(1) *sTang lha*, heaven (literally, 'the upper gods,' or 'the gods above').—A king reigns in sTang lha called sKyer rdzong snyanpo.[2] He is also called dBangpo rgyabzhin, and åBum khri rgyalpo. The name of his wife, the queen of heaven, is bKur dman rgyalmo, Ane bkur dmanmo, or åBum khri rgyalmo. They have three sons, Don yod, Don ldan, and Don grub. The youngest is the most prominent figure. 'Lightning flashes from his sword out of the middle of black clouds.' Don grub descends to the earth and becomes king Kesar of gLing. According to one theory, thunder seems to be caused by the walking of the gods, and, according to another, it is the groaning of the dragon-shaped *åbrug*, dwelling in the dark clouds, when it is assailed by Kesar with his sword of lightning. Three daughters of the king of heaven are also mentioned.

The life of the gods is an idealized form of man's life. They constitute a State, with king, ministers, servants, and subjects. They abide in perfect happiness, and live, free from illness, to a good old age. They tend, apparently on the earth, certain goats known as *lha ra*. These they must defend against the devil bDud. Kesar later on discovers many of the *lha ra* in the latter's realm. The king and the queen often change their shape. The former becomes a white bird or a yak, and the latter takes the shape of a woman, a *dzo* (hybrid between a cow and a yak), a golden or turquoise fly, or a dove.

(2) *Bar btsan*, the earth (literally, 'the firm place in the middle').—Other names are *mi yul*, 'land of men,' and *gLing*, 'the continent.' The principal deity of this earth is mother Skyabs bdun (or Skyabs mdun). It is probable that she is identical with brTanma, the goddess of the earth (H. A. Jäschke, *Tibetan-English Dictionary*, London, 1881). She rides a horse called bTsan rta dmar chung. Of her subjects, the human race, we do not hear much in the saga. The

---

[1] The term *gLing chos* was first employed by the present writer. Among natives of Tibet the name *gLing glu* ('songs of *gLing*') is in more general use. In a hymnal discovered in Upper Kanāwār the words *Lha chos* and *Bon chos* are used for this type of religion.

[1] Some of these *gLing glu* will be found in B. Laufer's 'Zwei Legenden des Milaraspa,' in *ARW* iv. [1901] 100–123, *nga ni ngar seng dkarmoi bu*, etc.; 131–143, *seng ågangsla ågyingba spar mi åkhyag*, etc.; 194–211, *dbus ribo mchog rab mchod rtenla*, etc.

[2] This is the actual pronunciation. In literature the name is spelt *brgya sbyin* (Śatakratu or Indra).

eighteen *agus* (see below) take the part of human beings.

(3) *Yog klu*, the under world (literally, 'the *nāgas* below').—Like sTang lha, Yog klu is also a State. There is a king called lJogspo (probably lCogpo is meant), with his servants and his subjects, who are remarkable for the large number of their children. The *klumo*, or *nāginī* (female *nāgas*), are famous for their beauty, and Kesar is warned not to fall in love with them. For this reason, at the present day, the Ladākhi women still desire to look like *klumo*, and wear the *perag* or *berag*, a leather strap set with turquoises. This *perag* represents a snake growing out of the neck of a human body, which, according to Indian Buddhist art, is the characteristic mark of *nāgas*.

3. The colours of these realms.—The most original system of colours seems to be contained in the Sheh version of the Kesar-saga. According to it, the colour of sTang lha is white—perhaps the colour of light; Bar btsan is red—perhaps on account of the reddish colour of the ground;[1] and Yog klu is blue—this may be due to the deep blue colour of many Tibetan lakes. The *klu* generally live in the water.

According to the Lower Ladākhi version of the Kesar-saga, the colour system is as follows: sTang lha is white; Bar btsan is red; and Yog klu is black. A still more advanced stage is represented in the Mongolian version (which is without doubt based on that of Tibet). Here sTang lha is white; Bar btsan is yellow; and Yog klu is black. The change from red to yellow has probably something to do with Tsong-kha-pa and his reformation of Lāmaism.

4. The devil bDud.—Occasionally, to the three realms of the world a fourth is added, that of the devil bDud, and then all the three realms become united in opposition to this new realm. The colour of the devil and of his realm is black (Sheh version) or violet (Lower Ladākhi version). It is situated in the north. The devil tries to carry away the goats of the gods. He is in possession of a beautiful castle, great treasures, and a girl who is kept in a cage. Near his castle is the well of milk and nectar. In size, appetite, and stupidity he closely resembles the giants of European mythology and folk-lore. There seems to be a close connexion between Yog klu and the devil's realm, as they both appear to go back to similar ideas. But gradually the devil developed into a morally detestable character, while the *klu* did not. Other names of the devil bDud are ȧDre lha btsan bog, Curulugu, Srinpo ('ogre'), and sDigpa ('sinful').

Of a very similar nature is agu Za. He is probably a mountain- or cloud-giant. He devours not only Kesar, but also sun and moon.

5. The seven and the eighteen agus.—Next to Kesar, the greatest heroes of the Kesar-saga are the eighteen *agus*. Kesar is their leader, and together with him they form a group of nineteen beings, in whom the present writer is inclined to see personifications of the twelve months plus the seven days of the week. Just as India had a group of seven *ādityas* before there were twelve, we find occasionally a group of seven *agus* who act by themselves, the others being forgotten. There is a female *agu* among the group of seven, and there is always a traitor among the *agus*. They are described as having non-human heads on human bodies, thus being similar in shape to the Chinese representations of the zodiac. The list of the eighteen is as follows:

1. Pasang ldan ru skyes, with a goat's head.
2. Anggar rtsangspo, with a lizard's head.
3. Khrai mgo khrai thung, with a falcon's head.
4. Kha rgan [d]gani, with a white beard.
5. sKya rgodpo, with a soup-spoon for a head.
6. zLaba bzangpo, with a moon for a head.
7. mDā dpon gongma, with an arrow-blade for a head.
8. Ala jong gol, with the sole of a boot for a head.
9. ȧBu dmar lam bstan, with a worm's head.
10. Shelgyi buzhung, with a concave mirror for a head.
11. [d]Gani gongba, with a collar for a head.
12. Lag lag rings, with a hand for a head.
13. rKang rKang rings, with a foot for a head.
14. Bong nag ldumbu, with a donkey's head.
15. bKā blon ldanpa, with a man's head.
16. dPalle rgodpo, with an old man's head.
17. rNa γyu rna ȧthsal, with a turquoise for a head.
18. zLaba dkarpo, with a white shell for a head.

The following is the list of the seven *agus*: (1) dPalle, (2) [d]Gani, (3) Gongma buthsa, (4) lTaba miggi rab, (5) rNa γyu rna ȧthsal, (6) mDa dpon gongma, (7) dPalmoi astag.

Both lists are from the Lower Ladākhi version. Certain names will be found to differ in other villages. It looks as if there were not much hope of finding the clue to this ancient zodiac.

6. The Lokapālas.—There is some likelihood that the *gLing chos* has always had deities for each of the four cardinal points. It is quite possible that the Indian Amoghasiddha, Vajrasattva, Ratnasambhava, and Amitābha were deities of the four quarters before they became Dhyānibuddhas. In close correspondence with them we find in the *gLing chos* the following deities of the four quarters: Don yod grubpa, North; rDorje sems dpa, East; Rinchen byung ldan, South; sNangba mthā yas, West. It is not necessary to assume that these deities were introduced from India together with Buddhism. It is more likely that the names represent an instance of mutual influence between pre-Buddhist Tibetan and Indian mythology. The name Don grub, which corresponds exactly to the Indian Siddhārtha, was not necessarily introduced with Buddhism. Siddhārtha was a common name in India long before Buddha's time, and may belong to a deity similar to Don grub and Don yod grubpa of Tibet. There are also four 'kings' of the four quarters, who correspond more closely to their Indian equivalents, and may therefore have been received from India; but even these have nothing to do with Buddhism. Like the deities mentioned above, they belong to the four quarters, and to nothing else in the *gLing chos*.

7. The Tree of the World.—It is called the 'king-willow,' or the 'far-spreading willow.' It has its roots in Yog klu, its middle part in Bar btsan, and its top in sTang lha. It has six branches, and on each branch a bird with a nest and an egg. On the first branch there is the huge bird Khyung with a golden egg; on the second, the wild eagle with a turquoise egg; on the third, the bird 'white-head' with a pearl-white egg; on the fourth, the eagle 'white-kidney' with a silver egg; on the fifth, a snow-pheasant with a coral egg; and, on the sixth, the white falcon with an iron egg.

8. Outline of the Kesar-saga.—

(1) *Prologue to the saga: the creation of the earth.*—The 'forefather and his wife' sow some seed which grows into a huge tree, the fruits of which are gathered into a barn. There the fruits become changed into worms, which eat one another until one huge worm is left. This worm becomes the child Dong γsum mila. The child kills an ogre with nine heads, and builds the world (gLing) out of its body in seven days. Dong γsum mila is married to eighteen girls, to whom are born the eighteen *agus*. The *agus*, eager to gain riches, start for the castle Pachi dpal dong. Agu dPalle arrives there first of all, receives the riches, and hears the prophecy about what will happen in the course of the Kesar story.

(2) *Birth of Kesar.*—Agu dPalle assists the king of heaven in his fight with the devil, in the shape either of yaks or of birds. He is allowed to ask a boon, and asks that one of the three sons of the king of heaven may be sent to the earth as king. All the sons are asked, and Don grub, who is the ablest in spite of his youth, decides to go. He dies in heaven, and is reborn on earth to Gog bzang lhamo. (The name *Kesar* or *Kyesar* is spelt in full *skye γsar*, and is said to have been given with reference to this story; it means the 'reborn one'.) The conception arises from Gog bzang lhamo's eating a hailstone, and the child is born

---

[1] The word *dmarpo*, 'red,' is also used for 'brown.' Cf. the traditional interpretation of the word 'Adam.'

through the ribs. It is of a most ugly shape, but at pleasure exchanges this for a beautiful shape, with sun and moon as attributes. The traitor among the *agus* makes some unsuccessful attempts to kill the child, and has to suffer himself. Together with Kesar, sun and moon and all kinds of animals are born.

(3) *Kesar's marriage to åBruguma.*—Kesar meets åBruguma on a plain where she is gathering roots. There are a great number of stories as to how he teases her. åBruguma is to be married to the traitor among the *agus*, but Kesar wins her through his skill in games. Her parents are disgusted when they see him in his ugly shape, and treat him with contempt. He runs away, and åBruguma has to seek him. She is pleased to find him in his beautiful shape, but at once he throws it off and sends hail and rain. Her parents say that their daughter will be given to him who brings the skin of the huge yak Riri (this yak looks almost like a cloud), and who will bring a wing of the bird Nyima khyung byung (this bird looks almost like the sun). The *agus* try; but only Kesar succeeds. Now he is accepted as son-in-law, and the wedding is celebrated. (Here Kesar is praised even as the inventor of firearms.)

(4) *Kesar's victory over the giant of the north.*—After religious preparations Kesar decides to start for the north to kill the devil. He finds it hard to have to leave åBruguma, and allows her to accompany him, but the queen of heaven sends her back. In the castle of the devil he finds a girl in an iron cage, whom he delivers. They have an enjoyable time together until the devil returns. Before his arrival Kesar is hidden in a pit which is dug inside the room in a miraculous way. Although the devil smells the presence of a human being, and although his book of magic assures him of it, he is soon persuaded of the contrary by the girl, and goes to sleep. Then Kesar is dug out again and kills the devil. The girl gives Kesar the food and drink of forgetfulness, and in consequence of this he forgets åBruguma, the land of gLing, and everything.

(5) *åBruguma abducted by the king of Hor.*—Because Kesar does not return, the king of Hor starts to carry off åBruguma. The traitor among the *agus* sits on the throne of *gLing*, and the other *agus* offer only feeble resistance. The most plucky among the *agus* is the youngest, åBu dmar lam bstan. åBruguma herself goes to fight, but is sent back with ridicule. She has to submit and become the wife of the king of Hor. Still she refuses to leave the land of gLing unless the king of Hor solves three difficult problems. Then åBruguma hides herself in a stable, but she is discovered and carried away. She begins to love the king of Hor. åBu dmar lam bstan makes a successful attempt to retake her, but he is killed through the treachery of åBruguma and the traitor among the *agus*. (This is the *Siegfried* story.) Agu dPalle sends two storks with a message towards the north to Kesar. He leaves the north and soon reaches the land of gLing. The horse arrives there before him, and together with the horse's adventure spring sets in.

(6) *Defeat of the king of Hor.*—The road to Hor, with its many obstacles, is described. First Kesar is led by a fox, then he gains the service of a dwarf. There is the door of rocks which opens and closes of its own accord; there are the stones flying about between heaven and earth; and the watchmen of Hor, who are killed in the same manner as Samson killed the Philistines in the hall. Kesar arrives in the shape of a beggar, and pretends to be the son of the smith of Hor. He is accepted after some difficulties and learns the trade of the smith. At a tournament he shows his superior power, and gains the victory in every contest. He is therefore sent with a force against the approaching *agus* of gLing. On this occasion he drowns all his followers from Hor, and sends the *agus* home again. He compels the smith to assist him in the fabrication of an iron chain, which is to be thrown on to the top of the castle of Hor. When it is finished, Kesar climbs to the top of the castle by means of the chain, kills the king of Hor, and regains åBruguma. On their way back to gLing, åBruguma's children, whom she had borne to the king of Hor, are offered to the door of rocks to induce it to open. In gLing, åBruguma is first punished for her treachery, then she is restored to her former position, and another wedding is celebrated.

(7) *Kesar's journey to China.*—(The Tibetan word for China—*rgya nag*—means 'the black expanse.') Kesar practises sorcery until the castle of the king of China falls to pieces and the king of China becomes ill. Kesar is entreated to go to China and heal the king. He sends the traitor *agu*, Khrai thung, in his place. Then he starts himself. The journey is one chain of obstacles (ice and snow, hills, lakes, an ogre and an ogress, etc.). All are overcome, and on Kesar's approach the king of China becomes better. Now he refuses to keep his word, and give Kesar his daughter (γYui dkon mchogmo). But the girl runs away with Kesar. He is, however, induced to go back again. Then the Chinese throw him into a pit with three dragons, which he does not mind much. He escapes in the shape of a fly, goes back to gLing, and smites the land of China with leprosy (snow apparently). The traitor among the *agus* has meanwhile gone back to gLing, turned åBruguma out of the castle, and seized the throne. He is punished, and Kesar lives in happiness with his two wives. The leprosy in China is stopped by another journey made by Kesar to that country.

(8) *Epilogue to the Kesar-saga: the story of Kesar's boy.*—Kesar and åBruguma have a boy called γSerri buzhung (or Shelli buzhung). He is married to Pimo (or Phyimo?) γSerralcan, but the ogre dPallepa carries this girl off. γSerri buzhung starts to seek her, and takes service at the ogre's castle. He is soon recognized, because the dogs, horses, and other domestic animals increase in an extraordinary way under his care. Before the ogres have succeeded in killing him, they are invited by Pimo γSerralcan to a feast. On this occasion the girl places nine frying pans, in which the lives (hearts) of the nine ogres dwell, outside the door. γSerri buzhung shoots with his arrow through eight of them, and thus eight ogres are killed. Then he runs away with Pimo γSerralcan and all the other girls of the ogres. dPallepa pursues him, but is destroyed with his army. Then the wedding is celebrated.

9. Is the Kesar-saga a myth of the seasons?—This was the present writer's idea from the first. As he was, however, assailed by several critics on account of it, he did his best to abandon it. But, when editing the 'Lower Ladākhi version of the Kesar-saga' for the *Bibliotheca Indica*, he was driven back to his former position. At any rate, he cannot help believing that myths of the seasons (mixed up, perhaps, with other materials) are contained in the Kesar-saga. Only a few instances may be noted: sun and moon are attributes of Kesar's beautiful shape, rain and hail of his ugly shape; he wields the sword of lightning 'in the middle of black clouds'; there is a full description of spring given on the occasion of Kesar's return to gLing (see above, § 8 (5)); the *agus* seem to point to an ancient zodiac; winter is apparently compared to leprosy; together with Kesar's departure (probably in winter) the male animals leave the female ones, but leave them with the hope of new offspring; Kesar's enemies are powers of darkness; the giant of the north; the king of Hor, also in the north; China is 'the black expanse.'

10. Relationship to other mythologies.—As has become evident, there are great similarities between the *gLing chos* and the mythologies of various Aryan nations. This, however, does not mean much, for even the mythologies of North American Indian tribes have much in common with European mythologies. But we must call attention to one particularly striking incident. The story of the Tibetan hero with the vulnerable spot, åBu dmar lam bstan, who is Kesar's representative, is very similar to the German story of *Siegfried*. The similarities are the following: both heroes have the vulnerable spot on the shoulder; both wear invisible caps; both are killed when drinking water; with both of them the vulnerable spot is pointed out by a woman who belongs to the side of the hero. All this is remarkable, because the corresponding Greek story, for instance, is greatly at variance with both of them, although there is an ethnic relationship between the Greeks and the Teutons.

11. gLing chos and Lāmaism.—It is not at all impossible that the *gLing chos* should have exercised an influence on Lāmaism. The following are a few instances. (1) With regard to the colours, white, red, and blue, there is a certain correspondence between the realms of heaven, earth, and under world on one side, and sPyan ras γzigs, åJam dbyangs, and Phyag rdor on the other. But with regard to their characters it is difficult to see a closer agreement. The three *mchod rten* of three different colours, white, red, and blue, seem originally to represent the three realms of the *gLing chos*, but are at the present time explained as having been erected in honour of the three Bodhisattvas. If this explanation is really true, it remains a strange fact that the *mchod rten* in the middle was always painted red, and not yellow; for yellow is the correct colour of åJam dbyangs. Thus the custom of erecting three *mchod rten* of three different colours seems to have its roots in the *gLing chos*, and in the Kesar-saga we often hear of the existence of three *lha tho* of the same colours, the prototypes of these *mchod rten* of the present day. (2) The story of Srong-btsan Gam-po with his two wives, the green and the white sGrolma, may have been influenced by the story of Kesar with his two wives. Thus åBruguma is addressed, 'Oh, thou milk-white fairy!' and Kesar's bride from China is called γYui dkon mchogmo, the turquoise goddess. Kesar is even called, in historical works, a suitor to the white sGrolma. (3) There can be hardly any doubt that the system of colours as we find it in the *gLing chos* has influenced the pantheon of Lāmaism with its white, red, blue, green, yellow, and golden-faced occupants. Still, it cannot account for all the different shades of colours. Some of them were probably introduced from India. (4) Most of the deities of the *gLing chos*, dBangpo rgyabzhin included, have been incorporated into the pantheon of Lāmaism, where they have to be satisfied with an inferior rank.

12. gLing chos and Bon chos.—The *gLing chos* was perhaps not such a pure religion of nature as it appears to have been from the preceding pages. It probably had its dark side of superstitions and sorcery. This dark side seems to have had its development down to the present day in the garb of the *Bon chos*.

13. Sacred numbers in the gLing chos.—Holy numbers in the *gLing chos* are 3, 7, 9, and 18. But it is remarkable that, whilst the first three of these numbers are quoted without a following number, the 18 is often followed up by 19; *e.g.*, 'They digged a pit of 18, 19 yards,' 'There appeared 18, 19 priests.' The 19 is favoured apparently as the sum of 12+7, the months of the year plus the days of the week.

14. Animism in the gLing chos.—Here we may mention the following personifications: *sKyeser*, the wind; *sbang char zilbu*, the rain; *sengge dkarmo γyu ralcan*, the glacier; *bya Khyung dkrung nyima*, (apparently) the sun; *byamo dkarmo*, the moon; *bya so mig dmar*, the morning-star; *γYan*, spirits living in rocks and trees. It is remarkable that several of these personifications are mentioned together with the representatives of the animal world. Some of such representatives are: *nyamo γser mig*, for fishes; *bya rgyal rgodpo*, for birds; *rKyang byung kha dkar*, for horses; *áBrong byung rogpo*, for yaks.

15. Festivals of the gLing chos.—(1) The *Lo γsar*, or New Year's festival. It is the festival of lamps and lights. Pencil-cedars are used for the decoration of houses. There are horse-races, and a goat is offered before a white *lha tho* (altar of the *gLing chos*). The heart is torn out of the living animal and offered to the *lha*. In the monasteries mask-dances are held, which were probably intended originally to show the victory of the coming spring over the demons of winter. Only at Hemis do the mask-dances take place in June, perhaps as a last remnant of a former festival to celebrate the highest point reached by the sun. (2) *Storma phangces*. This is the spring festival of driving out winter. At Khalatse a clay figure of human shape is carried outside the village and destroyed there. At other places the spirits of winter and disease are banished into magic squares of sticks and strings (*dosmo*) and destroyed outside the village. (3) The Kesar-festival. The festival is called 'Kesar-festival' only in Upper Kanāwār. In Ladākh it is called *mDā phangces*, 'arrow-shooting.' It is celebrated in spring. The *gLing glu* is played and sung; and the boys amuse themselves with arrow-shooting. There are processions round the fields to bless them, the *lha tho* (altars) are decorated with fresh twigs, and pencil-cedars are burnt. (4) The *Srub lha*, or harvest festival. In Skyurbuchan the boys dance with poles covered with fragrant alpine flowers. Offerings of grain are carried to the monasteries. The dates of all these festivals are fixed by the lāmas, and the lāmas take part in them.

16. The names of the gLing chos.—In the course of this article some of the names of the *gLing chos* are given with their English translation. The author has not ventured to translate all these names, because scholars are at variance with regard to the meanings of certain of them. In the names of the eighteen *agus* there is always contained the distinguishing mark of the *agu* which forms his head; thus in no. 2, *rtsangspo* means 'lizard'; in no. 4, *kha rgan* means 'old mouth,' *i.e.* a mouth surrounded by a white beard; in no. 1, *ru skyes* means 'horn-producer,' or goat. As for the group of seven *agus*, which has much in common with the heroes of such folk-lore as, *e.g.*, 'Sechse kommen durch die ganze Welt,' in the name of no. 4 the ability to see clearly is indicated; in the name of no. 5, the ability to hear clearly; in no. 6, to shoot well. There are certain names occurring in the *gLing chos* which are not of Tibetan origin: thus in the word *sengge* in the name sengge dkarmo γyu ralcan, 'white lioness with the turquoise locks,' the personification of the glacier has something to do with the Indian word *siṁha*. In the name of the smith Hemis, who teaches Kesar, the first part *hem* seems to be the Indian word *hima*, 'snow.' We find the word *hem* in the sense of 'snow' also in the name Hembabs, which means 'snow-falling,' and such Indian words as *rākṣasa*, 'monster,' Sītārām, Sītā and Rāma, and Indra occur occasionally in the *gLing chos*—which shows what an important part India has played in the shaping of certain tales of this ancient religion.

LITERATURE.—It must be admitted that all the following publications are one man's work. They have all passed through the present author's hands. It may, however, be pointed out that in no case did he write down the texts to the dictation of a native; he always employed natives to record them from the dictation of such other natives as were famous for their knowledge of this ancient literature.

LITANY.—A litany, according to the modern use of the word, may be described as a devotion consisting of a number of short petitions or invocations, to each of which a response is made by the people. It may be either said or sung, it may be either processional or stationary, it may be liturgical, *i.e.* connected with the celebration of the Holy Eucharist, or independent, and it may be for regular use or used only on special occasions. Processional psalmody which is not of the responsive form is not now usually called a litany, but at one time the word was applied to anything sung in procession. The modern use of the term is the result of a long and somewhat complicated history. It is especially necessary to trace the growth of two forms of devotion which were originally distinct, but which have coalesced to form the modern litany. These are the liturgical responsive prayer and the procession.

1. Earliest use of the word.—The word λιτανεία is not common in classical Greek, and it seems to be used in the quite general sense of a supplication. The earliest mention of the word in connexion with Christian services appears to be by Basil (*c.* A.D. 375; *Ep.* ccvii. 'ad Cler. Neocæs.' [*Opera*, iii. 311 D]).

Objections had been raised to some innovations which Basil had made. 'These things were not,' the objector says, 'in the days of the great Gregory' (*i.e.* Gregory Thaumaturgus, *c.* 254). 'Neither,' replies Basil, 'were the litanies which you now use. And I do not say this by way of accusing you; for I would that you all should live in tears, and in continual repentance.'

These litanies were, therefore, penitential devotions of some kind, but there is nothing to indicate their precise character. The word *rogatio* was used in a similar general sense in the West.

2. The liturgical litany.—The earliest description of Eucharistic worship is that contained in the *Apologies* of Justin Martyr (A.D. 148). Here common prayers are spoken of 'for ourselves . . . and for all others in every place,' immediately before the Kiss of Peace and the Offertory, and therefore after the lessons and homily (*Apol.* i. 65). Whether these already took the form of the later litany there is nothing to show, and the response 'Kyrie Eleison' is not yet mentioned. And there is no further detailed information about the form of service until the liturgies which date from about the end of the 4th century. Here, however, the liturgical litany is found in the form which it has preserved in the Eastern Church ever since. It consists of a number of short petitions offered by the deacon, to each of which the people respond 'Kyrie Eleison,' and the most usual place for it is after the Gospel, but this is not invariable. Some litany of this kind appears to be almost universal in the Eastern liturgies. Many examples will be found in Brightman (*Liturgies Eastern and Western*, esp. pp. 4, 471, 521 for the most ancient forms, all belonging to the 4th cent.). The usual name for these devotions in the East is not λιτανεία, but ἐκτενή (lit. 'stretched out,' *i.e.* the earnest prayer), or συναπτή ('continuous'). There is nothing to show when Kyrie Eleison was first used in the services of the Church, but as its use is almost universal in the Eastern liturgies it must have been very early, and the expression is so natural, and would be so easily suggested by passages of the OT, that no explanation of its introduction is necessary. It was also in use among the heathen, as was pointed out by Claude de Vert (*Explication simple, littérale et historique des cérémonies de l'église*, Paris, 1706–13, i. 94; cf. Epictetus, *Diss. ab Arriano digestæ*, ii. 7). The *Peregrinatio Silviæ* (ed. G. F. Gamurrini, Rome, 1888, p. 47) mentions the Kyrie as the response made at Jerusalem to the deacon's list of names, and it appears in the litanies mentioned above as belonging to the 4th century.

3. The liturgical litany in the West.—It is probable that the Western liturgies originally contained litanies closely similar to those of the East. This was certainly the case, as far as can be judged from their scanty remains, with the liturgies of the Gallican (or non-Roman) type. The extant forms bear the closest resemblance to the Eastern litanies, and may in some cases be translations from the Greek (see some examples in L. Duchesne, *Christian Worship*^{3}, pp. 198–201; F. E. Warren, *Liturgy and Ritual of the Celtic Church*, p. 229). There is little doubt that there was originally a litany of the same character in the Roman liturgy also, and that the Kyries at the beginning of Mass are a relic of it. There is also another place in the service which should be noted. After the Gospel the priest says 'Oremus,' but no prayer or response follows; and this was so at least as long ago as the 8th cent., as appears from the Ordines Romani. Some prayers had evidently fallen out of the service even at that early date, and these were undoubtedly the Prayers of the Faithful, which occur in this place in the Eastern liturgies, and which are still preserved in the Roman rite in the prayers used on Good Friday. Probably these prayers dropped out of use because they were transferred, in substance at least, to the litany which came at the beginning of the service. St. Gregory the Great (*Ep.* ix. 12), when speaking of the use of the Kyrie, mentions other devotions that accompanied it, and which were no doubt a litany. In the present service only the Kyrie remains, and this is curious because the Kyrie was probably an addition made to the original litany from the East, so that it would seem that the original prayers have disappeared, while the exotic response has remained. There is nothing to show when the Kyrie was first used in Rome. It was not used, as in the East, as the regular response to the petitions, but at the beginning and end of the service, and it was alternated with Christe Eleison, which was never used in the East. Gregory says:

> 'We have neither said nor do we say Kyrie Eleison as it is said among the Greeks, because in Grecian countries all say it together, but with us it is said by the clerks and the people respond; and Christe Eleison is said as many times, and this is not said at all among the Greeks' (*loc. cit.*).

The Kyrie was, therefore, in use in Rome in Gregory's time, but for how long before that we do not know. The Council of Vaison (c. iii. [A.D. 519]), in ordering its use in the province of Arles, implies that it had been introduced into Italy at a not very distant date. The rest of the liturgical litany disappeared, as has been said, from the Roman service at some unknown date, but that the Kyrie was still regarded as part of a litany is shown by the fact that in the 8th cent. the Kyrie was omitted when there was a processional litany to the church. The natural conclusion of the introductory litany, whether processional or not, was the prayer in which the Bishop 'collected' the petitions of the people, and which was therefore called Collectio or Collecta. But, as the Kyrie was omitted when there was a procession, the collect on these occasions was the first thing that was said after the people reached the church, and hence ritualists came to regard it as the prayer 'ad Collectam plebis'—when the people are gathered together. Thus there arose a double derivation of the word 'collect' (*q.v.*).

4. Processions in the East.—During the centuries of persecution it was not likely that forms of devotion so conspicuous as processions would be used by Christians. The first historical mention of them appears to be in A.D. 398, in connexion with the Arian controversy. The Arians, not being allowed to hold their assemblies in the city of Constantinople, used to meet in the public squares during the night, and to march out at dawn to their places of worship, singing antiphonally. Fearing lest the orthodox should be attracted by this ceremonial, St. John Chrysostom instituted counter-processions on a more magnificent scale, in which silver crosses and lights given by the empress Eudoxia were carried. These particular processions were prohibited by the emperor in consequence of the disorders which they caused, but the custom of using processions, especially in times of emergency, continued. Socrates mentions a legend to the effect that the antiphonal singing used at such times had its origin in a vision of Ignatius of Antioch, the third bishop from St. Peter, in which he saw angels singing responsive hymns to the Holy Trinity (*HE* vi. 8; Soz. *HE* viii. 8). These occasional processions were, however, quite distinct from the litany in the Eucharist.

5. Processions in the West.—Processions became common in the Western Church at about the same time as in the East, but their origin appears to have been independent. They were probably at first transformations of pagan processions. The Roman festival of the Robigalia, intended to secure the crops from blight, was kept on the 25th of April, and the procession called the Litania Major, which took place on the same day, St. Mark's Day, seems to be a direct descendant of this. Even the actual routes of the heathen and the Christian processions were nearly the same. The institution of the Greater Litany of St. Mark's Day has been generally ascribed to Gregory I., but it was probably earlier, and perhaps dates from the pontificate of Liberius (352–366). The litany ordered by Gregory on St. Mark's Eve, A.D. 490, in order to avert a pestilence, seems to have been distinct from the Litania Major. Another ancient Roman festival, the Ambarvalia, was observed on three successive days in the month of May, and also had the fertility of the fields as its object. There is here a close resemblance to the Rogation processions on the three days before Ascension Day. These are said to have been instituted by Mamertus, bishop of Vienne (*c.* 470), on the occasion of various public disasters (Sid. Apoll. *Ep.* v. 14, vii. 1; Gregory of Tours, *Hist. Franc.* ii. 34); but such processions had probably been practised at an earlier date, and were only revived on this occasion. These rogations or litanies, called Litaniæ Minores to distinguish them from those of St. Mark's Day, spread rapidly through Gaul, and were adopted and reorganized at Rome by Leo III. (795–816). Both the Greater and the Lesser Litanies were ordered to be used in England at the Council of Cloveshoe (A.D. 747 [A. W. Haddan and W. Stubbs, *Councils and Ecclesiastical Documents relating to Great Britain and Ireland*, Oxford, 1869–71, iii. 368]). It may be noted that in the decree of this council, and elsewhere, *rogatio* and *litania* are regarded as equivalent terms ('lætaniæ, id est, rogationes'), and also that the terms seem to include all the devotions connected with those days. There is no allusion to responsive prayer, and the only reference to processions is a mention of relics being carried about. The words 'litany' and 'rogation' were still used in quite a comprehensive sense.

6. Mediæval litanies.—Hitherto the liturgical litanies in the Mass and processions have been regarded as distinct. But it is easy to see how they would coalesce. Various kinds of singing have always been used in processions, but that particular form of responsorial singing in which the people answer with an unvarying refrain was so naturally adapted for processional use, owing to the ease with which the refrain could be taken up by a moving crowd, that litanies of the type of the Eucharistic ectene came to be very commonly used in processions not only in the Mass, but on all sorts of occasions. And so the word 'litany' came to mean a form of prayer with a response, either processional or stationary, and either regular or occasional. As the processional use was the most conspicuous and popular, the word 'procession' came to be used as almost an equivalent term, and the book which contained the mediæval litanies was called the Processional. The litanies in most common use also assumed a regular structure. They consisted, as a rule, of the following parts: (1) the Kyrie Eleison, alternated with Christe Eleison; (2) a number of invocations of saints by name, with the response 'Ora pro nobis'; (3) a series of short prayers against various evils, called Deprecations, with the response 'Libera nos Domine'; (4) prayers on behalf of various people and for various objects, called the Supplications, with the response 'Audi nos Domine'; (5) the Agnus and the Kyrie, and a collect. Such litanies became very popular, and Cardinal Baronius estimated in 1601 that there were then 80 different forms in use. The invocations of the saints just mentioned formed a conspicuous part of most of these litanies. It is not clear when these invocations were first introduced; it was certainly before the 8th cent.; they are to be found in the Stowe Missal, and in a litany which probably belongs to the 8th cent. printed in Warren, *Lit. Celt. Ch.* (p. 179), but they may be much older. Some of the later litanies became little more than a string of invocations. It has been suggested that these lists of saints originally grew out of a heathen formula recited by the Pontifex Maximus, but there appears to be little or no evidence for this.

It has been noted that litanies, in the sense of responsive prayers, were often, though not necessarily, sung in procession, and so were commonly called processions. On the other hand, devotions sung in procession were often called litanies even though they were not responsive prayers. Psalms and anthems were also frequently used. For instance, Bede says (*HE* i. 25) that at the first meeting of St. Augustine with king Ethelbert the missionaries approached the king in procession, bearing the image of our Lord upon the Cross, and singing litanies; and then he specifies what they sang, and it was clearly an anthem, and not a litany in the usual modern sense. Again, the processions before High Mass on Sundays became, during the Middle Ages, a very popular and conspicuous devotion, but the psalmody was not usually in form a litany. In the 8th cent. at Rome it was so, or it was regarded as such; for, when there was a procession, as has been mentioned, the Kyrie at the beginning of Mass was omitted. Later on the Kyries became a fixed part of the service, and the processional psalmody took a different form. From the 12th cent., however, there was a tendency to use the term 'procession' of whatever was sung in procession, and to confine the term 'litany' to the Kyries, the Greater and Lesser Litanies of St. Mark's Day and the Rogation Days, and other similar forms.

7. Litanies in the Roman Church.—As has been mentioned, a large number of litanies came into use in the later Middle Ages. But by a decree of the Holy Office, dated 6 Sept. 1601, Clement VIII. forbade the use of any litany except that usually known as the Litany of the Saints, which had been included in the liturgical books. The Litany of Loreto had already been sanctioned in 1587. All others were forbidden to be used without the approbation of the Congregation of Rites. It is probable that this decree was never very strictly enforced, but it was renewed in 1727 and in 1821. A decree, however, of the Congregation of Rites, dated 23 April 1860, allowed the private use of litanies sanctioned by the Ordinary. The Litany of the Blessed Virgin or of Loreto mentioned above was probably used in some form at a very early date at Loreto, but in its present form it perhaps dates from the early 15th cent., and the earliest printed copy known belongs to the year 1576. Another popular litany was that of the Most Holy Name of Jesus. This was perhaps also composed in the early 15th century. It was not included in the decree of 1601, but later on it received some sanction from the Congregation of Rites, and it was finally allowed by Pius IX. in 1852 for certain dioceses, and for universal use by Leo XIII. in 1886. The Litany of the Sacred Heart was sanctioned in 1899.

8. The Anglican litany.—As the procession was a popular form of devotion, it was natural that it should be one of the first parts of the public services to be translated into English. The *Prymers* of the 15th cent., books of devotion for lay people, commonly contain a litany in English. The form now used in the English Church appeared in 1544, and it is no doubt the work of Cranmer, and perhaps the happiest example of his literary style. The occasion of its production was given by public calamities. In 1543 the harvest was bad, and Henry VIII. wrote to Cranmer to desire that 'rogations and processions' should be made. In the following year there was war with France and Scotland, so that the English Litany was produced in similar circumstances to those of the early litanies mentioned above. It was, however, also intended for regular use, and was printed in the *Prymer* of 1545 and in the first English *Book of*

Common Prayer of 1549 This litany was constructed with great care, and several sources were used. The chief portion was taken from the Sarum Rogationtide litany, and the main structure of this was adhered to, but the invocations of the saints were greatly shortened, being reduced to three clauses, which were themselves omitted in the First Prayer Book. Passages were also introduced from a Sarum litany for the dying, called Commendatio Animæ (also omitted in the First Prayer Book), and a considerable part of the Supplications was taken from a mediæval German litany which was revised by Luther in 1529, and published in German and Latin. This litany was included in the *Consultatio* of Archbishop Hermann of Cologne, and so came to England, and it was used for the litany in Marshall's *Prymer* of 1535. It must be noted that the English litany falls into two main sections: the first ends with the collect that follows the Lord's Prayer—a collect being the natural ending of a litany. What follows is a translation of suffrages which were added to the Sarum litany in time of war. The reason for their insertion was no doubt that war was going on in 1544, but they were appropriate for use at other times, and were retained. These suffrages are preceded by the antiphon and Psalm verse which began the Sarum Procession on Rogation Monday. Unfortunately, the accidental omission of the Amen at the end of the collect has led to the ridiculous custom of using the antiphon ('O Lord, arise, help us') as a sort of response to the collect. Until 1661 the conclusions of most of the collects were not printed in the *Book of Common Prayer*; in the revision of that year the Amens were printed, but most of the endings were omitted by mistake.

Although in his adaptation of the old litanies Cranmer added little or nothing of his own, he made a noticeable change in the rhythm: the old petitions were short and simple; Cranmer, either with a view to compression or, more probably, because he preferred sonorous periods, grouped several petitions together, and enriched them with epithets and synonyms. For instance, the Deprecations of the Sarum litany begin thus:

> 'From all evil—Deliver us, Lord.
> From the crafts of the devil—Deliver us, Lord.
> From thy wrath—Deliver us, Lord.
> From everlasting damnation—Deliver us, Lord.'

In the new version this becomes:

> 'From all evil and mischief; from sin, from the crafts and assaults of the devil; from thy wrath, and from everlasting damnation—Good Lord, deliver us.'

At about the same time Cranmer intended to translate other processional hymns, such as 'Salve Festa Dies,' for he wrote to Henry VIII. in 1545 to say that he had done so. The attempt was probably relinquished because he became aware that he did not write so skilfully in verse as he did in prose.

The English litany has remained substantially unchanged since its first appearance in 1544. In 1549 the invocations of the saints were omitted, and in 1559 a petition about 'the tyranny of the Bishop of Rome.' 'The grace of our Lord' was added at the end in the same year. In 1661 the words 'and rebellion,' 'and schism,' were added, and 'Bishops, Pastors, and Ministers of the Church' was changed to 'Bishops, Priests, and Deacons.' The collection of collects at the end of the litany was altered more than once, and most of them were removed to other places in the *Book of Common Prayer*.

This litany was intended to be used for all the purposes for which the ancient litanies were employed. It was issued for occasional use at a time of distress, and it was sung in procession in the usual manner. Later on royal injunctions ordered it to be sung kneeling before Mass, and this became the usual, but not universal, practice. The present rubric allows either the stationary or the processional use. It was also related to the Rogationtide processions, being derived mainly from them, and it took the place of the Eastern ectene as a preparation for Mass. It was ordered from the first to be said on Wednesdays and Fridays, the ancient 'Station' days, on which especially Mass was anciently said, and, although its use on Sundays was not specified in the rubric until 1552, this was probably taken for granted from the first. Unfortunately, this special characteristic of the litany as a preparation for Mass was obscured later on, partly by the placing of the 'Grace' at the end, and partly by the rubric of 1661, which directs it to be said 'after Morning Prayer.' This made no practical difference so long as Matins, Litany, and Mass continued to be said in their natural order, but in recent years it has caused the litany to be regarded as a sort of appendage to Matins, and in many churches has led to its being altogether separated from the Mass.

9. Lutheran litanies.—As has been mentioned above, Luther published a revision of a mediæval litany in German and Latin in 1529. The original edition does not appear to be extant, but the litany was printed in the Psalm-books, and it was used in both languages for some time. The use of the Latin form seems to have died out in the 17th cent., and the German form, although it continued to be used on various occasions in North Germany, never became a popular form of devotion. The Calvinistic bodies objected to this form of service altogether, and the litany was one of the parts of the English *Book of Common Prayer* which were most disliked by the Puritans.

LITERATURE.—For Eastern litanies see F. E. Brightman, *Liturgies Eastern and Western*, Oxford, 1896. For Western litanies, F. E. Warren, *Liturgy and Ritual of the Celtic Church*, do. 1881; C. Wordsworth, *Ceremonies and Processions of . . . Salisbury*, Cambridge, 1901; *Sarum Processional* (ed. W. G. Henderson), Leeds, 1882; *York Processional*, Surtees Society, London, 1875; E. Hoskins, *Sarum and York Primers*, London, 1901; H. Littlehales, *The Prymer*, do. 1895; *Ordines Romani*, in Migne, *PL* lxxviii. 937 ff. For the Kyrie, E. Bishop, 'Kyrie Eleison,' in *Downside Review*, Dec. 1899 and March 1900; S. Bäumer, *Gesch. des Breviers*, Freiburg im Br., 1895, esp. pp. 128, 154. For a history of the litany, F. Procter and W. H. Frere, *New History of the Book of Common Prayer*, London, 1901; L. Pullan, *History of the Book of Common Prayer*, do. 1900; J. H. Blunt, *Annotated Book of Common Prayer*, rev. ed., do. 1895; L. Duchesne, *Christian Worship*^{3}, do. 1903.

LITERATURE (American).—The literature of the aborigines of America may conveniently be treated under two topics, viz. purely autochthonous literary expression, and works produced under Caucasian influence.

1. Autochthonous literature.—This group includes songs, orations, stories, legends and myths, rituals and possibly dramas, and chronicles. The sources of this literature are mainly oral tradition, though this tradition is fortified in many cases by mnemonic records, the most curious of which are the *quipus*—knotted and coloured cords—employed by the Peruvians. Petroglyphs and pictographs were wide-spread, and reached a considerable development in the direction of abstract symbolism, while among the Mayas, Aztecs, and other Mexican tribes they clearly gained the stage of hieroglyphic writing. Little progress has been made, however, towards the decipherment of the Mexican codices, except perhaps with respect to calendric computations, while the pictographic records of other Indian peoples depend for their interpretation upon individual initiation into the meanings intended. Such records as we have, therefore, are mainly transcriptions from oral expression.

American Indian songs are so intimately connected with American Indian music that they will be treated under art. MUSIC (American). Similarly, American Indian rituals, which are largely composed of cycles of songs and chants, will be treated under SECRET SOCIETIES (American) and PRAYER (American). Oratory was an art of prime importance among the many tribes who conducted their internal affairs by means of councils where the spoken word decided tribal policies. Gravity of mien and strict decorum characterized the orator, but his expression was often intensely passionate, and there is abundant testimony from white hearers to the power and eloquence of American Indian oratory, of which many fragments are preserved in scattered reports. More systematic records have been made of myths and legends, which are often documents of considerable length and no mean artistry. Their comparative stability of form under oral transmission may be studied in records of identical myths taken from different tribes (*e.g.*, the three versions of the 'Iroquoian Cosmology,' recorded by J. N. B. Hewitt, *21 RBEW* [1899–1900]). Legends of a historical character (as, *e.g.*, the legend of Hiawatha) give place in some tribes to conscious chronicles, or year-counts (see esp. G. Mallery, *10 RBEW* [1888–89], ch. x.; J. Mooney, *17 RBEW* [1895–96], 'Calendar History of the Kiowa'). Mooney (*19 RBEW* [1897–98], 'Myths of the Cherokee') classifies Cherokee myths as sacred myths, animal stories, local legends, and historical traditions. He traces many animal stories that have passed as of Negro origin to American Indian sources (notably the 'Brer Rabbit' stories of Joel Chandler Harris), and it is certain that the American Indians possessed tales designed for entertainment, often of a humorous character, as well as others intended for edification.

The artistic quality of which American Indian expression is capable may be suggested by a few examples. A. C. Fletcher (*27 RBEW* [1905–06], p. 431) records an Omaha song of four verses (or, with repetitions, seven), which she translates:

> 'No one has found a way to avoid death, to pass around it; those old men who have met it, who have reached the place where death stands waiting, have not pointed out a way to circumvent it. Death is difficult to face!'

This song is set to a moving native melody, which has been harmonized by Harvey Worthington Loomis ('Lyrics of the Red Man,' Newton Center, Mass., 1903, vol. ii. no. 2).

An impressive example of Indian eloquence is the speech of Smohalla recorded by Mooney (*14 RBEW* [1892–93], p. 720 f.), uttered in reply to the white commissioner's request that the Wanapum settle down to agriculture. The following is a fragment of Smohalla's peroration:

> 'You ask me to plough the ground! Shall I take a knife and tear my mother's bosom? Then when I die she will not take me to her bosom to rest.
>
> You ask me to dig for stone! Shall I dig under her skin for her bones? Then when I die I cannot enter her body to be born again.
>
> You ask me to cut grass and make hay and sell it, and be rich like white men! But how dare I cut off my mother's hair?'

In the Iroquoian creation myth, there is a somewhat subtle humour in the account of the fall of Ataentsic, the demiurgic Titaness, from the Sky-world to the chaos of nether waters:

> 'So now, verily, her body continued to fall. Her body was falling some time before it emerged. Now, she was surprised, seemingly, that there was light below, of a blue color. She looked, and there seemed to be a lake at the spot toward which she was falling. There was nowhere any earth. There she saw many ducks on the lake, whereon they, being waterfowl of all their kinds, floated severally about. Without interruption the body of the woman-being continued to fall.
>
> Now, at that time the waterfowl called the Loon shouted, saying: "Do ye look, a woman-being is coming in the depths of the water, her body is floating up hither." They said: "Verily, it is even so." Now, verily, in a short time the waterfowl called Bittern said: "It is true that ye believe that her body is floating up from the depths of the water. Do ye, however, look upward." All looked upward, and all, moreover, said: "Verily, it is true"' (*21 RBEW*, p. 179 f.).

With this may be contrasted a fragment of the Navaho myth of the creation of the sun (*8 RBEW* [1886–87], pp. 275–277), which is not without a touch of grandeur:

> 'The people then said, "Let us stretch the world"; so the twelve men at each point expanded the world. The sun continued to rise as the world expanded, and began to shine with less heat, but when it reached the meridian the heat became great and the people suffered much. They crawled everywhere to find shade. Then the voice of Darkness went four times around the world telling the men at the cardinal points to go on expanding the world. "I want all this trouble stopped," said Darkness; "the people are suffering and all is burning; you must continue stretching."'

The more civilized Indian peoples of Mexico, Central America, and Peru show a corresponding advance in formal literary composition. The Aztec rituals recorded by B. Sahagun (*Historia general de las cosas de Nueva España*, Mexico, 1829) are dignified and ornate, and often imbued with a sombre and haunting beauty. The assembled lore of these more advanced peoples must have comprised a considerable body of legends, chronicles, oracles, spells, calendric computations, laws, etc., judging from the fragments which are preserved, while the existence of a secular artistic literature is probable. Brinton is of the opinion that the Central Americans possessed an autochthonous dramatic art (see *Library of Aboriginal American Literature*, no. iii., 'The Güegüence, a Comedy Ballet in the Nahuatl-Spanish Dialect of Nicaragua,' Philadelphia, 1883); and Clements Markham regards the 'Ollantay' as an example of a pre-Spanish dramatic literature (see Markham, *The Incas of Peru*, London, 1910, which contains a translation of this drama). For this literature of the semi-civilized nations see the artt. ANDEANS, CHILAN BALAM, DRAMA (American), POPOL VUH.

2. Literature produced under white influence.—This class consists of (1) works in the native languages, and (2) works by American Indian authors in European languages. (1) Works of the first type include translations of the Bible and other works by white missionaries and teachers, and native records of native ideas made after a system of writing had been acquired. Of the latter, perhaps the most notable instance is the Cherokee literature in the native alphabet invented by Sequoya. A large number of periodicals—some under native, some under missionary, editorship, some in the native tongues exclusively, some part English, some wholly English—have appeared or are now appearing for the expression of American Indian ideas. For the growing body of aboriginal records—chiefly myths, rites, and chronicles—appearing in the *Reports of the American Bureau of Ethnology* and elsewhere special modifications of the Roman alphabetic signs have been invented and systematized for the expression of the native tongues.

(2) A certain number of Indians or part-Indians have distinguished themselves in their literary mastery of European tongues. The names of Garcilasso de la Vega, Inca-Spanish in blood, and of Fernando de Alva Ixtlilxochitl, descendant of the caciques of Tezcuco, are notable as authorities for the native customs and histories of Peru and

Mexico respectively. To these might be added the names of Tezozomac, Chimalpahin Quauhtlehuanitzin, Nakuk Pech, and Fernando Hernandez Arana Xahila, Mexican and Central American post-conquest chroniclers of native history (see respectively E. K. Kingsborough, *Antiquities of Mexico*, ix., 'Cronica Mexicana'; R. Siméon, *Annales de San Anton Munon Chimalpahin Quauhtlehuanitzin*, Paris, 1889; D. G. Brinton, *Library of Aboriginal American Literature*, i., 'The Maya Chronicles,' vi. 'The Annals of the Cakchiquels'). In N. America, George Copway (Kagigegabo, 1818–63) was the author of several books, dealing chiefly with his own people, the Ojibwa, while Charles A. Eastman (Ohiyesa, b. 1858) is the author of essays and stories portraying the native life and ideals of his Siouan kinsfolk.

LITERATURE.—Bibliographical details are given in the *Handbook of American Indians, Bull. 30* of the American Bureau of Ethnology, Washington, 1907–10, under 'Books in Indian Languages,' 'Bible Translations,' 'Dictionaries,' 'Periodicals'; see also 'Copway,' 'Eastman,' 'Sequoya.' Scattered through the *Reports* and *Bulletins* of the Bureau are many texts and translations of myths, songs, and rites; the files of the *JAFL* are rich in similar material. Other collections of importance include E. K. Kingsborough, *Antiquities of Mexico*, 9 vols., London, 1830–48; D. G. Brinton, *Library of Aboriginal American Literature*, 8 vols., Philadelphia, 1882–90; J. G. Icazbalceta, *Nueva Colección de documentos para la Historia de México*, 5 vols., Mexico, 1886–92; E. Seler, *Gesammelte Abhandlungen zur amerikanischen Sprach- und Altertumskunde*, 3 vols., Berlin, 1902–08. Yearly increasing material is to be found in the *Comptes rendus du Congrès international des Américanistes*, Paris, etc.; the *Memoirs* and *Papers of the Peabody Museum*, Cambridge, Mass.; the *Memoirs of the American Museum of Natural History*, New York; the *Memoirs of the American Folklore Society*, New York; the *Publications of the Field Columbian Museum*, Chicago; *of the University of California*, Berkeley, Cal.; *of the University of Pennsylvania Museum*, Philadelphia; the *Contributions of Columbia University*, New York, etc. Of the nature of bibliographical guides are H. H. Bancroft, *Native Races of the Pacific Coast*, New York, 1875, vol. i. p. xvii ff., 'Authorities quoted' (cf. also vol. iii. LITERATURE (Babylonian).—Our knowledge of Babylonian-Assyrian literature has been gained chiefly by excavations. Only a few monuments are extant on rocks, among them the famous bilingual inscriptions of the Achæmenian kings, from the study of which the decipherment of the Babylonian script and language started. The statues of kings and deities, the colossi of bulls and lions, slabs, prismoids, cylinders, and various smaller objects of art inscribed with Babylonian legends are, as far as hitherto disinterred, not very numerous in comparison with the thousands of clay tablets which served the ancient Babylonian and Assyrian priests to record the deeds of the rulers of those Empires, to chronicle their historical events, to fix the common prayers, incantations, and religious rites, to place the outcomes of their superstitious belief in certain systems, and to transmit very ancient myths and legends to posterity.

As a matter of fact, these documents are not throughout conceived in the Semitic tongue of Babylonia. It is now well known that in the third millennium before our era the fertile alluvial plain of the twin rivers enclosing Mesopotamia, the Euphrates and the Tigris, was inhabited by a non-Semitic race called the Sumerians, and to them must be attributed the primitive culture of that country, the building of its earliest cities, the first works of art in Western Asia, and the invention of the cuneiform script, the development of which out of a picture writing can still be traced. At what time Semitic, *i.e.* Babylonian, tribes invaded Sumerian territory, and how the process of amalgamation between the two races developed, cannot as yet be ascertained. It may be fairly assumed, however, that at the time of the Babylonian king Ḫammurabi, who replaced the various feudal governments of his predecessors by a vast Babylonian Empire under one sceptre (*c.* 2000 B.C.), that process had come to a standstill, and subsequently the Sumerian literature was gradually superseded by that of the Babylonian-Assyrians. As, however, the religious hymns and psalms composed by the Sumerian writers were adopted by the Semites, forming part of their liturgy and subsequently translated by the priests into their native tongue, Sumerian was studied as a sacred language by the Babylonians and Assyrians, and its literature was carefully preserved and handed down to posterity, just as in mediæval and modern times the Latin language is treated and used as the language of the Church.

Sumerian literature is dealt with in this art. in so far as it forms part of the Babylonian-Assyrian incorporated therein. Babylonian literature actually begins in the time of Ḫammurabi, whose inscriptions (with one exception) and whose famous collection of laws (see LAW [Babylonian and Assyrian]) are conceived in pure Semitic Babylonian. Before entering into a detailed enumeration of the various branches of that literature, attention must also be called to the fact that the difference between the Babylonian and the Assyrian languages consists merely in dialectic varieties, so that Babylonian and Assyrian literature, practically speaking, are to be considered as identical, and are differentiated only by the respective time of their origin during one of the great monarchies of Western Asia—the Old Babylonian Empire, the Assyrian Empire, and the Neo-Babylonian Empire.

The history of the ancient East can now be authentically reconstructed from the historical inscriptions of the Babylonian-Assyrian literature. To the great kings of those monarchies the gaining of immortality by means of a careful tradition of their exploits, their successful campaigns, and building operations appeared most desirable, and so they caused the records of those deeds to be inscribed on a number of clay prisms, on cylinders and tablets, and on the animal colossi at the entrances of their palaces. The great extent of such texts is illustrated by a recently discovered tablet, on which the events of a single year (714 B.C.) are recorded so minutely that an English translation of the text would fill five columns of the London *Times*. Long prayers supplement the historical contents of these inscriptions, interspersed with the enumeration of the titles and abilities, virtues and religiousness, of the royal personages therein glorified. As a rule, the contents are arranged according to the years of reign or the campaigns, in chronological order, followed by an account of the building operations and, in some cases, of the hunting matches of the respective kings, while, at the end of the inscriptions, the blessing of the great gods is invoked upon a successor preserving the document, and their wrath upon its destroyer. To the historical documents must also be assigned the branch of the epistolary literature dealing with public affairs. It is from an extended correspondence between Ḫammurabi and one of his highest officials that an exact knowledge of the reign of the first Semitic ruler in the united Babylonian kingdom is gained — his personal care for the welfare of his vast dominion, the building of corn-houses and dykes under his auspices, the regulation of the temple-taxes, and the use of intercalary months by order of the crown. Of no less importance are the documents of a correspondence carried on in the middle of the second millennium between the Pharaohs of Egypt, then rulers of the whole civilized world, and the kings of Western Asia, including Palestine, the Phœnician ports, and the island of Cyprus, which have become generally known as the Tell el-Amarna find. Letters, proclamations, petitions, accounts of building operations, and short notes accompanying requisites for war were in constant use down to the end of the Neo-Babylonian Empire, and are of a historical value similar to that of the royal inscriptions mentioned above and various so-called 'epigraphs' which were added to the numerous bas-reliefs on the walls of the palaces, illustrating the kings' campaigns and other achievements.

Babylonian-Assyrian literature in the narrower sense of the word has become known chiefly from the documents preserved in a great Royal Library founded at Nineveh by Ashurbanipal, the last great king of the Assyrian Empire, who reigned from 668 to 626 B.C. and was called Sardanapalos by the Greek writers. This Library, generally known as the Kouyunjik Collection, the various portions of which have been secured since the middle of last century for the Trustees of the British Museum by Sir Henry Rawlinson and other English scholars, consists of copies and translations of ancient Babylonian and Sumerian works, and deals with every branch of wisdom and learning then appreciated by the Assyrian priests, who, by command of their royal patron, collected and catalogued, revised and re-copied, the various texts which had been gathered from the oldest cities and temple archives of the whole land. Recent excavations have in some instances also brought to light a number of hymns and prayers, certain omen-texts, and a few astrological inscriptions which must be attributed to an earlier period than that of Ashurbanipal, and apparently belonged to the mass of original documents from which the copies in the Library were made; and the same may be said of certain collections of the Neo-Babylonian time, in which, again, copies from the Kouyunjik Collection have been found. An exact idea of the literary achievements of the Babylonian-Assyrians, however, can be formed only by a perusal of the contents of the Library itself. Such a perusal yields the following results.

Apart from the epistolary literature, a few drafts for royal inscriptions, and numerous commercial texts—the last extending from early Babylonian times down to the beginning of our own era—Assyrian literature was devoted chiefly to superstitious belief, to religious rites and ceremonies, incantations and prayers, and, in close connexion with both branches, to medicine, astrology, and philology.

A large proportion of the documents here concerned deal with the appearance and actions of various animals, and it has been justly remarked that in these inscriptions survivals may be seen of a very ancient animal-cult—reminding one of certain parallels in Egypt—which in later times seems to have been superseded by an exquisitely astral religion. Closely connected with these animal omens are the numerous and systematically arranged texts bearing on monstrosities and other unusual features of births, as well as the large collections of documents dealing with the inspection of the liver of an immolated wether. The movements of various birds, the actions of dogs and pigs, the hissing of a snake, and the invasion of locusts were especially observed for the compilation of such omen-texts. Another means of divination used by the Babylonians was pure water, into which a small quantity of sesame-oil was poured, so as to produce the well-known interference-colours, re-discovered by Newton, and certain structures of rings and bubbles, from which the events of the future were predicted. The link between these forecasts and the religious texts must be sought in the medical prescriptions, which were laid down and redacted into a kind of pharmacopœia. Various diseases, arranged according to the limbs and members attacked, are enumerated in these collections, and the draughts, decoctions, and other therapeutics are described in detail. Mental disorder was attributed to the influence of evil spirits, and on this account the medical texts are frequently interspersed with incantation formulæ which otherwise constitute a class of literature by themselves. Three or four 'series' of tablets containing such incantation-texts, accompanied by directions for the respective ceremonies, have become known to us. They are chiefly directed against the pernicious actions of witches and sorcerers, supposed to be neutralized by destroying the images of these witches, mostly by burning. In the majority of cases the text of these incantations is in the interlinear bilingual style, *i.e.* in Assyrian and Sumerian; and in several instances it can be proved that the Sumerian original has been taken over from ancient sources, portions of which still exist. On the other hand, it can hardly be denied that the Semitic Assyrian priests themselves also composed such interlinear texts, using the Sumerian language, then long extinct, in much the same way as mediæval monks used Latin. Moreover, even pure Sumerian texts without an interlinear Assyrian version are preserved in Ashurbanipal's Library—a fact from which it may be concluded that such incantations even at his time were recited in the old sacred language. And the same holds good of the psalms, litanies, and other forms of prayers which are written either in Sumerian only or accompanied, in Assyrian times, by a Semitic version. Whilst the incantation-texts, however, are mostly preserved as parts of certain literary compositions or 'series,' the prayers and similar religious documents stand for the most part isolated, and only by their style can they be recognized as belonging to various classes. Of such, the prayers called after 'the lifting of the hand,' the hymns exhibiting a parallelism of members, the litanies addressed to certain deities, and the compositions showing acrostics may be mentioned as specimens.

Of special interest among the religious texts are the legends and myths, of which a number of 'series' have been discovered. A few of them, as, *e.g.*, the Babylonian Creation Legend and the Deluge Story, both of which have parallels in the OT, can be proved to reach as far back as the Old Babylonian period. It cannot be ascertained at present, however, at what time the account of the Deluge was incorporated in a great national epic, the so-called Gilgamesh Epic, which is founded on astral religion and seems to refer to the life in the nether world. Similarly the 'Descent of the goddess Ishtar to Hades,' an isolated poem preserved in Ashurbanipal's Library only, appears to depict nature's death in the autumn and its resuscitation in the spring, and the story of Nergal, the lord of tombs, and his consort, the goddess Erishkigal, likewise contains a description of the abode of the dead. Immortality was not granted to mankind, as we learn from another myth, the story of a pious man called Adapa, who, being misled by chance, refused to partake of the food of life and the water of life, which were offered to him in heaven.

As has already been remarked, it may be concluded from the Gilgamesh Epic and from other mythological texts that in the Assyrian time at least an astral religion was reigning in the valley of the Euphrates and Tigris. This appears to be borne out by another branch of Babylonian-Assyrian literature, viz. the astrological texts. A large composition, comprising at least 70 tablets, is devoted to observations of the movements of the celestial bodies, including atmospheric phenomena, such as thunder-storms, hurricanes, and earthquakes, and to the forecasts taken from such observations and referring to the welfare of the king, the devastation of temples and palaces, the growth of vegetation, and the increase of cattle and other animals. As early as in the 7th cent. B.C. these astrological documents were paralleled by purely astronomical texts, dealing with the heliacal risings and the culminations of luminous fixed stars and constellations, while of the Neo-Babylonian time documents with astronomical observations and calculations have been found which bear witness to the highly developed faculties of the later Babylonians for determining the velocity of the sun and moon, the length of the year, and the revolution of the five planets then known.

An equally high standard was attained by the Babylonian and Assyrian priests in grammar and lexicography. Those sacred Sumerian incantation-texts, hymns, and prayers must have early prompted the protectors of religious traditions to collect helps for studying the extinct sacred tongue, and in course of time such investigations necessarily involved a study of the Semitic native language of those priests as well. Paradigms of verb-forms, lists of synonymous words, and, above all, large collections of Sumerian ideographs explained according to their pronunciation and meaning have thus been handed down. And the numerous lists of names of animals, stones, plants, and wooden objects, of stars, temples, and deities, afford a clear insight into the wisdom and work of the philologists, by whom the oldest colleges on earth were founded and literary tradition was first carried on.

Babylonian literature was deeply influenced, as has been shown, by its older Sumerian sister, and the Assyrians, in developing it, seem to have played a rôle similar to that played in later centuries by the Syrians who conveyed Greek learning to the nearer East. On the other hand, the cuneiform Babylonian script spread all over Western Asia, and the Hittite and Mitanni nations, the Chaldic tribes, and the Canaanites appear to have adopted it in one or other form, and certainly became familiar to some extent with the literary documents of the Babylonian people. Babylonian legends found their way to the ancestors of the Israelite tribes, and similar Babylonian documents were studied in the middle of the second millennium by the learned priests of the Egyptian Pharaohs. Finally, the late Assyrian omen and astrological texts wandered to the East as far as China, left remarkable traces in the Indian literature, and were transmitted to Greece, where actual translations of such texts have been found. In this way also Babylonian literature has in the last instance influenced Christianity, and has left its marks throughout mediæval times down to the present day.

LITERATURE (Buddhist).—The sacred canon of Buddhism has been handed down in two forms. One, written in Pāli and preserved in Ceylon, Burma, and Siam, contains the doctrine of the older school, the Hīnayāna ('Little Vehicle'; see art. HĪNAYĀNA), the chief aim of which is to attain *arhat*-ship or the release of the individual from suffering. It is the canon of one sect only. The other, the Sanskrit canon, which is later, is not extant in any complete example, but is known only from fragments found during recent years in Central Asia by M. A. Stein, A. Grünwedel, and A. von le Coq, partly also from quotations in other Buddhist Sanskrit texts, as well as from Chinese and Tibetan translations. The chief texts of the Sanskrit Mūla-sarvāstivādins, who belonged to the older Buddhism, were translated from Sanskrit into Chinese in the years A.D. 700–712. This canon agrees largely with the Pāli canon both in wording and in arrangement. But there are also various divergences. These are to be explained by the descent of both from a common original in the Māgadhī dialect, from which the Pāli canon was derived in one part of the country, and the Sanskrit canon, later, in another. While the other sects had no complete canon, each regarded as specially sacred one or more texts, which either incorporated parts of or replaced a theoretically acknowledged canon. The great bulk of these Sanskrit Buddhists belonged to the new school of the Mahāyāna ('Great Vehicle'; see art. MAHĀYĀNA), the chief aim of which was the attainment of the condition of a Bodhisattva, or future Buddha, who brings *nirvāṇa* within the reach of the entire human race.

The forms of Buddhism preserved in Pāli and in Sanskrit have commonly been called 'Southern' and 'Northern' respectively because the former prevails in Ceylon, Burma, and Siam, and the latter in Nepāl, Tibet, China, and Japan. The distinction thus made is misleading, since all Buddhist canonical literature arose in the North of India. The Pāli canon contains no reference to the South, and the term 'Northern' confuses sects by the erroneous implication that it excludes the older school of the Hīnayāna. It is, therefore, more appropriate to speak of 'Pāli Buddhism' and 'Sanskrit Buddhism.'

The languages in which the two canons were composed require to be more precisely defined. Pāli is the sacred language common to the Buddhists of Ceylon, Burma, Siam, and Cambodia, but Pāli MSS are written in the four different alphabets of those countries, while it has become the regular practice to print European editions of Pāli texts in Roman characters. The Pāli language in which the texts have been handed down cannot be identical with the dialect in which the canon of the 3rd cent. B.C. was composed; the latter could only have been the language of Magadha (Bihār), in which Buddha first preached and which must have been used by the monks of Pāṭaliputra who put together the canon. Traces of such a Māgadhī canon may be found in the Pāli texts. In this connexion it is noteworthy that the titles of the canonical texts enumerated in Aśoka's Bairat inscription appear in a Māgadhī form. But Pāli differs from the Māgadhī which is known to us from inscriptions, literary works, and grammarians. Nor is it identical with any other dialect. It is, in fact, an exclusively Buddhist literary language, which, like other literary languages, is the result of a mixture of dialects. Its basis is, however, in all likelihood Māgadhī—a conclusion supported by the tradition that even identifies Māgadhī and Pāli. The language of the other canon is either correct Sanskrit or a Middle Indian dialect which, approximating to Sanskrit, is best termed 'mixed Sanskrit' (formerly as a rule called the 'Gāthā dialect').

No work of Buddhist literature goes back to Buddha's time. But much contained in the canon may very well hand down the words spoken by the Master, such as the famous sermon of Benares, especially if we consider the tenacity of the verbal memory in Indian oral tradition.

Almost the whole of the oldest Buddhist literature consists of short collections containing speeches, sayings, poems, tales, or rules of conduct, which are combined into larger collections, called *piṭaka*, or 'basket,' in a manner somewhat analogous to the formation of the *saṁhitā* of the Vedas (cf. HYMNS [Vedic]). Three such aggregate collections, called the *Tipiṭaka*, form the Pāli canon.

The canon as constituted in Aśoka's reign must have undergone appreciable changes between then and the time when it was fixed in the 1st cent. B.C. in Ceylon. But thenceforward it has been handed down with great care. Some modifications, indeed, must have taken place even after the 1st cent., because it is otherwise difficult to account for the numerous contradictions appearing in the canon. Taken as a whole, however, the Pāli *Tipiṭaka* may be regarded as not very different from the Māgadhī canon of the 3rd cent. B.C. For the quotations occurring in the Aśoka inscriptions diverge only slightly from the extant text, while the titles of seven texts mentioned in one of these inscriptions are partly identical with, and partly similar to, those which are found in the extant *Sutta-piṭaka*. Moreover, the sculptures and inscriptions of the monuments at Sāñchī and Bhārhut (*c.* 200 B.C.) afford corroborative evidence of the existence of a collection not unlike the extant *Sutta-piṭaka*. But the earliest direct evidence that the *Tipiṭaka* as a whole had already assumed its present form is furnished by the *Milinda-pañha*, which dates from the 1st cent. A.D. The age and authenticity of the Pāli tradition are confirmed by the Sanskrit canon, which, as already stated, is so closely allied to it as necessarily to be derived from the same original.

The texts which the sacred literature comprises will now be summarily described in regard to their chief contents.

I. *THE PĀLI CANON.*—**1. Vinaya-piṭaka.**—The first of the three main divisions is the *Vinaya-piṭaka*, the 'Basket of Discipline,' which supplies the regulations for the management of the Order (*saṅgha*), and for the conduct of the daily life of monks and nuns. It includes rules for reception into the Order, for the periodical confession of sins, for life during the rainy season, for housing, clothing, medicinal remedies, and legal procedure in cases of schism. Here and there are also to be found stories, some of which contain the oldest fragments of the Buddha legend, while others are valuable for the light that they throw on the daily life of ancient India.

2. Sutta-piṭaka.—The second 'basket' is the *Sutta-piṭaka*, our best source for the *dhamma*, or religion of Buddha and his earliest disciples. It contains, in prose and verse, the most important products of Buddhist literature grouped in five minor collections named *nikāyas*. The first four of these consist of *suttas*, or 'lectures,' being either speeches of Buddha or dialogues in prose occasionally interspersed with verses. These four are cognate and homogeneous in character. For a number of *suttas* reappear in two or more of them; there is no difference in the doctrines that they contain; and they all show a similar mode of discussion, probably preserving a reminiscence of Buddha's actual method as good as that which the Platonic dialogues preserve of Socrates' method. One of the features of the method of argument in these *suttas* is the very extensive use of parables and similes, which, though lacking in cogency, are valuable as throwing much light on the daily life of the artisans, cultivators, and merchants of the day. Since each of these *nikāyas* contains old along with more recent elements of a similar character, there is no reason to doubt that all of them were formed into collections about the same time.

(*a*) The *Dīgha-nikāya*, or 'Collection of long lectures,' consists of 34 *suttas*, each of which deals fully with one or more points of Buddhist doctrine. The very first, entitled *Brahmajāla-sutta*, or 'Lecture on the Brāhman net,' is of very great importance for the history not only of Buddhism, but of the whole religious life of ancient India. The Buddha enumerates a large number of the occupations of Brāhmans and ascetics from which the Buddhist monk should refrain. The second, the *Sāmaññaphala-sutta*, or 'Lecture on the reward of asceticism,' furnishes valuable information about the views of a number of non-Buddhistic teachers and founders of sects. The *Amboṭṭha-sutta* illustrates the history of caste and Buddha's attitude to that system. The *Kūṭadanta-sutta*, 'Lecture on the sharp tooth (of the Brāhmans),' displays the relations between Brāhmanism and Buddhism, while the *Tevijja-sutta*, 'Lecture on the followers of the three Vedas,' contrasts the Brāhman cult with Buddhist ideals. The fundamental doctrine of Buddhism is treated in the *Mahānidāna-sutta*, or 'Great lecture on causation.' One of the most noteworthy texts of the Pāli canon is the *Sigālovāda-sutta*, or 'Admonition of Sigāla,' describing fully the duties of the Buddhist layman. But the most important text in the *Dīgha-nikāya* is the *Mahāparinibbāna-sutta*, or 'Great lecture on the complete Nirvāṇa,' a continuous account of the last days of Buddha. It is one of the oldest parts of the *Tipiṭaka*, as supplying the earliest beginnings of a biography of Buddha. It does not, however, all date from the same period, for in some passages Buddha appears entirely as a human being, while in others he is represented as a demi-god or magician. This text resembles the Gospels more than any other in the *Tipiṭaka*. On the other hand, the very title of the *Mahāpadāna-sutta*, or 'Great lecture on the miracles (of Buddha),' indicates its lateness. It already contains the dogma of six Buddhas as precursors of Gautama, and presupposes the whole Buddha legend.

(*b*) The *Majjhima-nikāya*, or 'Collection of (lectures of) middle (length),' consists of 152 sermons and dialogues dealing with almost all points of Buddhist religion. Thus Buddha is represented as admitting that a man may obtain *nirvāṇa* even without being a monk, or may commit suicide if he acts solely for the purpose of obtaining release; and as refuting the claim of Brāhmans to be the only pure caste and asserting the purity of all four castes. These *suttas* throw light not only on the life of Buddhist monks, but on such matters as Brāhman sacrifices, various forms of asceticism, and the relation of Buddha to the Jains, as well as superstitious, social, and legal conditions prevailing at the time. The difference in age of the *suttas* is indicated by the fact that here too Buddha sometimes appears as a purely human character and sometimes as a miracle-worker.

(*c*) Of the 56 divisions into which the *Saṁyutta-nikāya*, or 'Collection of combined lectures,' is divided the last is most noteworthy, as treating of the four truths (*sachcha*), and containing the famous *Dhamma-chakka-ppavattana-sutta*, the 'Lecture on setting in motion the wheel of the law,' usually described as the 'Sermon of Benares.' Of the *suttas* in one of its sections some contain a large admixture of stanzas, while others consist entirely of verse forming short ballads of great poetic merit.

(*d*) The *Aṅguttara-nikāya*, or 'Collection of lectures arranged according to increasing number,' consists of over 2300 *suttas* in 11 sections, so arranged that in the first are treated objects of which there is only one kind, in the second those of which there are two kinds, and so on. Thus, the second deals with the two kinds of Buddhas. In this collection are found a large number of *suttas* and stanzas which occur in other texts of the canon, and which here even sometimes appear as quotations. This alone points to a late date. But internal evidence also shows that it was composed at a time when Buddha was already regarded as an omniscient demi-god, if not an actual deity.

(*e*) The *Khudda-nikāya*, or 'Collection of small pieces,' is a late compilation added after the previous ones were complete. Its contents date from very different times; for, while several of its parts belong to the latest stratum of the Pāli canon, some go back to the earliest period. It is composed for the most part in verse, and, in fact, contains all the most important works of Buddhist Indian poetry. Of the works which it embraces the following may be mentioned. The *Khudda-pāṭha*, or 'Short reader,' comprises nine brief texts to be used by the novice or as prayers in the Buddhist cult. The first is the Buddhist creed; the second gives the ten commandments enjoined on monks; and the ninth is the fine *Metta-sutta*, in which kindness towards all creatures is praised as the true Buddhist cult. The *Dhamma-pada*, or 'Words of religion,' the most familiar and longest known work of Buddhist literature, is an anthology of maxims chiefly expressing the ethical doctrines of Buddhism. More than one-half of its 423 stanzas are found in other texts of the Pāli canon. The *Udāna*, or 'Solemn utterances,' consisting of old verses and prose stories (probably later additions), is a glorification of the Buddhist ideal of life and of the endless bliss of *nirvāṇa*. The *Itivuttaka*, or 'Sayings of Buddha,' is composed in prose and verse used in such a way that the same idea is expressed in both. Very often the verse simply repeats the statement of the preceding prose. The oldest parts of the work probably date from the time of Buddha himself. The *Sutta-nipāta* is a collection of poetical *suttas*, many of which, as shown by internal evidence, must go back to the beginnings of Buddhism, and have arisen at least among the first disciples of Buddha. They are important as supplying information about the original doctrine of Buddha, besides representing an early, though not the earliest, stage of the Buddha legend. The *Thera-gāthā* and *Therī-gāthā*, or 'Songs of monks and nuns,' are poems of great literary merit exalting mental calm as the religious ideal, and describing the value of Buddhist ethical doctrine from personal experience. It is quite possible that here may be included poems composed by some of the earliest disciples of Buddha, but several are much later, since they represent a Buddha cult like that of the Mahāyāna. The *Jātaka* is a book consisting of about 550 stories of former 'births' of Buddha in the character of a Bodhisattva, or future Buddha. It consists partly of poetry and partly of prose, but only the verse portions have canonical value. For a discussion of the work see art. JĀTAKA.

3. Abhidhamma-pitaka.—The *Abhidhamma-piṭaka*, or 'Basket of higher religion,' treats of the same subject as the *Sutta-piṭaka*, differing from that collection only in being more scholastic. It is composed chiefly in the form of question and answer, like a catechism. The starting-point of this collection appears to have been the *Sutta-piṭaka*, one of the texts of which, the *Aṅguttara-nikāya*, may be regarded as its precursor. Its first beginnings seem to have been certain lists called *mātikās*, which are already mentioned in the *Vinaya-piṭaka*.

While the Pāli canon (apart from additions) was entirely composed in India, the non-canonical literature was the work of monks in Ceylon. There is only one important exception, the *Milinda-pañha*, which must have been written in the north-west of India. It represents a dialogue supposed to have taken place between a Buddhist teacher and Menander (Milinda), the Greek king who from about 125 to 95 B.C. ruled over the Indus territory, Gujarāt, and the valley of the Ganges. The author, whose name is unknown, must have lived at a time when the memory of this king was still fresh. As the Greek domination came to an end soon after Menander, he could hardly have been remembered for more than a century. That the original portion of the work, books ii. and iii. with parts of i., is thus as old as the beginning of our era is supported by the fact that it bears comparison with the very best dialogues in the *Sutta-nipāta*. Books iv.–vii., besides differing in character from the rest, are wanting in the Chinese translation made between A.D. 317 and 420. These and the other spurious parts are the work of learned monks in Ceylon.

II. *SANSKRIT BUDDHIST LITERATURE.*—While one ancient sect created the Pāli canon, various later sects produced a Buddhist literature in pure or mixed Sanskrit, of which many extensive works have been preserved, though others are known only through Tibetan and Chinese translations. The great bulk of this Buddhist Sanskrit literature belongs to, or has been greatly influenced by, the later Mahāyāna school. That school, though acknowledging that the *Theravāda*, or 'Doctrine of the Elders,' went back to Buddha, regarded it as inadequate, because it made *nirvāṇa* attainable to the few only through the life of a monk. In order to bring salvation to all humanity, the Mahāyāna taught that every man could aim at being born as a Bodhisattva (*q.v.*); and any ordinary man, even a Pariah, could attain salvation by the practice of virtue and by devotion to Buddha. The Buddhas are now regarded as divine beings from the beginning, their earthly life and their *nirvāṇa* being nothing but an illusion. The Buddhas preceding Gautama, instead of being six, are now believed to be thousands or even thousands of millions in number; and an innumerable host of Bodhisattvas is revered as having for the salvation of mankind refrained from entering *nirvāṇa*. Under the influence of Hinduism a new mythology grew up in which a number of Hindu deities were added to the Buddhas and Bodhisattvas, and a much stronger devotion to Buddha, analogous to that of the Brāhman *Bhagavad-Gītā* (*q.v.*) to Kṛṣṇa. Brāhman doctrine influenced the development of Mahāyānism on the philosophical side also. For, while the old Buddhism denied the existence of the ego only, the Mahāyāna doctrine also denied the existence of everything (expressed by the formula *sarvaṁ śūnyam*, 'everything is void'), either as complete nihilism or as ideal nihilism (*vijñāna-vāda*, or 'doctrine' that nothing exists except 'in consciousness').

1. Hīnayāna.—The large realist sect of the Sarvāstivādins ('followers of the doctrine that everything is'), besides having an extensive literature, possessed a Sanskrit canon, of which, however, only fragmentary parts of the *Udāna-varga*, *Dharmapada*, and *Ekottarāgama* (corresponding to the Pāli *Udāna*, *Dhammapada*, and *Aṅguttara-nikāya*) have as yet been discovered. The *Mahāvastu*, or 'Book of great events,' is a text of the Lokottaravādins ('followers of the doctrine' that the Buddhas are 'supernatural beings'), a subdivision of the old schismatic sect, the Mahāsāṅghikas, or 'adherents of the great community.' Its chief content is a miraculous biography of Buddha, written in mixed Sanskrit. It is of great importance as containing many old versions of texts that also occur in the Pāli canon, such as the 'Sermon of Benares' and a section of the *Dhammapada*. About half of it consists of *jātakas*, many of which do not occur in Pāli. Though belonging to the Hīnayāna, it contains much that is akin to the Mahāyāna, as that the adoration of Buddha is alone sufficient for the attainment of *nirvāṇa*. There is, however, only a slight admixture of regular Mahāyāna doctrine, and nothing of Mahāyāna mythology. Some of the elements which it contains point to the 4th cent. A.D., but the nucleus of the book probably dates from the 2nd cent. B.C. (see MAHĀVASTU).

The *Lalita-vistara*, or 'Detailed account of the play (of Buddha),' though it seems to have originally been a Buddha biography of the Sarvāstivādins, has been extended in the sense of the Mahāyāna, of which it bears all the characteristics. It is a continuous narrative in Sanskrit prose, with long metrical pieces in 'mixed Sanskrit.' Containing old and new elements side by side, it is valuable for the development of the Buddha legend from its earliest beginnings to the deification of Buddha as a god above all gods.

The *Buddha-charita*, or 'Life of Buddha,' is an epic composed in pure Sanskrit. It is the work of Aśvaghoṣa (*q.v.*), a genuine poet, who, as one of the pioneers of the Mahāyāna and a contemporary of Kaniṣka, must have composed it about A.D. 100. Originally a Brāhman, he joined the Sarvāstivādin sect, but laid great stress on devotion to Buddha. His epic, however, contains no pronounced Mahāyāna doctrine.

Another work of the same school, dating probably from the 4th cent. A.D., is the *Jātaka-mālā*, or 'Garland of birth stories,' by Āryaśūra. It is composed in a mixture of verse and prose, conforming to the style of classical Sanskrit literature. It contains 34 *jātakas*, illustrating the *pāramitās*, or 'perfections,' of a Bodhisattva, and nearly all occurring in the Pāli Jātaka Book.

Cognate with the preceding works are a number of collections of *avadānas*, or 'stories of great deeds,' being practically *jātakas* in which the hero is a Bodhisattva (not Buddha). The older ones still belong to the Hīnayāna, though attaching special importance to the veneration of Buddha. Such is the *Avadāna-śataka*, or 'Century of great deeds,' which, dating probably from the 2nd cent. A.D., contains pieces from the Sanskrit canon of the Sarvāstivādins, and nothing connected with the cult of Bodhisattvas or with Mahāyāna mythology. Dating from about a century later, but including very old texts, is the *Divyāvadāna*, or 'Heavenly *avadānas*,' which often mentions the Sanskrit canon and quotes individual canonical texts, besides having several legends in common with the Pāli canon. Most of the stories are written in good simple Sanskrit with occasional *gāthās*, but others show the elaborate metres and long compounds of the artificial classical style.

2. Mahāyāna.—The Mahāyāna, not representing a homogeneous sect, possesses no canon. But there are nine *dharmas*, or 'religious texts,' which, composed at different times and belonging to different sects, are also called *Vaipulya sūtras*. The most important and most characteristic work of the Mahāyāna school is the *Saddharma-puṇḍarīka*, or 'Lotus of good religion.' It contains matter of different date represented by Sanskrit prose and by *gāthās* in 'mixed Sanskrit.' Its original form dates perhaps from about A.D. 200. Śākyamuni is here no longer a man, the mendicant of the Pāli *suttas*, but a god above all gods, who has lived for countless ages and will live for ever. His doctrine is that every one can become a Buddha who has heard the preaching of Buddha, performed meritorious works, and led a moral life. Even those who adore relics, erect *stūpas*, or make Buddha images obtain the highest enlightenment (see LOTUS OF THE TRUE LAW).

A whole *sūtra*, the *Kāraṇḍa-vyūha*, akin in language and style to the later Hindu *purāṇas*, is devoted to the exaltation of Avalokiteśvara, the 'Lord who looks down' with compassion on all beings, here the typical Bodhisattva who, in the exercise of infinite pity, refuses Buddhahood till all beings are saved. The yearning for salvation has probably never been more powerfully expressed than in the figure of Avalokiteśvara (*q.v.*). The cult of this Bodhisattva is known to have been in existence before A.D. 400. More mythological is the *Sukhāvatī-vyūha* (*c.* A.D. 100), or 'Detailed account of the Land of Bliss,' which is devoted to the praise of the Buddha Amitābha ('of unmeasured splendour'). The *Gaṇḍa-vyūha* (a still unpublished *dharma*) celebrates the Bodhisattva Mañjuśrī (*q.v.*), who occupies a prominent position in Mahāyāna cult and art.

Other Mahāyāna *sūtras* are of a philosophic and dogmatic character. The *Laṅkāvatāra-sūtra* (a *dharma*) describes a visit paid to the demon Rāvaṇa in Ceylon by Buddha, who answers a number of questions about religion according to the doctrines of the Yogāchāra school (founded by Asaṅga). The tenets of a number of philosophical schools are also discussed here. The *Daśabhūmīśvara* (a *dharma*) represents a lecture by Buddha in Indra's heaven, about the ten stages by which Buddhahood is to be reached. It dates from before A.D. 400, when it was translated into Chinese. The *Samādhi-rāja* (a *dharma*), or 'King of meditations,' is a dialogue in which Buddha shows how a Bodhisattva can attain the highest enlightenment by various stages of contemplation. The *Suvarṇa-prabhāsa* (a *dharma*), dating from not later than the 6th cent. A.D., is partly philosophical, partly legendary, and partly ritualistic in its contents. The Hindu goddesses Sarasvatī and Mahādevī are introduced, and magical formulæ and Tantra practices are dealt with. The *Rāṣṭrapāla-sūtra* (before A.D. 600), besides containing Buddha's description of the qualities of a Bodhisattva, introduces a number of *jātakas*. Its main interest lies in its prophecy of the future decay of religion; for its realistic descriptions must largely reflect the lax morality of the Buddhist monks of the 6th century. The most important of all the *sūtras* of the Mahāyāna are the *Prajñā-pāramitās*, or *sūtras* on the 'perfection of wisdom.' They deal with the six perfections of a Bodhisattva, but especially with the highest, *prajñā*, 'wisdom,' the knowledge of the doctrine of nothingness, which denies not only being, but also not-being. The doctrine of the Mahāyāna *sūtras* was systematized by Nāgārjuna, originally a Brāhman who flourished about A.D. 200 and founded the Mādhyamika school, one of the main branches of the Mahāyāna. In order to remove the otherwise insoluble contradictions of complete nihilism, he lays down in his Mādhyamika *sūtras* that the doctrine of Buddha rests on two kinds of truth. The one is the conventional truth of everyday life (in which the higher truth is latent), and the other is truth in the highest sense. It is only through the lower that the higher truth can be taught, and it is only through the latter that *nirvāṇa* can be attained. This distinction resembles that between the higher and the lower knowledge in the Vedānta system of the Brāhmans (see MADHYAMAKA, MĀDHYAMIKAS).

Nāgārjuna cannot be regarded as the originator of the Mahāyāna doctrine itself. There must have been teachers and texts of that doctrine more than a century before his time; for Mahāyāna texts were translated into Chinese in the 3rd cent. A.D., and the Gandhāra type of Buddhist art, which represents the Mahāyāna doctrine, came into being about the beginning of our era.

Asaṅga (*q.v.*), the eldest of the three sons of a Brāhman from Peshāwar, probably flourished in the first half of the 4th century. Originally an adherent of the Sarvāstivāda school, he became the main exponent of the Mahāyānist Yogāchāra school, which recognizes existence in consciousness (*vijñāna*) only, denying the reality of the phenomenal world. The only absolute entity is truth (*bodhi*), which is manifested in the Buddhas, and which is attainable solely by those who practise *yoga* in ten stages. *Yoga* (*q.v.*) was thus brought into systematic connexion with the Mahāyāna doctrine. Asaṅga expounds the tenets of this school in his *Mahāyāna-Sūtrālaṁkāra*, a work consisting of memorial verses (*kārikās*) in various metres and a commentary written by himself. Asaṅga's brother, Vasubandhu, one of the most important figures in Buddhist literature, distinguished for profound learning and great powers of independent philosophic thought, is remarkable as having written authoritative works representing both the great divisions of Buddhism. His most important work, belonging to his earlier and Hīnayāna period, was his *Abhidharma-kośa*, which deals with ethics, psychology, and metaphysics, but is known only through a Sanskrit commentary and Chinese and Tibetan translations. In later life he was converted by his brother Asaṅga to the Mahāyāna doctrine, when he composed a number of commentaries on various Mahāyāna *sūtras*, which have, however, been preserved in Chinese and Tibetan translations only. The most important of the later Mahāyānists was Śāntideva, who probably lived in the 7th cent. and was the author of two works. The first, *Śikṣā-samuchchaya*, or 'Summary of the Doctrine,' is a manual of the Mahāyāna teaching, consisting of memorial verses (*kārikās*) and a commentary. The other is the *Bodhicharyāvatāra*, or 'Entry into the practice of enlightenment,' a religious poem of great literary merit, inculcating the pursuit of the highest moral perfection. The aim in both works is the attainment of enlightenment as a Bodhisattva by means of infinite compassion and the veneration of Buddhas, the highest wisdom being the belief in nothingness (*śūnyatā*).

An indication of the decay of Buddhism in India is the approximation of its later literature to that of Hinduism. Thus the Mahāyāna *sūtras* show striking resemblances to the Brāhmanic *purāṇas*, containing, like these, *māhātmyas*, or glorifications of particular localities, and *stotras*, or hymns addressed to various deities. There are also separate *stotras*, like those addressed to Viṣṇu and Śiva; many of them glorify the goddess Tārā, the female counterpart of the Bodhisattva Avalokiteśvara.

A further sign of degeneracy is the increasingly important position which the *dhāraṇīs*, or 'spells,' begin to occupy in Mahāyānist literature. They appear to have existed from the 3rd cent. A.D. They were probably in their earliest form intelligible *sūtras* containing Buddhist doctrine, but unintelligible mystic syllables gradually began to prevail as the 'kernel' of magic powers. Finally, under the influence of the Śaivite *tantras* they became pure gibberish and entered as essential elements into the Buddhist *tantras*.

The *Tantras* (*q.v.*), which probably date from the 9th to the 11th cent., and are composed in barbarous Sanskrit, represent the final stage in the degradation of Indian Buddhism. They are treatises partly concerned with ritual (*kriyā-tantra*) or rules of conduct (*charyā-tantra*), partly with the esoteric doctrine of the Yogīs (*yoga-tantra*). The former class is a revival of the old Brāhman ritual of the *Gṛhyasūtras*, and the mystical syllables contained in them are addressed not only to Buddhas and Bodhisattvas, but also to Śaivite deities. Most of the *tantras*, however, are connected with *yoga*, starting from the mysticism of the Mādhyamika and the Yogāchāra schools. The *yogī* here aims at the highest knowledge of nothingness (*śūnyatā*), not only by asceticism and meditation, but by magical rites, hypnotism, and other expedients. The teaching and practice of this *yoga* are a mixture of mysticism, sorcery, and erotics, accompanied by disgusting orgies. Nothing of Buddhism remains in them, for they differ in no respect, except in being described as 'promulgated by Buddha,' from the Śaivite *tantras*, inculcating as they do the worship of the *liṅga* and Śaivite gods, and introducing numerous female deities into their cult.

LITERATURE.—H. Kern, *Manual of Indian Buddhism*, Strassburg, 1896, pp. 1–8; L. de la Vallée Poussin, *Bouddhisme : Études et matériaux*, Brussels, 1897; T. W. Rhys Davids, *Buddhism*, London, 1904, Lect. ii., *Buddhist India*, do. 1903, chs. ix.–xi.; M. Winternitz, *Gesch. der ind. Litteratur*, vol. ii. pt. i. 'Die buddh. Litteratur,' Leipzig, 1913 (contains very full bibliographical notes on editions, translations, books, and articles on questions of detail—*e.g.*, on the history and authenticity of the Pāli canon, p. 1).

A. A. MACDONELL.

LITERATURE (Chinese).—The vast mass of Chinese literature is divided by Chinese scholars into four classes—classics, histories, writings of philosophers, and belles lettres. The term *king*, translated 'classic,' means originally the warp of a web, and by metaphorical extension comes to mean what is invariable, a rule. The Chinese classics are, therefore, those books which are regarded by the Chinese as canonical. Taoism and Buddhism as well as Confucianism have their classics; but in speaking of the Chinese classics one has in view the books of the Confucian canon only. If we speak of them as 'sacred,' we expose ourselves to misleading associations. We do, indeed, meet with the phrase *Sheng King* as designating the Confucian canon, where *Sheng* is the word which is used in Christian literature to express the idea of holiness. Originally, however, it refers to perfection of wisdom ('sage,' 'sagely'), and does not of itself suggest any relation to the divine. Of the perfect Sage it is said :

> 'He is seen, and the people all reverence him ; he speaks, and the people all believe him ; he acts, and the people all are pleased with him' (*Doct. of the Mean*, xxxi. 3).

The authority of the classics is due not to any special inspiration, but to their connexion with sages or sagely men who possessed this ideal development of human nature. Degrees of authority are recognized ; Mencius, *e.g.*, in some of his pronouncements is held to have fallen short of the perfect balance of Confucius. In so far as education was founded on and almost confined to the classics, their influence has been enormous. Less legitimately their connexion with the sages has given them a pre-eminent share in that reverence, passing into superstition, with which all written and printed paper is regarded by the Chinese. Among the commentators on the classics, Chu Hsi (A.D. 1130–1200) has long been considered to be the standard of orthodoxy. The number of books embraced in the Confucian canon has varied. The Imperial edition of the T'ang dynasty included thirteen books. The present canon, taken in the strictest sense, includes the Five Classics and the Four Books.

I. The 'Five Classics.'—(1) *I King*, '*The Book of Changes.*'—The germ of this is the Eight Trigrams, further elaborated into sixty-four, alleged to have been copied by Fu Hsi, a legendary ruler of early China, from the back of a mysterious creature which appeared from the waters of the Yellow River. The diagrams are combinations of whole and broken lines, and are supposed to correspond to the powers of nature—heaven, earth, fire, water, etc. Wen Wang added to the diagrams his 'Definitions' ; Chou Kung supplemented these with his 'Observations' ; and, finally, Confucius added 'Ten Chapters of Commentary,' and the classic was complete. As being the joint work of these four sages, it enjoys a great reputation. It is a compound of obscure and fanciful speculation and of a system of divination. But with regard to its meaning and its origin, whether it is native to China or may be connected with Babylonia or elsewhere, various opinions have been held by scholars.

(2) *Shu King*, '*The Book of Historical Documents.*'—We read of a canon of one hundred

historical documents, ascribed on inadequate evidence to Confucius, with a preface the Confucian authorship of which is even more doubtful. What now exists is this preface and fifty-eight books of documents, the tradition of which is traced back to two scholars, Fu Sheng and An Kuo. The twenty-five books which rest on the sole authority of the latter are gravely suspect. The whole collection of documents, which by no means forms a continuous history, falls into five divisions—the books of T'ang, of Yü, of Hsia, of Shang, and of Chou. The earliest documents refer to a period about 2000 B.C., the latest to 627 or 624 B.C. Whatever be the admixture of legendary matter, the documents are of much historical interest. As a record of early moral and religious ideas their value is also great. The political ideal is a benevolent autocracy, and sovereignty is conferred or withdrawn according to the righteous judgment of God, who raises up the instruments of His providence.

(3) *Shi King*, '*The Book of Odes.*'—This comprises three hundred and five odes, with the titles only of six more, traditionally said to have been selected by Confucius from the numerous pieces extant in his time. This account greatly exaggerates his share in the making of the classic. Confucius attached great educational value to the odes. He claims that their design is summed up in this: 'Have no depraved thoughts'; but, while they are free from indecencies, a number of them spring from irregular passion. The subject-matter of the odes is various—praise of virtuous kings and ministers, and of chaste and submissive wives; longing for absent friends, and the joy of reunion; the griefs of neglected officers and forsaken wives; complaints of injustice, remonstrances with careless or wicked rulers; celebration of State banquets and sacrifices. The odes are not arranged in chronological order, but in four classes: (1) 'Lessons from the States,' 15 books of odes from various feudal States; (2) 'Minor Odes of the Kingdom,' 8 books; (3) 'Greater Odes of the Kingdom,' 3 books; and (4) 'Odes of the Temple and the Altar,' 3 books. The earliest odes date from the Shang dynasty (1765–1122 B.C.), and the latest from the time of King Ting (605–585 B.C.) of the Chou dynasty. Much can be gathered from the odes illustrating early Chinese civilization.

(4) *Li Ki*, '*Collection of Treatises on the Rules of Propriety or Ceremonial Usages.*'—Of the 'Three Rituals,' the *I Li*, the *Chou Li*, and the *Li Ki*, the last only has a place among the Five Classics. It is a collection condensed from a larger group of documents in the 1st cent. B.C., and augmented and finally fixed in the 2nd cent. A.D. The various treatises, which are not arranged in any logical order, cover a great variety of subjects—birth, capping, marriage, death, mourning, sacrifices, education, and intercourse between persons of different grades and ages. There is much wearisome detail, but it is from this classic that we learn the genius of the Chinese race as embodied in religious and social usages.

(5) *Ch'un Ch'iu*, '*Annals.*'—*Ch'un Ch'iu*, lit. 'Spring and Autumn,' a common name for annals, is the only one of the Five Classics ascribed to Confucius himself; but it falls so far short of Mencius's eulogy of the *Ch'un Ch'iu* which he knew that doubt—not supported by other evidence—has been expressed as to whether our *Ch'un Ch'iu* is indeed the Sage's work. It seems to be founded on, and may be merely transcribed from, the annals of Lu, Confucius's native State. It is an absolutely bald record of such things as the beginnings of the seasons, State-covenants, wars, deaths of persons in high estate, and extraordinary events. The notices of eclipses are important as affording chronological data. The record runs from 721 B.C. to the 14th year of Duke Ai, when Confucius's work ends, and is supplemented by his disciples up to the time of his death, 16th year of Duke Ai (478 B.C.). Even Chinese scholars admit that the record is not impartial, and is guilty of concealing the truth. An unfortunate cloud thus rests on the character of its author. The best known commentary on the *Ch'un Ch'iu* is the *Tso Chuan*, which supplements it in a lively style and carries the record to 467 B.C., with one entry of a slightly later date.

2. The 'Four Books.'—(1) *Lun Yü*, '*Analects.*'—These were probably compiled by Confucian scholars of the second generation. Conversations with Confucius and disconnected sayings of his, mostly quite brief, form the staple of the work; but bk. 19 contains sayings of disciples only, and these occur also in other books. The main themes are ethics and government. In spite of the general failure even to seek after righteousness, it is maintained that human nature is made for virtue, which is a life-long task. For the attaining of virtue there is sufficient strength, if only it is exerted. Hence the importance of moral culture, though some may be incapable of it. The ideal man (Chun Tzŭ) is depicted, and such topics as filial piety, friendship, and perfect virtue are discussed. 'Reciprocity'—not to do to others what one would not have done to oneself—is the highest moral rule. There is intentional reticence on extramundane matters. In politics the moral ends of government are emphasized, as is also the influence of a virtuous ruler over his subjects. Bk. 10 contains many particulars as to Confucius's deportment and habits. More important are the scattered estimates of Confucius by himself.

(2) *Ta Hsüeh*, '*The Great Learning,*' is so called with reference either to the importance of its matter or to the maturer age of its students. The text appears to be fragmentary. In one recension it forms a section of the *Li Ki*; but as usually printed it is arranged by Chu Hsi, though without authority, into text by Confucius and comment by Tsêng Tzŭ. The book professes to trace the development of morality from investigation of things, through extension of knowledge, sincerity of the thoughts, and rectification of the heart, up to cultivation of the person (which is the central idea); and then on to regulation of the family and tranquillizing of the empire. The work, though not without some excellent moral ideas, falls far short of its promise.

(3) *Chung Yung*, '*The Doctrine of the Mean*' (probably rather '*Equilibrium and Harmony*'), is ascribed to K'ung Chi, grandson of Confucius, commonly known as Tzŭ Ssŭ. This treatise, like the *Ta Hsüeh*, forms a section of the *Li Ki* Human nature, as given by heaven, is the sourc of morality. In its original state it is 'equilibrium'; as developed into right action it is 'harmony.' The beginnings of this development lie at hand in ordinary duties and virtues, particularly in 'reciprocity,' which is here developed positively (=the Golden Rule; cf. *ERE* vi. 311^b). Such development of nature is exhibited in the sages. When it is so developed that fact and ideal coalesce, we have 'sincerity.' Some have this sincerity by innate endowment; some attain to it by moral instruction. It is the *summum bonum*, and has a transforming influence on things and men. Confucius is eulogized extravagantly, though perhaps not precisely identified with the ideal man who is the equal of heaven.

(4) *Mencius* (371–288 B.C.).—Seven books of his teaching remain, which are credibly ascribed to Mencius himself in collaboration with his disciples. The main topics are ethics and politics Human nature is made for righteousness. This original constitution is the child-heart which good

men preserve. Mencius maintains the disinterested nature of the affections, and asserts as according to nature the subordination of the passions to moral control. Nature in ordinary men and in the sages is one and the same, but for its development ceaseless effort is required. The 'passion nature' is not to be suppressed but disciplined. If nature does not evince its goodness, it is only as a hill constantly grazed on appears bare of verdure. Untoward circumstances should be regarded as divine discipline. Repentance so purges a man that he may even worship God. Mencius's views on politics are mostly developed in conversation with contemporary rulers, with whom he uses, on the whole, an admirable frankness. Government should be benevolent and righteous. Such a government inevitably prospers. Its main concerns are agriculture and education. Above all, the people, who are of the first importance in a State, must have a stable livelihood. If a monarch be utterly unworthy, it is not rebellion to depose him; but this must be done in accordance with the decree of heaven revealing itself in the popular mind. Mencius acutely criticizes the heretical views of his time. In IV. ii. 26 he recommends observation of phenomena as the source of knowledge. His style is lively, the illustrations abundant and mostly apt, and the dialectic keen. He has popularized and given a tone of his own to the doctrines of Confucius, to which his work is the most interesting approach.

LITERATURE.—For the English student the most accessible works are J. Legge's ed. of the *Chinese Classics*, Hongkong, 1861–72, and the volumes of his translations in *SBE* iii.^{2} [1899], xvi. [1882], xxvii. [1885], xxviii. [1885]. In W. A. P. Martin, *Hanlin Papers*, 2nd ser., Shanghai, 1894, there is a chapter on 'Chinese Ideas on the Inspiration of their Sacred Books.' For a more general view of Chinese literature one may refer to A. Wylie, *Notes on Chinese Literature*, London, 1867; H. A. Giles, *A History of Chinese Literature*, do. 1901; W. Grube, *Gesch. des chines. Litteratur*^{2}, Leipzig, 1909.

P. J. MACLAGAN.

LITERATURE (Dravidian).—Dravidian literature is the record of the best of the thought of those peoples of S. India who speak languages designated by Kumārila Bhaṭṭa, in the 7th cent. of our era, as Āndhra Drāviḍa. The four principal literary Dravidian languages are now Telugu, Tamil, Kanarese, and Malayālam. According to the Census Report of 1911, Telugu is spoken by 23½ millions of people, Tamil by a little over 19 millions, Kanarese by 10½ millions, and Malayālam by 6¾ millions. That the Sanskrit-speaking Aryans were acquainted with S. India at an early period is evident from the mention of the Āndhras by the grammarian Pāṇini (probably *c.* 350 B.C.), but Aryan immigration into the South came at so late a period that the southern Dravidian languages retained, with but few exceptions, their own characteristic grammatical structure. Their vocabulary was, however, enlarged by the inclusion of Sanskrit technical terms and words or their corruptions. So widely did this Aryan influence on the literature of the South spread in course of time that J. Vinson says:

> 'Not one Telugu, Kanarese, or Tamil book now in existence is independent of Sanskrit. . . . Writing was not applied to vernacular languages before the 4th century. It was the Aryan Brāhmans or Jains or Buddhists who first having learned the vernaculars used them for literary purposes and then taught the natives to write and compose works. The preliminary or Jain period must have lasted two or three centuries' (*Siddhānta Dīpika*, August 1908).

The southern inscriptions of Aśoka show that writing must have been familiar to the people by the 3rd cent. B.C. The present southern scripts are, however, all derived from the Āndhra alphabets of about the 4th cent. of our era. Telugu and Kanarese alphabets date from the 5th cent., while the oldest Tamil cursive writing comes from the 7th century. Previous to any writing or written records the folk-songs of the people, their moral aphorisms as well as their lyric outbursts of love and war, set as they were to music, were handed down by memory from generation to generation. P. Sundaram Pillai states that more than 19,000 lines of the hymns of the early poet Sambandhar, not later in date than the 7th cent., are still extant:

> 'Most of them appear to have been uttered impromptu, and all of them being lyrical are set to music. The original tunes are now mostly forgotten. They were lost in the later airs introduced by Aryan musicians of the north' (*Some Milestones in the History of Tamil Literature*, p. 5).

The intruding Aryan influence so blended with the indigenous Dravidian element that the Aryan lute (*vīṇā*) completely ousted the primitive Dravidian musical instrument (*yāl*), no reliable description of which remains on record. Similarly, the old grammars and the grammars of the Pāṇinian and Āndhra school of grammarians have been superseded by the now standard authority for all classic compositions, the *Nan Nūl*, composed by a southern Jain grammarian, Pavanandi, about the beginning of the 13th century. The *Nan Nūl* lays down the rule that 'to reject the old and obsolete usage and to adopt new and modern usage is not an error but a yielding to the necessities of time and circumstance' (G. U. Pope, *Third Tamil Grammar*, Madras, 1859, Rule 462, 'Nan Nūl'). Notwithstanding this salutary rule, Dravidian prose and poetry are considered worthy of commendation by the learned only when they are as different from the spoken vernaculars as Anglo-Saxon is from modern English. The more they hold themselves aloof from the colloquial language of the time and people, and the more they are swathed in archaisms, the more they merit the praise of *paṇḍits.* The earliest, and therefore the purest, Dravidian literature, as freest from Aryan influences, lies enshrined in works dating from about the 2nd cent. of our era. Collections known as the *Ten Classical Poems* are assigned to a very early date; these were succeeded by *Eight Compilations* of various authors. Eighteen shorter stanzas, including the moral aphorisms of the *Kural* of Tiruvalluvar, followed, and the four hundred quatrains of the *Nālaḍiyār*, said to have been composed by a Jain poet of about the 8th century. The latter quatrains show strong Aryan influences, dealing as they do with the ordinary topics of Indian metaphysics—the pain of existence, transmigration of the soul, and release therefrom. Some of the quatrains are mere translations from such Sanskrit epics as the *Mahābhārata*. Pope, who translated and annotated the *Nālaḍiyār* in a scholarly edition, described it as 'The Bible of the Cultivators of the Soil.' Its style, however, is so classical that no cultivator of the soil could understand the meaning of the verses unless explained to him in the language that he is accustomed to speak. The moral epigrams of the *Kural* and *Nālaḍiyār*, in couplets and quatrains, have been acclaimed as the highest achievements of Dravidian literature. Pope (*Kural*, p. xiv) truly says of the *Kural* (and the same applies to the *Nālaḍiyār*) that a line 'is often little else than a string of crude forms artfully fitted together.' Style such as this, framed on Sanskrit corrupt compounds, can hardly claim the title of literature, however epigrammatic or moral the underlying and hidden thought may be. The *Nālaḍiyār* is, nevertheless, well suited to fill its present rôle as a literary puzzle for Tamil students at the Madras University, or for Honours candidates at other Universities.

To the same period, from the 2nd cent. to the 10th cent., are ascribed the chief versified Tamil romances—the *Maṇi Mekhalai*, the *Śilapp'adhikāram*, and the most perfectly constructed and the most untranslatable, on account of its open erotic sentiment, of all Tamil romances, the

Jīvakachintamaṇi. These poems, amid a surrounding of love and romance, give a vivid view of early Jain and Buddhist life in S. India and reliable accounts of the doctrines of the Jain and Buddhist faiths. They still await translation into English to make them available for historical purposes. No translation could possibly convey the peculiar charm of the stately and leisured style of the original, its melodious and harmonic sequences of sound, and the subtlety of its quaint and involved conceits of metaphor. J. Vinson (*Manuel de la langue tamoule*, p. xlv) has given a valuable and balanced judgment respecting the comparative value of the best of Dravidian literature.

> 'Malgré tout, cependant, la littérature tamoule est secondaire. A part peut-être les recueils de sentences morales, il n'est pas un poème de quelque importance dont une traduction complète puisse être lue sans fatigue par des Européens. Ses descriptions y sont diffuses, monotones, pleines de mauvais goût et d'exaggérations choquantes, conformes d'ailleurs à un type uniforme donné. Ses poèmes d'amour ne sont pas plus variés, et les poèmes de guerre se ressemblent tous; ce sont proprement des jeux d'esprit, des amplifications de rhétorique sur une formule générale et sur un canevas minutieusement réglé. L'invention et l'imagination ne peuvent s'y exercer que sur les détails, sur les expressions, sur la mesure, sur la forme extérieure en un mot.'

This Aryan influence on the religious literature (see DRAVIDIANS [South India]) and even on the indigenous folk-songs of the people has had the result that without a previous knowledge of Sanskrit much is almost unintelligible. According to C. E. Gover (*Folk-Songs of Southern India*, p. 14), who gathered together folk-songs from the varied peoples of S. India,

> 'the foreign element progressed till almost the whole written literature of the country became Brahmanic. Indigenous poetry fell into undeserved contempt or, where that was not possible, was edited so unscrupulously that the original was hidden under a load of corruption.'

This Aryan influence so permeated the whole spirit and vitality of indigenous literature that Appakavi, a grammarian of the 17th cent., contemptuously declared that Telugu adaptations from the Sanskrit were merely for the use of women and Śūdras. The distinguished Dravidian scholar, G. V. Rāmamūrti, who quotes the above in his *Memorandum on Modern Telugu* (Madras, 1913, p. 3), further states that, should a Brāhman read the *Rāmāyaṇa* for religious merit, he reads the Sanskrit original and not a Telugu adaptation. The same writer, who is an ardent advocate for a reformed pure Dravidian literature freed from Sanskrit corruptions, states only the truth when he says:

> 'A Sanskrit original, whether it is the Rāmāyaṇa or Mahābhārata, is much simpler in style and language than a translation of it' (*op. cit.* p. 6).

Nevertheless, the simple peasant values these Telugu, Tamil, Kanarese, or Malayālam imitations of, or adaptations from, the Sanskrit poems, epics, and *purāṇas.* Read as they are by professional reciters under the village tree during the long star-lit evenings, they hold the simple folk in spellbound wonder and awe as they listen to a running translation and commentary in the current vernacular. They teach the village folk the simple story of life, of the rewards and joys of those who had faith in the gods and thereby gained salvation through the grace of the deity, of the triumph of good over evil, and, above all, the loved stories of wifely devotion and patient suffering under unmerited calamities.

R. W. FRAZER.

LITERATURE (Egyptian).—The great bulk of extant Egyptian sacred literature may be grouped in three divisions: (1) the Pyramid Texts; (2) the *Book of the Dead,* with its related group of books, the *Book of Am Duat* (or of knowing that which is in the under world), the *Book of Breathings*, the *Book of Gates*, etc.; and (3) miscellaneous writings, embracing a number of hymns to various gods, Ra, Osiris, Hāpi, Amen, such writings as the *Lamentations*, and the *Festival Songs of Isis and Nephthys* and the *Litanies of Seker*, and a number of legends concerning the gods and their relations to mankind.

1. The Pyramid Texts.—These constitute by far the most important body of Egyptian sacred writings known to us, not only because they exhibit the religious beliefs of the nation at a very early period in its history, but also because the remains of primitive traditions embedded in them enable some of the Egyptian beliefs to be traced back even to pre-historic times, and because the development manifest in the later versions of them shows how gradual but important changes were happening in Egyptian religious belief within a definite period.

The great pyramids of the IVth dyn. kings have no interior inscriptions, and it was supposed that this was true of all other pyramids also, until in 1880 Mariette's workmen at Saqqarah managed to effect an entrance to the pyramid of Pepy I. of the VIth dyn., and later on to that of Merenra of the same line, and found that both contained lengthy hieroglyphic inscriptions, hewn in the stone and coloured green. Eventually inscriptions were found in five pyramids, of which the oldest is that of Unas of the Vth dyn., and the others are those of Teta, Pepy I., Merenra, and Pepy II., all of the VIth dynasty. The inscriptions thus cover a period of about 150 years, from 2625 to 2475 B.C., or, on Petrie's Sinai dating, from about 4210 B.C. onwards. Immediately after their discovery the texts were edited by Maspero, and the attention devoted to them has been steadily increasing. The best edition at present available is that of Sethe (*Die altägyptischen Pyramidentexte*, Leipzig, 1908–10).

These texts are, then, the oldest body of religious literature extant in the world, and a great deal of the material embodied in them carries us back to very much earlier times than their own sufficiently early date, referring to primitive customs and conditions of life which had long been extinct by the time of the Vth and VIth dynasties. The later versions show traces of editing, which has been undertaken in order to meet the new developments of religious thought arising in a period of 150 years. Broadly speaking, the object of these writings is to secure blessedness in the after life to the king on the walls of whose tomb they are inscribed; for there is as yet no trace of any idea that the immortality postulated for the Pharaoh may be also the property of the common people. The whole contents of the texts are directed towards the one purpose of securing entrance to the abodes of bliss for the dead king, and unification with the gods when his entrance is secured. These contents fall under the following divisions: (1) funerary ritual and ritual of mortuary offerings, (2) magical charms, (3) ancient ritual of worship, (4) ancient hymns, (5) fragments of ancient myths, and (6) prayers on behalf of the dead king.

The material is arranged in sections, each of which is headed by the words 'Utter (or recite) the words.' Of these sections the pyramid of Unas contains 228, and the other pyramids make up the number to 714. The amount of material is thus considerable, as may be judged from the fact that in Sethe's edition it fills two quarto volumes with over 1000 pages of text. It is arranged in the most haphazard manner possible, the scribes responsible for the different versions having made (as usual in Egyptian religious writings) not the slightest attempt to group together the various types of matter enumerated above. The hymns scattered through the collection already exhibit a familiar poetical arrangement, in the form of couplets showing parallelism in the ordering of words and thoughts; and the texts are not devoid of a certain wild and rude power of imagination which entitles them to rank as literature. Thus, when the dead king rises to the vault of the heavens,

'Clouds darken the sky,
The Stars rain down,
The Bows [a constellation] stagger,
The bones of the hell-hounds tremble,
The gatekeepers are silent
When they see king Unas
Dawning as a soul.'

And there is some power of fancy in the passage which pictures the king, after he has passed the lily-lake and drawn near to the gates of heaven, being challenged by voice after voice, out of the world of the dead, 'Whence comest thou, son of my father?' until, at last, when answer has been duly made to all the challengers, they fall silent, and the dead Pharaoh enters unopposed upon his heavenly kingdom.

The life of blessedness which the Pyramid Texts contemplate has already ceased to be that which we may take to be the earliest form of the Egyptian conception of the life after death—that of sojourn at and about the tomb. The deceased king's realm is in the sky, and, moreover, in the east of the sky—this in absolute contradiction to later belief, which always placed the abode of the blessed dead in the west. In the sky the king may develop either of two destinies: he may become a star, or he may be associated with Ra, the sun-god, finally becoming identified with him. These two destinies no doubt represent two different strata of earlier belief, which have been slumped together according to the regular Egyptian custom of associating incompatibles without attempting to reconcile them.

The earliest form of belief represented in the texts is solar; the deceased is constantly identified with Ra, and the Osirian belief is referred to in terms which show that it was held to be incompatible with, or even hostile to, the solar form. Certain prayers are designed to protect the pyramid and its temple against the intrusion of Osiris; and other passages show that 'to the devotee of the Solar faith, Osiris once represented the realm and the dominion of death, to which the follower of Re was not delivered up' (Breasted, *Development of Religion and Thought in Ancient Egypt*, p. 140). Gradually, however, and, as the texts show, even within the Pyramid Age, the Osirian faith began to assert its power and to appropriate part of the place which the solar religion had formerly occupied. In doing so the Osirian conception of the life after death, originally one of an under world, becomes more or less solarized, and the two faiths interpenetrate to some extent; but, on the whole, the Pyramid Texts present us with the picture of the gradual assertion of superiority on the part of the Osirian faith over the earlier solar creed. It would appear that in this transformation we witness the triumph of popular over State religion, as it is evident that, to start with, the solar faith was the State theology, while the cult of Osiris was always a popular form of religion.

On the whole, there is no more interesting body of religious literature in the world than this, the most ancient of all, and its interest is due, not to its own intrinsic value alone, but also to the fact that it takes us nearer than any other religious writing to the primitive ideas of mankind as to the modes of life in the world after death. Passages such as those which describe how the dead king in the other world lassoes and disembowels the gods, cooking them in his kettle, and eating them,

'Their great ones for his morning meal,
Their middle-sized ones for his evening meal,
Their little ones for his night meal,'

so that 'their magic is in his belly,' have their own value as literature for the wild power and vigour of imagination which they reveal; but they are still more valuable as survivals of a period when the Egyptian, whom we have never seen save in the decent, ordered civilization of the dynastic period, was actually an unregenerate savage, with beliefs on the same intellectual level as those of other uncivilized races.

2. The Book of the Dead.—Next in importance to the Pyramid Texts comes the collection of sacred writings which has for long been regarded as representative of Egyptian religious literature, and is most widely known by the totally erroneous title of *The Book of the Dead*. The only justification for the use of this title is that the texts more or less regularly used in the collection were, like the Pyramid Texts, entirely designed for the advantage of deceased persons in the other world. The Egyptians themselves called the collection 'The Chapters of Pert em Ḥru,' or 'The Coming Forth by Day' (or 'Ascending by Day'), a title whose significance is somewhat obscure, though the contents of the chapters suggest that it may have something to do with the powers which the knowledge of them conferred upon the deceased to go in and out from his tomb, and to live an unfettered life in the other world. Concerning the early history of the *Book of the Dead* we have no certain information. In fact, there is practically no literature extant from the period between the VIth and the XIth dyn. to show the development of religious thought. In the middle kingdom, however, under the XIth and XIIth dynasties, there begins to appear a series of texts which are regarded by some as an early recension of the *Book of the Dead*. These texts are written no longer on the walls of tombs, but on the inner surface of the cedar coffins in which the well-to-do people of the period are buried. They are generally written in black ink, and are ornamented with coloured borders representing the usual funerary offerings to the deceased. About one-half of the material thus preserved is taken from the Pyramid Texts, the other half consisting of material which is met with later in the genuine *Book of the Dead*; so that, really, the inscriptions of this period occupy a middle position between the old texts, whose object was the service of the king alone, and the later book, which was a popular compilation intended for the use of all and sundry. It might be useful, therefore, to distinguish these Middle Kingdom texts by some such title as that of 'Coffin Texts,' which Breasted employs to denote them. The writing of these texts is marked by the same carelessness and inaccuracy which characterize the later versions of the *Book of the Dead*. The scribe's sole object was to cover the prescribed surfaces as rapidly as possible; it was never expected that his work would be seen again, and consequently he took the least possible trouble with it. In one instance the same chapter is repeated five times over in a single coffin. Apparently the thought that by his carelessness he might be prejudicing the safety of his patron in the other world did not worry the Egyptian scribe.

The Coffin Texts are intermediate in character, as in time, between the Pyramid Texts and the *Book of the Dead*. The old solar ideas of the Pyramid Texts are still present; but the Osirianizing process, already begun, has been carried a stage further, and now we have indications of the intrusion of the essentially Osirian idea of an under world into the old solar idea of a celestial heaven. Breasted epigrammatically sums up the dip of the balance in the Coffin Texts towards the Osirian side by the remark that in the Pyramid Texts Osiris was lifted skyward, while in the Coffin Texts Ra is dragged earthward (p. 277). The idea of a Western Elysium, in contradistinction to the solar idea of an Eastern one, begins to appear, and the character of the Elysium begins to approximate to that of the Sekhet Aaru, 'Field of Bulrushes,' as found in the *Book of the Dead.* Thus one of the chapters of the Coffin Texts is concerned with 'Building a House for a Man in the Nether World, digging a Pool, and planting Fruit trees.' Already the Coffin Texts exhibit instances of the desire, which reaches full development later, of furnishing the deceased with words of power to enable him to assume various transformations. Various texts enable him to transform himself into 'the blazing eye of Horus,' into an '*ekhet*-bird,' or into 'the servant at the table of Hathor'; and along with this development comes another which reaches an extraordinary pitch in the *Book of the Dead*—that of charms to protect the deceased against the dangers of the under world. Thus there are charms for 'preventing the head of a man from being taken from him,' for repulsing serpents and crocodiles, for preventing a man from being obliged to walk head downwards, and so forth. This kind of rubbish, towards which the Egyptian mind had an extraordinary inclination, increases steadily in amount until the really valuable morality of the *Book of the Dead* is almost choked under its senseless bulk.

The *Book of the Dead,* properly so called, makes its appearance with the New Empire in the 16th and following centuries B.C., under the XVIIIth and XIXth dynasties. The change from inscriptions on tomb-walls to inscriptions on the inner surfaces of coffins is now followed by a further change: the texts which form the new compilation for the use of the dead are now written on rolls of papyrus, and placed in the coffin. The various versions extant from the XVIIIth to the XXIInd dyn. have mainly been derived from tombs near Thebes, and therefore the *Book of the Dead* of this period is known as the Theban Recension. It cannot be too clearly understood that there never was a standard text, or anything even remotely approaching to such a thing. Probably no two papyri agree as to the number of chapters, or the contents of them, and the divergencies are extraordinarily great. The size and content of the so-called *Book of the Dead* which was buried with any particular man depended entirely upon the power or the will of his friends to purchase a satisfactory copy for him or the reverse. The poor man has a meagre roll a few feet in length, containing a pitiful selection of a few of the more important chapters; the rich man may have a sumptuous version from 60 to 100 ft. in length and containing anything up to 120 or 130 chapters. In the XVIIIth dyn. the scribes began to ornament the text with designs in black outline, known as vignettes. Little by little the practice developed, and in the XIXth dyn. the illustrated papyrus had become the rule. The illustrations are often beautiful pieces of illumination, and sometimes attention has been given to them at the expense of the text.

In the most notable papyri of the XXIst dyn. the development of the artistic work continues at the expense of the text, which has become very corrupt, and also begins to contain passages which are not found in the older versions. This tendency is accentuated in the XXIInd dyn. papyri, which contain sections that, strictly speaking, have no connexion with the *Book of the Dead.* And from this time onwards there is a falling off in the versions, until a time is reached when no copies of the book seem to have been written. This period coincides with the decline of the power of the priests of Amen-Rā.

In the XXVIth dyn., however, the book takes a new lease of life. It now appears to have been reduced to some sort of order, to have been, in fact, edited and systematized. The result of this editing is the Saïte Recension. It contains four chapters which have no counterparts in the earlier versions.

In the Ptolemaic period we have a version which is best represented by the Turin Papyrus, from which Lepsius prepared his well-known edition. It is the longest extant collection of texts, containing nominally 165 chapters—some of them, however, are really vignettes, and others duplicates, the number of actual chapters being 153.

Meanwhile a number of short religious works had been compiled, containing what at this period was deemed to be most essential in the old versions of the book, and these are more commonly found in the end of the Ptolemaic period than the full version. These are known as the *Shai-en-Sensen* ('Book of Breathings'); they contain no hymns, no addresses to the gods—nothing, in fact, which does not directly refer to the life of the deceased in the world beyond. They may be regarded as an epitome of all that the Egyptian hoped to obtain in the spirit world.

In the Roman period there are still found small rolls of papyrus inscribed with statements referring to the happiness of the deceased in the next world; and even in the early centuries of the Christian era the knowledge and use of the book were not quite extinct, for selections from it are found on coffins as late as the 2nd century.

If we take into consideration the fragmentary versions in use as late as the 2nd cent. A.D., the actually extant documents of Egyptian religion, the Pyramid and Coffin Texts, and the *Book of the Dead,* cover a period of practically 3000 years on the most limited system of dating; and, allowing for the fact that even in the earliest texts theological ideas are to a great extent developed and stereotyped, we shall probably not exceed reasonable limits in saying that these documents represent the theological development of at least 5000 years. Petrie's system of dating would, of course, considerably extend this period.

The object of the *Book of the Dead* was simply and solely to secure for deceased persons eternal life and all the advantages which the Egyptian considered desirable in the world beyond the grave (cf. art. DEATH AND DISPOSAL OF THE DEAD [Egyptian]). There are chapters the knowledge of which was intended to preserve the body from decay or the ravages of certain animals—*e.g.,* ch. xxvi., 'Of driving away Apshait' (the beetle or cockroach), and ch. xlv., 'Of not suffering corruption in the under world'; chapters providing charms against the serpent Apepi, the serpent Rerek, and the crocodile that comes to take away the charm from the deceased; chapters 'Of not letting a man be burnt or scalded in the under world,' and 'Of not eating filth or drinking filthy water in the under world,' and so forth.

Generally speaking, it may be said of these chapters, and of many others of similar import, that they are somewhat melancholy reading. Allowance has, of course, to be made for the fact that they are full of allusions to a mythology the knowledge of which has almost absolutely perished, and that these allusions may have been full of signification to the Egyptian, though they are meaningless to us. It seems, however, that very early the sense of a number of the references had already been lost, as there are several chapters which contain glosses on the various allusions, and these glosses do not always agree. Very often the chapters do not rise above the level of mere vulgar incantation. Sometimes they consist simply of an endless series of names supposed to have magical power; sometimes they are merely ludicrous—*e.g.*, ch. xxxiii., 'Of repulsing serpents in the under world':

> 'Hail, thou serpent Rerek, advance not hither! Behold Seb and Shu. Stand still now, and thou shalt eat the rat which is an abominable thing unto Rā, and thou shalt crunch the bones of a filthy cat.'

The most important chapter of the book is cxxv., which embodies the Egyptian conception of the judgment of the dead. It consists of three parts: the introduction, the famous 'Negative Confession,' and a concluding text, and is fully discussed in artt. CONFESSION (Egyptian), and ETHICS AND MORALITY (Egyptian).

The fundamental religious idea of the Egyptian mind was that of immortality, and it is to the Pyramid Texts and the *Book of the Dead* that we owe our knowledge of the extraordinary development which this idea had reached in Egypt at the earliest historical period, of the wonderful persistency with which it was maintained and worked out into almost endless detail, and, most of all, of the strange resemblances which the Egyptian conception of resurrection and immortal life presents to the Christian conception. The *Book of the Dead* is not to be taken as in any sense a complete statement of Egyptian belief—a thing which as yet is conspicuously lacking. The name sometimes given to it, 'The Egyptian Bible,' is a total misnomer. But in the working out of its central theme it affords unquestionable evidence of the fact that the conception of immortality and resurrection held by the ancient Egyptian was such as no other religious system of antiquity ever approached.

Little is told us of whether any intercourse was expected in the other world with the souls of those who had been known on earth, but chs. lii., cx., and clxxxix. at least indicate that the deceased looked forward to recognizing and being protected by the spirits of his father and mother.

The other sacred books related to the *Book of the Dead* may be briefly dismissed.

The *Book of the Overthrowing of Apepi* contains fifteen chapters treating of the various methods of destroying this enemy of souls in the under world. Its material is largely borrowed from the *Book of the Dead* (Papyrus of Nesi-Amsu, British Museum).

The *Book of Knowing that which is in the Duat* contains a description of the twelve parts of the under world through which the bark of the sun journeyed during the hours of night. It tells the names of these divisions, of the gates and gods belonging to each, and states the advantages to be derived from a knowledge of these names.

The *Book of Breathings* is largely a compilation from the *Book of the Dead*, and in the later periods was buried with the dead, being placed under the left arm, near the heart.

3. Miscellaneous writings.—Under this heading are to be included numerous hymns of Rā, Osiris, Hāpi, Ptah, and other gods (cf. art. HYMNS [Egyptian]); the *Festival Songs of Isis and Nephthys*; the *Litanies of Seker*; the *Lamentations of Isis and Nephthys*, and other similar works.

The *Festival Songs* and *Lamentations* are poems dealing with the Osirian myth, and supposed to be recited by the two goddesses with a view to effecting the resurrection of the dead Osiris. The ancient *Legends of the Gods* and their relations to mankind are found in inscriptions in several tombs (notably in the tomb of Seti I.) and in various papyri, and have been frequently translated.

In addition there are certain books which do not strictly come under the heading of 'sacred,' but have yet a semi-religious character. Among them may be mentioned the *Precepts of Ptah-hetep*, *of Gemnikai*, *of Ani*, and *of Khensu-hetep*, writings essentially of the same character as the book of Proverbs, while the *Lay of the Harper* (or *Song of King Antef*) may be compared with Ecclesiastes, and a remarkable comment on the social and moral condition of the land in the Middle Kingdom is found in the *Admonitions of Ipuwer*.

LITERATURE.—i. *PYRAMID TEXTS.*—Versions: G. Maspero, *Les Inscriptions des pyramides de Saqqarah*, Paris, 1894; K. Sethe, *Die altägyptischen Pyramidentexte*, Leipzig, 1908–10. Examples of the texts are given by E. A. W. Budge, *Egyptian Religion*, London, 1908, and *Literature of the Egyptians*, do. 1914. The best summary of their contents and appreciation of their importance is found in J. H. Breasted, *Development of Religion and Thought in Ancient Egypt*, do. 1912.

ii. *THE BOOK OF THE DEAD.*—Versions: Coffin Texts, P. Lacau, 'Textes religieux,' *RTr* xxvi. [1904]–xxvii. [1905], xxviii. [1906]–xxxiii. [1911]; R. Lepsius, *Aelteste Texte des Todtenbuchs*, Berlin, 1867; S. Birch, *Egyptian Texts of the Earliest Period from the Coffin of Amamu*, London, 1886; Budge, *Facsimiles of Egyptian Hieratic Papyri in the British Museum*, do. 1911.

BOOK OF THE DEAD PROPER.—Versions: E. Naville, *Das ägyp. Todtenbuch*, Berlin, 1886; Lepsius, *Turin Papyrus*, Leipzig, 1842; Birch, tr. of the Turin Papyrus in C. C. J. Bunsen, *Egypt's Place in Universal History*, Eng. tr., v., London, 1867; Budge, *The Book of the Dead*, do. 1898 (contains also a translation of the *Book of Breathings*); Maspero, hieroglyphic transcript with Fr. tr. of abridged version of the *Book of the Dead*, in *Les Momies royales de Déir-el-Bahari*, Paris, 1886.

iii. *MISCELLANEOUS WRITINGS.*—For hymns, etc., cf. Literature in art. HYMNS (Egyptian). A good popular rendering of the *Legends of the Gods* is found in M. A. Murray, *Ancient Egyptian Legends*, London, 1913. The *Admonitions of Ipuwer* have been rendered by A. H. Gardiner, *The Admonitions of an Egyptian Sage*, Leipzig, 1909.

Egyptians*, Eng. tr., do. 1905; Naville, *The Old Egyptian Faith*, Eng. tr., do. 1909; G. A. Reisner, *The Egyptian Conception of Immortality*, do. 1912; A. H. Sayce, *The Rel. of Anc. Egypt*^{2}, Edinburgh, 1913.

J. BAIKIE.

LITERATURE (Indian Vernacular).—The literature of the modern vernaculars of India may be divided into two main classes—that written under Musalmān, and that written under Hindu, influence. The former dates from the Mughul conquest, and was composed mainly in the Urdū form of Hindōstānī. Up to the introduction of printing at the beginning of the 19th cent. it was nearly all in verse and was confessedly written on Persian models and in Persian metres. The earliest works date from the 16th cent. A.D., but the standard of composition was set by Walī of Aurangābād in the Deccan, who flourished at the end of the 17th cent., and who is known as 'the Father of *Reḵhta*,' *Reḵhta* being the technical name for the form of Hindōstānī used by these poets. From the Deccan the taste for this literature spread to Delhi, where Walī found numerous successors, and thence to Lucknow. The most celebrated of the Delhi poets were Rafīʻu's-Saudā, best known for his satires, and Mīr Taqī, famed for the purity of the language in which his *Ghazals* and *Mathnavīs* were expressed. Both these flourished in the 18th century. Among the Lucknow poets the most celebrated was Mīr Ḥasan (18th cent.). Hindōstānī prose hardly existed as literature till the foundation of the College of Fort William in Calcutta at the commencement of the 19th century. It began with the preparation of text-books for students at the College, and since then has had a prosperous existence. It has been specially successful in the department of fiction. The novels of such authors as Ratan Nāth Sarshār and ʻAbdu'l Ḥalīm Sharar are worthy of a wider circle of readers than that to which they are condemned by the language in which they are written.

Although the above literature grew up under Musalmān auspices, its language has been successfully adopted by many educated Hindus, some of whom are looked upon at the present day as masters of an exceptionally pure style.

The beginnings of Hindu literature in the modern vernaculars were religious. In the North, up to about the 16th cent. A.D., the language of religion was Sanskrit, but, in the South, vernaculars were employed at a much earlier period. There is a great collection of Saivite texts in Tamil, said to go back to the 2nd or 3rd century. The more important of them are described in the art. DRAVIDIANS (South India). To these can be added a long list of Vaiṣṇavite works in the same language dating from before the time of Rāmānuja (12th cent.). The most noteworthy of these are referred to by A. Govindāchārya in two papers in the *JRAS* (1910, p. 565 ff., and 1911, p. 935 ff.). The Dravidian doctors employed both Sanskrit and Tamil for their writings. As a rule, it may be said that the Vaḍagalais, or Northern Tamils, wrote in Sanskrit, while the Teṅgalais, or Southerners, wrote in Tamil (cf. Govindāchārya, in *JRAS*, 1912, p. 714).

In Northern India vernacular religious literature is of enormous extent and, considered merely as literature, of great merit. It owes its origin to the spread of the Vaiṣṇavite Bhakti-Mārga under Rāmānanda and his followers (see art. BHAKTI-MĀRGA, vol. ii. p. 539 ff., esp. 546). All the great writers of this early period belonged to humble ranks of life, and were not Sanskrit scholars. Each therefore wrote in his own vernacular.

> 'The greatest of all the moderns, Tulsī Dās, although a Brāhman by caste, was abandoned by his parents at birth, and was picked up and educated by a wandering ascetic. Kabīr was a weaver, and Dādū a humble cotton-carder. Nāmdēv, the founder of Marāṭhā poetry, was a tailor, and his most famous successor, Tukārām, a struggling Śūdra shopkeeper. Tiruvalluvar, the brightest star in the South Indian firmament, was a Pariah, the lowest of the low; and Vēmana, the most admired of Telugu writers, was an untaught peasant.'[1]

In Northern India this *bhakti*-literature falls into two groups—that devoted to Rāmachandra, and that devoted to Kṛṣṇa (Krishna). In both cases it includes not only devotional works, but all branches of literature ancillary thereto.

In the art. BHAKTI-MĀRGA (vol. ii. p. 543) it has been pointed out that the foundation of the religion is the belief in the fatherhood of God. This is more especially true as regards that literature in which Rāmachandra is regarded as the most perfect presentation of the Deity, and on this idea is based some of the most lofty poetry that India, ancient or modern, has produced. In the Ganges valley, Kabīr (15th cent.) preached the doctrine in wise and pithy sayings that are still household words in Hindōstān. An offshoot from his teaching was the Sikh religion, whose sacred book, the *Ādi Granth*, is a collection of hymns by various authors formed by degrees in the course of the 16th century (see artt. GRANTH, SIKHS). Both Kabīr and Nānak (the founder of Sikhism) were more or less sectarian in their teaching. A greater man than either, but the founder of no sect, was the famous poet Tulsī Dās (16th–17th cent.), the author of the religious epic entitled the *Rāma-charita-mānasa*, or 'Lake of the Gestes of Rāma,' and of at least eleven other important works. His influence down to the present day over the people of Hindōstān cannot be overrated. Tulsī Dās was a native of Awadh (Oudh), and this country was the scene of Rāmachandra's early life and of his latest years. The poet, therefore, wrote in the Awadhī dialect of Eastern Hindī, and this form of speech has ever since, in the Ganges valley, been the only one employed for celebrating the deeds of Rāmachandra, and, indeed, for epic poetry of every description.

In Hindōstān proper, numerous followers and imitators of Tulsī Dās have narrated the story of Rāmachandra, and the same subject has also, though to a less extent, attracted writers in other parts of India. In Bengali there is the 16th cent. *Rāmāyaṇa* of Kīrttibās Ojhā, which is still recited at village festivals. In Marāṭhī, the learned Mōrōpant wrote several poems dealing with Rāma, but the favourite deity of this language is Kṛṣṇa. In the south of India we have a Tamil *Rāmāyaṇa* written by Kamban in the 11th cent., a Malayālam *Rāma-charita* of the 13th or 14th cent., and a Kanarese *Rāmāyaṇa* by Kumāra Vālmīki, said to be one of the oldest works in that language.

The literature based on the presentation of Kṛṣṇa as the Deity differs from the Rāma-literature in one important particular. The love of God is represented, not as that of a father to his child, but as that of a man for a maid. The soul's devotion to the Deity is pictured by the self-abandonment to Kṛṣṇa of his queen Rādhā, and all the hot blood of Oriental passion is encouraged to pour forth one mighty torrent of prayer and praise to the divine Lover. The whole idea is based on sexual relations; and, though the mystics who first wrote of it did so in all purity of conscience, in later years it developed into erotic poetry of a character too gross for description.

It is natural that most of the literature of this school should take a lyric form. According to tradition, Kṛṣṇa's earlier exploits centred round the town of Mathurā, and it was from this locality that his worship in the Ganges valley spread to other parts of Northern India. Hence, just as the Rāma-literature is couched in Awadhī, so the Kṛṣṇa-literature of Hindōstān is mainly recorded in the Braj Bhākhā dialect spoken round Mathurā. Its most famous writer was Sūr Dās (16th cent.), the blind bard of Āgrā. His *Sūra-sāgara*, or 'The Ocean (of songs) of Sūr Dās,' and the epic of Tulsī Dās are considered to have exhausted between them all the possibilities of Indian poetry—no later poet could write anything original. In spite of this dictum, one later writer in Braj Bhākhā, Bihārī Lāl of Jaipur (17th cent.), composed the *Sat Saī*, or 'Seven Centuries' of verses, a collection of seven hundred masterpieces in dainty miniature painting of scenes or incidents in the life of Kṛṣṇa. Numerous other writers connected with this phase of religion followed Sūr Dās in the Ganges valley. In Bihār, to the east, he was preceded by Vidyāpati Ṭhākur (15th cent.), who, however, wrote in his own language, an old form of Bihārī. He was the first of the old master-singers of Eastern India, and was followed and imitated by Chaitanya and other religious lyric poets in Bengali. Assam, further east, and, in the west, Rājpūtānā, Kashmīr, Gujarāt, and the Marāṭhā country have all been prolific in this style of composition, the most famous writers being Mīrā Bāī, the queen poetess of Mēwāṛ (15th cent.), and Tukārām (17th cent.) the Marāṭhā. In the south of India we have the great Tamil hymnology, the *Nālāyira-prabandham*, some of the contents of which are said to date from the 12th cent., and, in Telugu, the *Bhāgavata* of Bammera Pōtarāja, which ranks as a classic. There are also several works in Kanarese.

Reference has already been made to the Śaivite literature of S. India. There is a considerable literature devoted to Śiva in the north. The best known is that of Bengal, where the worship of Durgā, the *śakti*, or energic power of Śiva, is very popular. There were numerous writers who dealt with the worship of this goddess. The most admired is probably Mukundarāma Chakravartī (17th cent.), author of the *Śrīmanta Saudāgar*, or 'Adventures of the Merchant Śrīmanta,' and the *Chaṇḍī*, a poem in praise of the goddess Durgā. Extracts from the latter have been translated into English verse by E. B. Cowell (*JASBe* lxxi. [1902], extra no.). There is also a considerable Śaivite literature in Kashmīr. This directly deals with Śiva, rather than with his *śakti*, and is more in agreement with the Śaivite writings of the South described in the art. DRAVIDIANS (S. India).

---

[1] G. A. Grierson, in *IGI* ii. 415.

A few lines must be devoted to the non-religious vernacular literature of India. Of great importance are the bardic chronicles of Rājpūtānā, Gujarāt, and the Marāṭhā country. The name of the earliest and most famous of these, the *Prithīrāj Rāsau* of Chand Bardāī (12th cent.), is familiar to students of J. Tod's *Rajasthan* (London, 1829–32, frequently reprinted), in which the poem is freely quoted. A semi-historical work, the *Padumāwatī* of Malik Muḥammad, is an epic poem in Awadhī of considerable merit.

The technical study of poetics gave rise to a large literature, to a certain extent ancillary to the literature of religion. Its most famous writer in Northern India was Keśav Dās of Bundelkhaṇḍ (16th cent.), who wrote in Braj Bhākhā.

The introduction of printing into India has given an immense impetus to the writing of books. It is impossible to deal with the results of this great increase in the mass of reading matter, good and bad; it must suffice to say that, so far as Hindu literature is concerned, it has tended more and more to follow English models. The only writer in the vernacular who has gained a high reputation in both Europe and Asia on the grounds of originality and imagination is the modern Bengali poet Rabīndra Nāth Tagore.

LITERATURE.—The only work attempting to deal with the vernacular literature of India as a whole is R. W. Frazer, *A Literary History of India*, London, 1898; G. A. Grierson, in *IGI*, vol. ii. (Oxford, 1908), ch. xi., may also be consulted. Brief and incomplete accounts of the literatures of most of the literary languages of S. India have appeared in such periodicals as *IA* and in prefaces to grammars and dictionaries. For Marāṭhī literature the English student can find the most accessible account in the preface to J. T. Molesworth, *Marāṭhī Dictionary* [2], Bombay, 1857. For Bengali see Dinesh Chandra Sen, *History of Bengali Language and Literature*, Calcutta, 1911, the philological parts of which should be used with caution, and a valuable collection of selections from Bengali literature entitled *Vaṅga Sāhitya Parichaya*, Calcutta, 1914. For N. India generally cf. G. A. Grierson, *The Modern Vernacular Literature of Hindūstān*, Calcutta, 1889; the dates in this are frequently taken from native sources, and are not always to be relied upon. See also C. J. Lyall, art. 'Hindōstānī Literature,' *EBr* [11] xiii. 483 ff.; and Gaṇeśa Vihārī Miśra, Śyāma Vihārī Miśra, and Śukadeva Vihārī Miśra, *Miśrabandhu-vinōda* (Hindī), in course of publication, pt. i., Khaṇḍwā and Allāhābād, 1913.

G. A. GRIERSON.

LITERATURE (Jewish).—The term 'Jewish literature' is used to cover those writings of the Jewish people which were composed after the completion of the Biblical (OT) canon, and which are devoted to the discussion or exposition of Judaism—its teachings, its history, and its documentary sources—and designed primarily for Jewish readers. This definition excludes all such works of Jewish authorship as, though written in Hebrew and meant for Jewish readers, deal with matters of general learning or literature.

I. *THE TRANSITION FROM ORAL TRADITION TO WRITTEN RECORDS.*—Between the completion of the Hebrew canon and the rise of Jewish literature there is an interval of several hundred years, and the reason why the literary activity of the Jews was so long in abeyance is that they regarded it as unlawful to commit their teachings to writing. The Scripture, as the Book *par excellence*, could suffer no other book to approach it; all supplementary doctrine must be imparted orally (תורה שבעל פה); 'to set down the oral teaching in writing is forbidden.' Thus even the Biblical Apocrypha were regarded as ספרים חיצונים, 'extraneous books.' The idea that the production of new works was unlawful must have been prevalent by the time of the elder Sirach, and hence his collection of proverbs could not be received into the canon; an author who wished to reach the public by a book had to publish it under some ancient and venerable name, such as Daniel. That the Alexandrian Jews were at that time displaying a remarkable literary fertility did not affect the Jewish authorities in Palestine at all, for the works of the former were written in Greek, and could, therefore, make no claim to canonicity. Thus all the creations of the Jewish mind in this epoch remained unwritten; translations of the Bible, prayers, academic and popular instruction, the development of law and custom, of ethics and religion—all these were carried on by oral instruction only. Apart from letters and fugitive notes relating chiefly to ancient pedigrees,[1] there is only a single document that has come down from ancient times in a written form, viz. the roll of festivals (מְגִלַּת תַּעֲנִית), a list of joyous memorial days of the Jewish nation (Jth 8^6, χαρμοσυναὶ οἴκου Ἰσραήλ)—that remarkable Aramaic calendar which stands as a monument of Jewish national pride, though it is extant only in a revised form with relatively late scholia (*JE* viii. 427 f.).

It would appear that as regards the Haggādā the interdict upon written communication was somewhat relaxed soon after the fall of the Jewish State, while as regards the Hălākhā it was still rigidly observed (Bab. *Giṭṭîn*, 60*b*). The first complete literary product of post-Biblical Judaism is the Mishnā, which was redacted *c.* A.D. 200 by R. Judah Nāśî. Whether the Mishnā was at once committed to writing is a question which is still—as it has been for a thousand years—a subject of controversy among scholars; and, while there are ostensible indications of its having been in written form from the first, yet our reliable sources rather support the hypothesis that at the time of its redaction and even for centuries afterwards it was still transmitted in a purely oral form (*JE* viii. 614). By the time we reach the redaction of the Babylonian Talmud, however (*c.* A.D. 500), the ancient prohibition must at length have been set aside, the change being necessitated, indeed, by the exigencies of the period—the repeated interference of the State in forbidding the continuance of the seminaries in their traditional ways—and also by the enormous growth of the material, which had now become too great a load for the human memory. In view of these facts, the last of the Amôrâîm and the Sabôrâîm found it necessary to break with the past by committing the Talmud to writing, and they thereby cleared the ground for the growth of a Jewish literature. Once the ban against writing had thus been lifted from the Hălākhā—that important domain where the interdict had been observed most rigorously—Jewish scholars formed the resolution, hesitatingly at first, but with time ever the more confidently, to write down and make more generally known the facts of their people's life and doctrine.

II. *LITERARY PERIODS.*—Jewish literature, in the fifteen centuries of its development, has passed through a variety of phases. To the period from *c.* A.D. 500 to 1000 we must assign its initial stages, in which the various branches of literature had to be evolved and wrought into form. While formerly knowledge of every kind was contained and indiscriminately massed together in the Talmud, special departments were now gradually disengaged from the mass, and were dealt with in monographs and more or less systematically. To the Gāôn Sa'adya b. Joseph (A.D. 892–942; see art. SA'ADYA) belongs the distinction of having been the first to treat of the most widely varied branches of Jewish theology in special works, and thus to have laboured as a pioneer, so that he has been rightly named 'the chief of the speakers in every place.' From A.D. 1000 to 1200 Jewish literature passed through its mediæval period of fertility in two ramifications, viz. a Hispano-Arabic, which displays a powerful tendency to scientific thoroughness and systematization, and a Franco-German, which in more characteristic fashion further elaborated the traditional materials of knowledge. The period from 1200 to 1500 was one of decline, and from 1500 to 1750 one of profound decadence, during which the literary activity of the Jews was mainly confined to Poland and the East; but, from the advent of Moses Mendelssohn ([*q.v.*] 1729–86), Jewish literature, now in contact with the spirit of European culture, experienced a fresh revival which, mainly under the influence of Leopold Zunz (1794–1886), developed into a scientific treatment of Judaism, *i.e.* a methodical and critical discussion of the thought expressed in the Jewish teachings and evolved from the Jewish mind, and has since found expression in numerous works, not only in Hebrew, but in all the languages of Europe. We cannot here trace Jewish literature throughout its various epochs and in all its phases; it must suffice to examine the chief departments in which it was specially active, to indicate the tendencies that asserted themselves in it, and to search for the reasons that led to the success of this or that particular work. A characteristic feature of Jewish literature, as contrasted with the literatures of other peoples, is that it is not so much the work of individual authors as the collective product of the spirit of entire epochs. In many cases, too, it is ill preserved—a result of the fact that it was not studied by the learned only, but spread among all classes; and, further, that it did not merely serve an intellectual interest, but also provided for a religious need, and was in consequence often disseminated and transmitted by untrained hands, in a form very different from what was originally intended.

III. *THE SEVERAL DEPARTMENTS OF JEWISH LITERATURE.* — Jewish literature in its entire range may be conveniently brought under the following categories, with which we shall deal in order: (1) Scripture study and investigation of the Hebrew language; (2) works relating to the Talmud; (3) historical literature; (4) systematic theology; and (5) liturgical and secular poetry.

1. Scripture study and investigation of the Hebrew language.—Jewish literature is first of all, as it was originally, exegesis of Scripture—Biblical study in the broadest sense of the term. Targum and Midrash constitute its earliest forms, and perhaps the two were originally one, for the Targum was of the nature of paraphrase, and thus involved a kind of exegesis. Traces of the old, non-literal rendering of the Scriptures are found in the so-called Palestinian Targums—the Targum of Jonathan and the Fragmentary Targum. For the Pentateuch, however, the rendering to which Aquila first gave the name of the Targum of Onqelos, and which assumed its definitive form in the Babylonian schools of the 3rd cent. A.D., became the standard of authority; it was recited in the synagogue, and was generally regarded by the Jews as *the* Targum. For the Prophets, again, the acknowledged standard was the so-called Targum of Jonathan—not much later in date than that of Onqelos; while here, too, the other Palestinian Targums fell into the background. For the Hagiographa there was in the period of the Talmud no recognized Targum at all, and the renderings which we now possess were separately executed in the course of centuries, some of them, indeed, not having been completed till after A.D. 1000 (cf. *JE* xii. 57 ff.). 'Midrash' (*q.v.*) denotes exposition of Scripture, and was at first attached to the particular passages explained; but in the Bible itself we find the word used in the sense of a reproduction of older narratives (2 Ch 24^{27}; cf. 13^{22}). The Midrash was of a twofold character; from the text of Scripture it evolved laws—the Hălākhā—or else deduced moral and religious teachings, adding stories and parables—the Haggādā. The Hălākhic Midrash was compiled chiefly in the schools of R. Ishmael ben Elisha (early 2nd cent. A.D.) and R. 'Aqîbā (see art. AḲIBA BEN JOSEPH), and the latter school continued to be regarded as authoritative; the work of both schools, however, being in the mass subsequently lost, has come down to us in mere fragments; and it is only recently that we have been able, with the help of the *Midrash hag-Gādhôl*, a compilation of the 13th cent., written in Yemen, to piece the remains together, and obtain an approximate idea of the form of the ancient Midrashîm. The Haggādic Midrash is of vast extent; much of it is included in the Talmud, but it is found also in special collections. Leaving out of account the immense number of smaller Midrashîm (*JE* viii. 572 ff.), we may distinguish the following great compilations: the Midrash Rabbā or Midrash Rabbôth to the Pentateuch and the Five Mᵉgillôth, to Esther, Ruth, Song of Solomon, Lamentations, and Ecclesiastes, the Tanḥûmā to the Pentateuch, and the Midrash to the Psalms, Proverbs, and Samuel; but, while all these continuously follow the order of their respective texts, the Pᵉsiqtā collections deal only with selected portions of the Tôrāh or of the Prophets, for use at festivals or on special Sabbaths. Mention should also be made of the two great Midrashic compilations known respectively as the *Yalqûṭ Shim'ônî*, which probably took shape in Germany during the 12th cent. A.D., and embraces the entire Bible, and the *Midrash hag-Gādhôl* of Yemen already referred to, which is confined to the Pentateuch (*ib.* 557 ff.). The Haggādic Midrash has been brought within the reach of contemporary scholarship by the monumental works of Wilhelm Bacher, *Die Agada der babylonischen Amoräer*, Strassburg, 1878, *Die Agada der Tannaiten*, do. 1890, 1902, and *Die Agada der palästin. Amoräer*, do. 1892–99.

The Midrash frequently gives simple explanations of the words and meaning of the Scripture text, but this is by no means its primary interest; in the main it is concerned with religious and devotional ends. Jewish scholarship did not evolve a rational exegesis of its own—exegesis in the scientific sense—till the time of Sa'adya, who was a pioneer and wrote independent commentaries upon, as also a translation of, the whole Bible. In his excursuses he, too, writes with a religious purpose; but, on the whole, his chief concern is the rationalistic, grammatical, and lexical exposition of Scripture. The movement which he initiated owes its further development in the main to European scholars. In Europe there arose two great exegetical schools, one in Spain, the other in Northern France. The Spanish school was largely influenced by Arabic learning, and its most prominent representative was Abraham ibn Ezra (1093–1168), whose works superseded those of all his predecessors (cf. *JE* vi. 520 ff., and art. IBN EZRA, § 1). His commentaries had an extraordinary popularity; they have come down to us in various MS copies, and were appended to the first printed editions of the Bible. The Northern French school, again, while it certainly lacked the scientific bent, the philological foundation, and the general culture of the Spanish, yet by its devoted study of the Biblical text and its sympathy with the spirit of the written word did a large amount of highly meritorious and exemplary work for the discovery of the verbal sense. It failed to gain recognition in its ripest representatives, who—particularly Samuel b. Meir (*c.* 1085–*c.* 1174)—have, in fact, been re-discovered by modern scholarship; but the favourite and most widely circulated commentary of the Middle Ages was the work of Solomon b. Isaac of Troyes, called Rashi (1040–1105), who combined the old method of the Midrash with the effort to ascertain the plain meaning; and consequently, though he certainly gives the dry details of exegesis, we also find in his work passages of an attractive and edifying character. His commentary eclipsed all others in general esteem; from the outset to the present day it has been widely read, and has formed a subject of study by itself; while in the course of centuries it has drawn to itself over a hundred special commentaries, and ranks in the popular mind as 'the commentary' κατ ἐξοχήν (cf. *JE* x. 324 ff.). A blending of the characteristic tendencies of the Spanish and Northern French schools appears among the scholars of Provence, from whose group sprang David Kimḥi (1160–1235; cf. *JE* vii. 494 f.), whose exegetical works on the Prophets and the Hagiographa were specially prized. The re-discovery of the predecessors and successors of the exegetes named, as also the historical evaluation of the entire literature of the period, has been the work of modern scholarship. In Kimḥi's commentaries we find a new type of exegesis—the philosophical, which soon passed into the mystical. Of the works that favour this type, those especially which were able to bring their more stubborn materials into a popular and generally accessible form attained a great vogue. These include the long-popular commentaries of Don Isaac Abarbanel (1437–1508; cf. *JE* i. 126), and also those of the so-called Bîûrists (*JE* iii. 232), dating from the age immediately after Moses Mendelssohn. On the whole field of exegetical literature cf. *JE* iii. 162–176.

Closely associated with the exegesis of Scripture were the works dealing with Hebrew philology. Linguistic study among the Jews was but rarely regarded as an end in itself, but, as the science of the language in which the Scripture was written, was pursued mainly as an adjunct to Biblical investigation. The literary treatment of Hebrew grammar and lexicography was systematically prosecuted by the Hispano-Arabic school, the masterly works of which, however, were composed in Arabic, and accordingly, even when translated into Hebrew, attracted but little notice; the philological writings of Judah b. David Hayyuj (b. *c.* 950; *JE* vi. 277 f.) and Abū al-Walīd Marwān ibn Jānāh (early 11th cent.; *ib.* vi. 534 ff.), important as they are, were re-discovered only recently. The works of Abraham ibn Ezra enjoyed an enormous vogue, as did also, and even in a still greater degree, the grammar and dictionary of David Kimḥi, which have in many quarters retained their pre-eminence until recent times. From the 15th cent., however, a marked decline in linguistic studies began; in proportion as mysticism prevailed, interest in the exact investigation of Hebrew fell away; the works of Elijah Levita (1468–1549; cf. *JE* viii. 46) attracted much less notice in Jewish than in Christian circles. Philology remained in a state of neglect until it was restored to its rightful position by the Mendelssohnian group; the manuals of J. L. Ben-Ze'eb (1764–1811; *JE* ii. 681 ff.) were widely studied until they were superseded by more modern and more competent works. The revival of Hebrew philology was due in a very special degree to the pioneer work of S. D. Luzzatto (1800–65; cf. *JE* viii. 224 ff.). Luzzatto was at the same time the first Jewish scholar for centuries who combined the study of the language with the exegesis of Scripture, and may also be regarded as the most eminent independent representative of Biblical literature among the Jews of last century. With the name of Luzzatto that of Abraham Geiger (1810–74) deserves to be specially associated. Speaking generally, we may say that the Biblical science of the Jews during last century was profoundly influenced by the contemporary critical works of Christian scholars in the same field.

2. Works relating to the Talmud.—The Talmud came to be the most important, the most comprehensive, and the most highly esteemed branch of Jewish literature; it is in a sense bound up with Biblical study, as its germs are found in the Midrash, and as it purports to be nothing more than an exposition of and a complement to the Scriptures. It consists of two parts, the Mishnā and its elucidation, the latter being the Talmud in the narrower sense; the term G^{e}mārā, which is usually applied to the second part, is of relatively late origin, and was introduced into the text by the clerical censorship. Our use of the expression 'the Talmud' involves a presumption due to the facts of historical development; for, although there is but one Mishnā, there are two commentaries upon it—one of Palestinian, the other of Babylonian, origin. In the process of historical development, however, the seminaries of Palestine were early dissolved, while those of Babylonia maintained their position, and succeeded in establishing the regulative supremacy of their views and decisions. The result was that, although in the earlier period the Palestinian scholars were held in great honour, and their decisions sought in all important questions, eventually the scholars of Babylonia came to be the sole recognized authorities. In the age of the G^{e}ônîm (*c.* 600–1040) the Babylonian Talmud had secured so high a place in general esteem that its Palestinian counterpart was virtually forgotten; and when, about the year 1000, the latter was once more brought to mind, consolation for its long neglect was sought in the pretext that the decisions of the Palestinian scholars had been known to the Babylonians, and had been duly taken into consideration by them. In consequence, the Palestinian Talmud remained in comparative obscurity; it was not studied to anything like the same extent as the Babylonian, nor did it find a single commentator during the entire mediæval period; moreover, its text suffered such gross deterioration that we can now scarcely hope to see it restored even to a semblance of its original form. It should be noted, however, that a few Hălākhic collections from Palestine, the so-called Minor Tractates, were appended to the Babylonian Talmud, and were studied in conjunction with it, thus becoming a factor in the further development of religious practice and religious law. The two Talmuds are not related to the Mishnā in the same way; in the Palestinian Talmud we have the commentary to forty Mishnaic Tractates, belonging to the first four Orders; in the Babylonian we have thirty-six only, principally from the second, third, fourth, and fifth Orders, while of the first and sixth Orders only one tractate in each is dealt with.

As the Talmud, until the dawn of the modern epoch, occupied the central place in Jewish learning, and formed the supreme standard of religious thought and practice among the Jews, it became the nucleus of an enormous literature, which, in connexion with its more outstanding representatives, may be summarized in the following divisions.

(*a*) *Explanatory works.*—For so intricate a work as the Talmud, explanation was indispensable; its own expositions were frequently very brief, and the links of connexion could be supplied only by those who had been initiated into the peculiar mode of its dialectic; moreover, the language of the Jews, like their general conditions of life, underwent in process of time radical changes, and was no longer the same as was presupposed in the Talmud. The need of explanation was felt at an early date, and soon, indeed, explanatory notes seem to have been attached to the text and transmitted with it; thus we find writers of the 10th cent. quoting *verbatim* from comments dating from the 6th.[1] On the other hand, what we may call an expository literature was not evolved till a much later day, for it was the Gᵉônîm of the 10th cent. who first felt constrained to supply written comments—first of all in the form of explanations of words; and these, again, were the germs of the comprehensive dictionaries, of which the most celebrated was the *ʿĀrûkh* of Nathan b. Jeḥiel of Rome († 1106; cf. *JE* ix. 180 ff.). The first commentaries in the ordinary sense, however, were produced in N. Africa *c.* A.D. 1000; besides explaining words, they gave short notes elucidating the context. The most important of these N. African commentaries is that of R. Ḥananel b. Ḥushiel of Kairwan (990–1050; cf. *JE* vi. 205). In Spain little progress was made in the composition of commentaries, although it was in that country that the most influential Mishnā commentary of the Middle Ages was composed, viz. that of Moses Maimonides ([*q.v.*] 1135-1204; cf. *JE* ix. 73 ff.), written originally in Arabic, but afterwards translated into Hebrew, and from the time that it was first printed (1492) to the present day regularly embodied in editions of the Mishnā or the Talmud. The most notable contributions to the exposition of the Talmud were produced in Germany and France. Talmudic learning, carrying with it the earliest commentaries, spread by way of Italy to Germany. R. Gershom b. Judah, 'the Light of the Exile' († 1040; cf. *JE* v. 638 f.), who taught in Mainz, gave the impulse to a new method of Talmudic exposition. His school not only dealt in the most thorough manner with details, but attached great importance to bringing out the connexion of thought; and from that school emanated the most notable of all commentaries on the Talmud, that of Rashi mentioned above. Its greatness lies in the fact that its author, with the self-restraint of genius, surrenders his mind wholly to the text, suppressing his own opinions, and bent only upon discovering and exhibiting the thought of the original writer. Rashi never introduces superfluous matter; nor, again, does he ever gloss over a difficulty; he either gives a solution of it or modestly confesses that he has none to suggest. The work came to be used as an indispensable auxiliary to the study of the Talmud; it superseded all previous commentaries, and threw all the later into the shade. While much of the expository literature of that age was buried in oblivion until the modern period, Rashi's work was frequently conjoined with the MSS of the Talmud, and it has been bound up with the printed editions from the first; even at the present day, indeed, it is regarded as an essential adjunct to the study of the Talmud, and no less as a work on the whole unrivalled in its method. The French schools sought to supplement Rashi; they occasionally felt the need of a more dialectical mode of exposition, and thought that the text of the Talmud should be furnished with decisions of the questions proposed and with references to practical life; and, finding none of these things in Rashi's work, they wrote supplementary notes, *tôsāfôth*, which, however, did not run continuously with the text, but here and there supplied comments of the desiderated type upon particular passages. Of these Tôsāfists numerous schools arose in Germany and France during the 12th and 13th centuries; the works which they produced were much studied in the Middle Ages, and afterwards, from the time when the Talmud was first printed in its entirety (Venice, 1520), a number of them, selected for purposes of study, were issued in conjunction with it (cf. *JE* xii. 202 ff.). A peculiar development of the expository literature appears in the so-called 'novels' (*ḥiddûshîm*), which, taking their pattern from the works of Naḥmanides (1194–*c.* 1270) and Solomon b. Adreth (1235–1310), continued to be produced for hundreds of years from the 13th cent.; they were really commentaries in the form of treatises on entire sections of the Talmud. Talmudic commentaries finally degenerated into mere empty dialectic, and this was specially the case in Germany and Poland from the 15th century.

As regards the Palestinian Talmud, the Middle Ages scarcely produced a single commentator, and the modern period not even one, who deals with it from beginning to end. The best known and most widely circulated commentaries to it are the *Qôrbān hā-ʿĒdhā* of David Fränkel, the teacher of Moses Mendelssohn, and the *Pnē Môshe* of Moses Margolioth (*c.* 1700). For the literature of the commentaries see *JE* xii. 28 ff.

(*b*) *Compendia.*—While the Talmud was regarded as the standard to which all religious institutions must conform and by which all questions of law must be solved, it was, nevertheless, but ill adapted to facilitate consultation for the decisions that were often required in practical life. Apart from the fact that it was a work of vast compass, such as scarcely a single individual could completely master, it confined itself almost wholly to the discussion of the questions which it raised, and hardly ever gave a decision as to which of the opinions which it presented should be regarded as authoritative. Further, its matter is not always systematically arranged; it frequently passes abruptly from one theme to another, so that its discussions of a single question have often to be sought for and examined in widely separate places. In order to remedy these defects, Yehudai, Gāôn in Sura, had (*c.* A.D. 750) drawn up a compendium of *hălākhôth*, which was subsequently revised, enlarged, and, as the *Hălākhôth Gᵉdhôlôth*, given a place in the religious literature by Simon Qayyara (*c.* 850), from whose time it has been taken into account as a basis for all decisions (cf. *JE* vii. 461 ff.). The *Hălākhôth Gᵉdhôlôth* often follows the Talmud's own order, and, while abridging its discussions, it reproduces them with verbal accuracy, and in such a way as to make the final question quite clear. The same method was adopted by Isaac b. Jacob Alfasi (1013–1103), whose work was diligently studied, and was likewise used as a basis for decisions. This type of synoptical abridgment of the Talmud became the work of a special school, mainly in Spain, where it was cultivated by many scholars—and with outstanding success by Asher b. Jeḥiel († 1327), a native of Germany, who took Alfasi's text as his groundwork, and added to it numerous notes from the Tôsāfists; his compendium is generally given in the printed editions of the Talmud.

Another mode of epitomizing the matter of the Talmud was to arrange it under the 'Six hundred and thirteen commandments and prohibitions,' an arrangement which is first found as an introduction to the *Hălākhôth Gᵉdhôlôth*, and was subsequently often reproduced in comprehensive forms. The most important work of this class is the *Sēfer ham-Miṣwôth* of Moses Maimonides, which, originally written in Arabic, was several times translated into Hebrew, and found many opponents and many imitators (cf. *JE* iv. 181 ff.).

The most important and practically most serviceable type of compendium, however, was the 'Code' in the narrower sense of the word. Here, too, Maimonides stands supreme; his *Mishnē Tôrāh*, written in Hebrew *c.* A.D. 1180, is the most systematic book in all Jewish literature; with masterly skill he arranges the entire material of the Talmud according to subjects, groups it in paragraphs, and succeeds in presenting it in such a way that the reader can at once find his bearings. Each section of the work opens with a clear statement of its subject, and then proceeds from the less to the more significant, from details to essentials, all being set forth so lucidly that the solution of any particular problem can be found without delay. The book met with the approbation which it so well merited—though it likewise encountered opposition, not only because of the bold and unprejudiced views advanced by the author in the theological sections, but also—what chiefly concerns us here—because of its very structure. Codification was a process that was never greatly favoured among the Jews, who were disposed to fear that it might supersede the study of the sources; and with regard to the work in question, consisting as it did of abstractly formulated paragraphs, and giving no references to sources or to the learned champions of particular views, they thought it well to guard specially against that danger. Nevertheless, the admirable structure of the *Mishnē Tôrāh*, and the veneration in which its author was held, made it a standard work; and the writings designed to elucidate or criticize it constitute a literary aggregate of vast proportions.

Maimonides, in importing the entire material of the Talmud into his Code, took no account of the question whether it still applied to the conditions of his age; thus, *e.g.*, he dealt also with the laws regarding the Temple, the sacrifices, etc. About the year 1340, however, Jacob b. Asher drew up a new code, entitled *Arbāʿā Ṭûrîm*, in which he passed by such subjects as were no longer of practical significance, and took cognizance of views and decisions that had meanwhile come to the front; moreover, unlike Maimonides, he dealt with the various themes in treatises, not in separate paragraphs, and, in particular, he gave expression to the views of scholars who had lived in the centuries immediately preceding. The *Arbāʿā Ṭûrîm* came to be a work of the utmost significance in the following period. Joseph Qaro (1488–1575; cf. *JE* iii. 585 ff., and art. QARO, JOSEPH) wrote a voluminous commentary to it, the *Bēth Yôsēf*, from which he afterwards compiled an abstract entitled *Shûlḥān ʿĀrûkh*. The *Shûlḥān ʿĀrûkh* follows the arrangement of the *Arbāʿā Ṭûrîm*, and, like that work, is divided into four parts. It deals only with the laws that had been in force from the fall of the Temple, but it departs from its model and reverts to the method of Maimonides in giving rules only, short paragraphs, and in making no reference to its sources or to the advocates of particular views. In systematizing power and candour of thought, however, Joseph Qaro is signally inferior to Maimonides; he was strongly influenced by the mystical tendency in the theology of the period of decadence. The *Shûlḥān ʿĀrûkh* was at first slighted, being regarded as a mere 'book for the ignorant,' and its eventual fame was due to its critics, who gave expression to their opposing views in commentaries and supplements to it. To begin with, Moses Isserles (1520–73; cf. *JE* vi. 678 ff.) published a series of supplements to the *Bēth Yôsēf* under the title of *Darkhē Môshe*, and afterwards re-issued them as glosses to the *Shûlḥān ʿĀrûkh*; here, on the basis of the Talmudic tradition then dominant in Germany, he frequently modified the decisions of Qaro. It was in this supplemented form that the *Shûlḥān ʿĀrûkh* was thereafter regularly given to the public, but it did not win full recognition till about 1650, by which date each of its four parts had already formed the text of celebrated commentaries; these, however, were not of the nature of expositions, but were rather supplements, and often, indeed, in direct opposition to their text. Thus at length it gained an acknowledged position, yet never without encountering resistance; and even in those circles of Jewish life where in principle it served as a norm there were countless departures from it in matters of detail. On the literature of the compendia cf., further, *JE* vii. 635 ff.

(*c*) *Responses.*—A combination of the two forms of Talmudic literature dealt with in the foregoing is found in the *Shᵉʾēlôth ū-Tᵉshûbhôth* ('Questions and Answers'), which contain explanations, decisions of particular cases, etc. The literary interchange of views regarding Talmudic problems began very early.

---

[1] Cf. N. Brüll, *Jahrbücher für jüd. Gesch. und Litt.*, ii. (Frankfort, 1876) 43.

and an active correspondence by letter had been carried on between the teachers of the Talmud in Palestine and those in Babylonia. In proportion as the Jews became more and more dispersed, correspondence became more and more necessary; and from the time of the Gᵉônîm there was a large increase in the number of responses; from that period itself, indeed, no fewer than fifteen more or less voluminous collections of responses have been preserved. Nor, when the centre of Jewish life was transferred to Europe in the Middle Ages, did the interchange of opinions diminish either in extent or in vigour. Thousands of opinions and legal pronouncements by certain eminent Rabbis of mediæval times have been preserved, and were in the mass consulted as an important source of information. The number of works embodying such responses is so enormous that we must be content to mention only the most extensive and the most generally consulted: from the Middle Ages we have those of Meir b. Baruch of Rothenburg (1220–93), Naḥmanides (1194–c. 1270), and Solomon b. Adreth (1235–1310), and that of Isaac b. Sheshet (1320–1408), all belonging to Spain; from the dawn of the modern period, those of Israel Isserlein († 1460) and Joseph Kolon (c. 1450), as also that of David ibn Abu Simra († c. 1570); and from more recent times those of Ezekiel Laudau († 1793) and Moses Sofer († 1839). On the literature of the responses cf. also *JE* xi. 240 ff.

(*d*) *Systematic works.*—Mention must be made, lastly, of that branch of the literature which deals with the problems of the Talmud in a methodical and systematic way—a mode of treatment but little regarded in the earlier period, and, indeed, never strenuously applied till modern times. The earliest work aiming at systematic treatment is the *Sēder Tannāîm wᵉ-Ămôrāîm*, dating from the 9th cent.; the next works of the kind to appear were the *Mᵉbhô hat-Talmūdh* of 'Samuel ibn Nagdila' (extant only in one part, which, however, is printed in all editions of the Talmud) and the *Maftēaḥ* of Nissim b. Jacob, both of the 11th century. Of great importance in a methodological respect, again, are the introductions which Maimonides issued as prolegomena to his commentary on the Mishnā and several of its divisions. Later works worthy of mention are the *Sēfer hak-Krîthûth* of Samson of Chinon (c. 1300) and the *Hălîkhôth 'Ôlām* of Joshua ha-Levi of Tlemsen (c. 1450); the latter has drawn around it numerous commentaries, and has often been reprinted. A new epoch in these aspects of Talmudic study was ushered in by S. J. L. Rapoport (1790–1867; cf. *JE* x. 322 f.), who, in various Hebrew periodicals, as also in his dictionary, the *'Ērekh Millîn*, dealt with the problems of the Talmud in a scientific way, at once systematic and critical. The course marked out by Rapoport has been followed by Z. Frankel (1801–75; *ib.* v. 482 ff.) in his *Darkhē ham-Mishnā* and his *Mᵉbhô hā-Yᵉrūshalmî*, Abraham Geiger (1810–74; *ib.* v. 584 ff.) in numerous treatises in his magazines, and I. H. Weiss (1815–1905; *ib.* xii. 495 ff.) in the historical work named below.

3. Historical literature.—The post-Biblical historiography of the Jews took its rise as an element in the systematic treatment of the Talmud. The majority of the earlier works in this field were written chiefly with the object of re-constructing the chain of tradition and of determining as accurately as possible the genealogies of eminent families and the chronicle of learned men. The germs of Jewish historical literature are found in the Talmud itself, and these furnished the pattern for the earliest developments. The chronology of the course of history from the Creation to the destruction of the Second Temple is given in the *Sēder 'Ôlām*, the nucleus of which was the work of Jose b. Ḥalafta (c. A.D. 160). An annalistic work, though dealing only with the family of the exilarchs, is found in the *Sēder 'Ôlām Zûṭā*, a genealogical register, which cannot have been drawn up before the 7th cent. A.D., and which assumes a disparaging attitude towards the exilarchs of the day. The biographical annals of scholarship, again, are represented by the *Sēder Tannāîm wᵉ-Ămôrāîm* (c. 880), and the *Epistle of Sherira* (987), the latter being our principal source for the period between A.D. 500 and 1000. To the same class belongs also the *Sēfer haq-Qabbālā*, composed in 1161 by Abraham b. David of Toledo, who is chiefly concerned to exhibit the continuity of learned tradition down to his own times; for, though he gives somewhat more detailed information regarding the Jews in Spain of the two preceding centuries, yet even there his manifest purpose is to trace the development of learning and recognized authority. The work of Abraham Zakuto, who was for a time a professor of astronomy and chronology in Salamanca, but after the expulsion of the Jews from Spain settled in the East, was upon similar lines; his *Sēfer Yūḥăsîn* (1504) contains a detailed study of most of the Talmudic authorities, and also a chronology brought down to his own day. For centuries this work was known only in a form containing a series of supplements, and was first made accessible in its original shape in 1857. Jehiel Heilprin, of Minsk, wrote his *Sēder had-Dôrôth* (c. 1700) solely for the purpose of supplementing the data of Zakuto and bringing the Rabbinical genealogies down to his own times.

A further incentive to the writing of history was provided by the peculiar fortunes of the Jewish people, and in particular by the sufferings and persecutions which they had to endure almost without intermission during the Middle Ages. These oppressions are chronicled in a vast number of fragmentary records, both in prose and in poetry, but there are very few connected and continuous accounts. We shall enumerate here only the more extensive compilations of this type still extant. A narrative of the persecutions which harassed the Jews, chiefly in the Rhine country, in connexion with the Crusades is given by A. Neubauer and M. Stern in their *Hebräische Berichte über die Judenverfolgungen während der Kreuzzüge*, Berlin, 1892. In those days of incessant persecution it was the practice to read (*commemorare*) in the synagogues the roll of those who had perished as martyrs; so-called memorial books were drawn up in the various communities, and were constantly added to. The most comprehensive of these books was published by S. Salfeld under the title *Das Martyrologium des Nürnberger Memorbuches*, Berlin, 1898. The earliest connected account of the persecutions was composed by the noted astronomer Judah ibn Verga († c. 1485), whose *Shēbheṭ Yᵉhûdhāh* was supplemented by a younger relative named Solomon and another writer named Joseph, and published in its enlarged form. The best-known account of the Jewish martyrdoms in the Middle Ages is from the hand of the physician Joseph hak-Kôhēn, who lived in the 16th cent., and resided in various Italian cities; his *'Ēmeq hab-Bākhā* describes with accuracy and graphic power the persecutions and banishments suffered by the Jews from the destruction of the Second Temple. A strange combination of martyrology and the history of learning is found in Gedaliah ibn Yaḥya's *Shalsheleth haq-Qabbālā* (c. 1550), which, although much of it was shown at an early date to be untrue and even incredible, enjoyed an extraordinary popularity, and was again and again issued in printed editions.

The Jewish scholars of the Middle Ages had little aptitude for intelligently grasping or portraying their people's history. The *Book of Josippon*, a reproduction of the Latin Hegesippus (cf. *ERE* vii. 578ᵇ) in fluent Hebrew, composed in Italy in the 10th cent., stood long alone; by reason of its vivid and interesting style it has always been held in great esteem, and has been not only frequently edited in Hebrew, but also translated into many other languages. Even more rarely, if possible, do we find mediæval Jewish writers attempting to write profane history in Hebrew. A work of later date deserving of mention is Joseph hak-Kôhēn's *Chronicle of the Kings of France and Turkey*, written in 1553, while, a few decades afterwards, David Gans († 1613, in Prague) published, in his *Ṣemaḥ Dāwîdh* (Prague, 1592), records, first of Jewish, and then of universal, history from their respective beginnings to his own time; this work appeared also in a Latin translation. In general, however, Jewish writers restricted themselves to the composition of popular narratives of particular episodes.

It was not until comparatively recent times, indeed, that Jewish history was treated in a coherent and orderly manner. In 1820 I. M. Jost began the publication of a history of the Jews in

Library of
PACIFIC BIBLE SEMINARY
4835 EAST ANAHEIM STREET

many volumes and in various forms, in which he was primarily concerned to recount the political fortunes of his people, discussing their sociological development in an appendix. Leopold Zunz, while he wrote nothing of the nature of a systematic work on Jewish history, furnished in his *Zur Geschichte und Literatur* (Berlin, 1845) copious materials for all branches of that history, and suggestions as to the method of treating them. The best-known and most widely circulated work of this class, the *Geschichte der Juden* by H. Graetz (2nd ed., Leipzig, 1853–70), aims chiefly at exhibiting the development of the religion and literature of the Jews in relation to their political position and the martyrdoms suffered by them, while A. Geiger's *Das Judentum und seine Geschichte* (Breslau, 1871) deals solely with their religious development. I. H. Weiss, in his Heb. *Dôr Dôr wᵉ-Dŏrshăw* (Vienna, 1871–91), is likewise concerned only with the development of Judaism on its spiritual side. On the historical literature cf. also M. Steinschneider, *Die Gesch.-Literatur der Juden*, i. (Frankfort, 1905), and art. 'Historiography' in *JE* vi. 423 ff.

An important source of information regarding the history of the Jews in the Middle Ages is found in the copious narratives of the numerous Jewish travellers and wayfarers. The most important of such books of travel is the *Massāʿôth* of Benjamin of Tudela, who (*c.* 1165) made a journey from Spain to the East and back, and noted down in a racy style 'all that he had seen or heard.' In the edition of the *Massāʿôth* prepared by A. Asher (London, 1840), Zunz has given a detailed account of the geographical literature of the Jews ii. 230 ff.).

4. Systematic theology.—A great part of the Talmud and the Midrashîm is devoted to the religious and moral teachings of Judaism; the Haggādā in particular is concerned mainly with the problems of theology—with dogmatic and ethical ideas. No more than the Bible itself, however, does the Talmudic literature give a systematic presentation of theological doctrine. It was, in fact, only under the influence of Muslim theology that Jewish writers first essayed to deal systematically with the doctrinal fabric of their religion, and to support it by arguments. Their works were, to begin with, written in Arabic, but were soon all translated into Hebrew—largely through the efforts of the family of Ibn Tibbon, in Lunel—and in this form given to the Jewish world. The earliest speculative theologian among the Jews was Saʿadya Gāôn, who, in his *Ĕmūnôth wᵉ-Dēʿôth*, written in 933, sought to bring the doctrinal teachings of Judaism into relation with contemporary philosophy. Baḥya b. Joseph (first half of 11th cent.; *JE* ii. 446 ff.) won an extraordinary success with his *Ḥôbhôth hal-Lᵉbhābhôth*, which treats chiefly of the moral teachings of Judaism; the book was read far and wide, and was in its day perhaps the most popular work of general philosophical literature among the Jews. Judah Halevi (*JE* vii. 346 ff.; see also art. HALEVI), in his *Kuzari*, renounced philosophy altogether, and based theology exclusively upon the revealed faith and the experience of the Jewish people; the work, by reason of its poetic mode of treatment in the style of the Platonic Dialogues, enjoyed a great vogue. By far the most eminent work in this field, however, is the *Môreh Nᵉbhūkhîm* of Moses Maimonides, which, like his *Mishnē Tôrāh* mentioned above, is distinguished at once for its rigorously systematic structure and for the keenness and independence of its thought. Although the book, with its free handling of Jewish doctrine, aroused hostility on many sides, and was even publicly burned at the instance of Jewish accusers, yet in influence it stands supreme; all later study of Jewish philosophy revolves around the *Môreh*, and the most outstanding Jewish thinkers, such as Spinoza, Moses Mendelssohn (*qq.v.*), and Solomon Maimon, found in it the incentive to the construction of their own systems. The *Môreh* marks the culminating point of Jewish philosophical literature in the Middle Ages. Of writers belonging to the time after Maimonides we mention only Levi ben Gershon ([*q.v.*] *c.* 1350; *JE* viii. 26 ff.), who, with his *Milḥāmôth Ădhônāi*, was the first to make a stand against the authority of Aristotle; Ḥasdai Crescas (*c.* 1400; *ib.* iv. 350 ff.), whose *Ôr Ădhônāi* was drawn upon by Spinoza as an important source; and Joseph Albo (*c.* 1415; *ib.* i. 324 ff.), whose *ʿÎkkārîm* was an enormously popular book.

The period after Maimonides was, however, on the whole one of profound decadence in philosophical studies, which were, in fact, regarded as positively unlawful. The enlightened philosophy of Maimonides brought forth a counterpoise in the composition of the Qabbālā (see ḲABBĀLĀ), a peculiar medley of speculative ideas and curious fancies which was put forward as an esoteric doctrine of ancient origin, and sought to attach itself to the earliest authorities; its representatives, indeed, did not scruple even to disseminate writings purporting to be the work of the most venerable personages, including Moses and the Patriarchs. The most notable book of such speculative secret doctrine was the *Zôhār*, which was put into circulation *c.* 1300 by Moses de Leon, and passed off as the work of Simeon b. Yoḥai, a writer of the 2nd cent. A.D. It takes the form of a commentary to the Pentateuch, but is interspersed with many systematic dissertations, which bear special names, and are perhaps later insertions. The *Zôhār* was regarded with the utmost reverence; it was designated a divine book, and was ranked higher than the Talmud or even the Bible itself; its real origin was brought to light only in recent times. The name of Isaac Luria († 1572) marks a further stage in the development of the mystical literature. While Luria himself wrote nothing, his pupils promulgated his teachings in a vast number of biographies of their master, of commentaries to the Bible and the book of prayer, and of legal and ethical works. Likewise Ḥasîdism (cf. *ERE* vii. 606^{b}), the last phase of Jewish mysticism, gave birth to countless works of the kind indicated above; but, as all of them reproduce the ideas of their respective schools in a most unsystematic and incoherent way, it is very difficult to describe them in terms of literary science.

It was not until comparatively recent times that Jewish theology again assumed a rationalistic character. The turning-point was marked by Mendelssohn's *Jerusalem* (Berlin, 1783), and thereafter, under the influence of Kant, Hegel, and Schelling, Jewish thought brought forth various systems, not one of which, however, can be said to have come into general favour. The modern Judaism of Western countries, in fact, has been powerfully influenced by the prevailing philosophy of the age. Of the latest works dealing with Jewish theology we would mention only K. Kohler, *Grundriss einer systematischen Theologie des Judentums*, Leipzig, 1910, and S. Schechter, *Some Aspects of Rabbinic Theology*, London, 1909.

The ideas embedded in the theological literature were given to the wider Jewish public by means of popular writings, including not only the many widely circulated discourses (*Dᵉrāshôth*), but also numerous books of morals, which, it is true, laid more emphasis upon ethics than upon the speculative verification of the faith. The most excellent of the books of morals produced in the Middle Ages is the *Sēfer Ḥăsîdhîm* of Judah b. Samuel of

Regensburg († 1217; *JE* vii. 356 ff.), a work of high ethical value, which, though not free from the superstition of its time, is pervaded by an admirable spirit of piety and an earnest desire to foster the mutual love of men. The books of morals were in many cases translated into the language of the country in which they arose, and they form a large part of the Judæo-German, Judæo-Spanish, and Judæo-Arabic literatures. From the time of their composition they have had an enormous currency, and even at the present day the most widely read and systematic work on Judaism is the *Ethik des Judentums* of M. Lazarus (Frankfort, 1898, 1911).

The theology of the Jews also involved the work of pointing out the lines of demarcation between their own religion and other creeds. The Jews, who from an early period formed but a sparse minority among the adherents of other faiths, had abundant occasion for such procedure. As might be expected, all their writings which deal with theological matters are concerned also with apologetics and polemics, but the systematic treatment of the questions at issue was a relatively late development. The works in this field which were given to the public and still survive are but few in number; from fear of the dominant religion, indeed, they were often suppressed, or at any rate not issued in printed form.[1] Jewish polemical works consist either of explanations of Biblical passages which had been interpreted in a Christological or Muhammadan sense, or of systematic treatises on the cardinal doctrines of Christianity or Islām. Of writings directed against Christianity the *Tôl^{e}dhôth Y^{e}shū* (on which see *ERE* vii. 552^a) was not used so much by Jews themselves as by Christian controversialists. Of Jewish polemical works that created a considerable stir, mention may be made of the *Niṣṣāḥôn* of Lipman-Mühlhausen, a resident of Prague (*c.* 1400), who in that work brought forward three hundred and forty-six passages of the OT as telling against Christianity, and the *Ḥizzūq Ĕmūnā*, in which Isaac Troki, the Qaraite, made a systematic attack upon Christian doctrine (*c.* 1580). Both of these works were translated into various languages, and many attempts were made to refute them by Christian theologians. On the polemical literature cf., further, *JE* x. 102 ff.

A considerable amount of varied polemical activity was likewise directed against the Qaraites and other Jewish sects, but for the most part it finds expression incidentally in more general writings, and we are unable to specify any monograph of importance in this smaller field.

5. Liturgical and secular poetry.—The worship of God supplied the most powerful impulse to the post-Biblical development of Hebrew poetry, which, now termed *pīyyūṭ*, was revived with a view to enriching the liturgy. All instruction in and laudation of Jewish history and religion, which in the olden time had been the work of the preacher, fell, from *c.* A.D. 600, to the function of the *paiṭān*. It was under the influence of the Arabs that Jewish religious poetry sprang into life, and it was from them that it borrowed its artistic forms, but it required first of all to mould the Hebrew language to its designs—a process which, after long-sustained efforts, was at length brought to full realization in Spain. The most distinguished *paiṭān* of the Middle Ages was Eleazar b. Jacob haq-Qalîr, who lived probably *c.* A.D. 750 in Palestine; he composed over two hundred well-known poems, which have found a place in the Jewish prayer-books of nearly all countries, though we must note the exception of Spain, which had its own eminent figures in this field, and where mediæval Hebrew poetry attained its highest level between 1040 and 1140. The most outstanding names here are those of Solomon ibn Gabirol, Moses and Abraham ibn Ezra, and Judah Halevi (*qq.v.*). Poems by these writers are found in all prayer-books, but such compositions form only a small part of their poetic work; they also wrote voluminous 'divans,' which, it is true, soon fell into oblivion, and were rediscovered only in recent times; a number of them still await publication. On the *pīyyūṭ* cf. *JE* x. 65 ff.

While liturgical poetry occupied the place of supreme regard, other branches of the poetic art were by no means neglected. Of these the most widely cultivated was the didactic, which was turned to account in every department of knowledge. The *pīyyūṭ* itself sometimes assumed a didactic form; but, in addition, we find disquisitions in verse relating to the calendar, philology, and Biblical study, the Hălākhā, the laws of religion, Talmudic jurisprudence, philosophy and polemics, history, medicine, astronomy, etc., and poems in all these branches of study are extant in large numbers (cf. *JE* x. 98 f.). Of more importance, as being more closely in touch with the poetic spirit, is Jewish lyric poetry. The religious poetry, once more, was to a great extent lyrical. But the earliest development of the lyric in the ordinary sense, *i.e.* the poetry that finds its themes in love, wine, war, patriotism, etc., took place in Spain, where the supreme master of this form was Moses ibn Ezra, where Judah Halevi won renown by his occasional poems and his poetical descriptions of nature, and where Abraham ibn Ezra and Judah al-Ḥarizi (early 13th cent.) found recognition as keen satirists. The greatest Jewish secular poet, however, was Immanuel b. Solomon, of Rome—the contemporary, perhaps a personal friend, of Dante—who combined Oriental fantasy with Italian erotics, and gave expression to them in highly polished Hebrew verse, writing, indeed, with such audacious abandon that the *Shūlḥān 'Arūkh* forbade the reading of the poet's *Maḥberôth* on the Sabbath, while even in our own time Graetz has accused him of having profaned the Hebrew muse. Another lyric writer worthy of mention is Israel Nagara (*c.* 1570), who, while he sings of God and of Israel, works upon a basis of love-songs and their melodies, and writes with such intensity of passion and such daring anthropomorphism that he too incurred the censure of the Rabbis. Moses Ḥayyim Luzzatto (1707–47) deserves mention as a writer of great emotional power, and as the first who composed epic poetry in the Hebrew language.

Jewish poetry, like Jewish literature in general, passed through a long period of barrenness, which lasted, indeed, until it was vitalized by the modern renascence of intellectual interests. The majority of the more distinguished poets of the present age are of Russian origin, the most eminent of all being Judah Loeb Gordon (1831–92; cf. *JE* vi. 47 f.), whose achievement, however, lies more in the field of satire than in that of the lyric. Of living poets special reference is due to H. N. Bialik, whose lyric poetry has justly met with the highest appreciation, and whose compositions have already been translated into nearly every European language The last few decades have witnessed the rise of a copious Hebrew literature of general interest.

LITERATURE.—J. W. Etheridge, *Jerusalem and Tiberias; Sora and Cordova: Religious and Scholastic Learning of the Jews*, London, 1856; M. Steinschneider, *Jewish Literature from the Eighth to the Eighteenth Century*, Eng. tr., do. 1857; D. I. ELBOGEN.

LITERATURE (Pahlavi). — Pahlavi ('Parthian,' *i.e.* 'heroic, belonging to heroic times'), or Middle Persian, literature dates, so far as its contributions to religion are concerned, from the 8th to the 11th cent. of our era; and its chief value in this regard is the elucidation of Zoroastrianism and Manichæanism (*qq.v.*), since it explains and supplements the data contained in the Avesta (*q.v.*) and adds materially to the scanty documents of Manichæan literature, besides giving fragmentary renderings of Christian texts. The religious material in Middle Persian falls into three categories: translations of Avesta texts, original compositions on Zoroastrian religious subjects, and Manichæan and Christian literature.

1. Translations of Avesta texts.—These translations are combined with running commentaries, sometimes of considerable length; but they are handicapped by failing to understand the original, especially in its grammatical relations, since the inflected type of the Avesta language had yielded, long before the composition of any Middle Persian of which we have any indication, to the analytic type present in Pahlavi, whose grammar differs only in unimportant details from that of Modern Persian and other modern Indo-Iranian dialects. At the same time, the Middle Persian translations of the Avesta possess a real value and must be considered in any attempt to decipher the meaning of the Avesta original, particularly in view of the allusions, etc., preserved by Iranian tradition (see, further, art. INTERPRETATION [Vedic and Avesta]). The principal Pahlavi translations are of the *Yasna*, *Vīsparad*, and *Vendīdād* (most conveniently ed. F. Spiegel, *Avesta*, Vienna, 1853-58; L. H. Mills, *The Ancient MS of the Yasna, with its Pahlavi Tr.* (*A.D. 1323*), *generally quoted as J2*, Oxford, 1893, and *Gathas*, Leipzig, 1892-1913 [also with Sanskrit and Modern Persian versions, and Eng. tr.]; the *Vendīdād* separately by D. P. Sanjana, Bombay, 1895, and H. Jamasp and M. M. Ganderia, do. 1907), *Nyāyiśns* (ed. [also with Sanskrit, Persian, and Gujarātī versions, and Eng. tr.] M. N. Dhalla, New York, 1908),[1] *Yaśt* i. (ed. K. Salemann, in *Travaux du 3^e congrès des orientalistes*, Petrograd, 1879, ii. 493-592), vi., vii., xi. (ed. J. Darmesteter, *Études orient.*, Paris, 1883, ii. 286-288, 292-294, 333-339; a complete ed. is promised by Dhalla), *Nīrangistān* (ed. D. P. Sanjana, Bombay, 1894; tr. of Avesta portion by Darmesteter, *Zend-Avesta*, Paris, 1892-93, iii. 78-148, and *SBE* iv.^{2} [1895] 304-368), *Aogemadaēcā* (ed. and tr. W. Geiger, Erlangen, 1878), and *Hāṭōxt Nask* (ed. and tr. Hoshangji Jamaspji Asa and M. Haug, in their *Ardā Vīrāf*, Bombay, 1872-74, also tr. Darmesteter, *Zend-Avesta*, ii. 648-658, and *SBE* xxiii. [1883] 311-323). In addition, Pahlavi versions of *Yt.* ii., xiv., and xxiv., and of the *Āfrīnakāns* and *Sīh rōcaks*, are known to exist in MS.[2]

2. Texts on Zoroastrian religious subjects.—Of these the longest and most important is the *Dīnkarṭ* ('Acts of the Religion'), dating from the 9th cent., and forming 'a large collection of information regarding the doctrines, customs, traditions, history, and literature of the Mazda-worshipping religion' (E. W. West, *GIrP* ii. 91). The first two books have been lost, and the ninth ends abruptly. The *Dīnkarṭ* is the chief source for a knowledge of Zoroastrian philosophy in the Sasanid period, and it also contains much legendary material of value, such as the traditions concerning Zoroaster (tr. West, *SBE* xlvii. [1897] 3-130), while two books, viii.-ix. (tr. West, *ib.* xxxvii. [1892] 3-397), contain summaries of the Avesta, including accounts of those large portions which are no longer extant. The text, which is of exceptional difficulty, has been edited by D. M. Madan (Bombay, 1911), and, with English and Gujarātī paraphrases, by Peshotan Behramji and Darab Peshotan Sanjana (do. 1874 ff.; vol. xiii. carries the work through *Dīnk.* vii. 2). The *Bundahiśn* treats of Zoroastrian cosmogony, cosmology, and eschatology. It is found in two recensions: a shorter (ed. and tr. F Justi, Leipzig, 1868; tr. West, *SBE* v. [1880] 3-151) and a longer—the so-called Great, or Iranian, *Bundahiśn* (ed. T. D. Anklesaria, Bombay, 1908; summary of contents in *GIrP* ii. 100-102; tr. of portions by Darmesteter, *Zend-Avesta*, i. 267 f., ii. 305-322, 398-402; by J. J. Modi, *Asiatic Papers*, Bombay, 1905, pp. 225-234; and by E. Blochet, *RHR* xxxii. [1895] 99 ff., 217 ff.).

Eschatology forms the general subject of the *Arṭā-ī-Vīrāf Nāmak*, which sets forth, in describing the journey of Arṭā-ī-Vīrāf through heaven and hell, the future life of both righteous and wicked (ed. Hoshangji and Haug, Bombay, 1872-74). Here belong also the *Bahman Yaśt*, which purports to be Ahura Mazda's revelation to Zoroaster of the future vicissitudes of the Iranian nation and religion (ed. K. A. Noshervan, Poona, 1899; tr. West, *SBE* v. 191-235); and the *Maṭan-ī-Śāh Vāhrām-ī-Varjāvand* ('Coming of King Vāhrām-ī-Varjāvand'), on the expulsion of the Arabs from Persia (ed. Jamaspji Minocheherji Jamasp-Asana, *Pahlavi Texts contained in the Codex MK*, Bombay, 1897-1913, p. 160 f.).

The principal Pahlavi texts of a purely general religious character are the following: *Māṭīgān-ī-Haft Amśaspand* ('Particulars of the seven Amesha Spentas'); *Stāyiśn-ī Sīh-Rōcak* ('Praise of the Thirty Days'), which 'praises and invokes Aūharmazd as the creator of each of the thirty sacred beings whose names are applied to the days of the month, and whose attributes are detailed and blessed in succession' (West, *GIrP* ii. 108); *Stāyiśn-ī-Drōn*, a laudation of the *drōn*, or sacred cake; *Ḥaqīqat-ī-Rōjhā* ('Statement of the Days'), stating what actions are suitable on each of the days of the month; *Māṭīgān-ī Māh Fravarṭīn Rōj Xūrdāṭ*, enumerating the marvellous events that have occurred on the sixth day of the first month from the beginning to the end of the world (ed. Jamaspji, *op. cit.*, pp. 102-108; tr. K. J. Jāmāsp Asānā, *Cama Memorial Volume*, Bombay, 1900, pp. 122-129); *Māṭīgān-ī-Sīh-Rōj*, containing material similar to the *Ḥaqīqat*, but in fuller detail (tr. D. P. Sanjana, *Next-of-kin Marriages in old Irân*, London, 1888, pp. 105-116); *Dārūk-ī-Xūrsandīh*, giving the components (contentment, perseverance, etc.) which are to be pounded with 'the pestle of reverence,' and taken daily at dawn with the spoon of prayer (ed. Jamaspji, *op. cit.*, p. 154); *Cīm-ī-Drōn* ('Meaning of the Sacred Cake'), dealing with the symbolism and consecration of the *drōn*; *Patēṭ-ī-Xūṭ*, a long formula for the confession of one's sins; a number of *Āfrīns* ('Benedictions'); the *Āśīrvād*, or marriage benediction; *Namās-ī-Aūharmazd*, a laudation of Ahura Mazda (ed. and tr. E. Sachau, *SWAW* lxvii. [1871] 828–833; also tr. Darmesteter, *Une Prière judéo-persane*, Paris, 1891); and *Nāmstāyiśnīh*, a laudation of the name and attributes of Ahura Mazda.

---

[1] Translations of the Pahlavi version of *Ys.* xxx. and lvii. have been made by H. Hübschmann (*Ein zoroastr. Lied*, Munich, 1872, and *SMA*, phil.-hist. Classe, 1873, pp. 651-664), of xi. by W. Bang (*Bull. de l'Acad. roy. de Belgique*, xviii. [1889] 247-260), of xxviii.-xxxii. 1 by M. Haug (*Essays on the Sacred Language, Writings, and Religion of the Parsis*^{4}, London, 1907, pp. 338-354), of ix. by M. B. Davar (Leipzig, 1904), and of *Vend.* i. by W. Geiger (Erlangen, 1877), of i., xviii.-xx. by Haug (*op. cit.* 355-393), and of xvii. by P. Horn (*ZDMG* xliii. [1889] 32-41).

[2] The authenticity of the *Vijirkarṭ-ī-Dīnīk* (ed. Peshotan, Bombay, 1848) is too dubious to be considered here. The book, of which the writer knows only two copies (in the Staatbibliothek, Munich, and in the library of A. V. W. Jackson, Columbia University), has been suppressed by the Parsis as unauthentic (cf. on it West, *GIrP* ii. 89 f.; C. Bartholomae, *Indogerman. Forschungen*, xi. [1900] 119-131, xii. [1901] 92-101).

Second only to the *Dīnkarṭ* as a source for knowledge of the religious philosophy of the Sasanid Zoroastrians (and, like the larger work, doubtless embodying a large amount of older material) is what may be termed *responsa* literature. This treats of all sorts of matters on which questions might arise. One of the most important works of this type is the *Dāṭistān-ī-Dīnīk*, the 'Religious Opinions' of Mānūšcīhar, high priest of Pārs and Kirmān, in reply to the questions raised by Mitrō-Xūršēṭ and others (tr. West, *SBE* xviii. [1882] 3–276; the first 15 questions ed. D. P. Sanjana, Bombay, 1897); with this is connected a long and important Pahlavi *Rivāyat* (ed. Bamanji Nasarvanji Dhabhar, Bombay, 1913), while the same Mānūšcīhar wrote, in 881, three epistles on ritual problems (ed. Dhabhar, Bombay, 1912, tr. West, *SBE* xviii. 279–366), his brother, Zāṭ-Sparam, also being the author of a noteworthy religious treatise (tr. West, *SBE* v. 155–186, xlvii. 133–170, xxxvii. 401–405). Of equal importance with the *Dāṭistān-ī-Dīnīk* is the *Dīnā-ī-Maīnōg-i-Xraṭ* ('Opinions of the Spirit of Wisdom'), of which only a portion (ed. F. C. Andreas, Kiel, 1882) survives in Pahlavi, though the complete work is found in Pāzand and Sanskrit (ed. West, Stuttgart, 1871, tr. West, *SBE* xxiv. [1885] 3–113). The *Pursiśnīhā* ('Questions') are chiefly answered by quotations from Avesta texts (the latter ed. and tr. Darmesteter, *Zend-Avesta*, iii. 53–77, *SBE* iv.^{2} 276–299), and another noteworthy collection of *responsa* (as yet unedited) is contained in the *Rivāyat-ī-Hēmēṭ-ī-Aśavahištān*. Here, too, belongs, roughly speaking, the *Šāyast-lā-Šāyast* ('Proper and Improper'), whose contents 'are of a very varied character, but sins and good works, precautions to avoid impurities, details of ceremonies and customs, the mystic signification of the Gathas, and praise of the sacred beings are the principal subjects discussed' (West, *GIrP* ii. 107; tr. West, *SBE* v. 239–406). In this category may also be ranked the *Māṭīgān-ī-Yōšt-ī-Fryāno*, narrating how the righteous Yōsht answered the 33 questions of the wizard Axt, who was thus destroyed, whereas he had previously killed all who had failed to solve his queries—the Iranian version of the story of the sphinx (ed. and tr. Hoshangji and Haug, in their *Ardā Vīrāf*; also tr. A. Barthélemy, *Une Légende iranienne*, Paris, 1889). Controversial literature is represented by the *Māṭīgān-ī gujastak Abāliś*, recounting the disputation between the heretic Abāliš and Aṭūr-Farnbag (who began the compilation of the *Dīnkarṭ*) before the khalīf al-Ma'mūn about 825 (ed. and tr. Barthélemy, Paris, 1887).

Yet another important type of Pahlavi literature is that of didactic admonitions. To this class belong the *Pand-nāmak-ī-Zaratūšt* (not the Prophet, but probably the son of Āṭūrpāṭ-ī-Māraspandān; ed. and tr. P. B. Sanjana, in his *Ganje-Shāyagān*, Bombay, 1885); *Andarj-ī-Xūsrō-ī-Kavāṭān*, purporting to be the dying counsels of Chosroes to his people (ed. and tr. Sanjana, *op. cit.*; also tr. L. C. Casartelli, *BOR* i. [1887] 97–101, and Salemann, *Mélanges asiat. tirés du bull. de l'acad. imp. des sciences de St. Pétersbourg*, ix. [1887] 242–253); *Andarj-ī-Āṭūrpāṭ-ī-Māraspandān*, being the advice of Āṭūrpāṭ to his son Zaratūsht (perhaps the person mentioned just above; ed. and tr. Sanjana, *op. cit.*; also tr. C. de Harlez, *Muséon*, vi. [1887] 66–78); *Pand-nāmak-ī-Vajōrg-Mitrō-ī-Būxtakān* (ed. and tr. Sanjana, *op. cit.*); *Five Dispositions for Priests and Ten Admonitions for Laymen* (ed. Jamaspji, *op. cit.* 129–131); *Characteristics of a Happy Man* (ed. Jamaspji, *op. cit.* 162–167); *Vācak aēcand-ī-Āṭūrpāṭ-ī-Māraspandān*, the dying counsel of Āṭūrpāṭ (ed. Jamaspji, *op. cit.* 144–153); *Andarj-ī-Aōśnar-ī-dānāk*, *Injunctions to Beh-dīns*, *Admonitions to Mazdayasnians*, and *Sayings of Aṭūr-Farnbag and Baxt-Āfrīṭ* (these as yet unedited).

3. Manichæan and Christian literature.—Until comparatively recently it was supposed that Pahlavi literature was exclusively Zoroastrian; but the discoveries made in Central Asia by M. A. Stein, A. Grünwedel, A. von Le Coq, and P. Pelliot have revealed a new province of extreme interest and value. The decipherment of the MSS found by these explorers has only begun. Here it must suffice to say that we already possess Pahlavi versions of somewhat extensive portions of Manichæan literature—a fact the more important since this religion had hitherto been known only from the writings of its enemies. The most important collection of these texts thus far is that of F. W. K. Müller (with German translation, 'Handschriften-Reste in Estrangelo-Schrift aus Turfan,' *ABAW*, 1904; revised ed. C. Salemann, 'Manichaeische Studien, i.,' *Mém. de l'acad. imp. des sciences de St. Pétersbourg*, viii. 10 [1908]; Müller, 'Doppelblatt aus einem manich. Hymnenbuch,' *ABAW*, 1913). In the closely allied Soghdian dialect are numerous fragments of a version of the NT, perhaps from the 9th or 10th cent. (Müller, 'NT Bruchstücke in sog. Sprache,' *SBAW*, 1907, pp. 260–270; 'Sog. Texte, i.,' *ABAW*, 1913; cf. L. H. Gray, *ExpT* xxv. [1913] 59–61).

4. Pāzand and Sanskrit versions.—The special problems of the Pahlavi language cannot be discussed here (see F. Spiegel, *Gram. der Huzvâresch Sprache*, Vienna, 1851; P. B. Sanjana, *Gram. of the Pahlvi Lang.*, Bombay, 1871; C. de Harlez, *Manuel du Pehlevi*, Paris, 1880; Darmesteter, *Études iran.*, do. 1883; Salemann, 'Mittelpersisch,' *GIrP* I. i. [1901] 249–332; E. Blochet, *Études de gram. pehlvie*, Paris, n.d. [1905]); it must suffice to say that, when the Semitic words (or logograms) in Pahlavi are written in Iranian (e.g., *śāhān śāh*, 'king of kings,' instead of *malkāān malkā*), the language is termed Pāzand (Spiegel, *Gram. der Pârsisprache*, Leipzig, 1851). Many Pahlavi texts already listed are found in Pāzand as well. The great majority of the religious writings of this type, except the important *Šikand gūmānīg-Vijār* ('Doubt-dispelling Explanation'), probably dating from the latter part of the 9th cent. (ed. Hoshang and West, Bombay, 1887; tr. West, *SBE* xxiv. 117–251), and the *Jāmāsp-nāmak* (ed. J. J. Modi, Bombay, 1903), have been edited by E. K. Antiā (*Pâzend Texts*, Bombay, 1909). The *Šikand gūmānīg-Vijār* defends the doctrine of dualism, and in this connexion polemizes in very interesting fashion against Judaism, Christianity, Manichæanism, and—necessarily quite guardedly—Muhammadanism (cf. artt. JESUS CHRIST IN ZOROASTRIANISM, JEWS IN ZOROASTRIANISM); the *Jāmāsp-nāmak* gives a summary of Iranian cosmology, history, and future fortunes of the Iranian religion. Among the texts edited by Antiā are *doās* (benedictions recited on various occasions), *nīrangs* (charms, often of much ethnographical interest; for examples see Modi, *Anthropological Papers*, Bombay, 1911, pp. 48, 125–129; K. E. Kanga, in *Cama Mem. Vol.*, 142–145), *patēṭs* (confessions); and of texts not included in this collection mention may be made of *A Father instructing his Son* and *Andarj-ī-dānāk Marṭ*.

A number of Pahlavi (and Avesta) treatises are found in Sanskrit as well as in Pahlavi and Pāzand versions. Many of these are given in editions of Pahlavi texts enumerated above, but we must also note the ed. of Neriosangh's version of the *Yasna* by Spiegel (Leipzig, 1861) and the series of *Collected*

Sanskrit Writings of the Parsis, ed. S. D. Bharucha (Bombay, 1906 ff.).

5. Parsi-Persian literature.—Apart from Persian translations of Avesta and Pahlavi texts, there is a large amount of Zoroastrian literature in Persian, which, for the most part, still awaits study. The *Zartušt-nāmah*, dating from the 12th cent., which is now accessible in original and translation by F. Rosenberg (Petrograd, 1904), gives a legendary biography of Zoroaster. Another work of importance is the *Ṣad-dar* ('Hundred Gates'), which discusses a hundred subjects of note in Zoroastrianism. Two of its three recensions have been translated into English (West, *SBE* xxiv. 255–361) and Latin (T. Hyde, *Hist. religionis veterum Persarum*, Oxford, 1700, pp. 433–488). A different work, although along the same general lines, is the *Ṣad-darband-ī-Huš* (or *Ṣad-dar Bundahišn*; ed. B. N. Dhabhar, Bombay, 1909). Of worth for a study of the methods of Zoroastrian polemic against Muhammadanism is the *'Ulamā-i-Islām*, which is found in two recensions, the shorter of which has been edited and translated (ed. J. Mohl, *Fragmens relatifs à la religion de Zoroastre*, Paris, 1829; tr. J. Vullers, *Fragmente über die Religion des Zoroaster*, Bonn, 1831; Blochet, *RHR* xxxvii. [1898] 23–49). A particularly valuable collection of Parsi-Persian literature is contained in the MS Bu 29, belonging to the University of Bombay, the second volume of which has been edited by M. N. Unvālā (not yet published) and analyzed by Rosenberg (*Notices de litt. parsie*, Petrograd, 1909). It contains a large number of *Rivāyats* (religious traditions) and letters on the most diverse subjects—ritual, cosmogony, eschatology, etc.—the longer recension of the *'Ulamā-i-Islām* (pp. 72–80), the *Aḥkām-i-Jāmāsp* (containing the horoscopes of Zoroaster, Moses, Alexander the Great, Christ, Mazdak, etc., as well as cosmology and eschatology, pp. 111–130), *Vaṣf-i-Amšāsfundān* (attributes of the Amesha Spentas, pp. 164–192), *Āghāz-i-dāstān Mazdak va-Šāh Nūšīrvān 'Ādil* (on the heresiarch Mazdak, pp. 214–230), six parables connected with the Barlaam cycle (pp. 305–327; cf. art. JOSAPHAT, BARLAAM AND), and questions asked of Zoroaster by Jāmāsp (pp. 417–422). Among other Parsi-Persian texts, not yet edited, may be mentioned a *Discussion on Dualism* between a Zoroastrian priest and a Muhammadan, and the *Saugand-nāmah*, or 'Book of Oaths.'

The interesting secular works in Pahlavi, Pāzand, and Parsi-Persian, such as geographical matter, social rules, and tales, do not come within the sphere of religion.

Finally, it may be mentioned that translations of the Avesta have been made not only into Persian (for specimens see, in addition to works cited above, Darmesteter, *Études iran.* ii. 262 ff.), but also, from the 15th cent., into Gujarātī, the vernacular of the Indian Zoroastrians (see the Prolegomena to K. Geldner's ed. of the Avesta, Stuttgart, 1896, pp. vii–xi; Darmesteter, *Zend-Avesta*, i. p. xlii); and the modern religious literature of the Parsis is chiefly written either in Gujarātī or in English.

LITERATURE. — F. Spiegel, *Traditionelle Lit. der Parsen*, Vienna, 1860; E. W. West, 'Pahlavi Lit.,' *GIrP* ii. (Strassburg, 1904) 75–129; E. Wilhelm and K. B. Patel, *Cat. of Books on Irânian Lit. published in Europe and India*, Bombay, 1901, and the former scholar's annual report on 'Perser' in *Jahresberichte der Geschichtswissenschaft*.

LOUIS H. GRAY.

LITERATURE (Vedic and Classical Sanskrit).—**1. The language.**—The name 'Sanskrit' (*saṁskṛta*, 'adorned,' 'perfected,' perfect passive participle of the verb *saṁ-skar*, 'to adorn,' from *saṁ*, 'together,' and *kar*, 'to make') is ordinarily applied to the whole ancient and sacred language of India. It belongs more properly to that dialect which may be defined more exactly as Classical Sanskrit, the language which was treated by the Hindu grammarians, Pāṇini and his followers. For more than 2000 years, until the present day, this language has led a more or less artificial life. Like the Latin of the Middle Ages, it was, and is, even to-day, to a very marked extent, the means of communication and literary expression of the priestly, learned, and cultivated classes. The more popular speech upon which it was based is known as *bhāṣā* ('speech,' from *bhāṣ*, 'to speak'), of which there is no direct record. Sanskrit is distinguished more obviously from the phonetically later, decayed dialects, Prākrit and Pāli, the second of the two being the language of the canonical writings of the Southern Buddhists. The relation of the Prākrit and Pāli dialects to Sanskrit is closely analogous to the relation of the Romance languages to Latin. On the other hand, Sanskrit is distinguished, although much less sharply, from the oldest forms of Indian speech, preserved in the canonical and wholly religious literature of the Veda (Skr. *veda*, 'knowledge,' from *vid*, 'to know,' connected with Gr. *Ϝοῖδα* 'I know,' Lat. *videre*, Old Bulgarian *vědě*, 'I know,' Gothic *wait*, 'I know,' Old High German *wizzan*, Germ. *wissen*, Eng. *wit*, 'to know'). These forms of speech are in their turn by no means free from important dialectic, stylistic, and chronological differences; yet they are comprised under the name Vedic (or, less properly, Vedic Sanskrit), which is thus distinguished from the language of Pāṇini and its forerunner, the language of the Epics, whose proper designation is Sanskrit, or Classical Sanskrit.

Vedic differs from Sanskrit about as much as the Greek of Homer does from Attic Greek. The Vedic apparatus of grammatical forms is much richer and less definitely fixed than that of Sanskrit. The latter has lost much of the wealth of form of the earlier language, without, as a rule, supplying the proper substitutes for the lost materials. Many case-forms and verbal forms of Vedic have disappeared in Sanskrit. The subjunctive is lost; a single Sanskrit infinitive takes the place of about a dozen very interesting Vedic infinitives. Sanskrit also gave up the most important heirloom which the Hindu language has handed down from pre-historic times, namely, the Vedic system of accentuation. In the last forty years the recorded Vedic accents have proved to be of paramount importance in the history of the Indo-European languages. Vedic, however, notwithstanding its somewhat unsettled wealth of form and its archaic character, is not a strictly popular dialect, but a more or less artificial 'high speech,' handed down through generations by families of priestly singers. Thus both Vedic and Sanskrit, as is indeed the case more or less wherever a literature has sprung up, were in a sense caste languages, built upon popular idioms. The grammatical regulation of Sanskrit at the hands of Pāṇini and his followers, however, went beyond any academic attempts to regulate speech recorded elsewhere in the history of civilization.

Older forms lying behind the Vedic language are reconstructed by the aid of Comparative Philology. The Vedic people were immigrants to India; they came from the great Iranian region on the other side of the Himālaya mountains. The comparison of Vedic (and to a less extent Sanskrit) with the oldest forms of Iranian speech, the language of the Avesta and the cuneiform inscriptions of the Achæmenian Persian kings, yields the rather startling result that these languages are collectively mere dialects of one and the same older idiom. This is known as the Indo-Iranian or Aryan (in the narrower, and proper, sense) language. The reconstructed Aryan language differs less from the language of the Veda than Classical Sanskrit does from Prākrit and Pāli. The language of the Iranian Avesta is so much like that of the Veda that entire passages of either literature may be converted into good specimens of the other by merely eliminating the special sound changes which each has evolved in the course of its separate existence. And the literary style, the metres, and above all the mythology of Veda and Avesta are closely enough allied to make the study of either to some extent directly dependent upon the other. In fact, the spiritual monuments of the Avesta as well as the stone monuments of the Achæmenian kings became intelligible chiefly by the aid of the Vedic language. Since the revival of classical learning there has been no event of such importance in the history of culture as the discovery of Sanskrit in the latter part of the 18th century. There is at present no domain of historical or linguistic science untouched by the influence of Sanskrit studies. The study of this language gave access to the primitive Indo-European period, and originated the science of Comparative Philology in all its bearings. Linguistic Science, Comparative Mythology, Science of Religion, Comparative Jurisprudence, and other important fields of historical and philosophical study either owe their very existence to the discovery of Sanskrit or were profoundly influenced by its study.

2. The Veda as a whole.—The word 'Veda' is the collective designation of the ancient sacred literature of India, or of individual books belonging to that literature. At an unknown date, which is at the present time conventionally averaged up as 1500 B.C., but which may be considerably earlier, Aryan tribes (clans, *viś*, from which is derived the later name of the third, or agricultural, caste, Vāiśya) began to migrate from the Iranian highlands on the north of the Hindu Kush mountains into the north-west of India, the plains of the river Indus and its tributaries. The non-Aryan aborigines, called Dasyu, in distinction from Ārya (whence the word 'Aryan'), the name of the conquerors, were easily subdued. The conquest was followed by gradual amalgamation of the fairer-skinned conquerors with the dark aborigines. The result was a not altogether primitive, semi-pastoral civilization, in which cities, kings, and priestly schools rivalled the interests connected with cattle-raising and agriculture. From the start we are confronted with a poetical literature, primitive on the whole, and more particularly exhibiting its crudeness when compared with Classical Sanskrit literature, yet lacking neither in refinement and beauty of thought nor in skill in the handling of language and metre. That this product was not entirely originated on Indian soil follows from the above-mentioned close connexion with the earliest forms of Persian literature. Vedic literature in its first intention is throughout religious. It includes hymns, prayers, and sacerdotal formulæ offered by priests to the gods in behalf of lay sacrificers; charms for witchcraft and medicine, manipulated by magicians and medicine-men; expositions of the sacrifice, illustrated by legends, in the manner of the Jewish Talmud; higher speculations, philosophic, psycho-physical, cosmic, and theosophic, gradually growing up in connexion with and out of the simpler beliefs; and, finally, rules for conduct in everyday life, at home and abroad. This is the Veda as a whole.

At the base of this entire literature of more than 100 books, not all of which have as yet been unearthed or published, lie four varieties of metrical and formulaic compositions known as the four Vedas in the narrower sense. These are the Rigveda, the Yajurveda, the Sāmaveda, and the Atharvaveda. These four names come from a somewhat later time; they do not coincide exactly with the earlier names, nor do they correspond completely with the contents of the texts themselves. The earlier names are *ṛchaḥ*, 'stanzas of praise,' *yajūṁṣi*, 'liturgical stanzas and formulæ,' *sāmāni*, 'melodies,' and *atharvāṅgirasaḥ*, 'blessings and curses.' The collection which goes by the name of Rigveda contains not only 'stanzas of praise,' but also 'blessings and curses,' as well as most of the stanzas which form the basis of the *sāman*-melodies of the Sāmaveda. The Atharvaveda contains *ṛchaḥ* and *yajūṁṣi*, as well as blessings and curses. The Yajurveda also contains many blessings in addition to its main topic, the liturgy. The Sāmaveda is merely a collection of a certain kind of 'stanzas of praise' which are derived with some variants and additions from the Rigveda, but are here set to music which is indicated by musical notations.

3. The Rigveda.—The *Rigveda* is on the whole the most important as well as the oldest of the four collections. A little over 1000 hymns, equalling in bulk the surviving poems of Homer, are arranged in ten books, called *maṇḍalas*, or 'circles.' Six of them (ii.–vii.), the so-called 'family books,' form the nucleus of the collection. Each of these is the work of a different *ṛṣi*, 'seer,' or rather a family of poets, traditionally descended from such a *ṛṣi*, as may be gathered from certain statements in the hymns themselves. The eighth book and the first fifty hymns of the first book, belonging to the family of Kaṇva, are often arranged strophically in groups of two or three stanzas. These form the bulk of those stanzas which are sung to melodies in the Sāmaveda. The hymns of the ninth book are addressed directly to the deified plant *soma*, and the liquor pressed from it, in order that it may be sacrificed to the gods. The remainder of the first book and the entire tenth book are more miscellaneous in character and problematic as to arrangement. On the whole they are of later origin and from a different sphere. Their themes are partly foreign to the narrower purpose of the *ṛchaḥ*; witchcraft hymns of a more popular character and theosophic hymns appear in considerable numbers. The poems of the former class reappear, usually with variants, in the Atharvaveda.

On the whole the Rigveda is a collection of priestly hymns addressed to the gods of the Vedic pantheon (see VEDIC RELIGION) during sacrifice. This sacrifice consisted of oblations of intoxicating *soma*, pressed from the 'mountain-born' *soma*-plant, which reappears in the Zoroastrian Avesta under the name *haoma* (*q.v.*), and was therefore the sacred sacrificial fluid of the Indo-Iranians, or Aryans. In addition, melted butter (*ghṛta*, or *ghī*) was poured into the fire, personified as the god Agni (Lat. *ignis*), who performs the function of messenger of the gods (Aṅgiras). The ritual of the Veda is to a considerable extent pre-historic, and advanced in character—by no means as simple as was once supposed. But it is much less elaborate than that of the Yajurveda and the Brāhmaṇas (see below). The chief interest of the Rigveda lies in the gods themselves and in the myths and legends narrated or alluded to in the course of their invocation. The mythology represents an earlier, clearer stage of thought than is to be found in any other parallel literature. Above all, it is sufficiently primitive in conception to show clearly the processes of personification by which the phenomena of nature developed into gods (anthropomorphosis). The original nature of the Vedic gods, however, is not always clear, not as clear as was once confidently assumed to be the case. The analysis of their character is a chapter of Vedic philology as difficult as it is important. In any case enough is known to justify the statement that the keynote of Rigvedic thought is the nature myth.

4. The Yajurveda.—The *Yajurveda* represents the exceeding growth of ritualism or sacerdotalism. Its *yajūṁṣi*, 'liturgical stanzas and formulæ,' are in the main, though not wholly, of a later time. They are partly metrical and partly prose. The materials of the Rigveda are freely adapted, with secondary changes of expression, and without regard to the original purpose and order of their composition. The main object is no longer devotion to the gods themselves; the sacrifice has become the centre of thought: its mystic power is conceived to be a thing *per se*, and its every detail has swollen into all-importance. A crowd of priests (seventeen is the largest number) conduct a vast, complicated, and painstaking ceremonial, full of symbolic meaning even in its smallest minutiæ. From the moment when the priests seat themselves on the sacrificial ground, strewn with sacred grass, and proceed to mark out the altars (*vedi*) on which the sacred fires are built every act has its stanza or formula, and every utensil is blessed with its own fitting blessing. Every flaw is elaborately expiated. These formulæ are conceived no longer as prayers that may, or may not, succeed, but as inherently coercive magic. If the priest chants a formula for rain while pouring some sacrificial fluid, rain shall and must come; if he makes an oblation accompanied by the curse of an enemy, that enemy is surely destroyed. In fact, and in brief, the Yajurveda means the deification of the sacrifice in its every detail of act and word.

5. The Sāmaveda.—The *Sāmaveda* is the least clear of all the Vedas as regards its purpose and origin. Its stanzas, or rather groups of stanzas, are known as *sāmāni*, 'melodies.' The *sāman*-stanzas are preserved in three forms: (1) in the Rigveda, as ordinary poetry, accented in the same way as other Vedic poetry; (2) in the Sāmaveda itself in a form called *ārchika*, a kind of libretto composed of a special collection of stanzas, most of which, though not all, occur also in the Rigveda (see above); here also there is a system of accents, peculiar in its notation, but apparently with reference to the unsung *sāmans*; (3) in the third *sāman*-version, the *gānas*, or song-books, we find the real sung *sāmans*; here not only the text but the musical notes are given. Still this is not yet a complete *sāman*. In the middle of the sung stanzas exclamatory syllables are interspersed—the so-called *stobhas*, such as *oṁ*, *hau*, *hai*, *hoyi*, or *hiṁ*; and at the end of the stanzas certain concluding syllables—the so-called *nidhanas*, such as *atha*, *ā*, *īṁ*, and *sāt*. The Sāmaveda is devoted chiefly to the worship of Indra, who is a blustering, braggadocio god and who has to befuddle himself with *soma* in order to slay demons. It seems likely, therefore, that the *sāmans* are the civilized version of savage shamanism (the resemblance between the two words, however, is accidental), an attempt to influence the natural order of things by shouts and exhortations. It is well understood that the Brāhmans were in the habit of blending their own hieratic practices and conceptions with the practices which they found among the people. The *sāman*-melodies and the exclamations interspersed among the words of the text may therefore be the substitute for the self-exciting shouts of the shaman priests of an earlier time.

6. The Atharvaveda.—The oldest name of the Atharvaveda is *atharvāṅgirasaḥ*, a compound formed of the names of two semi-mythic families of priests, the Atharvans and Aṅgirases. At a very early time the former term was regarded as synonymous with 'holy charms,' or 'blessings,' the latter with 'witchcraft charms,' or 'curses'. In addition to this name, and the more conventional name Atharvaveda, there are two other names, practically restricted to the ritual texts of this Veda: *bhṛgvaṅgirasaḥ*, that is, 'Bhṛgus and Aṅgirases,' in which the Bhṛgus, another ancient family of fire-priests, take the place of the Atharvans; and *Brahmaveda*, probably 'Veda of the Brahma, or holy religion in general.' As regards the latter name, it must be remembered that the Atharvaveda contains a large number of theosophic hymns which deal with the *brahma* in the sense of the Neo-Platonic λόγος, as a kind of pantheistic personification of holy thought and its pious utterance. The Atharvaveda is a collection of 730 hymns, containing some 6000 stanzas.

7. The Vedic schools.—The redactions or collections of these four Vedas are known as *Saṁhitās*; each of them is handed down in various schools, branches, or recensions, called *charaṇa*, *śākhā*, or *bheda*, the term *śākhā*, or 'branch,' being the most familiar of the three. These 'branches' represent a given Veda in forms differing not a little from one another. The school differences of the Rigveda are unimportant, except as they extend also to the Brāhmaṇas and Sūtras of that Veda (see below). There are two Sāmaveda redactions, those of the schools of the Kauthumas and the Rāṇāyanīyas. A very persistent tradition ascribes nine schools to the Atharvaveda; the Saṁhitās of two of these, the Śaunakīyas and Paippalādas, are published, the latter in an interesting chromo-photographic reproduction of the unique manuscript of that text preserved in the library of the University of Tübingen. The Yajurveda, especially, is handed down in recensions that differ from one another very widely. There is in the first place the broad division into White Yajurveda and Black Yajurveda. The most important difference between these two is that the Black Yajurveda schools intermingle their stanzas and formulæ with the prose exposition of the Brāhmaṇa (see below), whereas the White Yajurveda schools present their Brāhmaṇa in separate works. The White Yajurveda belongs to the school of the Vājasaneyins, and is subdivided into the Mādhyaṁdina and Kāṇva recensions. The important schools of the Black Yajurveda are the Taittirīyas, Maitrāyaṇīyas, Kaṭhas, and Kapiṣṭhalas. Sometimes these schools have definite geographical locations. For example, the Kaṭhas and Kapiṣṭhalas were located, at the time when the Greeks became acquainted with India, in the Panjāb and in Kashmīr. The Maitrāyaṇīyas appear at one time to have occupied the region around the lower course of the river Narmadā; the Taittirīyas, at least in modern times, are at home in the south of India, the Deccan.

8. The Brāhmaṇas.—The poetic stanzas and the ritualistic formulæ of the Vedas collectively go by the name of *mantra*, 'pious utterance,' or 'hymn.' These were followed at a later period by a very different literary type, namely, the theological treatises called *brāhmaṇa*, the Hindu analogon to the Hebrew Talmud. The Brāhmaṇas are exegetical and commentative, bulky expositions of the sacrificial ceremonial, describing its minute details, discussing its value or reason, speculating upon its origin, and illustrating its potency by ancient legends. Apart from the light which these texts throw upon the sacerdotalism of ancient India, they are important because they are written in connected prose—the earliest in the entire domain of Indo-European speech. They are especially important for syntax: in this respect they represent the oldest Indian stage even better than the Rigveda, owing to the restrictions imposed upon the latter by its poetic form. The Brāhmaṇas also were composed in schools, or recensions: the various Brāhmaṇa recensions of one and the same Veda differ at times even more widely than the Saṁhitās of the *mantras*. Thus the Rigveda has two Brāhmaṇas, the *Aitareya* and the *Kauṣītakin*, or *Śāṅkhāyana*. The Brāhmaṇa matter of the Black Yajurvedas is given together with the *mantras* of that class (see above); on the other hand, the White Yajurveda treats its Brāhmaṇa matter separately, and with extraordinary fullness, in the famous *Śatapatha Brāhmaṇa*, the 'Brāhmaṇa of a Hundred Paths,' so called because it consists of a hundred lectures. Next to the Rigveda and Atharvaveda Saṁhitās this work is the most important production in the whole range of Vedic literature. Two Brāhmaṇas belonging to independent recensions of the Sāmaveda have been preserved entire, that of the Tāṇḍins, usually designated as *Pañchaviṁśa Brāhmaṇa*, and that of the Talavakāras or Jaiminīyas. To the Atharvaveda is attached the very late and secondary *Gopatha Brāhmaṇa*; its contents harmonize so little with the spirit of the Atharvan hymns that it seems likely to have been produced in imitation of the 'school' conditions in the other Vedas.

9. The Āraṇyakas and Upaniṣads.—A later development of the Brāhmaṇas is the *Āraṇyakas*, or 'Forest Treatises.' Their later character is indicated both by the position which they occupy at the end of the Brāhmaṇas and by their partly theosophical character. The name 'Forest Treatise' is not altogether clear. Either these works were recited by hermits living in the forest, or, owing to the superior sanctity of their contents, they were taught by teacher to pupil in the solitude of the forest rather than in the profaner atmosphere of the town or village. The two important Āraṇyakas are the *Aitareya* and the *Taittirīya*, belonging to the two Vedic schools of that name. The chief interest of the Āraṇyakas is that they form in contents and tone a transition to the Upaniṣads, the older of which are either embedded in them or form their concluding portions (see artt. ĀRAṆYAKAS, UPANIṢADS).

10. The Śrauta-Sūtras, or manuals of the Vedic ritual.—Both *mantra* and *brāhmaṇa* are regarded as revealed (*śruti*, or 'revelation'); the rest of Vedic literature as tradition (*smṛti*), derived from holy men of old. This literature has a characteristic style of its own, being handed down in the form of brief rules, or *sūtras*, whence it is familiarly known as Sūtra literature, or the Sūtras. They are, in the main, of three classes, each of which is, again, associated with a particular Vedic school, reaching back, as a rule, to the school distinctions of the Saṁhitās and the Brāhmaṇas. The first class of Sūtras are the Śrauta or Kalpa Sūtras, which may be translated 'Sūtras of the Vedic Ritual.' They are brief mnemonic rule-books compiled, with the help of oral tradition, from the Brāhmaṇas. They are technical guides to the Vedic sacrifice, distinguished from the diffusive Brāhmaṇas, where the ritual acts are interrupted by explanation and illustrative legend. To the Rigveda belong two Śrauta Sūtras, corresponding to its two Brāhmaṇa schools: the *Āśvalāyana* to the *Aitareya Brāhmaṇa*, and the *Śāṅkhāyana* or *Kauṣītakin* to the Brāhmaṇa of the same name. To the White Yajurveda belongs the Śrauta Sūtra of Kātyāyana, closely adhering to the *Śatapatha Brāhmaṇa*. There are no fewer than six Śrauta Sūtras belonging to the Black Yajurveda, but only three of them are published, or in the course of publication, those of Āpastamba and Baudhāyana, belonging to the schools of the Taittirīyas, and the Mānava, belonging to the school of the Maitrāyaṇīyas. The Sāmaveda has two Śrautas, those of Lāṭyāyana and Drāhyāyaṇa, belonging respectively to its two schools of the Kauthumas and the Rāṇāyanīyas; the Atharvaveda has the late and inferior *Vaitāna*.

11. The Gṛhya Sūtras, or 'House Books.'—Of decidedly greater, indeed of universal, interest is the second class of Sūtras, the *Gṛhya Sūtras*, or 'House Books.' These are treatises on home life, which deal systematically and piously with the events in the everyday existence of the individual and his family. Though composed at a comparatively late Vedic period, they contain practices and prayers of great antiquity, and supplement most effectively the contents of the Atharvaveda. From the moment of birth, indeed from the time of conception, to the time when the body is consigned to the funeral pyre, they exhibit the ordinary plain Hindu in the aspect of a devout and virtuous adherent of the gods. All the important events of life are sacramental, decked out in practices often of great charm and usually full of symbolic meaning. For ethnology and the history of human ideas the 'House Books' are of unexcelled importance. These manuals are also distributed among the four Vedas and their schools, each of which is theoretically entitled to one of them. More than a dozen are now known to scholars. The Rigveda has the *Gṛhya Sūtras* of its two schools, that of Āśvalāyana and Śāṅkhāyana; the White Yajurveda that of Pāraskara; the Black Yajurveda a large number, as those of the Āpastamba, Baudhāyana, Hiraṇyakeśin, Mānava, and Kaṭha schools; the Sāmaveda has the Gobhila, Khādira, and Jaiminīya. To the Atharvaveda belongs the unique *Kauśika Sūtra*, which, in addition to the domestic ritual, deals with the magical and medicinal practices that specially belong to that Veda.

12. The Dharma Sūtras, or 'Law Books.'—The third class of Sūtras are the *Dharma Sūtras*, or 'Law Books.' They also deal to some extent with the customs of everyday life, but are engaged for the most part with secular and religious law. In one department of law, that of expiation, these Sūtras root in the Vedic hymns themselves. A considerable number of expiatory hymns and stanzas, clearly of the same stock as the law of expiation, are found in Vedic texts, especially the Atharvaveda and the *Taittirīya Āraṇyaka*. The Law Sūtras, in their turn also, are either directly attached to the body of canonical writings of a certain Vedic school or are shown by inner criteria to have originated within such a school. The oldest Law Sūtras are those of the Āpastamba and Baudhāyana, belonging to the Black Yajurveda schools of that name; the Gautama belonging to the Sāmaveda; the Viṣṇu belonging to the Kaṭha school of the Black Yajurveda; and the Vāsiṣṭha of less certain associations. The earliest metrical law-books, the so-called *Dharmaśāstras*, written in Classical Sanskrit, seem also to be based on lost Sūtra collections of definite Vedic schools. The most famous of these, the *Mānava Dharmaśāstra*, or 'Law Book of Manu' (see LAW [Hindu]), may be founded upon a lost *Dharma Sūtra* of the Mānava or Maitrāyaṇīya school of the Black Yajurveda, while the briefer 'Law Book of Yājñavalkya' is unmistakably connected with some school of the White Yajurveda.

English readers may obtain ready insight into the contents of Vedic literature in all its important aspects through the series of translations edited by Max Müller in *SBE* (Oxford, 1879 ff.). Parts of the Rigveda are translated by Müller himself (vol. xxxii.) and H. Oldenberg (vol. xlvi.); the Atharvaveda by M. Bloomfield (vol. xlii.); the *Śatapatha Brāhmaṇa* by J. Eggeling (vols. xii. xxvi. xli. xliii. and xliv.); seven of the *Gṛhya Sūtras* by Oldenberg (vols. xxix. and xxx.); the older *Dharma Sūtras* by G. Bühler and J. Jolly (vols. ii. vii. and xiv.); and the Law Book of Manu by Bühler (vol. xxv.).

13. Vedic and Sanskrit literature contrasted.—

The form and style of Sanskrit literature differ a good deal from those of the Vedas. As regards the language, it is to be noted that prose in Vedic times was developed to a tolerably high pitch in the Yajurvedas, Brāhmaṇas, and Upaniṣads; in Sanskrit, apart from the strained scientific language (*sūtra*) of philosophy or grammar, or the diffuse and inorganic style of the commentators, prose is rare. It presents itself in genuine literature only in fables, fairy tales, romances, and partly in the drama. Nor has this prose improved in literary and stylistic quality, as compared with the earlier variety. On the contrary, it has become more and more clumsy and hobbling, full of long awkward compounds, gerunds, constructions in the passive voice where the active would do, and other artificialities. As regards the poetic medium of Classical Sanskrit, it also differs from the Veda. The bulk of Sanskrit poetry, especially the Epic, is composed in the *śloka* metre, a development of the Vedic *anuṣṭubh* metre of four octosyllabic lines of essentially iambic cadence. But numerous other metres, usually built up on Vedic prototypes, have become steadily more elaborate and strict than their old originals; in the main they have also become more artistic and beautiful.

Notwithstanding the wonderfully unbroken continuity of Hindu writings, the spirit of Sanskrit literature also differs greatly from the Vedic. The chief distinction between the two periods is that the Veda is essentially a religious collection, whereas Sanskrit literature is, with rare exceptions, such as the *Bhagavad-Gītā*, or the metrical Law Śāstras, profane. In the Veda lyric poetry as well as legendary and expository prose are in the service of prayer and sacrifice; in Sanskrit epic, lyric, didactic, and dramatic forms are all for the purpose of literary delectation and æsthetic or moral instruction. In Sanskrit literature, moreover, with the exception of the grand compilations of the *Mahābhārata* and the *Purāṇas*, the authors are generally definite persons, more or less well-known, whereas the Vedic writings go back to families of poets or schools of religious learning, the individual authors being almost invariably submerged.

14. Epic literature.—Sanskrit literature may be divided into epic, lyric, dramatic, didactic, narrative, and scientific. In epic poetry there is the important distinction between the freer, narrative epic called *itihāsa* (*q.v.*), 'story,' or *purāṇa*, 'ancient legend,' and the artistic or artificial epic called *kāvya*, 'poetic product.' The great epic, the *Mahābhārata*, is by far the most important representative of the former kind. Of somewhat similar free style are the eighteen *Purāṇas* (see below), of much later date than the *Mahābhārata*. The beginnings of the artistic style are seen in the other great Hindu epic, the *Rāmāyaṇa*. But the finished style of the *kāvya* is not evolved until the time of Kālidāsa about the 6th cent. A.D.

The *Mahābhārata*, or 'Great Bhārata Story,' the greatest of Hindu epics, is a huge authorless compilation for which tradition has devised the name Vyāsa, 'Redaction,' as author. It is written for the most part in the epic metre, the *śloka*, and contains altogether about 100,000 stanzas of four lines each, about eight times the length of the Homeric poems.

The kernel story of the epic, which is interrupted by many episodes, or interwoven narratives, tells how the ancient and wicked dynasty of the Kurus was overthrown by the pious Pañchālas and Pāṇḍus. At a gambling-match depicted in the most vivid language, Duryodhana, the king of the Kurus, cheats the Pāṇḍu princes, robs them of their kingdom, and exiles them for thirteen years. But this is only the preparation for the final war, or eighteen days' battle, between the opposing royal houses and their allies. In this the Kurus are finally overthrown and destroyed. The heroic story is not only interrupted by episodes, but is in general made the pivot around which philosophical (religious) and ethical discussions of great length revolve. Thus the work has assumed the place in Hindu literature of an encyclopædia of moral and religious instruction.

A *Bhārata* and a *Mahābhārata* are mentioned as early as the 'House-Books' (see above) of the later Vedic literature, but all dates assigned to the original simpler epic which preceded the encyclopædic poems in its finished form are mere guesses, except that it obtained its essentially present form in the 4th or 5th cent. of our era.

Among the episodes of the *Mahābhārata*, the *Bhagavad-Gītā*, 'The Song of the Divine One,' or 'Song Celestial,' is pre-eminent. It is in some respects the most interesting and important book in post-Vedic literature.

When the rival armies of the Kurus and the Pāṇḍus are drawn up against each other, Arjuna, the leader of the Pāṇḍus, stoutest of heroes, hesitates to enter upon the slaughter. Then Kṛṣṇa, one of the incarnations of Viṣṇu, acting as Arjuna's charioteer, silences his scruples by pointing out that action, which is the performance of duty, is the obligation of man in the world, although, finally, abstracted devotion to the Supreme Spirit alone leads to salvation. The poem is conceived in the spirit of eclectic Hindu theosophy or philosophy. At the bottom is the Sāṅkhya doctrine of dual matter and spirit, but this is tinged with monistic Vedāntist pantheism (see BHAGAVAD-GĪTĀ).

It is not likely that the poem formed part of the original 'Bhārata Story,' but there is no information as to its date and authorship. The *Mahābhārata* has been translated into English prose at the expense of Pratāpa Chandra Rāy (Calcutta, 1895), and by M. N. Dutt (do. 1895).

15. The Rāmāyaṇa.—The *Rāmāyaṇa*, the second of the great epics, is in the main the work of a single author, Vālmīki. Though all parts are not from the same hand, and though it is not entirely free from digressions, it tells a connected story of great interest in epic diction of the highest order. It is to this day the favourite poem of the Hindus. The central figures are Rāma and his devoted wife Sītā; the main event the conquest of Laṅkā (probably Ceylon).

Daśaratha, the mighty king of Oudh (Ayodhyā), having grown old, decides upon Rāma, his oldest son, as his successor, but his intriguing second queen, Kâikeyī, succeeds in changing his mind in favour of her son Bharata. Rāma, banished for fourteen years, retires with Sītā to the forest. Upon the death of Daśaratha, his son Bharata refuses to usurp Rāma's throne, but seeks him out in the forest in order to conduct him back to the throne in his capital city. Rāma in turn refuses to cross his father's decision; he offers his gold-embroidered shoes as a token of his resignation of the throne. But Bharata, on returning, places the shoes upon the throne, and holds over them the yellow parasol, the sign of royalty; he himself stands by and acts as the king's plenipotentiary. In the meantime Rāma makes it his business to fight the demons who molest the ascetics of the forest in their holy practices. Râvaṇa, the king of the demons, who lives in Laṅkā, revengefully kidnaps Sītā. Then Rāma forms an alliance with Hanuman and Sugrīva, the kings of the monkeys, who build for him a wonderful bridge across from the mainland to Laṅkā. Rāma slays Rāvaṇa, is reunited with Sītā, returns home, and, conjointly with Bharata, rules his happy people, so that the golden age has come again upon the earth.

The story, notwithstanding the fact that it presents itself outwardly as a heroic legend, lies under the suspicion of containing one or more mythic roots. Certainly in the Veda Sītā is the personified furrow of the field, the beautiful wife of Indra or Parjanya (see VEDIC RELIGION). Hence Rāma certainly continues the qualities of Indra, the slayer of demons. The story also seems to typify the advance of Brāhmanical civilization southward towards Ceylon.

The *Rāmāyaṇa* consists of seven books, in about 24,000 stanzas. It exists in three recensions, which differ one from the other in their readings, the order of the stanzas, and in having each more or less lengthy passages that are wanting in the others. The best known and most popular recension has been translated by the Anglo-Indian scholar R. T. H. Griffith in five volumes (Benares, 1870–75).

16. The Purāṇas.—Somewhat related in character to the great epics are the *Purāṇas*, eighteen in number. They are later poetic works of mixed cosmogonic, epic, and didactic character. The word *purāṇa* occurs frequently in the prose texts of the Veda as a designation of the Veda's own cosmogonic and legendary lore; the name is also applied to the *Mahābhārata*. In its most distinctive sense the word refers to a class of writings which certainly do not date before the 6th cent. A.D. The existing *Purāṇas* seem to be sectarian religious manuals for the people, written in the interest of either the worshippers of Viṣṇu or those of Śiva. Though the fundamental later Hindu triad—Brahmā, Viṣṇu, and Śiva—is recognized, nevertheless the Vaiṣṇavite *Kūrma Purāṇa* does not hesitate to say: 'Viṣṇu is the divinity of the gods, Śiva of the devils.' To Brahmā all alike refer only in a perfunctory fashion. According to ancient tradition, the ideal *Purāṇa* is divided into five parts: (1) primary creation, or cosmogony; (2) secondary creation, or the destruction and rebuilding of the worlds; (3) genealogy of the gods and patriarchs; (4) *manvantaras*, or periods of reigns of the Manu; (5) the history of the dynasties of kings. Though no extant *Purāṇa* is so divided, yet their subject-matter roughly follows that order. The entire type of composition is of secondary importance; it borrows its themes very largely from the epic literature, and represents religious belief, practices, and legends in an exaggerated, fantastic, often disordered fashion (see PURĀṆAS).

17. **The 'artistic epics.'**—The Hindus consider six *kāvyas*, or 'artistic epics,' entitled to the epithet 'great' (*mahā-kāvya*). But their artistic, or, better, artificial, character removes them in reality from the sphere of genuine epic; they are interesting on account of their wealth of descriptive power and delicacy of illustration; they are deficient in the portrayal of strong character or stirring action. Moreover, they are commingled more and more with lyric, erotic, and didactic elements, as well as with bombast and play on words. Nevertheless, no less a person than Kālidāsa, the universal poet and dramatist, is the author of the two best known artistic epics, the *Kumārasaṁbhava*, or 'Birth of the War God,' and the *Raghuvaṁśa*, or 'Race of Raghu.' The former consists of seventeen cantos, the first seven of which are devoted to the courtship and wedding of the deities Śiva and Pārvatī, the parents of the youthful god of war. The real theme of the poem appears only towards the end, in the account of the destruction of the demon Tāraka, the object for which the god of war was born. The *Raghuvaṁśa*, in nineteen cantos, describes in the first nine the life of Rāma, together with that of his dynasty. Then in the next six cantos comes the story of Rāma himself, the same theme as that of the *Rāmāyaṇa*. The remaining cantos deal with the twenty-four kings who ruled as Rāma's successors in Ayodhyā. The remaining *kāvyas* deal for the most part with themes from the *Mahābhārata* and *Rāmāyaṇa*.

18. **Lyric poetry.**—Every form of artistic Sanskrit literature, whether epic, dramatic, or confessedly lyric, has a strong lyric cast. At the bottom these three kinds, in the Hindu poet's hands, are but thematically differentiated forms of the same poetic endowment. Ornate figures of speech, luxuriant richness of colouring, carried into literary composition from the gorgeous climate, flora, and fauna of India, subtle detail-painting of every sensation and emotion—these are the common characteristics of Hindu artistic poetry. Lyric poetry can hardly do more than emphasize or specialize these conditions, yet it has its individual traits, the most important of which is the refined elaboration of the single strophe, in distinction from continuous composition. In form and name these strophes are infinitely elaborated and varied. In no other literature have poets endeavoured so strongly to harmonize the sentiment of a stanza with its metrical expression. The most elaborate continuous lyrics of India are the *Meghadūta*, or 'Cloud Messenger,' and the *Ṛtusaṁhāra*, or 'Cycle of Seasons,' both by Kālidāsa.

The theme of the former is a message sent by a *yakṣa*, or elf, exiled from heaven. The messenger is a passing cloud which shall report to the *yakṣa's* wife, as she tosses lovelorn upon her couch through the watches of the night, the longing of her exiled husband. May the cloud, after delivering his message, return with reassuring news, and never himself be separated from his lightning spouse. The 'Cycle of Seasons' is famous for its descriptions of India's tropical nature, matched all along with the corresponding human moods and emotions.

The bulk of lyrical poetry, however, is in single miniature stanzas, which suggest strongly the didactic sententious proverb poetry which the Hindus also cultivated with great success. In fact the most famous collection of such stanzas, that of Bhartṛhari, consists of lyric, didactic, and philosophic poems. Bhartṛhari, who lived in the 7th cent. A.D., is perhaps the most remarkable Hindu poet next to Kālidāsa.

His stanzas, 300 in number, are divided into three centuries—the 'Century of Love,' the 'Century of Wisdom,' and the 'Century of Resignation.' There is no action in these stanzas Ever and again, within the narrow frame of a single stanza, the poet pictures the world of him for whom the wide universe is summed up in woman, from whose glowing eyes there is no escape. But, after singing woman's praise in every key, he finally declares that he has become an altered man. Youth has gone by; his thoughts, freed from infatuation, are all for contemplation in the forest, and the whole world he accounts but as a wisp of straw.

The second master of the erotic stanza is Amaru, author of the *Amaruśataka*, or 'Century of Amaru.' He also is a master at depicting all the moods of love: bliss and dejection, anger and devotion. None of the Indian lyrists treats love from the romantic or ideal point of view; it is always sensuous love. But a certain delicacy of feeling and expression, as well as a sensitive appreciation of those qualities of love which attract irresistibly, only finally to repel, lifts their stanzas above the coarse or commonplace. It is Hindu 'minne-song,' flavoured with the universal, though rather theoretical, Hindu pessimism.

19. **Didactic poetry.**—Even in erotic lyrics the Hindu's deep-seated inclination towards speculation and reflexion is evident. This has not only been the basis of that which is best and highest in their religion and philosophy, but it has assumed shape in another important product of their literature, the gnomic, didactic, sententious stanza, which may be called the 'Proverb.' O. von Böhtlingk (*Ind. Sprüche*, Petrograd, 1870–73) collected from all Sanskrit literature some 8000 of these stanzas. They begin with the *Mahābhārata*, and are particularly common in the moral envoys of the fable literature. Their keynote is again the vanity of human life, and the superlative happiness that awaits resignation. The mental calm of the saintly anchorite who lives free from all desires in the stillness of the forest is the resolving chord of human unrest. But for him who remains in the world there is also a kind of salvation, namely, virtue. When a man dies and leaves all behind him, his good works alone accompany him on his journey into the next life (metempsychosis). Hence the practical value of virtue almost overrides the pessimistic view of the vanity of all human action. These gnomic stanzas are gathered up into collections such as the *Śānti-śataka*, or 'Century of Tranquillity,' or the *Moha-mudgara*, or 'Hammer of Folly'; but the ethical saw is really at home in the fables of the *Pañchatantra* and *Hitopadeśa*. These works are paralleled by Buddhist compositions (see below). In fact, a Buddhist collection of this sort, the *Dhammapada*, or 'Way of the Law,' contains perhaps the most beautiful and profound words of wisdom in all Hindu literature.

20. **The drama.**—The drama is one of the latest

yet one of the most interesting products of Sanskrit literature. With all the uncertainty of literary dates in India there is no good reason to assume for this class of works a date earlier than the 5th or 6th cent. of our era. Certain Vedic hymns in dialogue are all that the early periods of Hindu literature suggest as a possible partial, yet very doubtful, basis for the drama. The Sanskrit word for 'drama' is *nāṭaka*, from the root *naṭ*, *nart*, 'to dance' (whence '*nautch* girls,' etc.). The word therefore means literally 'ballet.' It is not doubtful that dances contributed something to the development of the drama. In various religious ceremonies of earlier times dancing played a part; at a later time the cult of Śiva and Viṣṇu, and especially of Śiva's incarnation Kṛṣṇa, was accompanied by pantomimic dances. These pantomimes reproduced the heroic deeds of these gods, and were accompanied by songs. Popular representations of this sort, the so-called *yātras*, have survived to the present day in Bengal. They are not unlike the mystery-play of the Christian Middle Ages, and their modern continuation, the passion-play. The god Kṛṣṇa and Rādhā, his love, are the main characters, but there are also friends, rivals, and enemies of Rādhā. The *yātras*, a mixture of music, dancing, song, and improvised dialogue, while unquestionably in some way connected with the origin of the drama, are nevertheless separated by a very wide gap from the finished product of the *nāṭaka* as it appears in such works as the *Śakuntalā* of Kālidāsa, or the *Mṛchchhakaṭikā*, 'Clay Cart,' of Śūdraka.

It is still a moot question whether Western (Greek) influence, particularly the New Attic Comedy of Menander (as reflected in Plautus and Terence), has not in some measure contributed to the shaping of the Hindu drama. It is known that Greek actors followed Alexander the Great through Asia, and that they celebrated his victories with dramatic performances. After the death of Alexander Greek kings continued to rule in North-Western India. Brisk commerce was carried on between the west coast of India and Alexandria, the later centre of Greek literary and artistic life. Greek art and Greek astronomy certainly exercised strong influence upon Hindu art and science. The chief points of resemblance between the Hindu drama and the Greek comedy are as follows. The Hindu drama is divided into acts (from one to ten), separated by varying periods of time; the acts proper are preceded by a prologue spoken by the stage manager (*sūtradhāra*). The stage was a simple rostrum, not shut off from the auditorium by a curtain, but, on the contrary, the curtain was in the background of the stage; it was called *yavanikā*—that is, 'Greek curtain' (*ἰωνική*). The characters of the Hindu drama resemble in some respects those of the Attic comedy. There are courtesans and parasites, braggarts and cunning servants. Especially the standard comic figure of the Hindu drama, the *vidūṣaka*, the unromantic friend of the hero, compares well with the go-between, the *servus currens*, of the Græco-Roman comedy. The *vidūṣaka* is a hunchbacked, bald dwarf of halting gait, the clown of the piece. Though a Brāhman by birth, with maliciously humorous intent, he does not speak Sanskrit, but the popular dialect, Prākrit, like the women and the inferior personages of the drama. He plays the unfeeling realist, intent upon every form of bodily comfort, especially a good dinner, to the hero's sentimental flowery romanticism. Although it is just possible that one or the other feature of the Hindu drama may be due to outside influence, the inner matter is certainly national and Indic. The themes are, for the most part, those of the heroic legend in the epics, or they move in the sphere of actually existing Hindu courts. The themes, at any rate, are not different from those of other Hindu literature. They show no foreign admixtures. It must not be forgotten that certain general coincidences between the drama and the theatre of different peoples are due to common psychological traits; hence genuine historical connexion in such matters requires the most exacting proof.

The chief dramatic writer is Kālidāsa, the incomparable Hindu poet, master at the same time of epic and lyric poetry (see above). Three dramas are ascribed to him: the *Śakuntalā*, the *Urvaśī*, and *Mālavikāgnimitra*, or 'Mālavikā and Agnimitra.' From a time somewhat earlier than Kālidāsa comes the drama *Mṛchchhakaṭikā*, the 'Clay Cart,' said to have been composed by king Śūdraka, who is praised ecstatically as its author in the prologue of the play. Similarly, during the 7th cent. A.D., a king named Harṣa is said to have composed three existing dramas: the *Ratnāvalī*, or 'String of Pearls'; the *Nāgānanda*, whose hero is a Buddhist, and whose prologue is in praise of Buddha; and the *Priyadarśikā*. From the 8th cent. A.D. date the dramas of Bhavabhūti, a South Indian poet, the most distinguished dramatist next to Kālidāsa and Śūdraka. His most celebrated compositions are the *Mālatīmādhava*, or 'Mālatī and Mādhava'; and the two dramas *Mahāvīracharita* and *Uttararāmacharita*, both of which deal with Rāma, the hero of the *Rāmāyaṇa*. Finally may be mentioned Viśākhadatta, the author of the *Mudrārākṣasa*, the 'Seal of the Minister Rākṣasa,' a drama of political intrigue, whose composition also dates from the 8th century.

'Action is the body of the drama'—such is the dictum of the Hindu theorists. Precisely what we should call dramatic action is not the prominent quality of the greatest dramatist of them all, Kālidāsa. His dramas are rather distinguished by tenderness of feeling and delicacy of touch. They are lyric rather than dramatic. The action is slow, the passions profound but not elemental. The deepest feelings are portrayed in delicate forms which never approach violence or coarseness, but, on the contrary, are over-nice. At the height of the situation, perhaps in profound misery, the hero and the heroine still find time to institute comparisons between their own feelings and the phenomena of nature. There is indeed a plethora in them all of mango-trees and *śirīṣa* - blossoms, of creepers and lotus, of *bimba*-lips, of gazelles, flamingoes, and multi-coloured parrots. But we must bear in mind the climate of India, and its almost frenzied flora and fauna; then this excess will seem less extravagant. Kālidāsa's dramas are always artistic and finished, and their beauty strongly suggests the genius of Goethe. The single Hindu drama which calls to mind a real modern drama is the 'Clay Cart,' ascribed to king Śūdraka, whose persons, diction, and action, more than those of any other Hindu play, remind one of Shakespeare (see DRAMA [Indian]).

21. Fables and stories. — No department of Hindu literature is more interesting to the student of comparative literature than that of the fables and fairy tales. There is scarcely a single motive of the European fable collections that does not appear in the Hindu collections. The study of the migrations and relations of fables and fairy tales was first elevated to the position of a science by Theodor Benfey in his work on the *Pañchatantra* (Leipzig, 1859). On the other hand, the proverbs and instructions which are woven into the fables present the best and most practical picture of Hindu ethics. The most important and extensive collection of fables and tales is Buddhistic, being written in Pāli. This collection is designated as the *Jātakas*, which seems to mean 'Birth Stories.' Buddha is made to appear in every one of them as the wise or successful person or animal of the fable; he himself points the moral (see JĀTAKA). The two most important Sanskrit collections are the *Pañchatantra* and the *Hitopadeśa.* The *Pañchatantra,* or 'Five Books,' the most celebrated Sanskrit book of this sort, existed at least as early as the first half of the 6th cent. A.D., since it was translated by order of king Khusrū Anūshirvān (531–579) into Pahlavi, the literary Persian language of that time. It thence passed into Arabic, Greek, Persian, Turkish, Syriac, Hebrew, Latin, and German; and from German into other European languages. The name 'Pañchatantra' is probably not original, but took the place of 'Karaṭaka and Damanaka,' or some similar title, derived from the names of the two jackals prominent in the first book. This may be surmised, because the title of the Syriac version is 'Kalīlag and Damnag,' of the Arabic version 'Kalīlah and Dimnah.' Both the *Pañchatantra* and the *Hitopadeśa,* or 'Salutary Instruction,' were originally intended as manuals for the instruction of kings in domestic and foreign policy. The *Hitopadeśa,* said to have been composed by Nārāyaṇa, states that it is an excerpt from the *Pañchatantra* and 'other books.'

The most famous collection of fairy tales is the very extensive *Kathāsaritsāgara,* or 'Ocean of Rivers of Stories,' composed by the Kashmirian poet Somadeva, about A.D. 1070. This is in verse; three much shorter collections are in prose. The *Sukasaptati,* or 'Seventy Stories of the Parrot,' tells how a wife whose husband is away, and who is inclined to solace herself with other men, is for seventy nights cleverly entertained and deterred by the story-telling parrot, until her husband returns. The *Vetāla-pañchaviṁśati,* or 'Twenty-five Tales of the Vampire,' is known to English readers under the name of 'Vikram and the Vampire.' The fourth collection is the *Siṁhāsana-dvātriṁśikā,* or 'Thirty-two Stories of the Lion-seat' (throne), in which the throne of king Vikrama tells the stories. A noteworthy feature of the Sanskrit collections of fairy tales, as well as of the fables, is the insertion of a number of different stories within the frame of a single narrative. This style was borrowed by other Oriental peoples, the most familiar instance being the *Arabian Nights.* A few prose romances of more independent character may be mentioned in this connexion. The *Daśakumāra-charita,* or 'Adventures of the Ten Princes,' a story of common life and a very corrupt society, reminds one of the *Simplicissimus* of Grimmelshausen. Its author is Daṇḍin, and it probably dates from the 6th cent. A.D. The *Vāsavadattā* by Subandhu, and the *Kādambarī* by Bāṇa, are highly artificial romances; the latter narrates, in stilted language and long compounds, the sentimental love-story of an ineffably noble prince and the equally ineffably beautiful and virtuous fairy princess Kādambarī. These works are known as *charita,* 'narrative'; the same name is also used for chronicles or quasi-historical literature of inferior grade. The nearest approach to history, in our sense of the word, is the *Rājataraṅgiṇī,* or the Chronicle of Kashmīr, by Kalhaṇa, from the middle of the 12th cent. A.D.

22. **Scientific literature.**—India abounds in all forms of scientific literature, written in tolerably good Sanskrit, even to the present day. One of the characteristics of the Hindu mind is that it never drew the line between literary creation and scientific presentation, so that it is not easy to mark off from one another *belles lettres* and scientific literature. The ancient legal books of the Veda (see above) continue in the more modern poetical *Dharmaśāstras* and *Smṛtis.* Of these the Law Books of Manu and Yājñavalkya (see above) are the most famous examples; Manu specially enjoys great authority to this day. Rooted in the Upaniṣads are the *sūtras,* or rules, of the six systems of Hindu philosophy, and their abundant expositions. Grammar, etymology, lexicography, prosody, rhetoric, music, and architecture all own a technical literature of wide scope and importance, and the treatment of most of these shows a surprising tendency to assume metrical form. The earliest works of an etymological and phonetic character are the Vedic glosses of Yāska, the so-called *Naighaṇṭukas* and the *Nirukta,* and the *Prātiśākhyas,* or phonetic treatises pertaining to the treatment of a Vedic text in a given school or *śākhā* (see above). Later, but far more important, is the *Grammar* of Pāṇini, one of the greatest grammarians of all times, and his commentators Kātyāyana and Patañjali. Mathematics and astronomy were cultivated from very early times; the so-called Arabic numerals came to the Arabs from India, and were designated by them as Hindu numerals. Indian medical science must have begun to develop before the beginning of the Christian era, for one of its chief authors, Charaka, was the head physician of king Kaniṣka in the 1st cent. A.D. The germs of Hindu medical science reach back to the Atharvaveda. The Bower Manuscript, one of the oldest of Sanskrit manuscripts (probably 5th cent. A.D.), contains passages which agree verbally with the works of Suśruta and Charaka, the leading authorities on this subject.

LITERATURE.—The most convenient sketch for English readers is A. A. Macdonell's thoroughly competent *History of Sanskrit Literature,* one of the volumes of 'Short Histories of the Literatures of the World,' edited by Edmund Gosse (London, 1900). The bibliographical notes at the end of the book are a safe guide to more extensive study. Readable and popular in style is R. W. Frazer's *Literary History of India* (London, 1898). Max Müller's *History of Ancient Sanskrit Literature*^{2} (London, 1860) deals only with the Vedic period, and was important in its day, but is now antiquated. A. Weber's *History of Indian Literature* (from the German by T. Zachariae, London, 1878) is a learned and technical work, not at all adapted to the wants of the general reader; it represents the state of knowledge of a quarter of a century ago. The German work of L. v. Schröder, *Indiens Literatur und Cultur* (Leipzig, 1887), contains a fuller, very instructive, and readable account of Hindu literature; copious translations and digests of the texts themselves render this work very helpful. The more recent treatises are H. Oldenberg, *Die Literatur des alten Indiens* (Stuttgart, 1903), and V. Henry, *Les Littératures de l'Inde* (Paris, 1904), both excellent treatises, having in view more particularly æsthetic valuation of Hindu literature. Still more recently there have appeared three parts of M. Winternitz's *Geschichte der indischen Litteratur* (Leipzig, 1908 ff.), a most satisfactory and instructive book. The *GIAP*, commenced under the editorship of G. Bühler, and continued after his death by F. Kielhorn and others (Strassburg, 1896 ff.), covers the entire domain of Indo-Aryan antiquity, and contains authoritative information concerning many points and problems of Sanskrit literature.

MAURICE BLOOMFIELD.

LITHUANIANS AND LETTS.—1. Ethnography.—The Lithuanians and the Letts belong to the Aryan family of peoples, and together with the Borussians or Old Prussians, who became extinct in the 17th cent., form a distinct ethnological group. This group, now generally called the 'Baltic,' had already ramified into its several divisions in its pre-historic period, and its unity is now seen only in certain common elements of popular tradition and in the sphere of language—as regards which, however, the Lithuanians exhibit a much more archaic type than the Letts. The original home of the Lithu-Lettish or Baltic race was probably the basin of the lower Niemen, and, as that district is virtually coterminous with the Lithuania of to-day, while the Letts are found in Courland, the adjacent Prussian littoral, the southern half of Livonia, and Polish Livonia in the government of Vitebsk, it would appear that the Lettish branch had reached its present location by migrating to the originally Finnish districts of Courland and Livonia, and that, on the other hand, the Lithuanians remained fast upon their ancestral soil.

Numerically, neither member of the group is of great account, nor is it likely that either was ever important. The Lithuanians number some one and a half million, about 120,000 of them being in Prussia; the Letts less rather than more—the estimates varying from 1,200,000 to 2,000,000. In a physical respect both branches are mixed, though the mixture has been in no way detrimental to them, since many individual Lithuanians and Letts still exhibit all the distinctive marks of pure Aryan descent, while the rest, men and women alike, are generally self-reliant and sympathetic, well-formed, and often even handsome.

2. Political history.—The historical fortunes of the two peoples have run in quite distinct courses. (*a*) *Lithuanian.*—The history of the Lithuanians opens in the 11th cent. with prolonged frontier wars with Russia, from which, however, they emerged so successfully, and with their integrity still so far complete, that one of their princes, Mendowg (recognized by Pope Innocent IV. as king of Lithuania), actually contemplated the founding of a united Lithu-Russian State. This design, however, was frustrated by Mendowg's death (1263) and by internal embroilments. Nevertheless, it was at length brought to realization by the government of the Grand-duke Gedymin († 1341); and then, under the leadership of his sons, Olgierd (whom his brothers recognized as sovereign Grand-duke) and Keistut, the young nation succeeded in extending its sway from the Baltic to the Euxine, and from the Polish Bug to the Ugra and the Oka, though it did not include the western districts (Nadrauen, Schalauen, and Sudauen), which the Teutonic Knights had brought under their control during the years 1274–83.

At the death of Olgierd, in 1377, his place was taken by his favourite son, Jagiello, who, however, soon quarrelled with Keistut († 1382) and with his son Witaut, the outcome of the dissension being that the latter became the real lord of Lithuania, although nominally the sovereignty of Jagiello was not thereby infringed. Jagiello had shortly before (1386) married Hedwig, queen of Poland, thus opening the way for a political alliance between Lithuania and Poland which seriously threatened the independence of the former. Witaut strained every nerve and took all available measures to avert this danger. Not only did he seek to promote the independence of his country in a political sense, but he also endeavoured, by working for a union between the Greek and Roman communions within its borders, to make it ecclesiastically self-dependent. While these endeavours proved to be in vain, they won him the confidence of the Utraquist Hussites in such measure that upon the death of King Wenceslaus they offered him the Bohemian crown, and it was only the unpropitious political conditions of the time that prevented his acceptance of it. He was now all the more ready to assume the crown of Lithuania, which, indeed, the Emperor Sigismund, with a view to the complete severance of that country from Poland, had thrice offered him already. Here, again, however, Witaut was disappointed, as Poland intercepted the passage of the party which was conveying the crown to him, and he died shortly afterwards (1430)—four years before Jagiello, who, as Queen Hedwig's consort, had at her death (1399) become king of Poland.

In the succeeding period the Lithuanians repeatedly took occasion to assert their independence in relation to Poland, but this did not prevent the principality of Olgierd from gradually becoming a Polish feudatory. Witaut himself had been repeatedly compelled by the necessities of war and by external troubles to make concessions to Poland, and his successors, under the increasing pressure of the steadily growing power and rapacity of Moscow, were forced in even larger measure to purchase the help of Poland by ever closer fusion with that State. These rulers, moreover, almost without exception bore the name of Jagiello, and united in their individual persons the Grand-dukedom of Lithuania and the crown of Poland. The eventual result was the incorporation of the two countries in a single political organism whose fortunes were controlled by a common Diet. The incorporating union was effected at the Diet of Lublin in 1569.

(*b*) *Lettish.*—At the very outset of Lettish history we find the merchants of Lübeck taking steps to find an outlet for their commerce in the district of the Lower Dvina, and they were followed by German missionaries, who there founded the earliest Christian settlements. While these attempts at colonization were not at once greatly successful, they had, nevertheless, the effect of making Livonia known to the West, and of directing against that heathen land the enthusiasm for war against unbelievers which in that period of the Crusades dominated the thought of Christendom. It was owing to this enthusiasm that Albert, canon of Bremen († 1229), was able to secure a permanent footing in Livonia (1200), and as its bishop—supported as he was by constant immigration from Germany and by the Livonian Order of the Sword (founded in 1202)—to establish there a German colonial State, which was recognized in 1207 as a frontier-district of the Empire. Its suzerainty was shared by Albert and the Order in such a way as to make the power of the bishop preponderant; but this position of matters was fundamentally altered when, in 1237, the Livonian Order was merged in the Order of the Teutonic Knights, the latter thus adding the domain of the former to its own. Taking as its model the Prussian State, in which it alone held the reins of sovereign authority—the bishops themselves being subordinate to it—the Teutonic Order sought to curb the episcopal power among the Letts, and it was all the more successful in this policy as it managed to subjugate the hitherto unconquered heathen districts. The process of subjugation, so far as the Lettish provinces, Livonia and Courland, were concerned, was virtually completed by 1290. The Order, nevertheless, did not thereby win repose, but had constantly to take the field against unfriendly neighbours, and, as the fortune of war was on the whole unfavourable to it, while its powers were sapped by internal dissensions, and the secularization of its Prussian territory in 1525 isolated its Livonian domain, its authority in the latter also was at length completely shattered. In 1562 Livonia became a Polish province, while Courland, as a hereditary feudal duchy of Poland, came into the power of the last Master of the Livonian part of the Order, Gotthard Kettler. Finally, both provinces became subject to Russia.

3. Ecclesiastical history.—Thus, while the Western Lithuanians and the Letts came under German control in the 13th cent., the whole of Eastern—now Russian—Lithuania was brought into close relations with Poland a century later, and accordingly, as was to be expected, the two divisions came to diverge widely from each other, not only as regards their language, but also in the moral, and most of all in the religious, sphere. Eastern Lithuania, which at the time of Keistut's death was almost entirely pagan, was thrown open to Christianity by Jagiello, who himself had embraced that faith at his marriage with Hedwig, and strove with all the zeal of a new convert to propagate it among his own people of Lithuania; they became more and more closely bound to Poland, and the Church of the Polish Court and the Polish State soon gained complete spiritual authority among them. In this way Russian Lithuania became a Roman Catholic country, and such, except to a very small extent, it has always remained; its non-catholic population consists only of a small number of Lutherans, who were won to that communion through efforts directed from Courland, and of some 40,000 adherents of the Reformed Confession, whose forefathers were induced to renounce Roman Catholicism under the influence of Prince Nicholas Czarny Radziwill. The ecclesiastical history of the Western Lithuanians and the Letts took a different course. As in the Prussian territory of the Teutonic Knights, which under the Grand-Master Margrave Albert of Brandenburg became a secular Protestant duchy in 1525, so in Livonia and Courland the Lutheran teaching was enthusiastically welcomed, and, in fact, won universal acceptance in both provinces. Most of the inhabitants remained faithful to it, so that Protestantism is to-day almost universal among the Letts. The only exceptions are found in localities where Roman Catholicism was able to gain a footing under the protection of Poland, or where proselytes have been won by the Russian State Church.

4. Early religion.—The religion which prevailed among the Lithuanians and Letts prior to the introduction of Christianity was a developed nature-cult. Besides the worship of woods and waters, of trees, stocks, and stones, of fire and household snakes, we find a belief in the personality of the heavenly bodies, especially the sun, as also in the existence of divine beings who control all created things. Pre-eminent among these divine beings was 'God,' designated by the primitive Aryan name *dēwas* (Lat. *deus*). He was regarded generally as the highest supramundane power, but sometimes, like θεός in Homer, he was a distinct mythological figure, and as such probably identical with Perkúnas (Lett. Pérkohns), the thunder-god, who presided over the heavenly bodies, and was regarded as armed. An ancient folk-song tells that, when the moon was unfaithful to his wife, the sun, and became enamoured of the morning star, Perkúnas cut him in pieces with a sword. According to Lithuanian belief, Perkúnas's aunt washed the wearied and dust-covered sun, who was once called the daughter of God, and who herself had sons and daughters; in popular songs these play a great part as mystic powers, but are always represented as human in all respects. We hear frequently also of the 'children of God,' and it would seem that the mythological imagination did not distinguish between the latter and the 'children of the sun.' The sun, nevertheless, was not regarded as the wife of *dēwas* (or of Perkúnas), as appears not only from what has been said, but also from a Lettish folk-song which tells how, when Perkúnas set out to find a wife beyond the sea, he was attended by the sun, bearing a dowry-chest. The Letts, again, believed that Perkúnas was a polygamist, and in another of their folk-songs he is said to have as many wives 'as the oak has leaves,' though none of them plays an independent part in the mythology.

We need have no hesitation in assuming that the ancient religion of the Lithuanians and of the Letts alike recognized the existence of other divine beings, and the way in which these are associated shows that they originated in the observation of nature and human life. But, with the exception of Láime, the goddess of fortune, none of them comes down to us under a common Lithu-Lettish name, and we must be the more cautious in connecting such beings with the ancient religion because many of the divine names of the Lithu-Lettish mythology rest upon the misconceptions or fabrications of later times. There is adequate evidence, however, for an early belief in a number of demonic beings, such as the *laumes* ('fairies') and the *pũkis* ('goblin,' 'flying dragon'), and it is equally certain that the Lithu-Lettish religion was dominated from primitive times by the conception of a devil (Lith. Wélnias; Lett. Welns). While that conception never became perfectly distinct, it nevertheless formed so definite an antithesis to the idea of 'God' that we cannot doubt the presence of a dualistic element in the Baltic cult.

Corresponding to the belief in demonic beings, superstition of a more general kind was, and still is, very prevalent. It manifests itself in a belief in witches (*rãgana*, 'seeress'), in the practice of casting lots (Lith. *bùrti*; Lett. *burt*), in notions regarding countless occurrences of daily life, and not least in the idea that the spirits of the dead (Lith. *wēlēs*; Lett. *welji*) continue to move about among the living—an idea that is undoubtedly very ancient, as it is attested not only by distinct historical evidence, but also by certain features in folk-song (as, *e.g.*, the notion that disembodied spirits marry), and, above all, by graves dating from heathen times, which often contain the remains of both rider and horse, and are furnished with weapons and implements, thus pointing conclusively to the belief that the dead continue to exist in a condition not unlike that of their earthly life. As the majority of these graves contain skeletons, not ashes, they likewise show that the Lithu-Lettish peoples believed in the resurrection of the body. As to the situation of the Lithu-Lettish abode of the dead, there seems to have been no general agreement, some data suggesting the sky, others a nether world. In various localities we find traces of a doctrine of metempsychosis.

Whether the cult had a special class of priests cannot be made out. It had certainly no temples in the proper sense, and the 'ædes sacræ' of which we hear should probably be regarded as slight erections in which fire was kept burning. Sacrifices were common, and were offered not only by way of petition and thanksgiving, but also as propitiations; to judge from the Lettish designation, *ſeedi* ('blossoms'), the offerings would seem to have consisted originally of flowers and fruits, but we have historical evidence that there were from the first other kinds of sacrificial gifts, while, if not among the Letts, yet among the Lithuanians and Borussians, we find traces even of the practice of human immolation.

5. Sociological features.—Our data regarding the political and social conditions, the prevailing sentiments and morals, of the ancient Lithuanians and Letts are not sufficient to enable us to give a full and clear account of their civilization. With varying degrees of certainty, however, we may make the following statements regarding their mode of life: they were efficient in war, and were divided into numerous clans or cantons governed by chieftains; they lived by tillage, cattle-rearing, and hunting, and practised all manner of handicraft and trading; they lived in separate homesteads, and their family life was of the patriarchal type; marriage was based upon the purchase and capture of brides, and, while the wife was subject to the husband, she held a place of high honour among her children; finally, both peoples had a remarkable liking for song, but did not possess the art of writing.

6. Literary development.—One result of the lack of writing is that the Lithuanians and Letts have absolutely no literary remains from heathen times. It was, in fact, only when the Christian Church began to make use of texts written in the native languages—long after the invention of printing—that literary documents were at length produced. A Lithuanian and a Lettish translation of the Lutheran Catechism—the former by Martin Mosvidius, subsequently a clergyman, and published in 1547, the latter by various clergymen belonging to Courland, in 1586—a Lithuanian version of a Roman Catholic catechism by a canon named Michael Daukša (1595), and a work translated by a protestant Lithuanian nobleman named Pitkiewicz (1598), are the earliest known writings in the Lithu-Lettish languages. Like most of this earlier literary work, the further development of Lithu-Lettish literature was long due to clergymen, and thus, naturally enough, that literature, even when it is not of a distinctively religious character, is in its earlier stages largely pervaded by Christian feeling and moral earnestness. Among the Letts the most outstanding figure of the earlier secular literature was Pastor G. F. Stender (1714–96); among the Lithuanians, Pastor Christian Donalitius (1714–80), the distinguished author of a poem entitled 'The Seasons.' As contrasted with this earlier stage, contemporary secular literature is entirely modern in its point of view, as it not only bears the impress of the social revolutions of last century, but is informed by the spirit of a national consciousness, and aims at the independence and enlightenment of the Lithuanian and Lettish peoples. This progressive movement, which proceeded at first but slowly, has within recent decades become very vigorous, and alike in the field of politics and in that of letters has produced great, if not always good, results. Not a little of the poetic production of Lithuanian and Lettish writers is well worth the attention of foreign readers. Yet even the best of it is not to be compared in poetic quality with the lyrical survivals of the earlier eras, falling far short of the beauty of many Lithuanian folk-songs (*dainos*), and also of the charm of the countless Lettish lyrics in quatrains (*dſeesmas*).

LITERATURE.—*Scriptores rerum prussicarum*, 5 vols., Leipzig, 1861–74; A. Guagnini, *Sarmatiæ Europeæ descriptio*, Speyer, 1581; A. Bezzenberger, *Litauische Forschungen*, Göttingen, 1882; A. LOCKE.—

1. Chief dates in his life.—John Locke was born on 29th August 1632, at Wrington, Somersetshire. Brought up at home till the age of fourteen, he was then sent to Westminster school, from which he passed in 1652 to Christ Church, Oxford. He found little satisfaction in the scholastic kind of training then in vogue at Oxford, and, although, after his election to a Senior Studentship at Christ Church in 1659, he held lectureships in Greek and Rhetoric, his interests eventually turned more to scientific and medical studies. His connexion with medical practice happened in 1666 to bring him into contact with Lord Ashley, afterwards Earl of Shaftesbury, who figured so prominently in the politics of Charles II.'s reign; and the meeting had an important influence on Locke's life. In the following year Locke went to London to act in the double capacity of confidential adviser to Shaftesbury himself and tutor to his son, while he was also engaged in political work and held some appointments. Shaftesbury was dismissed from office in 1673, and in 1675 Locke had to go to France for his health. He remained abroad for four years, staying chiefly at Montpellier and Paris, but in 1679 returned to England to assist Shaftesbury once more. The two years that intervened before the statesman's fall and flight were stormy, and, though Locke had disapproved and probably kept clear of the final plots, he thought it prudent in 1683 to betake himself to Holland, nor did he return until the Revolution had made it safe to do so in 1689. The two years 1689–90 saw the publication of the great *Essay* and two others of his principal works, and thus constitute a sort of literary epoch in his life. From 1691 onwards he lived more in retirement, and chiefly in the family of Sir Francis Masham, at Oates, in Essex. He was in great favour with the new government, and for four years (1696–1700) held the well-paid appointment of a Commissioner of Trade. Failing health compelled his retirement from this office. His death took place at Oates on 28th October 1704.

2. Characteristics as a thinker and writer.—'Perhaps no philosopher since Aristotle has represented the spirit and opinions of an age so completely as Locke represents philosophy and all that depends upon philosophic thought, in the 18th cent.—especially in Britain and France' (A. C. Fraser, *Locke*, Preface). Locke's claim to be regarded as thus representative may be based alike on the variety of the subjects on which he wrote—philosophy, education, politics, religion—and on the aims and qualities of his thinking. In all directions he exhibits the merits and the defects which are attributed to the period. He is impatient of authority and of 'the jargon of the schools,' seeks to put aside preconceptions and see the truth of things clearly for himself, believes firmly that 'reason must be our last judge and guide in everything,' and desires sincerely to pursue truth only and for its own sake. On the other hand, he has no adequate knowledge or appreciation of the heritage of the past, accepts current assumptions, distinctions, and doctrines without seeing any need to test them, tends to bring 'reason' down to the level of reflective common sense, and is quite ready to acquiesce in a very humble estimate of its reach as a human faculty. Moreover, although Locke was so eminently representative and exercised an immense influence on European thought, he cannot be ranked very high as a philosophic thinker. His thinking, though patient, laborious, and candid, is fatally deficient in the two qualities of thoroughness and system. The deficiency is partly explained, no doubt, by his occupation with practical affairs, which interfered with continuous philosophical pursuits, and partly, too, by the directly practical aims of much of his writing; but this practicalness of his aims is itself characteristic. Locke's 'discontinued way of writing' goes also to explain his great fault as a writer—the endless repetitions with which he wearies his readers. In the 'Epistle to the Reader' with which he prefaced the *Essay*, he admits frankly that he has not been at great pains to correct the fault, and at times he certainly seems to let his pen run on almost as it pleases. But his faults are not unconnected with real virtues—his intentness upon expressing his whole thought fully and clearly, his desire to drive home his point and to gain the full assent of the reader. When he writes with any care, his plain style is as excellent as it is appropriate, and, when he is moved to earnestness, he writes with force and real impressiveness. His faults are seen at their worst in his controversial writings. Although he professes his eagerness to be shown his errors, he seems in point of fact to have been rather impatient of criticism. He is too much taken up with exposing the misunderstandings and misrepresentations of which his critics have been guilty to try to penetrate to the real motives of their criticisms. Hence his replies do not carry us much further, while even as polemics they have their defects. For, although Locke can be very effective both in direct retort and in irony, he is too apt to weaken his case, not merely by over-elaboration, but also by an insistence on the letter of his own and his critics' statements which the reader feels to be petty and unprofitable.

3. The 'Essay concerning Human Understanding' (1690).—In the prefatory 'Epistle to the Reader' Locke tells us how he was started upon the line of inquiry which resulted, after some twenty years of interrupted labour, in the publication of the *Essay*. He was discoursing with a few friends on a subject which he does not specify, but which we know from another source to have been 'the principles of morality and revealed religion' (see Fraser's ed. i. p. xvii). The baffling character of the difficulties which arose in the course of the discussion caused Locke to ask himself whether, before entering upon such subjects, it was not rather 'necessary to examine our own abilities, and see what objects our understandings were, or were not, fitted to deal with.' He took up the task of this examination, and found it expand far beyond his first expectations. The aim of his whole inquiry, however, remained the same throughout, viz. that determination of the certainty, extent, and degrees of human knowledge which is the theme of bk. iv. of the *Essay*, and to which all the rest of the work is subservient.

But before this theme could be dealt with effectively certain preliminary matters had to be cleared up. To know is to have ideas about things—this at least, whatever more. If, then, we are to arrive at right conclusions about the scope of knowledge, we had best begin by examining this medium in which alone it exists; *i.e.*, we had better try to take stock of our ideas,[1] and see how we come by them. To Locke it was plain that we come by them only through experience. To convince the reader that our knowledge and our ideas have no other source, Locke devotes bk. i. of the *Essay* to showing that there are no 'innate' principles or ideas, unless we understand the term 'innate' in some sense which makes the assertion of such innate knowledge either insignificant or misleading. If there are no such innate ideas, then we must look to experience and experience only for the origin of all our ideas, and must try to trace them back, one and all, to their source therein. It is easy to underestimate the importance of Locke's teaching on this point, but it really constitutes one of his claims to be regarded as the founder of modern psychology.

Yet it was hardly as a psychologist that Locke himself was interested in the source and origin of our ideas; it was rather because he thought that, by seeing how, and at what point, our ideas emerge or are formed in the course of experience, we should be better able to measure the knowledge which we get by means of them. We should know, in short, what the actual experience is from which the ideas are derived, and on which, therefore, the knowledge which we have by means of the ideas is based. The results of Locke's stocktaking of our ideas in bk. ii. can be here only summarized.

He finds that all our ideas may be traced back to two great sources: sensation, which gives us the ideas involved in our knowledge of the external world, and 'reflexion,' which is the perception of the operations of our own mind, and which gives us ideas such as those of reasoning, believing, willing. The ideas derived from (one or both of) these sources may be either simple—such as the ideas of yellow, thinking, pleasure, unity—or complex. The complex ideas are subdivided (ii. ch. xii.) into ideas of modes, substances, and relations. By 'modes' are meant 'such complex ideas which, however compounded, contain not in them the supposition of subsisting by themselves, but are considered as dependences on, or affections of substances: such as are the ideas signified by the words triangle, gratitude, murder.' They may be either simple (=unmixed) or mixed, according as they are merely variations or combinations of one simple idea, or, on the other hand, involve different simple ideas; *e.g.*, the different numbers are simple modes of number or unity, whereas ideas like gratitude and murder are mixed modes. Under the above heads Locke proceeds to survey and examine the most important ideas or classes of ideas that enter into our knowledge. The classification is open to criticism in various ways, but where it principally fails Locke is in dealing with the more abstract and general categories, such as existence, power, unity, substance. The first three of these are said in ch. vii. to be simple ideas derived both from sensation and from reflexion. But it is obvious that they are not really comparable with simple ideas like yellow or hot; they are not sensible qualities. Locke himself speaks of the ideas of existence and unity as 'suggested to' the understanding by objects, and in ch. xxi. the idea of power seems to be reached by a process in which inference, as well as direct experience, plays a part. The general idea of substance seems in like manner to be a result of inference, if we are to give that name to a process and a result which Locke describes in terms so halting and dubious that it is not surprising that his critic Stillingfleet took offence at them. The mind, we are told (ch. xxiii. § 1 f.), takes notice that its simple ideas go constantly together in groups (the qualities that make up a single thing), and, 'not imagining how these simple ideas can subsist by themselves, we accustom ourselves to suppose some substratum wherein they do subsist, and from which they do result; which therefore we call substance. So that if any one will examine himself concerning his notion of substance in general, he will find he has no other idea of it at all, but only a supposition of he knows not what support of such qualities, which are capable of producing simple ideas in us.'

It was the ambiguous position of ideas like power and substance that gave an opening for Hume's sceptical criticism. Throughout the long analysis of ideas which occupies bk. ii. the modern reader, accustomed to a more precise demarcation of the provinces of logic, psychology, and metaphysics, is perplexed by the difficulty of giving any one consistent interpretation of Locke's procedure. The analysis is not simply a logical dissection of ideas into their simplest constituents. Yet it is too much influenced by the point of view of logical analysis to be a truly genetic or psychological account of the growth of our ideas. Finally, both interests are crossed by the further interest in the knowledge-value of our ideas, though the last point of view takes us over to the theme of bk. iv. Thus the discussion of primary and secondary qualities in ch. viii., and the discussions of power, substance, and identity in the chapters so named, are as definitely concerned with the knowledge-value of our ideas, and with the nature of the realities known by means of them, as any part of bk. iv.

In bk. iii. ('Of Words') Locke applies his analysis of ideas to the interpretation of the words by which we express them. The most striking feature of the book is the way in which the distinction of real and nominal essence is applied to the names which signify mixed modes (*e.g.*, moral ideas) and substances respectively. When we define man as a rational animal, we lay down a certain abstract idea, or combination of abstract ideas, by reference to which our application of the term 'man' is determined. This abstract idea is the 'nominal essence' of man. The nominal essence, then, is for Locke nothing more than the statement of the meaning in which we intend to use the general name, whereas the 'real essence' of a thing is the real being or inner constitution of the thing itself. Now in Locke's view the ideas of mixed modes are ideas which we ourselves frame or put together at our own discretion. Therefore, so far as they are concerned, nominal and real essence coincide, and there is nothing, unless the complexity or vagueness of the ideas in question, to prevent us from stating their essence exactly and completely. But in the case of substances we are dealing with things which have a real essence, and, since in Locke's view their real essence is not known to us, we have in their case no guarantee that the distinctions which we draw by means of our abstract ideas or nominal essences will truly represent the real lines of division among the things themselves. In fact, by introducing the notion of essence at all we are assuming that there is a real division of things into species, and this assumption is liable at any point to turn out untrue. The lines of division which we suppose to exist may be found to break down. Hence Locke concludes that in the case of substances our general names express merely the nominal essence. 'The boundaries of species are made by men,' though, of course, we are guided in making them by those superficial resemblances among things which nature presents to our view.

---

[1] The term 'idea' is used by Locke in a very wide sense 'for whatsoever is the object of the understanding when a man thinks.' The equivalent in modern psychology is a term like J. Ward's 'presentation.'

In bk. iv. we come at last to those conclusions regarding the nature and extent of knowledge—or, where knowledge fails, of probability or probable judgment—to which the rest of the work had been subsidiary. Knowledge is defined by Locke as 'the perception of the connexion of and agreement, or disagreement and repugnancy of any of our ideas.' And of such agreement and disagreement he distinguishes four sorts: (1) identity or diversity (*e.g.*, 'blue is different from yellow'), (2) relation (*e.g.*, geometrical equality), (3) co-existence (of attributes in a subject or substance), and (4) real existence 'agreeing to any idea' (*e.g.*, 'God is'). Further, our knowledge of the agreement and disagreement of our ideas has different degrees of evidence. It may be (*a*) immediate or intuitive—and all certainty goes back to such intuition—or (*b*) demonstrative, *i.e.* reached by a series of steps, and therefore in Locke's view not quite so clear as immediate intuition, even though each step has, or ought to have, intuitive evidence. Lastly (*c*), there is 'sensitive knowledge,' our knowledge of the particular existence of external things when they are actually affecting our senses. The last degree of knowledge Locke regards as inferior to the other two, though not open to serious doubt. Whatever falls short of these degrees of evidence is matter, not of knowledge, but at the most of probability. From these preliminary determinations Locke proceeds to a series of discussions in which three problems are intertwined in a way that is rather confusing to the reader: (1) the problem how far we can have knowledge which is real in the sense of being authentic or valid, and not a mere imagination, (2) the problem how far this real knowledge is also general or universal, (3) the problem how far knowledge which is real in the first sense is also real in the further sense of being a knowledge of real existence, *i.e.* a knowledge of things which have a substantive existence or reality. The clue to Locke's answer to all three problems lies in the sharp opposition which he makes between our knowledge, *e.g.*, of mixed modes, where we are dealing with (complex) ideas which are 'archetypes of the mind's own making,' and our knowledge of substances and of real existence, where our ideas refer to archetypes beyond themselves. In the former case our knowledge (of relations among our ideas) can be at once real (in the first sense) and general, because it makes no further claim to be a knowledge of real existence (of things) or co-existence (of attributes in things). In the latter case our knowledge makes this further claim, and is therefore far more restricted. Our knowledge of the properties of a triangle or of the wrongness of murder is real and general, even though no perfect triangle could be drawn or no murder had ever been committed. But our knowledge of real existence and co-existence can never be thus general. As regards real existence, we have, according to Locke, an intuitive knowledge of our own existence, a demonstrative knowledge of God's existence, and a sensitive knowledge of that of external things. But it is to be observed that this knowledge is a knowledge of existence and not of substance, for on Locke's view we do not know the inner nature either of spiritual or of material substance. In fact, he offended his orthodox readers by suggesting that, while we may believe, we cannot know, that the soul (of man) is immaterial. The inner nature (or real essence) of material bodies he assumes to consist in a certain atomic constitution; and, since he regards this as inaccessible to our knowledge, he denies the possibility of physical 'science,' in the strict sense of the term 'science.' Such 'knowledge' as we have of material bodies is only of the co-existence of their superficial properties, and does not go beyond probability, though it may be extended and improved by experiment.

The subsequent development of philosophy and science has made many of Locke's positions seem strange to us. Our confidence in physical science is far greater, our reliance on abstract demonstrations of 'the existence of a God' far less than his. Above all, we have to be more careful about the relation of 'ideas' to real existence and less ready to separate and unite them alternately as suits our convenience. The weaknesses of Locke's compromise between common sense and philosophy have been made so abundantly evident by later criticism that it is hard to be fair to his real merits. And yet it is to the suggestiveness of his treatment of the problems of knowledge that later criticism owes the advance that it has made on his positions.

4. Ethics and politics.—Locke's contributions to ethics are scanty and of little value, unless we credit to ethics the discussion of free will contained in the chapter on power (bk. ii. ch. xxi.). Certainly this discussion, in spite of the perplexities which Locke candidly reveals to the reader, is full of interest and instruction alike for the moralist and for the psychologist. But in ethics proper his notion that morality is no less capable of demonstration than mathematics is an eccentricity, which can be explained only by his theoretical views about our knowledge of mixed modes. It certainly matches ill with his doctrine of moral obligation, which recognizes no higher motives than those of pleasure and pain, reward and punishment.

Nowhere are the features of Locke's thought displayed more characteristically than in his political doctrine. Published early in 1690, the *Two Treatises of Government* had a direct reference to current politics. The first was a refutation of Filmer's plea for the unlimited (paternal or hereditary) right of kings, the second a defence of the Revolution. Concerned only about the right of the people to resist oppressive and arbitrary rule, Locke is more than usually careless about thoroughness and system. He accepts with easy credulity the literal truth of a social compact, with the subsidiary doctrines of a state of nature, natural rights of the individual, and tacit consent of the individual to submit to the established government. In one and the same sentence (bk. ii. ch. xiii. § 149) he tells us that in a constituted commonwealth 'there can be but one supreme power, which is the legislative,' yet that 'the legislative being only a fiduciary power to act for certain ends, there remains still in the people a supreme power to remove or alter the legislative, when they find the legislative act contrary to the trust reposed in them.' He tells us (xi. § 134) that the legislative is 'sacred and unalterable in the hands where the community have once placed it,' yet admits that, as a result of historical changes, the legislative may cease to be representative and may therefore stand in urgent need of reform (xiii. § 157). And then, to complete the reader's confusion, he assigns the task of reforming the legislative to that royal prerogative whose arbitrary exercise he elsewhere denounces. In view of such incoherences we must be content to take Locke's treatise primarily as a pamphlet for his own time; it has at all events more historical than theoretical importance.

5. **Toleration.**—Locke's writings upon toleration serve as a link between his political and his religious doctrines. In 1689 he published in Holland a Latin *Epistola de Tolerantia*, which was translated into English in the same year. Criticisms (attributed to one Jonas Proast of Queen's College, Oxford) drew from Locke *A Second Letter concerning Toleration* and *A Third Letter for Toleration* in 1690 and 1692 respectively, and twelve years later he had even begun a fourth, of which, however, only a fragment was written. The original letter is a businesslike piece of argument, the second is longer, the third is very long and very tedious. Locke can see nothing at all in his critic's arguments, and it must indeed be admitted that the position which the critic had chosen to defend was anything but strong—viz. that, in the case of those who will not embrace the true religion, the magistrate ought to employ force, in the shape of moderate penalties, to compel them to consider the error of their ways. Against this position Locke shows again and again that compulsion can produce only outward conformity, not inward conviction, that what was punished was therefore really dissent and not 'want of consideration,' that any end which justified moderate penalties would equally justify the severest persecution where moderate penalties failed, that 'the true religion' must for practical purposes mean the magistrate's own religion, and that the arguments by which the critic sought to escape from these conclusions were either circular or question-begging. The practical force of Locke's argument lies in this, that the sincerity of religious dissent makes compulsion futile, while the actual divisions among Christian sects make it presumptuous. Philosophically these considerations were reinforced and explained by his view that in matters of religion there is no certain (or demonstrative) knowledge, and that we must be content with 'a persuasion of our own minds, short of knowledge' (*Works*[11], vi. 144). But he had also laid down clearly in the first letter the religious ground that it is 'in the inward and full persuasion of the mind' that 'all the life and power of true religion consists' (p. 11). 'I cannot be saved by a religion that I distrust, and by a worship that I abhor' (p. 28).

It can hardly be said, however, that the constructive argument of the original letter is in itself satisfactory. It is based on Locke's narrow conception of the State as concerned with little but the security of life and property, and as limited in its functions by the supposed consent of the individual. His argument is qualified, too, in ways which make its consistency doubtful. Thus it refuses toleration to atheists, because 'promises, covenants, and oaths, which are the bonds of human society, can have no hold upon an atheist' (p. 47), and, in effect, to Roman Catholics, because their religion requires them to submit themselves to a 'foreign jurisdiction' (p. 46). And this refusal does not square very well with that '*absolute liberty, . . . equal and impartial liberty*,' which, the reader was assured at the outset, '*is the thing that we stand in need of*.' Locke wants to separate sharply and completely the spheres of the civil power and the Church. As he denies to the magistrate any right to prescribe articles of faith or forms of worship, so he condemns those who 'upon pretence of religion' arrogate to themselves any peculiar authority in civil concernments: 'I say these have no right to be tolerated by the magistrate' (p. 46). But it seems strange that, with the recent history of his own country in view, he should not have recognized that an assertion of authority in civil concernments was almost certain to be made by the dominant religious sect, whatever it might be. The magistrate who was not to tolerate such ecclesiastical pretensions would hardly be able to avoid meddling in matters of religion. Nor was it to be expected that any religious sect, whether Catholic or Puritan, which was firmly convinced that it alone taught the true way of life and that its rivals were spreading pernicious errors would quietly acquiesce in its exclusion from the use and the control of the civil power. As in other cases, so here, Locke's argument makes a great show of robust common sense, but does not go very deep, and involves large tacit assumptions.

6. **Religion.**—One of these assumptions, no doubt, was that latitudinarianism of his own religious views which found expression later in his *Reasonableness of Christianity* (1695). In that work he seeks to show, by a great array of Scriptural evidence, that the one and only gospel-article of faith is this, that Jesus is the Messiah, the promised Saviour. To believe this, to repent of our sins, to endeavour after a sincere obedience to the Saviour's commandments—these and these only are the conditions required to make any one a Christian, these and these only are the true 'fundamentals' of the Christian religion, viz. those 'which are to be found in the preaching of our Saviour and his apostles.' Locke anticipates the objection that belief, on the strength of reported miracles, in the statement that Jesus is the promised Messiah is merely a historical, and not a saving, faith; but it can hardly be said that he sees the real force of the objection. He speaks, it is true, of the 'oblation of a heart, fixed with dependence on, and affection to God' as 'the foundation of true devotion, and life of all religion,' and describes faith as 'a stedfast reliance on the goodness and faithfulness of God' (*Works*[11], vii. 129, 131), but he does not explain sufficiently how this religious faith arises out of the historical belief. He insists on the inability of plain people, 'the day-labourers and tradesmen, the spinsters and dairy-maids,' to follow abstract reasonings, and on the consequent necessity for an authoritative religion and morality. 'The greatest part cannot know, and therefore they must believe' (p. 146). But whether such an appeal to authority would find its most natural satisfaction in Locke's simplified Christianity, or is even quite consistent with it, is not so clear. Among other advantages of an authoritative revelation he speaks of the support which it affords to morality, and he leaves us in no doubt as to the kind of support he has in view.

> 'The philosophers, indeed, showed the beauty of virtue; they set her off so, as drew men's eyes and approbation to her; but leaving her unendowed, very few were willing to espouse her. The generality could not refuse her their esteem and commendation; but still turned their backs on her, and forsook her, as a match not for their turn. But now there being put into the scales on her side "an exceeding and immortal weight of glory"; interest is come about to her, and virtue now is visibly the most enriching purchase, and by much the best bargain' (p. 150).

It has to be remembered, however, that appeals to self-interest—'the favourite passion,' as Butler calls it—were characteristic of the age.

7. **Education.**—Locke's views on this subject are contained in his *Thoughts concerning Education* (1693) and the posthumous *Conduct of the Understanding*. The latter connects directly with the *Essay*, and was originally designed to form a

chapter of it. It has been highly praised, but, like other writings on the general education of the intellect, seems often to be elaborating truths of a somewhat obvious kind. Perhaps its main value, after all, lies in the ample illustration which it affords of Locke's own intellectual attitude and temper of mind. The other work makes a much more definite contribution to the art of education. The limited and practical aim of the *Thoughts* is emphasized by Locke himself, viz. to set forth 'how a young Gentleman should be brought up from his infancy.' As a medical man he does not disdain to give detailed advice as to bodily health and training. The characteristic feature, however —and the conspicuous merit—of the book is the paramount importance which it gives to the training of character.

> 'That which every Gentleman . . . desires for his Son, besides the Estate he leaves him, is contained (I suppose) in these four Things, Virtue, Wisdom, Breeding, and Learning' (§ 134).

The order expresses Locke's deliberate estimate of the relative importance of the qualities named, and this estimate governs his treatment of the subject consistently throughout the book. No reader of the *Thoughts* is likely ever to confuse education with instruction. So, too, in the case of intellectual education itself, Locke insists, in his *Conduct of the Understanding*, that the business of education 'in respect of knowledge, is not, as I think, to perfect a learner in all or any one of the sciences, but to give his mind that freedom, that disposition, and those habits, that may enable him to attain any part of knowledge he shall apply himself to' (§ 12). A writer who goes carefully into details must, of course, expose himself to criticism. Locke's advice as to bodily training is in some points certainly not such as medical authority would now approve, and some of his views on moral training are at any rate open to question. But there can be little question about this, that Locke is at his best in dealing with such matters. His fresh and independent view of his subject, his steady insistence on character as all-important, his own kindliness and affection for young people, and his practical common sense combine to make him an admirable exponent of the spirit in which the educator should go about his work.

LITERATURE.—The best ed. of Locke's works is, according to A. C. Fraser, that of E. Law, 4 vols., London, 1777. The references in the art. are to *Works*^{11}, 10 vols., do. 1812. The *Essay* has been edited by Fraser, 2 vols., Oxford, 1894. The chief *Life* is that of H. R. Fox Bourne, 2 vols., London, 1876. There are short accounts of Locke's life and philosophy by Fraser, Edinburgh, 1890, T. Fowler, London, 1880, and S. Alexander, do. 1908; and E. Fechtner's *John Locke: ein Bild aus den geistigen Kämpfen Englands im 17ten Jahrhundert*, Stuttgart, 1898, is a work of similar character. In addition to the histories of philosophy, the chapters on Locke in the following works may be referred to: R. Adamson, *The Development of Modern Philosophy*, Edinburgh, 1903, i.; Leslie Stephen, *Hist. of English Thought in the 18th Century*^{3}, London, 1902, both vols.; *The Cambridge History of English Literature*, Cambridge, 1907–12, viii. ch. xiv. (W. R. Sorley). Of more special works those of G. von Hertling (*John Locke und die Schule von Cambridge*, Freiburg, 1892), G. Geil (*Über die Abhängigkeit Locke's von Descartes*, Strassburg, 1887), and R. Sommer (*Locke's Verhältnis zu Descartes*, Berlin, 1887) deal with the difficult question of Locke's relation to his predecessors; that of E. Martinak (*Die Logik John Locke's*, Halle, 1894) with the philosophy proper.

H. BARKER.

LOCKS AND KEYS.

—Before the invention of bolts or, later, of locks and keys, a variety of devices were in use to secure safety. Many peoples at a low level of culture live in shelters or huts, one or more sides of which are quite open (Tasmanians, Seminoles, Indians of Guiana, etc.), and others live in a house only for occasional purposes—sleeping, birth, sickness, death, etc.[1]—so that there is no need of a fastening. But in other instances, even where no doors exist, attempts are made to render the entrance secure. The huts of the Eskimos are approached by a narrow winding passage along which one must creep on all fours. Kumi villages are stockaded, and the door is approached by a winding passage trebly stockaded.[1] In Fiji, the Caroline Islands, Kiwai Island, among the Indians of the Chaco and of Guiana, and in various parts of Africa the doorway is made very low or very narrow, or is merely a small aperture at some height from the ground (cf. Pr 17^{19}).[2]

Sometimes the doorway is closed merely with a couple of large plantain leaves or palm leaves plaited into basket work, or with a branch of a coco-nut (Solomon Islands, Roro-speaking tribes of N. Guinea),[3] or with a *portière* (ancient Peru),[4] or with a kind of blind or mat which can be raised or lowered as desired (Uaupes, Samoa, Tonga, Tlascala, New Mexico).[5] To this might be fastened pieces of metal or shell which clattered and so gave warning when any one entered (Tlascala), or, as in New Britain, a rattle was hung in the doorway, so that any one entering at night might strike his head against it and warn the inmates.[6] In Benin, where locks were known (§ 1), a cord running through a staple, and attached to a block of wood, served to keep the door closed.[7] Or, again, a wooden screen is slid across the entrance—a kind of primitive door (Cross River, Kitimbiriu, ancient Mexico, Efik and Ekoi, Bageshu).[8] This is secured by thongs (Baganda, Melanesia [but the tying can be done from without through an opening made for the purpose]),[9] by props or a wedge (African tribes, Zuñis [stone slabs held in position by props]),[10] or by bars (Mexico, Upper Congo, Grebos, Dayaks, wild Malay tribes, Zuñis).[11] In some instances such doorways or doors are further protected by charms or fetishes which will work evil on any one trying to enter. These are analogous to the protectives placed at a keyhole to prevent fairies, spirits, etc., from entering through them (§ 3 (*c*)).[12] As knotted strings or thongs served for tents, so they were also sometimes used to fasten doors. In Babylonia and Egypt seals sometimes served the purpose of locks and keys, but bolts were also used, and over those of the temple of Šamaš in Babylonia libations of oil were poured as well as over other parts of the door

(cf. § 3 (*d*)). A conqueror in Egypt sealed the doors of the temple of Rā after having bolted them.[1]

1. Primitive locks and keys.—In some of the instances cited above a bar set against the movable door from within and held in place by various means is found. Doors and gates swinging on hinges were also held with bars of wood, bronze, or iron, set across from one doorpost to the other, the ends being set in holes in these (Dt 3^5, Neh 7^3, Is 45^2, Jg 16^3), or with bars and bolts (Neh 3^3, Babylonia, Egypt). In Homer, *Il.* xii. 455 ff., two bars are pushed out from square holes in the doorposts and meet in dovetailed fashion in the centre. A bolt or wedge keeps them in position. The primitive bolt, at first of wood, then of metal, slid into a staple on the doorpost.[2] Where folding doors were used, probably a vertical bolt above or below held one leaf, and a horizontal bolt fixed both in the centre. The bolt might be shot backwards or forwards by means of a cord from outside, secured to a catch by a series of knots. Or such a cord might lift a latch, the bar of which turned on a wooden pin.[3] Before the use of locks and keys a simple method of sliding a bolt was used in Greece as well as in central and northern Europe, in the shape of a bent hook or sickle-shaped rod. This was passed through a hole in the door and caught in a hole in the bolt or on a projecting knob. Such 'keys' have been found in archæological remains. A similar key about 2 ft. long made of iron with a brass handle ornamented with ring money, and known as the chief's door-key, is in use in N. Nigeria.[4] Another method was to hold the bolt in place by means of a peg also worked from outside by means of a string. A further development, implying the use of a key, consisted in using pegs which fell from an upright into corresponding sockets in the bolt. These pegs might be lifted in different ways according to the type of lock in use. In one type two pegs fell into notches in the bolt when it was pushed home, and held it in place. To raise these a T-shaped key was used.[5] It was pushed vertically through a hole in the door, given a quarter turn, bringing the arms into a horizontal position, and then pulled slightly back so that the returns of the T fitted into holes in the pegs, which could now be raised. The bolt was then pulled back by means of a string.[6] In the second type a number of small pegs drop into holes in the bolt and are then flush with its lower surface. The key consists of a rod bent at a right angle with teeth fitted variously upon the shorter piece. When inserted below the bolt, the teeth raise the pegs flush with its upper surface, and the bolt can then be pushed back by the key. Innumerable varieties of this type of lock are known, and the key is probably that known as 'Laconian' with three teeth, the invention of which was attributed to the Laconians. Locks and keys of this type were used in Egypt, among the Romans (often of an elaborate pattern), Greeks, Scandinavians, and possibly the Celts.[1] Both of these locks are of the 'tumbler' type, as is also the third, the tumbler being 'a bolt of a bolt.' In this the pins drop into holes in the bolt, which is hollow, until they are flush with the upper side of the hollowed-out part. The key consisted of a strip of wood or metal fitted with upright teeth corresponding in size and position with the pegs. It was inserted into the hollow of the bolt and raised the pegs, so that the bolt could be pulled back. In this case the key, which is sometimes of very large size, was put through a hole in the door large enough to let the hand pass through with it. But in some cases the lock was fixed on the outside. This type of lock was used in Egypt (perhaps not earlier than Roman times), and is still common there, in Oriental countries generally from early times—Syria, Arabia, Palestine—in Scandinavia, in Scotland, where it is still found in remote parts of the W. Highlands, among the Negroes of Jamaica, in British Guiana (where it may have been introduced by settlers), and among the Zuñis (perhaps of Mormon origin).[2]

The first of these types is supposed to be the kind of lock which Penelope opens in *Odyssey*, xxi. 46 ff.[3] Diels, however, regards the strap as fastening the bolt from outside. Penelope unloosens it (probably it was tied by a secret knot); then through a hole in the door she inserts a bar of metal bent twice at a right angle; its end strikes on a knob fixed on the bolt and pushes it out of its staple. If there were two bolts, both, connected together, could be shot at once.[4] A large key of this kind is often represented on monuments as a hieratic survival, carried by priestesses.[5] It is akin to the sickle-shaped key already described. In Benin a key and bolt working somewhat on this principle are in use. The bolt has a knob; the key is a metal rod, to the end of which is attached another piece bent twice at a right angle; at the other end is a ring-shaped handle. This key is inserted through a hole in the door, the keyhole being at a height above the bolt corresponding to the size of the key. The end of the key impinges on the knob, and, when a turn is given to it, the bolt is slid along. The bolts in the king's palace were of carved ivory.[6] Locks and keys more or less of this type, but of wood, are used by the Wamba of British Central Africa. The key has teeth of 2 or 3 inches in length. When it is turned, it moves a wooden bolt into place. Possibly these are of Portuguese origin.[7] Original native locks are made by the Hausa, and are traded among other tribes.[8] Du Chaillu refers to native locks used for chests and doors in Goumbi, Equatorial Africa, but does not describe them.[9] Among savage tribes generally civilized influences are introducing the use of European or American locks and padlocks—*e.g.*, among the Baronga and elsewhere in Africa.[10]

[10] Junod, *op. cit.* p. 92; du Chaillu, p. 254 f.

In another type, used mainly in padlocks, the key thrust into the lock compresses springs, thus permitting the shackle to be withdrawn. Such padlocks were used in Egypt, and are still known in W. Africa (possibly of Egyptian origin). They were also used by the Romans, and are still extant in China and India (the so-called puzzle padlocks).[1] The Romans had flat keys for raising latches, similar to those in use to-day.[2] Both the Greeks and Romans knew the lock with wards through which the key passes, thus moving the bolt backwards or forwards. Keys of a simple type to suit such locks are represented on vases.[3] More elaborate keys are often small and form a part of finger-rings, the key lying flat upon the finger. False keys were also used by Roman robbers.[4]

While locks of the primitive types here described were used in different parts of Europe and are indeed still used in remote districts, the ward system, with obstacles to prevent any but the proper key from turning the bolt, was much used during the Middle Ages. The principle of the tumbler lock was applied to locks during the 18th century. Roman keys terminated in a flat or perforated handle; others were of an open lozenge, ovate, or round shape. Until the 13th cent. keys had little ornamentation. In the 13th to 15th centuries they terminated in a lozenge, trefoil, or quatrefoil. After this, and especially in the 16th cent., they had elaborate decoration and became works of art. The bows terminating the stems were filled with ornament, the stem itself was ornamented or took the form of an animal or human figure, or stem and bow took the form of a crucifix. Even the webs were sometimes ornamented.[5]

2. The key as symbol.—The importance of the key, as that by which doors guarding treasure, stores, etc., might be closed or opened, was marked in ancient times. This doubtless originated in the period when locks and keys of a primitive type were first invented and their value made plain to all.

(*a*) Frequently the wife as *Hausfrau* bears the household keys symbolically. She is the key-bearer for her husband. Among the Romans the newly-married wife was given the keys of the store-rooms. The divorced wife had to surrender the keys; hence the formula in the Twelve Tables signifying divorce—'claves ademit, exegit.' The wife who separated from her husband sent him back the keys—'claves remisit.'[6] Among the Teutons and Scandinavians the bride was decked with keys at her girdle. Here also at divorce she had to give up the keys, and 'taking away' or 'giving up the keys' became a formula of divorce.[7] Among the Gauls a widow placed keys and girdle on the corpse of the dead husband as a sign of renunciation in participation of goods—a custom found elsewhere, and also signifying that the widow was free of obligation.[8] Slaves carried keys of various parts of the house, and the janitor bore the house-key. In the Christian Church the church-treasurer who carried the keys of the treasury was known as *claviger*.[9] In Is 22^{22} 'laying the key of the house of David upon his shoulder' signifies transference of the supremacy of the kingdom, and the imagery is taken from the large keys opening tumbler locks carried on the shoulder in the East. In Equatorial Africa, as chests containing treasure are a synonym for property, and as they are kept locked with either native or American locks, the more keys a man has the richer he is. Hence keys in large numbers are worn as a symbol of wealth.[1]

(*b*) Since many divinities were key-bearers, their priestesses (not usually their priests) also bore keys symbolically, signifying that the divine powers were theirs, or that they were guardians of the sanctuary of the gods. Priestesses are often represented carrying on their shoulder a large key of the rectangular type, already alluded to as an archaic survival; a key represented on a grave-stone signifies the burial-place of a priestess.[2] Iphigenia is called *κληδοῦχος* ('key-bearer') of Artemis, and Io *κληδοῦχος* of Hera.[3] Cassandra bore the keys of Hecate, and in the mysteries of the goddess the priestess was *κλειδοφόρος*, while the priestess of Ceres *κατωμαδίαν δ' ἔχε κλαῖδα*.[4]

(*c*) As has been shown in the art. DOOR (vol. iv. p. 851^{b}), heaven and the under world were believed to be regions or abodes with doors and gates. These doors and gates had bars and bolts as well as locks. In Babylonian mythology Marduk made gates to the heavens and attached secure bolts to them. Šamaš is said to open the bolt of the bright heaven, and to Ištar's supremacy is said to belong the opening of the lock of heaven. Hades with its seven gates has also bolts. Over these dust is scattered, and Ištar threatens to break the bolts when she descends there.[5] The gates of Pluto's realm are closed with iron bars and keys.[6] The Hebrews had similar conceptions. Sheôl has bars (Job 17^{16}; cf. Ps 107^{16}); Hades and the Abyss have locks and keys (Rev 1^{18} 9^{1} 20^{1}). These conceptions were still retained in Christian belief, and nothing is more dramatic in the legends or theology of the *Descensus* than Christ's breaking the bars and bolts of Hades. Similarly in Mandæan mythology the regions of the dark worlds have gates with bolts and with locks and keys differing from all other locks and keys.[7] So also earth, sea, the world, etc., have locks and keys. The Assyrian Ninib holds the lock of heaven and earth, and opens the deep, and Ea unlocks fountains.[8] Cybele is represented with a key—that of earth, which is shut in winter and opened in spring. Eros has keys of sea and earth as well as of heaven, and Proteus has the keys of the ocean (*πόντου κληῖδας*).[9] The Egyptian Sarapis has keys of earth and sea.[10] In Hebrew thought the sea has doors and bars, and the earth has bars.[11] In Breton folk-lore is found the curious idea that menhirs are keys of the sea. Should they be lifted, the sea would rush in. They are also keys of hell.[12] Fairyland likewise has its doors with locks and keys, and the key is sometimes given to a favoured mortal in order that he may obtain treasure.[13]

(*d*) It is not surprising, therefore, that some gods were represented with keys, those of the region which they guarded or which was sacred to them, or that the key became a symbol of power—the power which was represented in the opening or closing of the doors of that region to allow or prevent entrance or egress. This was more especially marked in Greek and Roman mythology, in which certain of the divinities bear the title κλειδοῦχος, *claviger*. Janus, as god of doors, is said to have been represented 'cum clavi et virga' in left and right hands—the key and the rod of the Roman doorkeeper. He sits guarding the gates of heaven with the Hours. At morning the doors of heaven are opened to let out the day, and they are shut again at night. Even more universally he was κλειδοῦχος, since all things—heaven, sea, clouds, and earth—were opened by his hand.[1] Portunus, another god of doors, probably of barns and stores, also carried keys, and perhaps some ritual act was performed with keys on the Portunalia.[2] Divinities of towns carried the keys of the town—*e.g.*, Athene is κλειδοῦχος of the town of Athens.[3] According to Parmenides, Dike carries the keys of the doors of day and night, *i.e.* of heaven, and removes the bar from the door when necessary.[4] So Helios, who comes forth from the doors of the sky, is said in the *Hymn* of Proclus (i. 2) to have keys. The same conceptions are found in Mithraic circles, perhaps partly taken over from these classical models. The Kronos of Mithraic belief carries a key in his right hand or one in each hand, or, like Janus, a key and a rod. These are the keys of the doors of heaven, by which souls enter or pass out to birth. He was addressed as 'the lord who fastens the fiery bars of heaven.'[5]

Divinities associated with the under world carry its keys. Hecate usually holds the keys of Hades on monuments or images of the goddess, and is also described as possessing them. She is even called 'the Lady bearing the keys of the Universe.'[6] In Caria every fourth year the procession of the key (κλειδὸς πομπή) was celebrated in her honour—a festival which lasted for several days. Pausanias (v. xx. 1) describes Pluto as having keys of Hades, which is closed by him so that none can go out thence. In the magic papyri and elsewhere other divinities bear the keys of Hades—Persephone, Æacus, Anubis—and here we enter the region of mingled classical, Oriental, and Egyptian beliefs which were popular after the decay of the Greek and Roman State religions.[7]

(*e*) Generally speaking, possession of the keys signifies power over the regions the locks of the doors of which these keys open. As heaven and Hades were regarded as towns or States with walls and gates, so they had locks and keys. The keys are entrusted to their respective guardian divinities, who have the power of opening or closing the gates. To those who were worthy of heaven its door was opened; to those who merited hell its door was opened. Once in, there was generally no egress. In Jewish thought Michael is said to hold the keys of the kingdom of heaven (3 Bar 11^2, cf. 4 Bar 9^5, Eth. version, where he holds open the gates of righteousness till the righteous enter in).

The power of the keys as associated with St. Peter is treated of in the art. BINDING AND LOOSING. Here it is sufficient to say that the idea of his being dowered with the keys of the kingdom of heaven is sufficiently obvious. The picture is still that of a State or town with gates. St. Peter, as κλειδοῦχος, can open to those worthy of the kingdom and its rewards, or can keep the door locked against the unworthy. But it should be observed that, while generally righteousness, obedience to divine law, was the condition of future reward, not only in Christianity but in other religions, there were other methods of compelling the opening of the gates of heaven. We find this in Mithraism, in Gnosticism, perhaps in the popular Christianity which was so much mingled with Gnosticism and paganism, and in the syncretistic magico-religious groups of the period. In these, submission to rites and ceremonies—*e.g.*, of baptism, purification, and communion—possession of amulets, knowledge of the right pass-words or the names of the demonic or divine guardians of the gates of the heaven, were all so many keys with which the soul could unlock the gates and pass onwards or compel the κλειδοῦχοι to unlock them.[1]

(*f*) The name 'key' might be given to anything which had the power of opening or disclosing. Rabbinic lore spoke of three keys which were given to no third party—the keys of the womb or of child-birth, of rain, and of resurrection of the dead.[2] As to the first of these, it is still a divine power which works in conception and birth, opening the womb, and we may compare the phrase of Aristophanes regarding Hera, that she guards the keys of marriage (κλῇδας γάμου φυλάττει), or that of Pindar when he says of Peitho that she bears the secret keys which open the way to the sanctities of love.[3] But the thought underlying this is seen in the erotic slang of many languages, which describes the male organ as 'key' and the female organ as 'lock.' The consummation of marriage by their means was a sacred act, consecrated to certain divinities. Similarly any book of secret knowledge or of mysteries or γνῶσις might be called a 'key.' It contained the means of unlocking mysteries, of opening the way to truth. The book of rites of the Paulicians is called *The Key of Truth*, and some of the magical texts current in the syncretistic groups already referred to bore the name 'Key.' The name is applied also to any book which purports to explain various matters, or even to literal translations of classical or foreign works; hence withholding 'the key of knowledge' of which Christ speaks (Lk 11^{52}) means debarring men from the knowledge of moral or spiritual truth which would give them entrance to the Kingdom of God. In the Coptic Gnostic documents Christ Himself is called 'the Key.'

As a symbol the key occurs in heraldry. It is found in the arms of the pope, of various bishoprics, of cities, of private families. It also occurs in the names and signs of shops and inns, and is here of ecclesiastical derivation—the Cross-keys, the Golden Key, etc. Keys, and especially that of the forbidden chamber, are prominent in folk-tales of the Bluebeard group (MacCulloch, *CF*, London, 1905, p. 306 ff.).

3. Locks and keys in magic.—The importance attaching to locks and keys gave them a place in various magical rites, while their being made of metal adds to their value, since metal of itself has magical power (see CHANGELING, vol. iii. p. 359^b; FAIRY, vol. v. p. 684; METALS AND MINERALS).

(*a*) As locks and keys make fast or open, bind or loose, so they are sometimes considered to have a sympathetic effect upon dwellers in the house—*e.g.*, at a birth or at death. It is a common custom to open all the locks at a confinement, lest the delivery should be hindered through their remaining fast, and so to lighten the labour. With this may be compared the Roman custom of presenting the woman with a key as a portent of an easy delivery. In Sweden in difficult labour the midwife asks the woman whether she has prayed to the Virgin for her key to open the womb. If not, the midwife says the prayer, the woman repeating it after her.[1]

[3] Aristoph. *Thesm.* 976; Pindar, *Pyth.* ix. 39.

If a witch was present at a wedding and snapped a padlock to at the benediction, dropping it into water, she caused the marriage to be unfruitful, until the padlock was recovered. This belief is found in Germany and, in a similar way, in Greece.[2]

On similar grounds the soul cannot leave the body of a dying person as long as any locks or bolts in the house are fastened; these are therefore unlocked or unfastened and the house-doors are opened.[3]

In all these we have instances of sympathetic magic—what is done to the lock is *ipso facto* done to the living person. They correspond to the world-wide use of knots (*q.v.*) and bindings in magic.

(*b*) In many cases the key itself, probably as a symbol of power, is used as an amulet or has magical virtues. Already among the ancient Greeks and Etruscans this use was found (see *ERE* vol. iii. p. 436ᵇ). In Italy small keys blessed by the priest are called 'keys of the Holy Spirit,' and are worn by infants as a preservative against convulsions. There, as well as in Portugal, Greece and the islands, Germany, and other places, the key is a frequent amulet against the evil eye. It may form one of the charms attached to the *cimaruta*, or sprig of rue, or may be a single amulet elaborately worked. Sometimes it is phallic, the handle being so shaped.[4] In Jerusalem necklaces from which charms depend are worn, and among the latter are a lock and key.[5] In China a common amulet given to an only son in order 'to lock him to life' is a silver lock. The father collects cash from a hundred heads of families and exchanges it for silver; of this a native padlock is made, and it is used to fasten a silver chain or ring round the boy's neck.[6] In Korea the neck ring lock is also a charm. For a girl it is a real lock of silver with a bar across the top (the bolt), and the key at the side. For a woman it is a mere symbol of the lock. On it is the inscription, 'Longevity, riches, and all you wish.'[7] With these practices may be compared an incident in a Danish *Märchen*: the hero gets a key as a christening gift, and it brings him luck.[8] In Norway a large old iron key is used against dwarf-struck cattle. It is hung over the stall, and is supposed to heal them. Such keys are supposed to have been forged by dwarfs (cf. the use of elf-shot, FAIRY, § 6).[9] An ancient method of warding off hail from a field was to hang keys around it—perhaps by way of locking the field in from harm, or merely as charms against the hail.[10] In Transylvania a lock is carried in the seed-bag in order to keep birds from the corn.[11] A key, partly for its own virtues, partly because it is of iron, is commonly placed in a cradle to prevent fairies from changing the baby.[12]

In the island of Zacynthos a key is placed on the breast of a corpse, because, being of iron, it will scare away evil spirits, though the popular explanation is that it will open the gate of paradise.[1] According to a belief in Poitou, when a werwolf is struck between the eyes with a key, the enchantment ends, and the human form is resumed.[2]

(*c*) Another magical use is that of the Bible and key. A large key, sometimes an ancient or hereditary key, is placed flat between the leaves of a Bible, which is then closed and bound with cord. The handle of the key projects and is held in the hand or on the fingers of one or two persons, while some formula is being said. At the psychological moment it twists and turns, thus indicating whatever is desired to be discovered. This has superseded earlier methods—*e.g.*, with a sieve—but Reginald Scot already mentions the use of a psalter and key. (1) They are used as a cure for nose-bleeding. Here the patient turns the Bible and key round, while the wise man repeats a charm. Then the latter removes the key and places it down the patient's back, while the patient holds the Bible. This is supposed to cure the bleeding entirely. The latter part of the charm is often used, but seldom now in a magical way. A similar use of Bible and key is for the purpose of 'unwitching' a patient.[3] (2) It is also used in divination, usually to discover a thief or a witch. The names of the suspected persons are repeated with the formula, 'Turn Bible, turn round the key, turn, key, turn, and show the name to me.' At the right name the key twists and the Bible drops from the hand. Within recent years such a use is known to have actually led to an arrest.[4] The Bible and key (or the key alone) are used in E. Anglia to divine with, and also to help a vessel entering or leaving port. To assist it to enter port, the key is turned towards oneself, and, to leave port, away from oneself.[5]

(*d*) The keyhole, as an opening by which fairies, spirits, and the like may enter the house, is often magically protected. Thus in the Sporades it is stopped with a skein of flax to prevent vampires from entering. They would require to count all the threads in the skein before doing so. In Cyprus, on locking up, the cross is signed with the key over the keyhole.[6] In Germany the keyhole is stopped up in order to outwit the *Mar* ('nightmare') which enters thereby.[7] In Egypt it is customary to say, 'In the name of God, the Compassionate, the Merciful,' when locking a door, as a protection against genii. The door cannot then be opened by them.[8] In Aude a vase of water was placed before the keyhole to prevent visits from a spirit, and in Savoy a watch-glass. The spirit broke the latter and then left in disgust.[9] Stables, cow-houses, etc., are sometimes protected by tying charms to the key—usually a perforated stone (the key-stone which keeps off the demon Mara) and a horn.[10] In Babylonia demons were said to slip into houses through bolts, etc., 'gliding "like snakes,"' and it may have been to prevent this that libations were poured over these (§ I; for other precautions taken see DOOR, vol. iv. p. 849ᵇ).[11]

(*e*) Keys were sometimes thrown into holy wells as a propitiatory offering to the spirit or guardian of the well, as at Criccieth on Easter morning.[1]

4. The key-flower.—Mediæval legend and later story had much to say regarding certain mysterious flowers which could either make locks fly open or cause a rock door in a mountain to swing open and so admit the seeker to obtain treasure hidden there. The flower was blue, red, or white, and was known as the 'wonder-flower' or 'key-flower' (*Schlüsselblume*); similar properties were also ascribed to the *Springwurzel*, or 'explosive root,' usually obtained from a woodpecker whose nest had been closed up with a wooden bung. She flies off to seek the root, returns with it, and applies it to the bung, which is forced out with a loud noise. It is then taken by the treasure-seeker, who uses it as the flower is used in other instances.[2] Ælian and Pliny know of this legend, but speak of a plant, and the latter elsewhere refers to a herb by which all things closed can be opened.[3] This is the *shāmīr* of Rabbinic legend, a kind of worm or a stone in possession of a moorhen.[4] In connexion with these stories of mountain treasures obtained by the wonder-flower, there are usually mysterious white ladies who guard them, and who, like the *Hausfrau*, carry a bunch of keys which also give access to the treasure.[5] There is a German belief that where the rainbow touches the earth a golden key falls, which gives its name to the flower.[6] In the story of 'Alī Bābā, the rock door opens when the mysterious word *Sesame* is spoken. The word may have stood in an earlier version for the herb *sesamum*, but in other instances the use of magical words makes locks and bars open—*e.g.*, those of the Egyptian under world—while even in tales of enchantresses from New Guinea the use of the words, 'Oh, rock be cleft,' and 'Oh, rock be closed,' causes a rock door to open and shut.[7] In the lives of saints a not uncommon miracle is to unlock a door when the key is lost. They touch the lock with the hand, or their mere presence causes the door to open. In other instances they pass through closed doors, as modern mediums have claimed to do.[8] Probably the *point d'appui* of these saintly miracles is Ac 12^{10}.

J. A. MACCULLOCH.

LOCUST.—1. **Introductory.**—The Latin word *locusta* first denoted certain crustaceans—*e.g.*, the lobster—and the English word 'lobster' is itself a corrupt adaptation of the Latin *locusta*. Dialectically 'locust' denotes the cockchafer and the cicada. A certain resemblance to the lobster seems to have brought the English meaning of 'locust' back to the insect.[1]

Various species of different genera have been endemic plagues in N. Africa and the Levant from ancient times. In recent years S. Africa and Australia have suffered severely. Mediæval lore, continuing the Biblical traditions and many Oriental tales, and also making the most of some inroads into Central Europe, elevated the locust into a fabulous monster. The Romans and Greeks had similar fancies; Pliny, *e.g.*, speaks of Indian locusts three feet long, with legs of such hardness that they were used as saws.[2] Arabian legend created a body of myth about the insect. The locust addressed Muhammad thus:

> 'We are the army of the Great God; we produce ninety-nine eggs; if the hundred were completed, we should consume the whole world and all that is in it.'

At various dates Italy, Russia, Transylvania, Poland, France, and Spain were visited by swarms, and the accounts given vie in exaggeration. But in the East from Africa to N. India they have been and are still a dangerous pest to agriculture, as the example of Cyprus shows.

The insect chiefly referred to in historical accounts is *Schistocerca peregrina*, formerly classified as *Acridium peregrinum*. *Pachytylus migratorius*, formerly *Œdipoda migratoria*, also appears in the Levant. They belong to the family *Acridiidæ*, not the *Locustidæ*, and are the only Old World species, the others being American.[3] The locustid insects of entomologists are the European grasshoppers. The OT has nine different names; it is improbable that these refer to different species. That most often employed is *arbeh* (*e.g.*, Ex 10^{4-15}), probably connected with *rābāh*, 'multiply.'[4]

The *larva*, not the perfect insect, is the destructive form. This blackish *larva*, which moves by hopping, resembles the *imago* very closely, but the wings are immature. The perfect insect walks until after a sixth change, when it is able to fly. Three to four inches in length, the *larva*, as it advances to the *imago*, passes from black to brown and green.

While we must distinguish the absolutely destructive *larvæ* from the relatively harmless winged insects, some accounts of the flights of the latter are essential, having produced so great an impression on the popular imagination. It is curious that only modern observers have described the march of the *larvæ*, as terrible in its completeness of destruction as that of the white 'ants' of Africa. But possibly such OT writers as Joel were familiar with the phenomenon, however vaguely they may refer to it. As will be seen from the account cited, it is far more impressive than the flight.

2. The locust flight.—Darwin's account has a typical value:

> '. . . a ragged cloud of a dark reddish-brown colour. At first we thought that it was smoke from some great fire on the plains; but we soon found that it was a swarm of locusts. They were flying . . . at a rate of ten or fifteen miles an hour. The main body filled the air from a height of twenty feet, to that, as it appeared, of two or three thousand above the ground.' The sound was 'like a strong breeze passing through the rigging of a ship. . . . They were not, however,

---

[1] *OED*, *s.vv.* 'Lobster' and 'Locust.' Old Cornish has *legast*, and Fr. *langouste*; cf. *Trin. Coll. Hom.* 127 (1200 A.D.): 'wilde hunie and languste his mete.' The word appears to mean originally the 'springer' (the 'grass-*hopper*'; cf. also Fr. *sauterelle*; *sauter*), and to be connected with Gr. *ληκάω*, Lettish *lēkt*, 'leap, spring' (A. Walde, *Lat. etymolog. Wörterbuch*^{2}, Heidelberg, 1910, p. 438 f.). The Boers term their 'locust' *voetganger*; this is the larva called by the Portuguese *saltona*, or 'jumper,' and by the Italians *cavalletta*, with which Germ. *Heupferd* may be compared. Jl 2^4 and Rev 9^7 repeat this analogy of form and movement with the horse.

[2] *HN* xxxv. (29).

[3] A. E. Shipley, art. 'Locust' in *EBi*; L. Gautier, art 'Locust' in *DCG*.

[4] G. E. Post, art. 'Locust' in *HDB*.

> so thick together, but that they could escape a stick waved backwards and forwards.'[1]

Another account, from the Levant, states:

> 'Their swarms fill the air, darkening the sky, and the noise of their wings resembles the pattering of a heavy rain . . . towards nightfall they light . . . they often break the branches of the trees . . . the swarm invariably resumes its flight as soon as the sun has warmed it a little . . . it has not time to destroy all the vegetation.'[2]

In 1889 a swarm over the Red Sea occupied 2000 square miles; its weight was calculated at 42,850 millions of tons.[3]

> Munro, writing of locusts in S. Africa, states that, when driven by a storm into the sea, they may 'lie on the beach as a bank from three to four feet thick and from fifty to one hundred miles in length, and the stench from the corruption of their bodies, it is affirmed, is sensibly perceived for a hundred and fifty miles inland.'[4] He describes the movements of the flying locusts as 'curious, interesting, and pretty.'

All observers agree with the Psalmist (Ps 109^{23}) that locust swarms follow the course of the wind.

> 'To a certain extent' the flying insects 'do injure here and there . . . but they do not destroy everything before them, like the army of the larval stage or jumpers.'[5]

3. The locust march.—After the flight the females lay their eggs in the soil, each ovisac containing about a hundred eggs.

> 'When the tiny creatures issue from their nest . . . the very dust of the ground which was so still before, now seems to waken into life. They begin to move by a process of twisting or rolling over one another, so that for the first few days they receive the name of twisters (South Africa). Within eight or ten days, however, they can jump four or six inches, and at the age of three or four weeks a new characteristic makes its appearance. A desire to explore manifests itself, and in a surprising manner. The whole company moves in a body in one general direction, and more or less in a straight line, as if by one common instinct, without apparently having any recognised leader or commander.'[6]

Marching thus over the country, they eat everything that comes in their way, even the bark of trees; they enter houses and 'eat the very clothes and curtains at the windows'; they even eat the wool off the sheep; and, 'last stage of all that ends this strange, eventful history,' they will eat one another. When the *voetgangers* are on their way, they resemble and receive from the Boers the name of an 'army on the march.'[7]

> 'It is in this marching stage that the *voetgangers* do enormous damage and eat every edible thing in their path, and completely destroy the work of the husbandman. They are unlike the flying company of locusts, which only levy toll here and there, but these, when they pass, leave nothing.'[8] 'The black larvæ,' says Post, referring to Palestine, 'now spread like a pall over the land, eating every green thing, even stripping the bark off the trees.'[9]

The Syrians beat pans, shout, and fire guns to drive off a swarm. When they have settled, they are gathered in sacks. The government enforces a *per capita* contribution of eggs, or offers a price for them by weight. When the *larvæ* hatch out, in fifteen or twenty days, trenches are dug in their pathway, or fires are built.[10] The only successful method of exterminating locusts was adopted in Cyprus in 1881. Since 1600 the island had been a wilderness. Matthei, conversant with the habits of the *larvæ*, erected an insurmountable wall of calico and leather round the main area. Unable to pass the smooth leather, the locusts fell into the trench dug beneath. At the same time 1300 tons of eggs were destroyed. The plague has been obsolete ever since.

4. Superstition and metaphor.—Among the Dravidians of Mirzapur, when locusts threaten the gardens, the natives catch one, decorate its head with red lead (in accordance with ceremonial custom), salaam to it, and let it go. The whole swarm is then believed to depart.[11]

> Similarly in Syria, when caterpillars invaded a vineyard or field, 'the virgins were gathered, and one of the caterpillars was taken and a girl made its mother. Then they bewailed and buried it. Thereafter they conducted the "mother" to the place where the caterpillars were, consoling her, in order that all the caterpillars might leave the garden.'[1]

It is not unlikely that the 'caterpillars' mentioned in this account are the locust *larvæ*. The conciliatory method of expelling pests and vermin is adduced by Frazer to explain such titles of Greek deities as Locust Apollo, Locust Hercules, and Mouse Apollo.[2]

> Such worships 'were originally addressed, not to the high gods as the protectors of mankind, but to the baleful things themselves, the mice, locusts, mildew, and so forth, with the intention of flattering and soothing them, of disarming their malignity, and of persuading them to spare their worshippers.'[3]

In Hebrew literature, and thence to a certain extent in European, the locust is a symbol of destructive agencies.[4] The OT also employs it to illustrate number and combination.[5]

5. Locusts as food.—Since the time of Herodotus[6] the use of locusts as food has been known. Thomson limits it to the Bedawīn of the frontier, and observes:

> 'Locusts are always spoken of as a very inferior article of food, and regarded by most with disgust—to be eaten only by the very poorest people.'[7]

They are roasted and eaten with butter, after the head, legs, and wings have been removed. They are also dried and then beaten into a powder, as a substitute for flour.[8] According to Burckhardt, they were roasted and kept in sacks with salt. He adds that the Bedawīn never used them as a dish, but would take a handful when hungry.[9] Van Lennep states that they resemble shrimps in flavour. Horses and camels are often fed with them, and they are exposed for sale in the markets of Baghdād, Medīna, and Damascus.[10]

The Law forbade Israel to eat 'creeping' things; 'yet may ye eat of all winged creeping things that go upon all four, which have legs above their feet to leap withal upon the earth.'[11] This exception includes the locust. The gospel account of locusts forming part of the diet of John the Baptist is accepted by most writers.[12] But Cheyne argues in favour of the ancient tradition that the ἀκρίδες are the beans or pods of the carob tree. This is a definite meaning of the words ἀκρίς and 'locust,' and the latter is even applied to the similar bean of the cassia tree. The resemblance between the insect and the bean is the reason for the identity of name. The carob beans are the 'husks' referred to as food for swine in the parable of the Prodigal Son,[13] and they are still sold for food in Syria.[14] In mediæval literature these beans are St. John's bread. In ancient Palestine there was a proverb, 'Israel needs carob beans to do repentance.'[15] They were a type of the food of the poor, and the connexion is between poverty and repentance, the

Baptist being essentially the prophet of repentance.[1] It is impossible to decide a detail which is itself perhaps legendary. But its typical value is great; and, as such, the carob bean proverb leaves little doubt in identification. Treating the detail as historical fact, we reach the same conclusion in favour of Cheyne's view, for this reason, that, while the carob, like all leguminous food, is highly sustaining (the Levantines have always made such food their staple diet), the nutritious value of the insect locust is extremely small, and insufficient, with honey, to support life.

LITERATURE.—This is fully given in the article, excepting J. H. Fabre, *Souvenirs entomologiques*, Paris, 1879 ff., vi. 196–212, 248–297.

A. E. CRAWLEY.

LOGIC.—I. *DEFINITION.*—Exceptional difficulties lie in the way of a general description of logic, because the definite increment of knowledge which is undertaken by primary sciences is not claimed here in a sense that is comparable. In logic we merely 're-traverse familiar ground, and survey it by unfamiliar processes. We do not, except accidentally, so much as widen our mental horizon' (B. Bosanquet, *Essentials of Logic*, p. 2). And exceptional pains are necessary in explaining how unfamiliar processes which reveal no unfamiliar objects amount to knowledge and science. A knowledge of knowledge cannot be proposed with quite the same assurance as a knowledge of space, matter, organization, and history, or even beauty or goodness. Some writers have proposed an art, rather than a science or even a philosophy; and others, a science of a special kind of mental process, or a philosophy reflecting on special relations of our personality to the universe. Mansel collects the following varied descriptions of the subject (Introd. to Aldrich, *Artis Logicæ Compendium*^{4}, p. lviii).

> Logic is a part of philosophy (the Stoics). It is not a part, but an instrument (Peripatetics). It is both a part and an instrument (Academics). It is both a science and an art (Petrus Hispanus and others). It is neither science nor art, but an instrumental habit (Greek commentators). It is a science and not an art (Albertus Magnus and others). It is an art and not a science (Ramus and others). It is the science of argumentation (the Arabians), of the operations of the mind so far as they are dirigible by laws (Aquinas), of the syllogism (Scotus), of the direction of the cognitive faculty to the knowledge of truth (C. Wolff), of the universal and necessary laws of thought without distinction of its objects (Kant), of the processes of the understanding concerned in the estimation of evidence (J. S. Mill). It is the art of thinking (P. Gassendi, Arnauld), of reasoning (J. Le Clerc, R. Whately, and others), of the right use of reason (J. Clauberg, Watts), of dissertation (Ramus), of teaching (Melanchthon), of directing the mind to any object (George Bentham), of forming instruments for the direction of the mind (Burgersdyck, R. Sanderson, Aldrich).

Underneath such summary phrases as 'laws of thought' and 'forms of knowledge,' which have become common in the more modern definitions, there still lie very varied suggestions as to scope and method. The following are influential examples:

> 'A collection of precepts or rules for thinking, grounded on a scientific investigation of the requisites of valid thought' (Mill, *Exam. of Sir W. Hamilton's Philosophy*^{5}, London, 1878, p. 462).
>
> 'If we analyse the mental phænomena with the view of discovering . . . the Laws by which our faculties are governed, to the end that we may obtain a criterion by which to judge or to explain their procedures and manifestations . . . we have a science which we may call the Nomology of Mind. . . . Pure Logic is only an articulate development of the various modes in which they [the primary conditions of the possibility of valid thought] are applied' . . . the laws of thought as thought (Hamilton, *Lectures*, Edinb. and London, 1859–60, i. 122, iii. 12, 78 f.).
>
> The forms and laws of thought 'are those subjective modes of the connection of our thoughts which are necessary to us, if we are by thinking to know the objective truth' (Lotze, *Outlines of Logic*, Eng. tr., Boston, 1892, p. 6).
>
> 'The conditions under which thought can arrive at propositions which are certain and universally valid . . . and the rules to be followed accordingly' (C. von Sigwart, *Logic*, Eng. tr., London, 1895, § 1).
>
> 'The doctrine of the regulative laws, on whose observance rests the realization of the idea of truth in the theoretical activity of man' (Ueberweg, *System of Logic and Hist. of Logical Doctrines*, Eng. tr., London, 1871, § 3).
>
> 'The subject-matter of Logic is Knowledge, *qua* Knowledge, or the form of knowledge; that is, the properties which are possessed by objects or ideas in so far as they are members of a world of knowledge . . . the characteristics by which the various phases of the one intellectual function are fitted for their place in the intellectual totality which constitutes knowledge' (Bosanquet, *Essentials of Logic*, p. 44, *Logic*, i. 3).

These definitions with one consent repudiate the relativity, or volitional limitation, which is suggested by the title 'art'; but the responsibilities which must fall on a professed science they acknowledge only with some qualification. Mill does not propose any 'scientific investigation' which is not already sponsored by psychology. Hamilton attenuates the specific guarantee by relying on conditions that are 'primary.' The others appear to undertake something further, but with the same risks as are attendant on speculative philosophy. Ueberweg expressly relies on 'universal laws of existence' borrowed from metaphysics, and 'laws of the life of the mind,' from psychology, for 'auxiliary axioms' (§ 2). In order that we may avoid the responsibility of assuming that the 'unfamiliar processes' of which Bosanquet speaks are 'knowledge' in the same sense as our more natural scientific processes are, and that logical doctrine consists of 'theses to be proved' and 'axioms to be applied,' as Ueberweg claims (§§ 1, 4), comparable with these in significance, we might define logic as the art of raising the natural scientific processes into explicit self-consciousness. The special labour of logical studies, in any case, is to be undertaken with a view to what psychologists describe as 'acquaintance with,' rather than 'knowledge about,' our natural processes.

> 'Without logic, the mind of man can admirably energise, admirably reason; but without it, does not know itself through and through; and ignores one of the fairest and most fruitful of its faculties. Logic brings to the mind self-acquaintance. Such is its use, and it cannot have any other' (Barthélemy Saint-Hilaire, *De la Logique d'Aristote*, p. xlii).

We might also require of any doctrine which claims to be logical that it shall be (1) reflective, as distinct from assertive, in its significance, (2) teleological or purposive in its principle, (3) *a priori* or independent in its authority, (4) theoretical rather than practical in its limitations, and (5) disciplinary, not objective, in its motive.

1. Reflexion.—Reflective contents belong to various kinds of philosophical doctrine. In logical doctrine they recover the reference to personality which has been discarded from scientific, and place an 'I know' where otherwise would be a 'So it is.' This reference is the ground for classifying logic with the sciences specially grouped as mental, as in Hamilton's scheme (*Lectures*, vol. i. ch. 7), or as an 'integral part of philosophy' (Ueberweg, § 6); and it forbids such arrangements as those made by A. Bain and H. Spencer, where, at least in part, it stands first in the series of natural sciences arranged in the order of abstractness. For logic is what it is, not because it leaves out of consideration the spatial and other aspects of reality which natural sciences accept, but because it accepts something which they reject, and so changes the significance of a scientific statement, in scholastic phrase 'a first intention,' into a 'reflective idea,' or 'second intention.'

2. Purpose.—Knowledge is a form of life, and, like other forms, cannot be explained by detailing its constituent energies or organs, without assuming a finality for the whole. For descriptive purposes we can say that 'the idea of complete knowledge is the motive power of theoretical effort' (Sigwart, § 62, 6); or, to mark off the occasion for logical study, that 'the *fundamental fact* which underlies all logical reflection . . . is that we make a *distinction, from the point of view of value, between the true and the false*' (W. Windelband, in *Encyclopædia of the Philosophical Sciences*, Eng. tr., i. 11); or, in co-ordinating cognitive life with other moments of cosmic existence, that 'the "value" which is the object of philosophical Logic is logical reality and fact itself' (B. Croce, *ib.* p. 203). Logical consciousness reinforces this finality, though the doctrine is essentially neither description of the experience nor discrimination of the faculty nor perspective of the event, but expression of the aim.

---

[1] Cheyne, art. 'Husks' in *EBi*.

3. Independence.—In analogy with Kant's celebrated criticism of knowledge, that it all begins with experience, but does not all spring from experience, we can say that logical consciousness begins with knowledge, but does not spring from it, or wait for a licence from it in the same way that empirical science has to wait for its special data. Even the borrowings from psychology and metaphysics are not for the purpose of conferring authority on logic, but are methodical devices for making it precise, for 'unfolding an inward conviction,' as Butler claimed to do in regard to conscience. The logical rule is neither more nor less authoritative than the example, provided it is understood discriminatively. 'If any man stumbles at the fact that when we want to think about thought we must, in so doing, already follow the norms of right thinking—there is no arguing with him' (Windelband, *loc. cit.* i. 25). All we can do is, in the words of Kant, to 'make the rule followed by the understanding a separate object of thought' (*Logic*, Introd. § i.).

4. Theory.—Cognition gives us the control of nature; and the reflective faculty, the control of self. But logic is the expression of the reflective faculty so far, and so far only, as the self is cognitive and there is conscience in science. It is indifferent to the manifestations of personality in feeling or action, and even in so much of cognition as escapes control.

5. Discipline.—Thus the motive of logic is not furnished by the world of objects, but by the aims of personality; if an art, it is a cognitive art, if a science, a disciplinary science; and it is sustained by our solicitude for intellectual self-government. The historical beginnings of logical theory are to be found in those racial dispositions and social conditions which gave occasion for the deliberate control of our trains of thought. In India it appears to have originated with rules in ceremonial deliberation:

> 'From the Brahmanic decisions on disputed points arising in the course of sacrifice . . . collected in exegetical and philosophic aphorisms . . . Gotama [probably later than the 5th cent. B.C.] evolved a system' (Bodas, *Tarka-Saṅgraha of Annambhaṭṭa*, Introd. p. 29).

And with Gotama the inwardness of logical concern has outworn its ceremonial form.

> 'The end proposed is the escaping from liability to transmigration, and the attainment of tranquil and eternally uninterrupted beatitude' (*Aphorisms*, tr. J. R. Ballantyne, Introd. p. 5).

In Greece it originated with canons of public debate and scientific instruction: the propaganda of plausibility by the Sophists, the challenges to the complacency of popular beliefs issued by Socrates, the polemics of Zeno.

> Some of Aristotle's predecessors, he records, 'had given rhetorical, others interrogative, discourses to learn—since they imagined that they should instruct their pupils by delivering, not [logical] art, but the effects of art' (*Soph. Elenchi*, ch. 34). The art which he constructed deepened, like Gotama's, into pure reflexion and self-communion, for 'dialectic [the art of discussion], being investigative, holds the way to the principles of all methodical thought' (*Topics*, i. ch. 2, *Soph. Elenchi*, ch. 2).

But in the Greek, unlike the Hindu, logical illumination, reflexion fastened upon conviction at the point where individual intelligence merged in the intelligence of humanity at large—just as in Greek ethics the good of the individual merges in that of the State. The Greek forms of proposition and syllogism seem to symbolize a world of intellects, where a common record of conviction can be maintained amid determinations of experience and foresight varying and changing with the individuals: the Greek analysis of demonstrative science idealizes the inner coherence of such a record, whereby it dominates the individual intellect, while the Greek dialectic is the interplay through which vitality, welling from the latter, streams into the record.

The motive of logic being disciplinary, its method must be adjusted to the intellectual forces which are permanently constitutive of civilization; and its general scope cannot change to the extent to which other sciences change, where any advance may open up new vistas of inquiry. Kant is able to say:

> 'Since Aristotle's time Logic has not gained much in extent, as indeed its nature forbids that it should. But it may gain in respect of accuracy, definiteness and distinctness. . . . Aristotle has omitted no essential point of the understanding; we have only to become more accurate, methodical and orderly' (*Logic*, Introd. § ii.).

Nevertheless, it must share the vicissitudes in fortune of civilization as a whole. And the more influential of these, since Aristotle, have been the limit set on the range of free judgment during mediæval centuries, the value set upon personality by modern religion and philosophy, and the accelerating progress of physical sciences in the most recent times—three influences which have some connexion with a certain exaggeration in value which has fallen upon the three Aristotelian departments of doctrine successively in scholastic, modern, and recent years, and has transformed at least the dialectic almost beyond recognition. For the contrasts and controversies between the historic schools are questions of emphasis and balance in what might be called the 'dimensions' of logical discipline, to borrow a conception from geometry; or in the fundamental 'ideas' used in forming our conceptions, to borrow from Whewell's philosophy of all scientific discovery whatever.

> In almost every science 'controversies' have 'turned upon the possible relations of Ideas, much more than upon the actual relations of Facts' (*Philosophy of Discovery*, p. 255).

The dimensions or ideas in which the historic schools have formed conceptions for logical value may be distinguished as explicitness, consistency, relevance, and system.

II. *PRINCIPLES.*—Parallel with what Whewell says as to the progress of physical science—

> it 'consists in reducing the objects and events of the universe to a conformity with Ideas which we have in our own minds—the Ideas, for instance, of Space, Force, Substance [Number, Composition], and the like . . . the Idealization of Facts' (*ib.* p. 385)—

we may expect for logic also that

> 'an exhaustive solution of the great aggregate of logical problems can only grow up out of the union of all the different methods of treatment to which Logic has been subjected in virtue of the inner essential manifoldness of its nature' (Windelband, *loc. cit.* i. 9).

But the different 'methods' must be such as are grounded, if not 'in the systematic continuity of a philosophical theory of knowledge,' as Windelband requires, still in the unity of dimensions in consciousness of logical value. The 'principles' of logic must be these dimensions.

1. Explicitness.—The earliest of such dimensions to be utilized in the formation of logical conceptions was that of explicitness. We must be conscious of the definite germinal organization within our judgments or inferences, whenever occasion arises to make them deliberate. Hamilton proposes as 'the only postulate of Logic which requires an articulate announcement . . . to be allowed to state explicitly in language all that is implicitly contained in thought' (*Lectures*, iii. 114). And Gotama inaugurated the history of the science by detailing sixteen conceptions for our guidance in the analysis of this 'content,' as 'standards of right notion.'

> 'Proof [*i.e.* the faculty of a right notion]; the object of a

> right notion; doubt; motive; familiar fact; scholastic tenet; syllogism; hypothetical confutation; ascertainment; discussion; controversial wrangle; cavil; semblance of a reason; perversion; futility; and unfitness to be argued with—from knowing the truth in regard to these [sixteen things], there is the attainment of supreme good' (*Aphorisms*, tr. Ballantyne, § 1. 1).

Most of these topics appear to represent 'stages in dialectic or in the process of clearing up knowledge by discussion' (Adamson, *History of Logic*, p. 166; cf. Saint-Hilaire, p. xxx). But logic in the long course of its development has always made use of a method dialectical in this sense, which should not hide from us a more inward motive and significance. While it was as yet only tradition, no other method was practicable; and, even when it became literary, the practical utility of the method preserved it alongside of interpretations that were more spiritual. The alliance of the two methods was assumed in the reforms and elaborations made by Dignāga about A.D. 500.

> 'Demonstration and refutation together with their fallacies are useful in arguing with others; and Perception and Inference, together with their fallacies, are useful for self-understanding; seeing this, I compile this Śāstra' (*Nyāya-praveśa*, quoted in Vidyābhūṣaṇa, *Hindu Mediæval Logic*, p. 89).

The Aristotelian exposition of the same alliance was turned to forensic uses by Cicero, to academic uses by the scholastics, and to educational uses by the many modern and the now contemporary authors who choose to teach a science of argument, as the medium for an implied science of knowledge.

The conceptions of explicitness suggested to a modern mind by Gotama's sixteen standards and the explanations which he and his commentators append to them would be such as follow. In placing a logical value upon any given judgment, we must bring into consciousness (1) the extent to which our cognitive faculties are committed to it, perceptually, inferentially, conceptually, or interpretatively; 'that I shall die' is inferential, the 'recognition of a sign'; (2) the genus of truth or reality which is thus assumed as accessible to the faculty, or 'fit to supply a right notion'—a topic similar to that of the 'category' in modern logic, or, in Whewell, the 'idea'; (3) the question, or predetermination of a void in the system of our knowledge, which brings faculty and reality into the relation—the problematic phase in the development of a judgment, such as fails us in truism or is perverted in paradox; (4) the emotive root which makes a thought worth thinking or even a science worth creating; for 'truth implies a reference to purpose as well as to reality' (W. R. Boyce Gibson and A. Klein, *Problem of Logic*, London, 1908, p. 2); 'that I shall die' is significant only for the businesses of life; 'that I shall not altogether die,' for the counsels of moral perfectness; (5) and (6) the sureness and definiteness which fact and dogmatic or conceptual principle bring with them to their function in inference; (7) the scheme of their co-operation in the inferential syntheses; there must be (*a*) the probandum, defined by doubt and motive; (*b*) the reason, appealing to a sign; (*c*) the example, verifying a principle of signification; (*d*) the application, investing the reason with the significance of the example; and (*e*) the conclusion, establishing the probandum as a significate. 'Shall I not die, seeing that I am but human, as my fathers died because they were human? For I am as human as they, and consequently I, too, must die.' It is the transition from the problematic to the assertory phase of thought that sunders the application and conclusion from the reason and probandum—a transition which disappears in all the Western schemes of explicitness, because it disappears in proofs and static formulations, as distinct from the processes, of knowledge. The remainder of the sixteen topics are adjustments imposed on a conviction by its entrance into an environment of other convictions on the same question, by its encounter with convictions current in the world of other persons, and by the entrance of its motive into a system of other motives within our manifold practical nature, an organism where cognition, after all, is only one of the forces constituting its life.

2. Consistency.—Under the more complex social and intellectual conditions of life in Greece, the logical consciousness became more sensitive to the contact of individual thinking with this 'static formulation' of knowledge. And the 'idea' most essential for forming conceptions suitable to the spiritual emergency is that of consistency. It is not the consistency between thought and thought which in modern times became the ideal of Hamilton and the 'subjectively formal' logicians, but that which makes possible the allegiance of individual intellects, with varying perceptions, memories, and premonitions, to common formulations of knowledge.

(*a*) *Interpretative.*—In recent psychology the paradoxical tenet is held that, while a 'permanently existing idea' appearing in consciousness 'at periodical intervals' is a mythological entity, yet 'the mind can always intend . . . to think the same' (W. James, *Text-book of Psychology*, London, 1892, chs. xi. and xiv.). Similarly, we may say that, while a judgment identical in many minds is mythological, varying acts of judgment may give allegiance to the same super-personal truth, and join in the same inferential trend. It is such truth and trend, and not any range of individual experience and foresight, that allow Aristotle to postulate 'the proposition of the same thing about the same thing' (*de Interpretatione*, vi. 1), and the continuation of the same section within the same collection, of actual or possible facts (*Pr. Anal.* I. i. 5–8). The actual variability within this mythical identity is veiled by the indefiniteness of the form of proposition named 'particular'; and the actual poverty of human foresight, by the 'universal' proposition, distributing possibilities, as though on a mere chart, to an infinite range. That 'some men die willingly' cannot be the same thought for you and for me, and that 'all men die' is beyond the intellectual concern of either of us. Yet we consent that death is not the supreme terror, and we foresee it widespread as far as our imaginations can have any concern. Aristotle's *Prior Analytics* must be interpreted as dealing with this situation, and as rendering into varieties of syllogistic form the ways in which formulated thought can tolerate the limitations of actual thought, and the reservations under which it must reject them.

> 'The first book of the *Prior Analytics*, after a brief statement of the nature of the proposition and of the fundamental law of predication, proceeds to analyse (1) the various kinds, figures, or modes of syllogism; (2) the means by which syllogisms are formed; (3) the reduction of various imperfect forms of argument to the perfect syllogistic type. . . . The second book . . . deals with the theory afterwards called that of *Consequence*, with circular reasoning, with the possibility and consequences of syllogisms formed by converting parts of the original argument, with certain modes of indirect argument and fallacy, and concluding with brief handling of induction, paradigm, enthymeme, argument from signs, probabilities,' etc. (Adamson, *History of Logic*, p. 40).

Such topics are the main teaching of academic logic to-day, in spite of criticisms renewed from generation to generation. It must be that the more adverse critics are preoccupied with the interest of some other direction of consistency than the Aristotelian, or with some dimension of logical value other than consistency. To their interests it may seem paradoxical that a professed theory of mental process should resolve this into linguistic elements—argument, syllogism, proposition, name (T. Case, *EBr*^{11}, art. 'Logic'); and unphilosophical that all the important distinctions should rest on the mere denotation of terms (Hamilton); and a mistaken subtlety to classify moods into figures.

according to order of terms (Kant); and puerile that inductive conceptions should be referred to their own list of instances (Bacon); and an error that syllogism is an estimate of evidence (Mill); and a usurpation that the formalities of deduction should be limited to syllogistic, and to propositions with two terms only, and to terms that are classes rather than objective relations, and to the logical relation only of inclusion and exclusion (L. Couturat, in *Encyc. Philos. Sciences*, i. 167–169).

(*b*) *Conceptual.*—A second direction in which consistency may be sought is between the thought of the moment and an identity or permanency of personal knowledge, hardly distinguishable from 'meaning the same,' as described in psychology, but quite distinguishable from the impersonal truth or universally human trend assumed by Aristotle.

The mythological world of the super-personal is replaced by an equally mythological content of the personal microcosm, a static conceptual structure to which our ever variable thoughts conform. The 'subjectively formal' or 'conceptual' logic is the canonic for the stability of this. It originated with Kant's discrimination between the section of his *Critique of the Pure Understanding* which he named 'Transcendental Logic,' where the 'forms' of knowledge appear as contributions of the mind to the constitution of its objects, and the 'General Logic,' where 'forms' are relations of cognitions to each other (*Critique*, bk. ii. Introd. § 2, *Logic*, Introd. § 1). Once more, then, as in the Hindu discipline, knowledge is referred to personality; but personality comes back not as an isolated centre of motive interest, to be disciplined for its high destiny, but as a realm of mere abstracts, namely cognitions outside the world of natural sciences, yet factitiously evolved through the course of transcendental reflexion. Kant himself, not forgetful of this origin, found in knowledge a dimension of 'relevance' as well as one of consistency. In the living thought he found an interplay corresponding to the petrified formations of the transcendental 'object.' And, while accepting the law of non-contradiction as the principle of such inference as is merely possible, he added a law of reason and consequence, for the cogency of any actual inference (*Logic*, Introd. § 71); and in applying this second law we encounter transcendental distinctions, such as between 'logical' or *a priori* universals and 'quasi-logical' or inductive. And the neo-Kantian school of logicians better their instruction by re-introducing the detailed conceptions of intellectual synthesis framed in transcendental logic. To others, however, still following the disciplinary motive, and unconcerned with the origin of the new realm commended to them for study, the only dimension recognizable independently of every physical or primary object, in which cognitions could be related to each other, appeared to be consistency.

> 'The stricter followers of the Kantian logical idea, *e.g.*, Mansel and Spalding, recognise, as sole principles which can be said to be involved universally in the action of thought, the laws of identity, non-contradiction, and excluded middle, and in their hands logic becomes merely the systematic statement of these laws, and the exposition of the conditions which they impose upon notions, judgments, and reasonings' (Adamson, p. 15).

(*c*) *Symbolic.*—More recently, a third direction in which consistency might be followed has been taken, which seems to presuppose, if not the factitious abstracts of transcendental logic, yet still the reflective valuations of general logic. Given these, it furnishes a 'clearer, more precise, and more plastic expression' of them, and formulæ of equivalence between them. Algebra renders a similar service to arithmetic, but without raising any doubt as to the scientific priority of the latter. Symbolic logic is at least a discipline in consistency when we make logical reflexions. Whether it is also a direct discipline in scientific knowledge, as the older formal logic is, and so may supersede or absorb it, is as yet controversially obscure.

But on every logic of consistency, however judiciously its pretensions may be restrained, one critical comment may be made:

> 'I do not deny the scientific convenience of considering this limited portion of Logic apart from the rest . . . but the smaller Logic, which only concerns itself with the conditions of consistency, ought to be, at least finally, studied as part of the greater, which embraces all the general conditions of the ascertainment of truth' (Mill, *Exam. of Sir W. Hamilton's Philosophy*^{5}, p. 477).

3. Relevance.—The larger logic was inaugurated by Aristotle through the addition of his *Posterior Analytics* to the *Prior*.

> 'No demonstrative proposition [*e.g.*, about numbers or lines] is taken as referring to "any number you may know of," or "any straight line you may know of," but to the entire subject —to every possible number or line' (*Post. Anal.* i. 1).

Relevance is that in 'the things we know of' which, when we 'possess or receive a demonstration,' relieves us from the need of similarly 'knowing of' the 'entire subject.' It is what Bosanquet describes as 'an inmost character' of the content of knowledge, 'as revealed by the structural relations in which it is found capable of standing' (*Essentials*, p. 49). Aristotle conceives relevance as embodied in 'universals.' Mediæval Hindu logicians (Dignāga, Divākara [*c.* A.D. 530], and Nandi [*c.* A.D. 800]) taught the intervention of 'secondary ideas' or 'abstract conceptions' in the process of inference, and authorized a 'syllogism for self' in which this dispensed with the analogy between 'example' and 'application' still required in the 'syllogism for instruction.' But Aristotle elevated this secondary idea into an authoritative 'principle,' dominating our knowledge, whether personal or racial. The authority was conferred by the faculty of reason.

> 'From experience, or from the entire universal which is retained in the soul, the single unit apart from the manifold of sense, which is identical in all particular cases, comes the elementary principle of art and science. . . . Reason would seem to be the faculty which has the primary principles as its objects' (*Post. Anal.* ii. 19).

The universal as a principle assures applications that might escape the 'secondary idea.' 'Man is mortal,' therefore 'I, too, must be mortal,' although men instinctively may 'think all men mortal but themselves.' The inevitability was not objective, as Plato's metaphysics might imply, but inferential.

> 'It does not follow, if demonstration is to exist, that there must be Ideas, or a Unity outside the many individual things, but it does follow that some unity must be truly predicable of the many' (*Post. Anal.* i. 11).

The predicable unities appear in judgment as predicates that are 'genera' and 'definitions,' and as subjects that are 'second substances'; and in demonstration as the 'essences' of the things which we seek to explain, the 'nature' of the things whose destiny we wish to foretell, the 'reasons' for what we experience, and the 'causes' for what we infer. And, although these conceptions in the dimension of relevance still influence the texts of modern logic, philosophical progress has disclaimed the static, self-sufficing constitution, which seems to spring arbitrarily from the fiat of reason. The achievements of reason must themselves become conscious under the guidance of logical conceptions more liberal, such as 'conditions of a rule' (Kant), 'laws of connexion' between attributes (Mill), 'coherence' of conceptual 'content' (Lotze), or 'identity' of relational 'system' (Bosanquet). Two distinct operations of reason must be traced: that which explains the comparative complexity of universals whose constituents are available at will, and that which explains the selection of constituents from the passive sequences of experience.

(*a*) *Deductive.*—The definite logic of the first begins with Descartes, and that of the second with Bacon. The interest of modern mathematical science supplied to Descartes the 'doubt' and 'motive,' to use Hindu logical conceptions, which brought to an end the Aristotelian superstition of 'second substances,' and suggested a scheme of rational constructiveness, proceeding from what Lotze afterwards named 'first universals' to a vast Platonic hierarchy, the 'world of ideas.'

> 'Those natures which we call composite are known by us, either because experience shows us what they are, or because we ourselves are responsible for their composition' (Rule xii.). . . . 'There are but few pure and simple essences . . . existing *per se*, not as depending on any others' (Rule vi.); essences which 'cannot be analysed by the mind into others more distinctly known' (Rule xii.). . . . 'Intuition is the undoubting conception of an unclouded and attentive mind; . . . it is more certain than deduction itself, in that it is simpler. . . . For example, 2 and 2 amount to the same as 3 and 1' (Rule iii.). . . . Deduction proceeds 'by the continuous and uninterrupted action of a mind that has a clear vision of each step in the process' (*ib.*). 'It is presented to us [as a complete movement] by intuition when it is simple and clear. . . . We give it the name of enumeration or induction [when it is complex], because it cannot then be grasped as a whole at the same time by the mind, and its certainty depends to some extent on the memory' (Rule xi.; Descartes, *Works*, tr. E. S. Haldane and G. R. T. Ross, vol. i., Cambridge, 1911, pp. 7–43).

(*b*) *Inductive.*—It was a parallel but slower development of the scientific spirit, in observation and experiment, that inspired a complementary scheme of rational insight as to 'how experience shows the natures that are composite.' The field for unclouded intuition is here fenced off by the indefinite multiplicity of constituents in an actual experiential situation, and, however few and simple may be the 'ultimate essences,' the steps in their synthesis are beyond either complete intuitive penetration or memory. All that Hindu logic had here achieved was to classify the 'constant associations' between sign and significate. According to Nandi, the 'signs' are either positive or negative, perceptible or imperceptible; and are related to their significates (*a*) constitutively, (*b*) as resultants, (*c*) causally, or (*d*) by concrete order, of priority, subsequence, or simultaneity (Vidyābhūṣana, p. 30 f.). Aristotle, in his *Topics*, when not prepossessed by the conception of second substances, reads more deeply into the indices of relevancy, suggesting comparative analysis of instances that are exceptional towards each other or contrary in their consequences, or are negative, reverse, privative, or relational to each other, or are homogeneous in whole or part, or vary methodically in quantity, time, place, or other relation. But these broken lights still left darkness of principle over the plans of manifestation for an 'essence' or 'nature,' and how reason finds them. It is inductive principle which Bacon appears to have been first in conceiving. The Baconian conception is:

> 'Observation presents to us complex natures which are the results of simpler, more general forms or causes. . . . The form which is sought can be detected only by examination of cases in which the given complex effect is present, in which it is absent, and in which it appears in different degrees or amounts; . . . a process of exclusion or elimination. . . . The method of exclusion can never be perfectly carried out; but all additional aids have significance only as supplying in part the place of exhaustive enumeration' (Adamson, p. 90).

Thus, were our experience divinely given on the perfect plan of reason, we should, in the words of Descartes, 'know what these natures are,' though we ourselves are not 'responsible for their composition.' J. S. Mill articulated the principle of exclusion or elimination in five experiential methods, with symbols and canons, and explained their cogency on the broad empiricist basis which his complete survey of logical doctrines is intended to commend and defend. But the ideal plan for the manifestation of universals in experience is as much the work of *a priori* reason as is the unclouded vision of synthetic essences described by Descartes, while the march of merely experiential sequences eternally withholds that definiteness and exhaustiveness of constituents which might thus unveil the pure tissue of relevancy. The neo-Kantian logicians can accept the canons of elimination as living expressions of the aspirations of thought, in such an intellectual nature as displays the 'categories of relation,' substantiality, causality, and reciprocity. But the rationalization of any given experiential sequence must be approached through a further dimension of logical value—that of system. In this we may conceive the 'additional aids' which transform aspiration into accomplished science. Relevance is a selective principle, system a comprehensive.

4. System.—A conviction which cannot be a stable truth through sheer restrictions of internal relevancy may have value through its membership of a world of other convictions—other convictions not defined by the same question, as in the Hindu system of standards, but by questions in all degrees of kinship to it.

(*a*) *Dialectical.*—Aristotle's *Topics* marks out a sphere where such value may be traced by expressly excluding both the harmony of personal investigation with super-personal truth and the open vision of truth through reason.

> 'The purpose of this treatise is to find a method which will qualify us as disputants in regard to every kind of subject, where the start of the inference is from probable judgments, and which will instruct us how to avoid stultifying ourselves when we ourselves sustain an argument. . . . We call probable what appears true to all men, or to the majority, or to the wise, and, among the wise, to all, to the greater number, or to the most distinguished and authoritative' (*Topics*, i. 1).

The wide ramifications of relationship of any conviction to the remainder of knowledge are suggested by a variety of incidental methods or 'auxiliary aids' to insight.

> 'The organa by which we find materials for syllogisms and inductions are . . . collection of opinion from various sources, resolution of ambiguities in meaning, discrimination between species and genera, assimilation of things to each other or in their relation to other things' (*Topics*, i. 13).

(*b*) *Methodological.*—In the modern era a more systematic study of system was begun by the *Novum Organum* of Bacon, the methodological reflexions of scientists themselves, and the theories of explanation, as distinguished from eliminative induction, and of approximate generalization, probability, and operations subsidiary to induction, resumed in detail by Mill. But the methods so formulated seem to be episodes in the consciousness of a more comprehensive development in the organization of our ideas. We continuously reform and refine our tentative concepts to meet the exigence of newly experienced facts (see artt. CONCEPT and INFERENCE). And in this process we both accept limitations from, and contribute pulsations to, a progressive sum of cognitive life. The logic of system frames conceptions of the limitation and the contribution, such as the colligation of facts by superinduction of conceptual schemata (Whewell), the depth to which concepts interpenetrate judgment or blur the purity of inferential synthesis (Lotze), the inversion of dependence in our thought between principle and application (Jevons), and the relation of approximation between science and final truth (F. Enriques). In the dimension of system, 'truth can only be tested by more of itself' (Bosanquet, *Logic*, ii. 267).

LITERATURE.—No bibliography of logic with any approach to completeness appears to have been attempted. J. M. Baldwin, *DPhP*, vol. iii. pt. 2 (New York, 1905), and the *Catalogue of Venn Collection, Univ. Lib.*, Cambridge, 1889, are the most useful. Reference is advisable to the following selection of representative authorities, besides such as have been quoted.

(1) *History, scope, and utility.*—C. Prantl, *Geschichte der Logik im Abendlande*^{2}, 2 vols., Leipzig, 1885 (the fullest history down to the Middle Ages); F. Harms, *Geschichte der Logik*, Berlin, 1881; A. Frank, *Esquisse d'une histoire de la logique*, Paris, 1838; P. Janet and G. Séailles, *Histoire de la philosophie*, pt. 2, do. 1887; R. Adamson, *A Short History of Logic*, London, 1911; W. Whewell, *On the Philosophy of Discovery*, do. 1860; *EBr*^{11}, art. 'Logic'; *Encyclopædia of the Philosophical Sciences*, Eng. tr., London, 1913, vol. i.

(2) *Hindu.*—F. Max Müller, *Six Systems of Indian Philosophy*, London, 1899; S. Suguira, *Hindu Logic as preserved in China and Japan*, Philadelphia, 1900; J. R. Ballantyne,

Aphorisms of the Nyâya Philosophy, Allahabad, 1850; M. R. Bodas, *Tarka-Saṅgraha of Annambhaṭṭa*, Bombay, 1897; S. C. Vidyābhūṣaṇa, *Hindu Mediæval Logic*, Calcutta, 1912.

For a summary of substantive logical doctrine see artt. BELIEF (Logical), CONCEPT, INFERENCE, JUDGMENT (Logical), and METHOD (Logical).

J. BROUGH.

LOGIC (Buddhist).—Buddhists have been called the real founders of the mediæval logic and logical literature of India, a position which they share to a great extent with the Jains.

> 'At about A.D. 400 began an epoch when they [Jains and Buddhists] seriously took up the problems of logic, and all the text-books on the Jaina and Buddhist systems of logic date at or after that time. Ujjainī in Malwa and Valabhi in Guzerat, . . . Patna and Drāviḍa [the Deccan],' were the principal seats of Jainist logical activity. 'The Nyāyāvatāra, by Siddhasena Divākara, dated about 533 A.D., was the first systematic work on the Jaina Logic.'[1]

The earliest seat of Buddhist mediæval logic is said to have been in Gandhāra (about Peshawar) on the Panjāb frontier, till the invading Huns dispersed all scholarly life. Only such literature survived as had been transported in translations to China and Tibet. There were, however, other schools at Ayodhyā (Oudh) and in the Deccan. From the latter school one systematic work of the 7th cent. A.D. has survived in Sanskrit: the *Nyāyabindu* of Dharmakīrti, and its commentary by Dharmottara.[2]

This ascription of the rise of logical studies in mediæval India to Jain and Buddhist culture is tantamount to saying that systematic treatment of the nature and regulation of reasoned knowledge as such first took shape when Indian culture was practically Buddhist and Jainist. That systematic treatment was more critical and exegetical than constructive. It is clear from the Buddhist scriptures, and also, so far as any work has yet been done upon them, from the Jain scriptures, that an unwritten and unelaborated body of normative principles and methods of thought had long existed in India. The early mediæval logics are exegeses, expounding and elaborating the logical categories applied in earlier works. These categories included classifications of knowledge, doctrines of terms and propositions, methods of induction, fallacies, and, possibly, in the Jain classics, syllogism. Of the methods and categories themselves the early works say little or nothing. Those works are the expression of the greater or constructive stage of the Buddhist and Jain movements. The Buddhist scriptures are often critical; but they criticize the traditions which they found holding the field, rather than the principles and methods of deduction and induction of their day.

Two passages in the Suttas afford an apparent exception to this assertion. In these, certain matters are declared to be 'not in the sphere of *takka*,' rendered by Rhys Davids and R. Otto Franke 'mere logic'[1] (*tarka-śāstra*, or 'rules of thought,' is one of the technical Indian terms for logic). And logic-mongers (*takkino*) and pedants (*vīmaṁsino*), failing to grasp them, are said to arrive at fantastic theories.[2] Again, in prescribing a pragmatic criterion of the merits of a religious doctrine, the Buddha is said to have excluded such criteria as authority, tradition, etc., and both *takkahetu* and *nayahetu*.[3] These, again, belong to the oldest technical terms for logic, *hetu* ('condition,' 'cause,' 'inference') and *naya* ('method') practically covering all reasoned thinking in both Jainist and Buddhist books.[4] This depreciation of ratiocinative method, combined with misconceptions of the orthodox theory of knowledge in early Buddhism, has given rise to the mistaken view that Buddhists rejected both logical method and the validity of any knowledge established by it.[5] But a careful consideration of the two *Suttas* quoted above, in the light of the sober intellectual method prevailing in the great majority of the *Suttas*, brings us to a very different conclusion. In the latter passage the soundness of any ethical doctrine or gospel is held to be rightly tested, not by metaphysical dialectic, but by a utilitarian calculus. In the former passage the 'logic' that is condemned as inadequate is such as often finds condemnation among ourselves, when we 'feel' rather than discern that deductions are being made from outworn, outgrown terms, from wrong data, from words ambiguously used. Only a culture which has a logic of recreated inductions will condemn such misuse of deduction as 'mere logic.' It is one of the penalties induced by such effete reasoning that the noble formulation of right thinking should, in popular usage, incur reproach, as if it had failed in general.

The Buddhist *Sutta* and *Abhidhamma Piṭakas* afford unmistakable evidence of (1) the existence of a current logical doctrine, (2) misuse of the same by dialecticians or 'sophists,' deducing from confused terms and wrong premisses, and (3) a constant faith in the appeal to judgment and argument, *i.e.* to logical faculty, and to logical principles. The *Suttas*, or discourses, were in great part addressed to relatively immature minds—to the 'man in the street' and to the average *bhikkhu* or *sekha* (learner in the Order). But the proportion of discourses filled with categorical assertions is very small. Most of them seek to capture the listener by argument. No sentence occurs oftener than *Taṁ kissa hetu?*, 'What is the reason of that?' The prevailing method of the Buddha in his replies to interlocutors is one of gentle 'reasonableness' (to adopt Matthew Arnold's rendering of ἐπιείκεια). And *nyāya* (*ñāya*), 'knowledge,' 'science,' which is the title-word in the oldest Indian logical works,[1] is used synonymously with *satya* (*sachcha*), 'truth,' as forming, with *dhamma* ('right' or 'norm') and *kusala* ('good'), the threefold foundation on which the perfect man should be established.[2] In the somewhat later collection called *Abhidhamma Piṭaka*, where doctrines, put forward *ad hominem* in the *Suttas*, are more abstractly expounded by way of question and answer, logical method is more systematically applied. The import of a great number of terms is set out, usually in dichotomic division, but sometimes in the distinctively Indian method of presenting the by us so-called Laws of Thought, thus: Is A B? If not, is A not-B? If not, is A both B and not-B? If not, is A neither B nor not-B (in other words, is A a chimæra)? The expositions, again, are sometimes exercises in converted propositions, sometimes arguments in hypothetical propositions. The books entitled *Yamaka* and *Kathāvatthu*,[3] respectively, consist entirely of these exercises and arguments. No definite exercise in, or allusion to, syllogism has been found in the *Piṭakas*, although it figures prominently in the earliest Buddhist and Jain treatises on logic. Nor, indeed, do the paired words *pamāṇa* ('immediate knowledge,' 'perception') and *anumāna* ('mediate knowledge,' 'inference') apparently occur in the *Piṭakas* as the indispensable logical terms which they subsequently became.[4] Nevertheless, the *Suttas* and the *Abhidhamma* books taken together, with all the legendary and illustrative matter discounted, present so varied an appeal to the intellect of their age that it is not surprising if one result of the paramountcy of Buddhist culture was to yield a harvest, not only of psychological, but also of logical, analysis and systematization. A still greater field of material for the history of logic will possibly be opened up when (1) the original Jain scriptures are all edited, and (2) the Chinese and Tibetan translations of Buddhist Sanskrit treatises on logic, as well as (3) the orthodox Theravāda philosophical works in Sinhalese and Burmese MSS, become accessible. A comparison of the conclusions gleaned from these sources, and from the Pāli materials as yet accessible, with the concepts of European logic will prove of deeper philosophical importance than may appear likely to those who see in logic only an academic exercise. By intellectual procedure, according to the norms of which logic is the interpreter rather than the dictator, the human mind has grasped the most general data of experience inductively and deductively. And that prócedure has centred round certain concepts here, round other concepts there. The difference in emphasis thus produced tends to become absolute, hindering both mutual understanding and also thereby a positive, general advance in philosophy. The system, for instance, of definition by genus and species, of division by dichotomy only, of subsuming the particular under the more general, admirable as it has proved in all quantitative analysis, may prove a hindrance in estimating qualitative values in æsthetic and spiritual inquiry. The Buddhist scriptures did not keep rigidly to these (peculiarly Greek) lines in their analyses. They did not always, or emphatically, see things as decomposable substances, in wholes and particulars. Their founder disliked generalizing. 'I am not,' he is made to say, 'a generalizer, I am a particularizer.'[1] True, they expressed organic phenomena in terms of *khandha*, 'aggregate.' But *khandhas*, for them, were not 'things that *are*,' but 'happenings and ceasings,' 'risings and fallings.' They may be said to have seen things more as intercrossing force-rays, each abscissa or confluence of which gave occasion for a general term. Hence their definitions consist in the laying together of mutually intercrossing, overlapping, or partially coinciding notions.

Centuries later we find Buddhaghoṣa and Buddhadatta adopting consistently a fourfold scheme for the definition of psychological and ethical terms, viz. by salient character(s), essential properties, resulting phenomena, and proximate cause.[2] This method survives in a classic work centuries younger, but is no longer prominently used.[3]

To revert to the laws of thought—the way in which Indian logic presented the second and third of these (Contradiction and Excluded Middle) has been mentioned. But the first (Identity) was virtually traversed, in Buddhist thought, by the fundamental law of *anichcha* (*anitya*), 'impermanence' (*i.e.* incessant change). By this law A is never A for more than a moment, but is after that not A, but, as it were, A_1, A_2, A_3. . . . And, just as Aristotle rated as mere 'vegetable' the mind that rejected the (Greek) laws of thought, so for the Buddhists there was no intelligent or accurate thinking on any basis which ignored this law of impermanence. The other great tenets that 'all (life) is subject to ill,' and that 'all is without soul or substance,' are, in fact, corollaries of it.

The only general principle of thought put forward in Europe which harmonizes with Buddhist axioms is that 'Principle or Law of Sufficient Reason' for which certain logicians, notably Leibniz, claimed equal rank with the three named above, namely, that 'nothing happens without a reason why it should be so rather than otherwise.' This comes very near to the *idap-pachchayatā* ('this is conditioned by that') of Buddhist causality. And, generally speaking, it is in the logic of causation or of induction that we first notice the resemblances between Buddhist and European logic rather than the differences. The ancient formula of cause—'that being present, this becomes; from the arising of that, this arises; that being absent, this does not become; from the cessation of that, this ceases'[4]—is the nearest approach to our logical schemata that we find in the *Piṭakas*. And the mediæval elaboration of the principle so formulated—that 'its essential mark is the condition of the happening of a phenomenon[5] on the occurrence of its sole invariable antecedent phenomenon'—is well in tune with our more modern logic of induction.

LITERATURE.—This is given in the footnotes. Of the two important early classics, the *Milinda-pañha* (see MILINDA) and the *Netti-pakaraṇa*, the former argues mainly by analogy, while the latter uses only the first and last of Buddhaghoṣa's four heads given above.

LOGIC (Indian).—See NYĀYA.

LOGOS.—The Greek word λόγος has no exact equivalent in any other language. Just as Goethe's *Faust*, when translating the first verse of the Fourth Gospel into German, tries in succession and rejects *Wort*, *Sinn*, *Kraft*, and finally decides upon *That*, so Latin theology wavered between *Verbum*, *Sermo*, and *Ratio* before accepting

Verbum, the least satisfactory, perhaps, of the three. The word has a history both in Greek philosophy and in Jewish Alexandrian theology. But, whereas in Greek philosophy the word means the divine Reason regarded as immanent in the cosmic process, the authors of the Septuagint use it to translate the Hebrew *Memra* and its poetic synonyms, which mean primarily the spoken word of the Deity.[1] Hellenized Jewish thought attempted to fuse these two originally distinct meanings; and so arose the Christian use of the word as a name for the second Person of the Trinity, incarnated in Jesus of Nazareth. It will be convenient to consider in succession the growth of the idea in Greek philosophy, in Jewish-Alexandrian theology (the use of *Memra* in the Hebrew sacred literature hardly belongs to our subject), and in Christian theology.

1. In Greek philosophy.—The history of the Logos-idea begins with Heraclitus of Ephesus (*c.* 535–475 B.C.), who, as F. M. Cornford has rightly maintained,[2] represents a mystical reaction against the materialism of the Ionian philosophers. For him the visible world is a symbolic system which half conceals and half reveals the reality. This truth or reality is the divine soul of the world, whose life is manifested in the endless cycle of birth and death, of becoming, change, decay, and renewal. There is *one* Logos, the same throughout the world, which is itself homogeneous and one. This wisdom we may win by searching within ourselves; 'it is open to all men to know themselves and be wise.' The divine soul is 'Nature,' the cosmic process; it is God; it is *ψυχή*, the life-principle; it is Logos, the divine law, or will of God. 'All human laws are fed by the one divine law. It prevails as much as it will, and is sufficient and more than sufficient for all things.' This Logos is the immanent reason of the world; 'it existeth from all time; yet men are unaware of it, both before they hear it and while they listen to it.' The Logos, like Wordsworth's 'Duty,' keeps the stars in their courses. It is the hidden harmony which underlies the discords and antagonisms of existence. There is no trace in Heraclitus of a transcendent God, whose reason or will the Logos could be. The system is rather a form of pantheism, with a strong mystical element. In Anaxagoras, however, the Logos, or *νοῦς* (he preferred the latter term), is intermediate between God and the world, being the regulating principle of the universe, the divine intelligence. In Plato, though he was the founder of a philosophy in which the Logos-idea was to find a congenial home, there is but little that bears directly on our subject. The world, he says in the *Timæus* (p. 29 f.), is created by a fusion of mind and necessity; it is itself a living and rational organism, the 'only-begotten (*μονογενής*) son of God,' itself a God, and the 'express image' (*εἰκών*) of the Highest.

In Stoicism the philosophy of Heraclitus received a new life and fresh developments. Like Heraclitus, the Stoics regarded Fire as the primordial substance, the material principle of the divine. Endowed with inherent productive activity, it is the 'seminal Reason' (*λόγος σπερματικός*) of the world, which manifests itself in all the phenomena of nature. These phenomena, or, rather, the active principles which create them, are often called *λόγοι σπερματικοί*, in the plural. Christian writers like Justin Martyr laid hold of this doctrine to connect Greek philosophy with their own religion. Every man, Justin taught, at his birth participates in the universal Reason, which he identifies with the Johannine Logos which 'lighteth every man.' Accordingly, he argues,[1] heathens like Heraclitus and Socrates, in so far as they lived *μετὰ λόγου*, may be claimed as Christians, and may be saved. The seminal Logos of the Stoics, when spoken of as a single Power, is God Himself as the organic principle of the cosmic process, which He directs to a rational and moral end. This power is not present in all creatures equally; only man participates in it so fully that he may be regarded as a real effluence of the Deity. The Stoics distinguished between the *λόγος ἐνδιάθετος*, the potential, unmanifested Reason, and the *λόγος προφορικός*, the thought of God expressed in action. This distinction led to a new emphasis being laid on the other meaning of *λόγος*, as 'word' or 'speech'; and in this way Stoicism made it easier for Jewish philosophy to identify the Greek *λόγος* with the half-personified 'Word of Jahweh.' Words and thoughts, according to the Stoics, were the very same things regarded under different aspects. The same *λόγος* which is Thought as long as it resides in the breast is Word as soon as it comes forth. The distinction between *ἐνδιάθετος* and *προφορικός*, often used by Philo and the Greek Christian Fathers, is really identical with that drawn by Aristotle between *ὁ ἔξω λόγος* and *ὁ ἐν τῇ ψυχῇ*.[2] Christian writers found another fruitful idea in the Stoic doctrine that, since the one Logos is present in many human souls, men may have communion with each other through their participation in the same Logos. The Logos-Christ might be explained Stoically as the indwelling revealer of the Father, with whom He is one; as the vital principle of the universe; as the way, the truth, and the life; as the inspirer of the highest morality; and, last, but not least, as the living bond of union between the various members of His 'body.' The world, for Stoicism, is simple and unique (*εἷς καὶ μονογενής*); it is a living creature (*οὐσία ἔμψυχος*). The Spirit (*πνεῦμα*) goes through all things, formless itself, but the creator of forms. The Logos, as World-Idea, is also single and simple (*εἷς καὶ ἁπλοῦς*), though it assumes manifold forms in its plastic self-unfolding. It is identified with Fate (*εἱμαρμένη*); and Stobæus says:

> 'Fate is the *λόγος* of the *κόσμος*, or the *λόγος* of those things in the universe which are directed by providence (*πρόνοια*). Chrysippus, however, instead of Logos uses Truth, Cause, Nature, Necessity, and other words' (*Ecl.* i. 130).

The question whether Stoicism identified God with the Logos is not easy to answer. E. Zeller is probably right in saying that the logic of Stoicism was rigidly pantheistic—it was a form of naturalistic monism: *Deus sive Natura*. Origen says that the Stoics and the Platonists both call the world God; but for Stoicism the world is the supreme God, for the Platonists only God in the second place. But the opponents of Stoicism are too harsh when they say that the Stoics bring in God only in order to be in the fashion. It was their religious need that made them bring Him in. Perhaps they could not consistently find room for any God above the Logos, but in fact they did ascribe to the Deity more personal attributes than could properly belong to their Logos. They were certainly able to feel enthusiastic devotion to the Logos as the principle of law and righteousness. This is shown by the famous hymn of Cleanthes:

> 'Thee it is lawful for all mortals to address. For we are Thine offspring, and alone of living creatures that live and walk the earth moulded in the image of the All. Therefore I will ever sing Thee, and celebrate Thy power. All this universe, rolling round the earth, obeys Thee, and follows willingly Thy command. . . . O King most high, nothing is done without Thee, neither in heaven nor on earth nor on the sea, except what the wicked do in their foolishness. Thou makest order out of disorder, and things that strive find in Thee a friend; for Thou hast fitted together good and evil into one, and hast established one Reason (*λόγον*) that lasts for ever. But the wicked fly from Thy law, unhappy ones, and though they desire to possess what

[1] *Apol.* i. 46.

[2] *Anal. Post.* i. 10. 76.

> is good, yet they see not, neither do they hear, the universal law of God. . . . But O God, giver of all things, who dwellest in dark clouds and rulest over the thunder, deliver men from their foolishness. Scatter it from their souls, and grant them to obtain wisdom, for by wisdom dost Thou rightly govern all things; that, being honoured, we may repay Thee with honour, singing Thy works without ceasing, as we ought to do. For there is no greater thing than this, for mortal men or for gods, to sing rightly the praise of universal law (λόγον).'

In fact, this conception of a germinative principle of Reason which manifests itself in the universe, and especially in the minds of human beings as members of a universal community, prepared the soil on which a world-religion might grow. And at the same time the individual was brought into a closer relation with the divine than had been contemplated in any earlier system of Greek philosophy.

2. In Jewish-Alexandrian theology.—Hebrew thought about the 'Word of the Lord' does not enter the subject of the present article until the tendency arose to personify the self-revealing activity of Jahweh. The earlier books of the OT connect the operations of the *Memra* with three ideas—creation, providence, and revelation. God spake the word, and the worlds were made; then at once His spirit, or breath, gives life to what the Word creates, and renews the face of the earth. The protecting care of God for the chosen people is attributed by the Jewish commentaries to the *Memra*. Besides this, the 'Word of the Lord' inspires prophecy and imparts the Law. The tendency to personify the activities of Jahweh is seen in the expressions used about the Angel, the Name, the Glory, and, above all, the Wisdom of God. Similar language about the Word is found in the frequent phrase 'the Word of the Lord came unto me,' and in such passages as Ps 147^{15}, Is 55$^{10f.}$ 2^{1}, Ps 33^{4}, Jer 23^{29}. Nevertheless, the personification is throughout poetical rather than metaphysical, except in writers completely under Greek influence. On the whole, in the later books the conception of Wisdom tends to displace that of Word—a change which really brings the Jewish idea nearer to the Greek. 'Wisdom' in Job is the hidden purpose which God is working out in man's existence—the grand secret of life known only to God. In Proverbs Wisdom is the cardinal virtue; she stands at the corners of the streets, and invites men to walk in her ways. God created or prepared her before the world was made; she was by His side when He planned the scheme of the world-order; she was daily His delight, rejoicing always before Him. Therefore He assures those who listen to her of life, blessedness, and the favour of God. In Ecclesiastes, Ecclesiasticus, and Wisdom of Solomon we find a further development of Jewish thought in the direction of Greek philosophy. Ecclesiastes presents us with a pessimistic philosophy quite alien from Judaism and strongly influenced by Stoicism, though the trend is masked by numerous interpolations. Ecclesiasticus is more Jewish in sentiment; 'Wisdom' has found her chief expression in the books of the Law. The book called Wisdom of Solomon is the work of an orthodox Jew, who has no sympathy with the views of Ecclesiastes, and resents their attribution to Solomon; but his doctrine of the divine Wisdom is strongly coloured by Stoical and Platonic ideas. Wisdom is immanent in God, belonging to the divine essence, and yet existing in *quasi*-independence side by side with God. Wisdom was the active agent in the creation of the world, selecting among the divine ideas those which were to be actualized in the created universe. She is an emanation from God, pervading all things, and passing 'more rapidly than any motion' among them, without contracting any impurity by her contact with matter. In the human spirit she is the teacher not only of every virtue and of all theological knowledge, but of all the human arts and sciences. The identification of 'Wisdom' with the Greek Logos is almost explicitly made, as is the identification of Wisdom with the Holy Spirit of God. This book, in fact, marks a transition from the OT doctrine to that of Philo, and is of much importance in the history of Jewish-Alexandrian theology.

Philo not only blends Greek and Jewish ideas about the Logos; he achieves a syncretism of divergent Greek conceptions. His Logos is a combination of the Platonic ideas and Stoic universal causality. He takes over the main Stoical conception, but detaches it from materialism, and tries to harmonize it with the Platonic theory that visible things are only types of realities laid up in the intelligible world. His Logos is much like Plato's idea of the Good, except that it is regarded as creatively active. Philo found this conception useful, because he wished to conceive of the divine activity Hellenically, without ceasing to believe in the OT Jahweh. Jewish thought had been in danger of separating the Creator so completely from His creation as to produce an intolerable dualism. This tendency had been mitigated by poetical personification. Philo fixed these poetical symbols, and turned them from poetry to metaphysics by identifying the *Memra* with the Stoical Logos Platonized. In opposition to the earlier Jewish idea of the Word, Philo's Logos is an intermediary between God and the world; He is the principle of revelation. Philo is fertile in forms of expression to convey the relation of this principle of revelation to the Godhead and to man respectively. In the former aspect, the Logos is declared to be the first-born Son of God, the first of the angels; in the latter, He is the Man who is the immediate image of God, the prototypal Man in whose image all other men are created. The Logos dwells with God as His vice-gerent; He is the eldest son of God, and Wisdom is His mother. In other places He is identified with Wisdom. Again, He is the Idea of Ideas, the whole mind of God going out of itself in creation. He represents the world before God as High Priest, Intercessor, Paraclete. He is the Shekinah, or glory of God; but also the darkness or shadow of God, since the creature half conceals and half reveals the Creator. He is the intelligible world, the archetypal universe of the Platonists, and the real life of the world that we know. In man He operates as the higher reason. If we ask whether the Logos is an aspect of the divine nature or an individual being, we get answers which are hard to reconcile. The rational part of the soul exhibits the type of the Logos, the 'second Deity'; no mortal could be formed in the likeness of the supreme Father of the world, or ever brought into comparison with Him. But elsewhere the Logos appears to be only an attribute of God. As an orthodox Jew (or one who wished to pass for orthodox), Philo cannot have thought of affirming two divine agents. And yet the Platonic doctrine of a transcendent unknowable God required a divine vice-gerent, while the Stoic Logos had been an independent immanent world-principle, very different from the Hebrew Jahweh. The amalgamation of these divergent philosophies in Philo is rather external and superficial. The Philonic Logos is a dynamic principle, but also a cosmic principle, who accounts for the existence of the world. Occasionally Philo seems to suggest that the Logos is 'the God of us the imperfect,' as if from the highest point of view the Logos were only an appearance of the Absolute. So in a thoroughly Plotinian passage he says:

> 'God appears in His unity when the soul, being perfectly purified and having transcended all multiplicity, not only the multiplicity of numbers but even the dyad which is nearest to unity, passes on to the unity which is unmingled, simple, and complete in itself' (*de Abrahamo*, 24).

But this is not a common line of speculation in Philo.

In the NT the technical use of the word Logos is found in the Fourth Gospel (unless we should add 1 Jn $1^{1f.}$ and Rev 19^{13}) only. But it is important to observe that St. Paul, especially in his later Epistles, gives us almost the whole of the Logos-doctrine which we read in the Prologue to the Fourth Gospel. The conception of Christ as a cosmic principle is even more emphasized in Colossians than in the Gospel. When we read of the Pauline Christ that He is the image (εἰκών) of God, that in Him the Pleroma of the Godhead dwells in bodily form, that He was the agent in creation, and the immanent Spirit 'through whom are all things,' that He pre-existed in the form of God, that He is the first-born of all creation, in whom and through whom and to whom are all things, that all things are summed up in Him, that He is all and in all, that His reign is co-extensive with the world's history, that He is life-giving Spirit, abiding in the souls of His disciples, forming Himself in them, and transforming them into His likeness, enlightening them and uniting them in one body with Himself, it does not seem that a candid criticism can deny that all the elements of a complete Logos-theology are to be found in the Pauline Epistles. Without assuming any direct influence of Philo, which is perhaps improbable, it is unquestionable that the Jewish-Alexandrian Logos-philosophy had a great and increasing influence upon St. Paul's doctrine of the Person of Christ. In proportion as the apocalyptic Messianism which we find in Thessalonians lost its importance for him, he approximated more and more to the type of Christology which we associate with the name of St. John. It must not be supposed that this statement stands or falls with the authenticity of Colossians and Ephesians. The Epistles to the Corinthians contain similar language.

The large obligations of the author of the Fourth Gospel to the Philonian school cannot reasonably be denied, though they have often been questioned. It is clear from the tone of the Prologue that Philo's conception of the Logos, or something akin to it, was already familiar to those for whom the Evangelist wrote. No explanation of the word Logos is given; and almost every verse in the Prologue might be paralleled from Philo. Technical terms from Philo (σφραγίς and παράκλητος are examples) abound in the Gospel. Indeed, the whole treatment adopted by the Evangelist presupposes the Jewish-Alexandrian philosophy of religion, and would be unintelligible without it. Nevertheless, it is true that the identification of the historical Jesus with the Logos, and of the Jewish Messiah with the Logos, makes a great difference. Philo had never thought of identifying the Logos with the Messiah—a figure in whom he took very little interest. The chief differences (which have often been exaggerated) between the Philonian and Johannine Logos are these: (1) the Evangelist defines far more clearly the relation of the Logos to God, as a second Person in the Godhead, distinct, though eternally inseparable from the Father; (2) the notion of God the Father as a transcendent unapproachable Being, to be known only through an intermediary, is foreign to the Gospel, in which God the Father acts directly upon the world; it is in consequence of the activity thus attributed to God the Father that the *creative* function of the Logos loses its interest and is not referred to after the Prologue; (3) in the Gospel the conception of the Logos is more dynamic than in Philo; the Logos-Christ is the complete revelation of the *character* of God rather than of His nature; the revelation of the Divine as self-sacrificing love is an idea not to be found in Philo; it follows that the conception of *life*, which implies growth, change, and development, has an importance for the Evangelist which it could not have for Philo; (4) could Philo have accepted the Incarnation? The difference between the two writers here has often been magnified by orthodox critics. Philo believed in theophanies, and could have easily accepted a docetic theory of the Incarnation. The Fourth Evangelist is no docetist; but for him too the Incarnation was primarily a *revelation*. The Johannine Christ became flesh that we might 'behold his glory,' and learn what could only thus be taught. But a real Incarnation of the Logos would no doubt have been inconceivable to Philo, for whom no historical event seems to have any importance as such. The Logos-doctrine of the Prologue may be briefly summarized as follows. From all eternity, before time began, the Logos *was*. He is supra-temporal, not simply the Spirit of the World. He did not become personal either at the Creation or at the Incarnation.[1] The Logos was 'turned toward' (πρός) God. The preposition indicates the closest union, with a sort of transcendental subordination. The Father alone is the πηγὴ θεότητος. The opening words of the Prologue do not (with Meyer, Weiss, etc.) refer to the exaltation of Christ, but to His eternal relationship to the Father. Deification was to the Jews blasphemy, to the Greeks a light thing. The Evangelist shows that the principles of distinction and deeper unity are in God Himself. 'All things came into being through the Logos,' who is the mediate Agent in creation.[2] 'Apart from him nothing came into being. That which has come into being was, in him, life.' Bossuet, following Augustine, comments rightly:

> 'Everything, even inanimate things, were life in the eternal Word, by his idea and eternal thought.'

The Logos is the light of men *as life*; that is to say, revelation is vital and dynamic. God reveals Himself as vital law to be obeyed and lived. The cosmic process, including, of course, the spiritual history of mankind and of the individual, is the sole field of revelation. 'The light shineth in darkness.' As the first step in the first creation was to divide the light from the darkness, so the new creation effects the same division in the moral and spiritual sphere. 'And the darkness arrested (?) it not.'[3]

'This is the genuine light, which lighteth every man as it comes into the world.' 'He was (always) in the world, and the world knew him not.'[4] 'And the Logos became flesh and tabernacled among us.' Here (v.^{14}) the Evangelist mentions the Incarnation for the first time. The Logos, who from all eternity was fully divine (θεός), became flesh (assumed visible humanity) at a certain time.

It is not easy to say whether the Evangelist conceived of the Logos existing *before* the Incarnation as 'true man from all eternity';[5] but 3^{13} and 6^{62} (cf. 1 Co 15^{47}) suggest that he did. It is certainly in accordance with Johannine ideas to hold that the Incarnation, and the Passion as the sacrament of the divine self-sacrifice, were part of the counsels of God from all eternity. The Logos before the Incarnation was, according to this thought, Man ἐνδιάθετος, though not προφορικός. The Prologue thus leads up to the Incarnation of the Logos, which is the theme of the whole Gospel, though the historical form precludes any further discussion of the subject on its philosophical side. The incidents are selected for their symbolical and illustrative value, and the whole tendency of the treatise is quietly to transmute local and temporal ideas about the Incarnation into a more universal and spiritual form. The highest form of faith, he more than hints, is that which can dispense with ocular evidence. The ascended Christ can be 'touched' more readily than was possible when the Logos had His tabernacle among men.

---

[1] There was nothing strange in this doctrine. The book of Proverbs (8^{23}) had asserted the same of Wisdom: 'I was set up from everlasting, from the beginning, or ever the earth was.'

[2] This is also Philonic; cf. *de Cherub.* 35: εὑρήσεις γὰρ αἴτιον μὲν αὐτοῦ [τοῦ κόσμου] τὸν θεόν, ὑφ' οὗ γέγονεν, ὕλην δὲ τὰ τέσσαρα στοιχεῖα, ἐξ ὧν συνεκράθη, ὄργανον δὲ λόγον θεοῦ, δι' οὗ κατεσκευάσθη.

[3] So Origen took κατέλαβεν, probably rightly.

[4] This is exactly what Heraclitus also says about the Logos.

[5] T. H. Green, *Works*, London, 1885–88, iii. 208 f.

3. In Christian theology.—The doctrine of the Logos has a very important place in the theology of the early Christian Church. It was the answer of orthodox Catholicism to various theories of the Person of Christ which at that time seemed plausible—theories which made Jesus a phantom, or an emanation, or a demi-god. Heretical thought, down to and including Arianism, tended to rank Christ with the imaginary intermediate Spirits which formed a hierarchy between the supreme God and humanity. The Johannine Logos-doctrine was a barrier against all such theories. The Apostolic Fathers do not supply much material. Ignatius calls Christ *λόγος ἀπὸ σιγῆς προελθών*,[1] which has a Gnostic ring, since Valentinus was soon to make Logos and Zoe the offspring of Bythos and Sigē. Hermas identifies the Son with the Law of God, just as Philo identifies Law and Logos. In the Acts of John the Logos-conception is separated from the man Jesus, so that Christ with His disciples can sing the praises of the Logos. And in ch. 13 the Voice teaches: 'This cross of light is sometimes called by me Logos, sometimes Jesus, sometimes Christ, sometimes *νοῦς*,' etc. In Montanism (*q.v.*) this notion of the Logos as a *σύγκρασις* of divine attributes was maintained. The anti-Montanist 'Alogi' represented a reaction against this tendency. They were 'feeble reptiles' (*ἑρπετὸν ἀσθενές*), according to Epiphanius. This was a time of unrestrained theosophical speculation, in which an attempt was made to throw into the Logos-conception a mass of heterogeneous elements—Jewish, Greek, and Oriental. The Fourth Gospel had a very steadying effect, when it was accepted as canonical; and so had the writings of the Apologists—Justin, Tatian, Theophilus, and Athenagoras. The Apologists were theological conservatives. They wished to preserve traditional Christianity, with its doctrine of revelation and its reverence for the OT. They do not philosophize for their co-religionists; they talk about the Logos to show the pagans that Christianity is in agreement with 'the best thought of our time,' just as our clergy talk about evolution.

The philosophy which the Apologists mainly wished to conciliate was Stoicism, which in the 2nd cent. was much stronger than Platonism.[2] So Justin argues that Christ is the 'Spermatic Logos,' the Reason of God, at first immaterial in the Father's bosom, then sent forth as the spoken word for creation and revelation. All men are made in the image of the Logos; and 'those who believe in Christ are men in whom the divine seed, which is the Logos, dwells.' Tatian[3] gives us a Stoic-Christian cosmology. The Logos was first *δυνάμει*, not *ἐνεργείᾳ*, residing in the bosom of the Father. Then, by the will of the Father, He came forth, and the worlds were made. The Logos is the *ἀρχή* in relation to the creatures. Theophilus[4] employs the Stoic terms *ἐνδιάθετος* and *προφορικός*, and gives in outline a systematic Logos-doctrine. Athenagoras[1] maintains that the Logos did not first acquire a personal existence in connexion with creation. Minucius Felix[2] equates the Christian Trinity with *Mens, Ratio, Spiritus*. This is to be noted, because later, under Platonic influence, a principle above Νοῦς (*Mens*) was asserted, and this, with Christian speculative mystics, was naturally identified with the Father, with the result that Νοῦς was now equated with the Logos, and *Ratio* (the will and thought of God transmuted into vital law) had to be awkwardly assigned to the Holy Ghost. This led to confusion. The Alexandrians continued to call the Father Νοῦς, feeling probably that the Neo-Platonic Absolute in no way corresponds to the Christian God the Father. Thus they introduced a distinction resembling that between the Godhead and God in Eckhart; a sublimated conception of Νοῦς was introduced between the Absolute and the Logos.

In Clement of Alexandria the Logos-doctrine is a doctrine of Immanence. The world is an organic whole, moving on to some exalted destiny in the harmony of the divine order. Humanity has its life and being in Christ. The Incarnation is no abrupt break in the continuity of man's moral history. Christ was in the world before He came in the flesh, and was preparing the world for His visible advent. Hence the prophecies of the Incarnation enter into the organic process of human history. The history of man's redemption is, for Clement, the education of the human race under its divine 'Instructor.' As Instructor, the Logos has always been present in the world; He spoke through Moses, and through Greek philosophy. He even gave the sun and moon to be worshipped, that men might rise from the lower worship to the higher.[3]

> 'He is the Saviour of all, some with the consciousness of what he is to them, others not as yet; some as friends, others as faithful servants, others hardly even as servants' (*Strom.* vii. 2).

Salvation is not a physical process, but a moral growth through union with God; knowledge is not merely speculation, but a growing sympathy and insight into the character of God and His laws. The union of the Logos with God is so intimate that we cannot hold (with the Gnostics and some Platonists) that the Father is *passive* in the work of redemption. The Incarnation is in itself the Atonement by which God reconciles the world to Himself. For Clement, as for other Greek theologians, there is properly only one dogma—the Incarnation.

For Origen's Logos-doctrine see art. ALEXANDRIAN THEOLOGY, vol. i. p. 316.

There were two schools which opposed the Logos-theology—the rationalistic Unitarians, who regarded the 'divinity' of Christ as a mere power bestowed on Him by God, and emphasized the humanitarian aspect of His Person, and the modalistic Monarchians, such as Praxeas, Noetus, and Sabellius. These maintained the old alliance with Stoicism, after the Catholics had adopted Neo-Platonism as their mistress in philosophy (see, further, art. MONARCHIANISM). Hippolytus's anti-Sabellian treatises show the line of argument used by the orthodox—a position which was later regarded as not wholly satisfactory. Methodius,[4] a Platonist but not an Origenist, argues that the Incarnation was the necessary complement of the Creation, the imperfection of Adam being natural. There is a double development—in the race and in the individual, both due to the immanent Logos. The *κένωσις* is perpetually re-enacted in spiritual experience. Macarius[5] teaches the same doctrine: in each believer a Christ is born.

---

[1] *Magn.* 8.

[2] Non-Christian Platonism never attached much importance to the Logos; the word for them had a different meaning; their 'Second Person' was Νοῦς.

[3] *Orat.* 5.

[4] ii. 10.

---

[1] 10.

[2] *Oct.* v. 10.

[3] *Strom.* vi. 14.

[4] *S. Conviv.* iii. 5.

[5] *Hom.* iv. 8 f.

The Arian controversy drove orthodoxy into something like a compromise with modalism. The test-word *ὁμοούσιος* gave the Monarchians most of what they wanted, and its adoption soon ended the hostility of this school. The Arian Christology is of no philosophical value; and its great opponent Athanasius, though he writes much about the Logos, does not add anything significant to the doctrine. It was, in fact, no longer thoroughly acceptable to the Catholics. The word *λόγος* was not allowed to appear in the Nicæan symbol; and the Synod of Sirmium (A.D. 451) condemned the doctrine of the *λόγος ἐνδιάθετος* and *προφορικός*. Other terminology, and to some extent other ideas, displaced it. It was never acclimatized in the Latin-speaking countries.

The Logos-doctrine has an obvious affinity with mysticism, and with types of religion which emphasize the divine immanence. It was revived by Eckhart in the Middle Ages, and has been a living article of faith with religious idealists, Christian Platonists, and speculative theists. It belongs to a permanent and very important type of religious thought, and can never lose its value, though there are now many who (like Max Müller) are ardent supporters of the Logos-idea in religious philosophy, while they cannot accept the Johannine identification of the Logos with a historical individual.

For an evolution in Indian philosophy somewhat similar to the development of the Logos-doctrine see art. VĀCH.

W. R. INGE.

LOKĀYATA.—This word, which denotes properly 'belonging to the world of sense,' is the Indian name for the materialistic system whose adherents are termed Lokāyatikas or Laukāyatikas, or more usually Chārvākas, from the name of the founder of their doctrinal system. There are clear indications of the presence in India, as early as pre-Buddhistic times, of teachers of a pure materialism;[1] and undoubtedly these theories have had numerous adherents in India from that period onwards to the present day.

Although two authorities[2] bear witness to the former existence of text-books of materialism, viz. the *Bhāgurī* and the *Sūtras* of Bṛhaspati, the mythical founder of the system, yet materialistic doctrines have never gained any further place in the literature of India. In order to understand these theories, therefore, we can only have recourse to a few passages of the *Mahābhārata*, to the polemic which was carried on against materialism in the text-books of the other philosophical schools, and to the doctrines of King Error in the philosophical drama *Prabodhachandrodaya*. This last was composed in the 11th or 12th cent. A.D., and aims at setting forth in allegorical style the superiority of Brāhmanical orthodoxy to all other theories of the universe. The principal source of our knowledge, however, is the first chapter of the *Sarvadarśanasaṅgraha*,[3] a compendium of all the philosophical systems of India, composed in the 14th cent. of our era by Mādhavāchārya, the celebrated teacher of the Vedānta, in which the doctrines of Indian materialism are set forth in the greatest detail. Mādhavāchārya begins his exposition with an expression of regret that the majority of the men of his day follow the materialism represented by Chārvāka.

The Lokāyata allows only perception as a means of knowledge, and rejects inference. It recognizes as the sole reality the four elements, *i.e.* matter, and teaches that, when a body is formed by the combination of the elements, the spirit also comes into existence, just like the intoxicating quality from the mixture of special materials. With the destruction of the body the spirit returns again to nothingness. The soul, therefore, is only the body *plus* the attribute of intelligence, since the existence of a soul distinct from the body cannot be established by perception. Supersensuous things are, of course, also wholly denied, and are dismissed at times with a mere jest. Hell is earthly pain, due to earthly causes. The Supreme Being is the king of the country of whose existence the whole world affords tangible proof. Emancipation is the dissolution of the body. The post-operative force of merit and demerit, which, according to the belief of all other Indian schools, determines the lot of each individual down to the smallest details, has no existence for the Lokāyatika, because this conception is reached only by inference. To the objection of an orthodox philosopher, that those who reject this controlling force in the universe leave the various phenomena of the latter without a cause, the materialist replies that the essential nature of things is the cause from which the phenomena proceed.

On the practical side this system exhibits itself as the crudest Eudæmonism; for it represents the gratification of the senses as the sole desirable good. The objection that sensual pleasures cannot be the highest aim for mankind, since these are always mingled with more or less pain, is met by the remark that it is for us to secure by prudence enjoyment as little alloyed as possible with pain, and to shun as far as is in our power the suffering inseparably connected with pleasure. The man who would have fish must take their skin and bones, and he who wants rice cannot exclude the husks from his bargain. Let him not then from fear of the pain renounce the pleasure which we instinctively feel to be congenial to our nature.

The Vedas are declared to be the idle prating of knaves, characterized by the three faults of untruthfulness, internal contradiction, and useless repetition; and the professors of Vedic science deceivers, whose doctrines are mutually destructive. To the Chārvākas the ritual of the Brāhmans is a fraud, and the costly and laborious sacrifices are useful only for providing with a livelihood the cunning fellows who carry them out. 'If an animal sacrificed at the Jyotiṣṭoma (the original form of the *soma* offering) rises to heaven, why does not the sacrificer prefer to slay his own father?' No wonder that in the view of the orthodox Hindu the doctrine of the Chārvākas is the worst of all heresies.

It is natural to conjecture that the Lokāyata system was based by its founder upon deeper principles, and developed upon more serious philosophical lines than the information which has come to us from their opponents allows us to understand. The conjecture, however, cannot be established.

LONGSUFFERING.—Longsuffering is alike a divine attribute and a human virtue. In both its uses its meaning is well represented by 'longanimity,' formerly a word of frequent occurrence, and not altogether obsolete.

> The earliest example of 'longanimity' quoted in the *OED* (vi. 417) is from a 1450 tr. of *de Imitatione*, I. xiii. 14: 'Thou shalt overcome them [temptations] better litel and litel by pacience and longanimyte'; the most recent citation of the word is from the *Spectator*, 11th Jan. 1890: 'His longanimity under the foolishness of the young woman is really marvellous.'

The literal meaning of the Greek word (*μακρόθυμος*) of which 'longsuffering' is the translation is 'long-tempered,' the opposite of our familiar expression 'short-tempered' (cf. Germ. *Langmütigkeit*).

In three OT passages (Ex 34^{6}, Nu 14^{18}, Ps 86^{15}) the RV substitutes a more literal rendering of the Hebrew phrase (אֶרֶךְ אַפַּיִם, 'length of face')—'slow to anger'—for the AV 'longsuffering.' In many passages (Neh 9^{17}, Ps 103^{8} 145^{8}, Jer 15^{15}, Jl 2^{13}, Jon 4^{2}, Na 1^{3}) the two translations are interchangeable.

> 'Longsuffering or slowness to anger is the glory of man as it is the glory of God' (R. C. Trench, *Sermons preached in Westminster Abbey*, London, 1861, xxx. 349).

That the two expressions are synonymous in many contexts is evident from the retention in the RV of 'longsuffering' in Jer 15^{15} 'Avenge me of my persecutors; take me not away in thy longsuffering.' The former sentence seems decisive in favour of the interpretation which regards the divine longsuffering as displayed towards the persecutors and not towards the prophet.

> 'The petition shews how great was the peril in which the prophet perceived himself to stand: he believes that if God delay to strike down his adversaries, that longsuffering will be fatal to his own life' (C. J. Ball, *The Prophecies of Jeremiah*, London, 1890, p. 321).

A similar ambiguity arises in the interpretation of Lk 18^{7}; AV translates *καὶ μακροθυμεῖ ἐπ' αὐτοῖς*, 'though he bear long with them'; but RV 'and he is longsuffering over them.' A. Plummer (*ICC*^{2}, Edinburgh, 1898, *in loc.*) grants that *ἐπ' αὐτοῖς* may refer to the enemies of the elect, but prefers to understand it to apply to the elect. The meaning, then, would be: 'And shall not God deliver His elect who cry day and night to Him, while He is slow to act for them?' But the analogy of Jer 15^{15} (cf. Sir 35^{22}) suggests that the main thought is of God's patient forbearance with those who are at once His enemies and the oppressors of His chosen ones. J. Moffatt renders: 'And will not God see justice done to his elect who cry to him by day and night? Will he be tolerant to their opponents? I tell you, he will quickly see justice done to his elect!' (*The New Testament: A New Translation*, London, 1913).

The uncertainty in regard to the interpretation of the above and other passages may serve to emphasize what Plummer rightly insists upon, namely, that, although *μακροθυμεῖ* usually means 'is slow to anger,' yet 'it sometimes means "to be slow, be backward, tarry," and is almost synonymous with *βραδύνω*. . . . So also *μακροθυμία* may mean "slow persistency" as well as "slowness to anger." Comp. 1 Mac. viii. 4' (*op. cit.* p. 414).

The EV recognizes this wider meaning, and regards 'longsuffering' as equivalent to 'patience' in He 6^{12} and Ja 5^{10}. The corresponding verb is applied in Ja 5^{7} to the husbandman's patient waiting for the harvest. But 'patience' is more frequently the translation of *ὑπομονή*, 'the temper which does not easily succumb under suffering,' while '*μακροθυμία* is the self-restraint which does not hastily retaliate a wrong' (J. B. Lightfoot, *Saint Paul's Epistles to the Colossians and to Philemon*, London, 1879, on Col 1^{11}).

To the 'longsuffering' of God reference is made in Lk 18^{7}, Ro 2^{4} 9^{22}, 1 P 3^{20}, 2 P 3^{9}, and to the 'longsuffering' of Jesus Christ in 1 Ti 1^{16} and probably 2 P 3^{15}. In Ro 2^{4} 'forbearance' (*ἀνοχή*) is linked with 'longsuffering.'

> The distinction between these two words is that 'the *ἀνοχή* is temporary, transient: we may say that, like our word "truce," it asserts its own temporary, transient character. . . . This, it may be urged, is true of *μακροθυμία* no less. . . . But as much does not lie in the word; we may conceive of a *μακροθυμία*, though it would be worthy of little honour, which should *never* be exhausted; while *ἀνοχή* implies its own merely provisional character' (R. C. Trench, *Synonyms of the New Testament*^{11}, London, 1890, p. 199).

As a moral attribute of God, 'longsuffering' is a manifestation of His grace. In 'the riches of His goodness' He waits long and patiently for the sinner's repentance (Ro 2^{4}), and in loving-kindness He tolerates those who deserve His wrath (Ro 9^{22}).

> Yet '*patience and long-suffering* point not merely to the suspension of punishment, but to the love which never tires till it has exhausted its last resource. Owing to the contrast between the apparent impotence of long-suffering, and supreme moral omnipotence, this is an attribute which excites special reverence' (T. Haering, *The Christian Faith*, London, 1913, ii. 492 f.).

'Longsuffering,' as a Christian grace, is a 'fruit of the Spirit' (Gal 5^{22}). Though a passive virtue, it is the manifestation in human character of spiritual power received in answer to prayer from Him by whom believers are 'strengthened with all power, according to the might of his glory, unto all patience and longsuffering with joy' (Col 1^{11}). In his earnest prayers that Christians may be adorned with this grace, St. Paul asks that they may have the mind of Christ, for he obtained mercy, that in him, as chief of sinners, 'Jesus Christ might shew forth all his longsuffering, for an ensample of them which should hereafter believe on him unto eternal life' (1 Ti 1^{16}). In 1 Co 13^{4} 'longsuffering' is said to be an attribute of the 'love' by which we are made partakers of the divine nature. Tertullian (*de Patientia*, 12) and other Fathers 'explain it to mean greatness of soul or magnanimity,' but *μακροθυμία* differs from *μεγαλοψυχία*, the 'high-mindedness' of Aristotle:

> '*First*, it is not a consciousness of greatness, but a largeness of conception. *Second*, it is not the loftiness of spirit that great men alone possess, but a moral and godly frame of mind to be exhibited in the life of every Christian. *Third*, it is not a noble pride that stands aloof, but an interested spectator of life's sufferings, though not an active combatant in the strife' (T. C. Edwards, *A Commentary on the First Epistle to the Corinthians*^{2}, London, 1885, p. 343).

In the *Apocrypha and Pseudepigrapha of the Old Testament* (ed. R. H. Charles, Oxford, 1913), *inter alia* the following instructive examples of the use of 'longsuffering' are found:

> *Test. Dan* 2^{1}: 'Unless ye keep yourselves from the spirit of lying and of anger, and love truth and longsuffering, ye shall perish.'
>
> *Test. Gad* 4^{7}: 'The spirit of love worketh together with the law of God in longsuffering unto the salvation of men.'
>
> *Test. Jos.* 17^{2}: 'With longsuffering hide ye one another's faults.'
>
> *Pirqê Âbôth* 4^{1}: 'Who is mighty? He who controlleth his evil disposition; as it is said: "Better is the longsuffering than the mighty, and he that ruleth his spirit than he that taketh a city."'

LITERATURE.—The word 'longsuffering' is best studied with the aid of commentaries on the passages in which *μακροθυμία* occurs. There is an instructive and comprehensive article in *ExpT* xii. [1900–01] 330 ff.; the following bibliography is given: H. Cremer, *Bibl. Theol. Lexicon*^{3}, Edinburgh, 1880, p. 288 ff.; J. Taylor, *Works*, London, 1848, iv. 483 ff.; R. W. Dale, *Week-Day Sermons*, do. 1883, p. 88 ff.; F. Temple, *Rugby Sermons*, do. 1861, iii. 173 ff.; C. J. Vaughan, *University and Other Sermons*, do. 1897, p. 230 ff.; A. Maclaren, *Paul's Prayer and Other Sermons*, do. 1893, p. 217 ff. See also J. Hastings, art. 'Longsuffering' in *HDB* iii. 136; H. C. Lees, art. 'Long-suffering,' in *DCG* ii. 53 f.

LORETO.—For many centuries the little town of Loreto, situated some 15 miles from Ancona on a hill commanding a view of the Adriatic, has been a notable place of pilgrimage. Montaigne, who visited it in 1580, and who apparently believed in the miracles of healing supposed to be wrought there, describes the town as 'containing few inhabitants except those who serve the needs of the religious devotees' (*Journal of Travels*, Eng. tr., London, 1903, ii. 196–209). The great basilica, the dome of which is visible from afar, was begun in 1468, completed in 1538, and has since received many additions and modifications. Of its artistic glories an excellent account is given in A. Colasanti (*Loreto*, Bergamo, 1910). But the basilica was built only to enclose and enshrine a tiny edifice known as 'la Santa Casa,' which is the real object of pilgrimage. The Holy House is believed to rest on the surface of the ground without foundations, and this fact seems to be authentic. It measures roughly 31 ft. by 13, and its walls are built of hewn stones, from their shape and colour often mistaken for brick, but externally they are hidden from view by a casing of marble richly adorned with sculptures. An ancient statue[1] of wood, of Byzantine inspiration, representing the Madonna and Child, now voluminously draped and also crowned, occupies a niche inside the little house at some height from the floor, and beneath it stands an altar at which Mass is said. Countless *ex votos* are suspended all around, but these probably represent only a small part of the rich gifts which belonged to the shrine before Napoleon rifled it in 1797. On that occasion the statue itself was carried off and taken to Paris, but in 1801 the First Consul returned it to the niche that it had formerly occupied. The words 'Hic Verbum caro factum est' sculptured above it indicate the shrine's official claim to the veneration of the faithful, but the story is more fully told in a Latin inscription set up in the basilica by Pope Clement VIII. in 1595, the approved English rendering of which runs as follows:

> 'Christian Pilgrim, you have before your eyes the Holy House of Loreto, venerable throughout the world on account of the Divine mysteries accomplished in it and the glorious miracles herein wrought. It is here that the most holy Mary, Mother of God, was born; here that she was saluted by the angel; here that the eternal Word of God was made flesh. Angels conveyed this house from Palestine to the town Tersato in Illyria in the year of salvation 1291 in the pontificate of Nicholas IV. Three years later, in the beginning of the pontificate of Boniface VIII., it was carried again by the ministry of angels and placed in a wood near this hill, in the vicinity of Recanati in the Marches of Ancona, where, having changed its station thrice in the course of a year, at length, by the will of God, it took up its permanent position on this spot three hundred years ago. Ever since that time both the extraordinary nature of the event having called forth the admiring wonder of the neighbouring people, and the fame of the miracles wrought in this sanctuary having spread far and wide, this Holy House, whose walls do not rest on any foundation and yet remain solid and uninjured after so many centuries, has been held in reverence by all nations.'

This statement lays little stress upon what is perhaps the most surprising feature of the legend, viz. the triple change of site after the arrival of the Holy House upon the shores of the Adriatic. Pietro di Giorgio Tolomei, best known, from his native town of Teramo, as 'Teramanus,' who between 1465 and 1473 drafted the earliest version of the translation story that has been preserved to us (the document has been discussed with great critical acumen by Hüffer in his *Loreto*, i. 33–66), explains that, because the Santa Casa was not sufficiently honoured where it was first deposited, near Fiume in Illyria, it was carried thence by angels across the Adriatic to a wood at Recanati belonging to the 'Lady Loretha'; hence the name which has since attached to the shrine ('inde accepit tunc ista ecclesia nomen "sancta Maria de Loretha" ab illa domina que erat illius silve domina et patrona'). Here, however, there was such a concourse of pilgrims that the wood was infested with robbers and murderers.

> 'For this reason,' the *Relatio Teramani* goes on, 'the Holy House was once more taken up by the hands of angels, and it was carried to the Mount of the Two Brothers, and on this same mount by the hands of angels it was set down. The which brothers, on account of the immense revenue and gain of money and other things, fell straightway into grievous discord and strife. Wherefore the angels, in the same manner as before, carried it away from the said place on the mount and brought it to a spot in the public road and there they made it fast.'

The legend also relates how the Blessed Virgin in 1296 appeared in his sleep to a certain man who was devout to her, and in this way made known the whole story. Thereupon sixteen good men and true journeyed to the Holy Land to measure the foundations of the Holy House at Nazareth. They discovered that these exactly agreed with the dimensions of the Santa Casa, and also that a stone tablet commemorated the disappearance of the little building which had formerly been venerated there. Furthermore, in the time of Teramanus himself two old men came forward and each testified that his grandfather's grandfather had confirmed from personal knowledge the account of the translation.

This was the story which, with further amplifications, added in the 16th cent., was believed from about the year 1470 to the present day. Although such antiquarian writers as M. Leopardi and G. A. Vogel betrayed their misgivings, they did not venture to throw doubts upon the substantial truth of the narrative. It was only in 1906 that U. Chevalier, following in the wake of the less elaborate criticisms of H. Grisar (at the International Catholic Congress of Munich in 1897), A. Boudinhon (in *Revue du clergé français*, xxii. [1900] 241), and L. de Feis (*La Santa Casa di Nazareth*, Florence, 1905), published a systematic refutation of the whole legend (*Notre-Dame de Lorette*). Since then an energetic and often acrimonious controversy has been carried on, both in magazine articles and in separate books, between the assailants and defenders of the legend; but, even among the organs of Roman Catholic opinion, the more weighty and critical reviews without exception have all ranged themselves on the side of Chevalier.

Apart from the intrinsic improbabilities of the legend itself, two lines of argument have been pressed home by the critics with irresistible force. The first, mainly negative, lays stress upon the fact that a shrine of Our Lady had existed at Loreto a century before the date of the supposed translation, that nothing whatever is heard of this translation until the middle of the 15th cent., and that, even when first spoken of, the accounts of the transportation by angels do not suggest that it was the house of the Holy Family at Nazareth which was so transported. Curiously enough—and this is a point which all the many writers on the subject seem to have missed—the earliest known mention of a miraculous translation by angels occurs in the narrative of an English pilgrim, William Wey, one of the original fellows of Eton College. His account, which is probably not of later date than 1462, runs as follows:

> 'Also twelve miles from Ancona and three miles from Recanati, is a hamlet which is called Loreto, where there is now a stone chapel of Blessed Mary which of old was built by St Helen in the Holy Land. But because the most Blessed Mary was not honoured there, the chapel was lifted up by the angels, the most Blessed Mary sitting upon it, and was carried away from the Holy Land to Alretum, while the country-folk and shepherds looked on at the angels bearing it and setting it down in the place where it now is; where the most Blessed Virgin Mary is held in great honour' (*Wey's Pilgrimage*, Roxburghe Club, London, 1857, p. 54).

It will be noticed at once that the building transported is not the actual Holy House of Nazareth, but a chapel built by St. Helen. On the other hand, the first papal document which gives any indication of the special sanctity attaching to the Loreto shrine is the bull of Paul II. in 1470, which speaks thus:

---

[1] Adolfo Venturi (see Hüffer, *Loreto*, i. 41, n.) assigns it to the early years of the 14th cent.; but it seems to be mentioned in documents of the year 1313, and other authorities attribute it to the 13th or even the 12th century. The legend declares it to have been carved by St. Luke the Evangelist.

> 'Desiring to show our veneration for the church of Blessed Mary of Loreto, miraculously founded in honour of the same most holy Virgin outside the walls of Recanati, in which, as the statements of persons worthy of credit attest, and as all the faithful may ascertain for themselves, an image of the glorious Virgin, through the wondrous mercy of God, has been deposited, attended by a troop of angels, and to which (church) by reason of the countless stupendous miracles which the Most High through her intercession has worked for all who devoutly have recourse to her and humbly implore her patronage,' etc.

Here again not the least suggestion is conveyed that the building, even if believed to exist miraculously without foundations, was the actual house of the Holy Family of Nazareth. On the other hand, the terms of this notice lend great probability to the opinion, supported by Hüffer and others, that it was the statue, showing, as we have noticed, Byzantine characteristics, and consequently known to have come from a distance, that was at first supposed to have been brought to Loreto by the hands of angels. Then the fact that the chapel had no proper foundations seems to have given rise to the further development that the whole building had been miraculously transported from the East. And, finally, a reason was found for this exceptional providence by assuming that the building was none other than the actual Holy House of Nazareth. Considerable support is lent to this hypothesis of a gradual evolution of the legend by a curious parallel in the case of a chapel not far from Siena. The story is told first by A. Fortunio in his *Cronichetta del Monte San Savino* (Florence, 1583, pp. 9–11). In the year 1116 a little wayside chapel of the Blessed Virgin at Asciano belonged to a certain lord, who at his death left it to his two sons. They quarrelled over the division of the offerings and were on the point of fighting a duel when, during the night, the angels took the chapel up and bore it to a place about 14 miles off, called Colle di Vertighe, near Monte San Savino. G. B. Mittarelli, a really serious and critical antiquary of the 18th cent. (see his *Annales Camaldulenses*, Venice, 1755–73, iii. 89–92), bears witness to the existence of the chapel in his time and also to its great antiquity. Here again, just as at Loreto, the chapel was without foundations, and a great church had been erected over the smaller building to protect and enshrine it. Whether the Loreto legend or that of the Colle di Vertighe is really the older it is difficult to decide. In the case of Loreto the negative evidence tending to show that in the beginning no idea existed of the chapel having come from Nazareth is emphasized by the large number of documents of the 14th and 15th centuries which have been unearthed concerning it. It is incredible, as Hüffer shows in his very patient discussion, that the supremely sacred character of the building could have been ignored, as it is, in almost all of them, if men had then believed that this was actually the Holy House in which God had become incarnate.

The second line of argument, developed by Chevalier and other critics, claims to show that at Nazareth itself nothing was known to have happened in 1291, when the Holy House is supposed to have been transported westwards; no pilgrims comment on the disappearance of a shrine which was known to have been visited by their predecessors in the 12th and 13th centuries, nor do the accounts of what was venerated at Nazareth as the abode of the Holy Family apply in the least to such an edifice as we now see at Loreto. It may be noticed also that the measurements and proportions of the chapel of the English shrine of Our Lady of Walsingham, which happen to have been accurately preserved to us, do not agree with those of the Santa Casa, while, according to legend, the Walsingham chapel reproduced exactly the dimensions of the Holy House as measured by a pilgrim about the year 1060.

By the time of Pope Julius II. the legend of the Santa Casa had fully established itself in popular favour and it is incorporated in a bull of 1507, but with the qualification 'ut pie creditur et fama est.' In 1518 Leo X. identifies himself with the whole marvellous story 'ut fide dignorum comprobatum est testimonio,' and it must have been shortly after this that Thomas Duchtie or Doughtie of Musselburgh made his pilgrimage to the Holy Land and brought back that image of the Italian shrine for which he afterwards built a chapel on the land now occupied by Loreto School. Other pontiffs, notably Sixtus V. and in modern times Pius IX. and Leo XIII., adopted the tradition without any question, and Innocent XII. permitted the celebration of a special feast of the translation of the Holy House with a 'proper' Mass and Office. In the latter part of the 16th cent. the story of the miraculous translation was everywhere accepted, and the local traditions of Nazareth itself were modified to suit it. It should, however, be remembered that none of these papal bulls or other similar acts of ecclesiastical authority is regarded in the Roman Church as having any dogmatic force, and consequently all Roman Catholics are free to accept or reject the legend according to their own judgment of the historical evidence. The defenders of the tradition still lay stress upon an alleged scientific examination of the materials, particularly the stone of which the Santa Casa is built, and it is claimed that experts have declared that such materials are not found in Italy, but only in the neighbourhood of Nazareth (see D. Bartolini, *Sopra la Santa Casa di Loreto*, Rome, 1861). But these experiments were carried out in 1857, and it may be doubted whether their conclusions can be regarded as rigidly scientific. Let us also notice that the frescoes at Gubbio and in one or two other places, said to be of early date and representing angels carrying a house (the date and details are nearly always matters of controversy), cannot be assumed to refer of necessity to the Loreto legend. It is clear from the Monte San Savino chronicle quoted above that there was at least one rival tradition of the same kind in circulation. These frescoes, then, cannot be appealed to as a conclusive argument in favour of the early date of the Loreto story in particular.

LITERATURE.—The vast bibliography of the subject has been very fully, though not quite exhaustively, dealt with by J. Faurax, *Bibliographie lorétaine*, Tournai, 1913, and also by G. Hüffer, *Loreto* (see below), pp. 5–8; only a selection of books and articles can be mentioned here. The text of the early writers who elaborated the legend into the form which ultimately prevailed, viz. Teramanus, Jerome Angelita, Raphael Riera, and Horazio Tursellini, will be found printed at length in the voluminous work of P. V. Martorelli, *Teatro istorico della S. Casa Nazarena*, 3 vols., Rome, 1732–35. Besides this, we may note, among older works, the important treatises of G. A. Vogel, *de Ecclesiis recanatensi et lauretana earumque episcopis commentarius*, 2 vols., Recanati, published in 1859, though written in 1806, and M. Leopardi, *La Santa Casa di Loreto*, Lugano, 1841. Both these works give proof of much research among municipal archives and other MS sources. In the modern controversy, after U. Chevalier, *Notre-Dame de Lorette*, Paris, 1906, by far the most important contribution to the subject is that of G. Hüffer, *Loreto: eine geschichtskritische Untersuchung der Frage des heiligen Hauses*, Münster, 1913 (so far only one volume, but a second promised). See also A. Boudinhon, *La Question de Lorette*, Paris, 1910; C. Bouffard, *La Vérité sur le fait de Lorette*, do. 1910, and *The Month*, July 1912.

Of the various attempts made to reply to Chevalier's criticisms we may note A. Eschbach, *La Vérité sur le fait de Lorette*, Paris, 1910; F. Thomas, *La Santa Casa dans l'histoire*, Lyons, 1909; L. Poisat, *Lorette au xiiie siècle*, Arras, 1906; M. Faloci Pulignani, *La Santa Casa di Loreto secondo un affresco di Gubbio*, Rome, 1907; I. Rinieri, *La Santa Casa di Loreto*, 3 vols., Turin, 1911; G. Kresser, in *Theolog. praktische Quartalschrift*, Linz, 1907, pp. 795–820, and 1911, pp. 50

526; cf. also *Theologische Quartalschrift*, Tübingen, 1909, pp. 212–248, 477–490.

HERBERT THURSTON.

LOTS.—See DIVINATION.

LOTUS (Egyptian).—**1. Name.**—First we must dismiss entirely the modern botanical name 'lotus.' '*Lotus Arabicus* is a small leguminous plant resembling a vetch' (*Proc. Roy. Soc.* lxvii. [1900] 225). As plants more or less confused together, being all water-lilies, and popularly called 'lotus,' there may be specified (1) rose lotus (*Nelumbium speciosum*), distinguished by imbricated petals on the bud; (2) white lotus (*Nymphæa lotus*), distinguished by ribbed petals on the bud, rounded when opened; and (3) blue lotus (*Nymphæa cærulea*), distinguished by smooth, pointed petals. The two *Nymphæa* lotuses cross, and any intermediate form may occur naturally.

(1) *Rose lotus.*—This is at present an Indian plant unknown in Egypt, except as a cultivated rarity. It was known in Roman times, being found in the cemetery at Hawara (W. M. F. Petrie, *Hawara*, London, 1890, p. 52), and described by Athenæus:

> 'Lotus grows in the marshes . . . one like that of the rose, and it is the garlands woven of the flowers of this colour which are properly called the garlands of Antinous; but the other kind is called the lotus garland, being of a blue colour' (xv. 21).

It was known earlier to Herodotus:

> 'There are also other lilies like roses that grow in the river, the fruit of which is contained in a separate pod . . . in this there are many berries fit to be eaten' (ii. 92).

There does not seem to be any proof that this plant was indigenous, nor that any instance of it was represented in Egypt. It cannot, therefore, be reckoned as of importance in religion or art. Various instances have been alleged, but incorrectly. Loret states that the lotus-flower supporting Horus is a rose lotus; but the petals are equal-ended and striped as white lotus. He also states it to be on the head of Nefertum; but that flower appears rather to be a *Nymphæa*. He agrees that it is not shown on monuments. The capital found at Memphis (Petrie, *Palace of Apries*, London, 1909, xviii.), like other early capitals, is white lotus, and not rose.

(2) *White lotus.*—This is characterized by the sepals and petals being ovoid with rounded ends. It is frequent in canal scenes of the early kingdom; as a capital at Memphis (Petrie, *Palace of Apries*, xviii.); as figures of capitals (Zowyet el-Meyityn, VIth dyn.; El-Bersheh, XIIth dyn.; see E. Prisse d'Avennes, *Hist. de l'art égyptien*, Paris, 1879); as a garland (P. E. Newberry and F. Ll. Griffith, *El Bersheh*, London, 1895) it was placed upon the mummies of Aahmes, Amenhetep I., and Rameses II. It is represented as the flower upon which Horus is seated, shown by the strong ribbing of the sepals (R. V. Lanzone, *Dizionario di mitologia egizia*, Turin, 1886, ccxiv. 1). This figure is entirely of late date, 8th cent. B.C. and onward. Loret attributes this to the rose lotus; but J. G. Wilkinson emphatically states that it is the blue lotus (*Manners and Customs of Ancient Egyptians*, London, 1878, iii. 132 f.); the ribbing would indicate that it is, as a matter of fact, the white lotus.

(3) *Blue lotus.*—This is the most usual lotus-flower of all periods, with straight-edged pointed petals. It is found commonly in the tombs, and is the origin of the regular lotus-capitals. The Egyptian names of these flowers are variously equated. Loret puts the *neheb*, *nekheb*, or *nesheb* to the rose lotus, *seshni* to the white lotus, and *serpet* to the blue lotus. But we have seen that probably the rose lotus was a Persian importation, and could not therefore have a usual name dating from the VIth dyn. (Papyrus, i. col. 440). Now Loret gives Arab authority for the *sushan* being a blue flower (*Flore phar.*, p. 116), and the *khazam* (which in the *Scalæ=soshem*) being also blue. It seems probable that *seshni* is the blue lotus. The seeds of all three lotus-plants were eaten (Herod. ii. 92), and *seshni* was gathered in the IInd dyn. (see a seal in Petrie, *Royal Tombs*, London, 1901, ii., xxi. 171). If *seshni* were blue, probably the commonest name *nesheb* is the white lotus. The name *serpet* is more fully spelled out like a Syrian word, as *sairpata*. It seems obviously connected with *sirpād* of Is 55^{13}, where it stands in antithesis to myrtle, and is therefore probably a bush rather than a herb or water-plant. It does not appear to have any connexion with a lotus.

2. Meaning.—Though the lotus is so abundant naturally in Egypt, and so incessantly represented in decoration, yet it seems to have singularly little contact with the religion or writing. Its use as a vocal sign is rare and of late period, and before that it appears only as a determinative of the names of such plants. It is never associated with any early god. Nefertum, who wears the flower on his head, is a late deity, the figure first occurring in the XIXth dyn. (A. Mariette, *Abydos*, Paris, 1869–80, i. 38c), where also is a portable shrine with the lotus-flower of the god, clearly the blue lotus. Usually he is not represented till the Greek period. Horus, who appears seated on the lotus-flower, is so represented only in the Ethiopian and later ages (G. Colonna-Ceccaldi, *Monuments antiques de Chypre*, etc., Paris, 1882, pl. viii.; G. A. Hoskins, *Visit to the Great Oasis of the Libyan Desert*, London, 1837, pl. vi. base). As Wilkinson says of the lotus, 'there is no evidence of its having been sacred, much less an object of worship' (iii. 133).

LITERATURE.—The principal books are **V. Loret**, *La Flore pharaonique*², Paris, 1892, for the botany; **G. Foucart**, *Histoire de l'ordre lotiform*, do. 1897, for Egyptian architecture; **W. H. Goodyear**, *Grammar of the Lotus*, London, 1891, for general art connexions, but overstrained.

W. M. FLINDERS PETRIE.

LOTUS (Indian).—To the Indian taste the lotus has always been the fairest flower: it has enjoyed an unparalleled popularity throughout the length and breadth of India from the earliest times down to the present day, as is shown by its predominance in literature and art. Beginning to be mentioned in the oldest Veda, it plays a prominent part in the mythology of Brāhmanism. To the later Sanskrit poets it is the emblem of beauty to which they constantly compare the faces of their heroines. The lotus, moreover, enters into Indian art of all ages and all religions as a conspicuous decorative element. It appears thus on the oldest architectural monuments of Buddhism as well as later on those of Jainism and Hinduism all over India. With the spread of Buddhism to the countries of the Farther East, its use as an ornament in religious art has extended as far as Japan.

1. In literature.—The lotus is already named in the Rigveda and is mentioned with increasing frequency in the later Saṁhitās. Two varieties occur in the Rigveda. The *puṇḍarīka* (later known as a white variety of the *Nelumbium speciosum*) is once referred to (X. cxlii. 8) as a water-plant. In the Atharvaveda (X. viii. 43) the human heart is compared with this lotus, and the *Pañchaviṁśa Brāhmaṇa* (XVIII. ix. 6) speaks of its flower as 'born of the light of the constellations.' The Taittirīya recension (I. viii. 2. 1) of the Black Yajurveda mentions a garland of such lotuses (*puṇḍari-srajā*). The blue variety named *puskara* occurs several times in the Rigveda (VI. xvi. 3, VII. xxxiii. 11, VIII. lxxii. 11) and still oftener in the later Vedas. In the former it is alluded to as growing in lakes. Here also the term seems to be applied to the bowl of the sacrificial ladle, presumably on account of resemblance in shape; it is certainly so applied in the *Aitareya Brāhmaṇa*. That this variety of the flower also was early used for personal adornment is shown by the fact that the Aśvins, the youthful twin gods of the morning, are described (x. clxxxiv. 2) as wearing a garland of blue lotuses (*puṣkara-sraj*). Another kind of lotus, the *kumuda*, is mentioned, together with its various edible parts, in the Atharvaveda (IV. xxxiv. 3). The flower meant is doubtless the white edible lotus (*Nymphæa esculenta*), denoted by this name in later times.

In the *Brāhmaṇas* the lotus first appears associated with the Creator Prajāpati in cosmogonic myths. Thus the *Taittirīya Brāhmaṇa* (I. i. 3. 5 ff.) tells how Prajāpati, desiring to evolve the universe, which in the beginning was fluid, saw a lotus-leaf (*puṣkara-parṇa*) standing erect out of the water. Thinking that it must rest on something, he dived in the form of a boar, and, finding the earth below, broke off a fragment, rose with it to the surface, and spread it out on the leaf. Again, the *Taittirīya Āraṇyaka* (I. xxiii. 1) relates that, when the universe was still fluid, Prajāpati alone was produced on a lotus-leaf.

Later, in the epic poetry of the *Mahābhārata*, the Creator, under the name of Brahmā, is described as having sprung from the lotus that grew out of Viṣṇu's navel, when that deity lay absorbed in meditation. Hence one of the epithets of Brahmā is 'lotus-born' (*abja-ja*, *abja-yoni*, etc.). The lotus is thus also connected with Viṣṇu, one of whose names is accordingly *padma-nābha*, 'lotus-naveled.' It is further associated with Viṣṇu's wife Lakṣmī, goddess of fortune and beauty, in the *Mahābhārata*, where the myth is related that from Viṣṇu's forehead sprang a lotus, out of which came Śrī (another name of the goddess), and where one of Lakṣmī's epithets is *padmā*, 'lotus-hued.' The *Mahābhārata*, in its account of Mount Kailāsa, the abode of Kubera, the god of wealth, describes his lake Nalinī and his river Mandākinī as covered with golden lotuses.

2. In art.—As regards its application in religious art, the lotus figures, with the rise of that art in India, on all the Buddhist monuments which came into being in different parts of the country from about 200 B.C. onwards. In its simplest form the expanded lotus is very frequent as a circular ornament in the sculptures at Sānchī, Bhārhut, Amarāvatī, and Bodh Gayā, as well as in the rock-cut Buddhist temples of Western India, being introduced a as medallion on pillars, panels, and ceilings. Very elaborately carved half-lotuses sometimes appear used thus, or, in Ceylon, as so-called moonstones—semi-circular stone slabs at the foot of staircases. Lotuses growing on stalks also occur in the sculptures of Gandhāra and of Mathurā, and often figure in elaborate floral designs on the pillars of Sānchī or the panels of Amarāvatī.

The lotus is further found from the earliest times conventionalized either as a seat or as a pedestal on which divine or sacred beings rest in a sitting or standing posture. The oldest and most striking example of this use is exhibited in the figure of the Hindu goddess Lakṣmī in the Buddhist sculptures at Udayagiri, at Bhārhut, and especially at Sānchī, where it is frequently repeated on the gateways of the Great Stūpa. She is portrayed sitting or standing on a lotus and holding up in each hand a lotus-flower which is watered by two elephants from pots raised aloft by their trunks. This ancient type is found all over India at the present day; it even occurs among the old sculptures at Polonnaruwa in Ceylon.

After Buddha began to be represented in sculpture, from about the beginning of our era, his image constantly appears sitting cross-legged on a lotus seat, occasionally also standing on a lotus pedestal. In this form it occurs, for instance, at Rājgīr in Behār, in the Kanheri caves near Bombay, and often in the Gandhāra monuments of the North-West. From the latter region this type spread beyond the confines of India, reappearing in Nepāl, Burma, China, and Japan. Even when the seat is not actually the flower itself, two, three, or four lotuses are, in the Gandhāra sculptures, carved on its front. Such lotuses are even found delineated on a footstool on which Gautama rests his feet instead of sitting cross-legged. The number of the petals of such lotuses varies from four to six.

The use of the lotus seat has been extended to images of *bodhisattvas* not only in India but in Buddhist countries beyond its borders. Thus Mañjuśrī is represented sitting in this way not only at Sārnāth, near Benares, but also in Java and Tibet. In a modern Tibetan picture Maitreya is depicted on a lotus seat, and the figure of a Persian *bodhisattva* sitting on a seat adorned with lotuses and painted on a wooden panel was discovered by M. A. Stein during his first expedition to Central Asia. Even in China the *bodhisattva* Avalokiteśvara occurs sitting on a lotus seat, and in Nepāl also as standing on a lotus pedestal. The lotus is otherwise intimately connected with this *bodhisattva*: for he is represented as born from a lotus, and he regularly holds a lotus in his hand, whence is derived his epithet of Padmapāṇi, 'lotus-handed.' To him, moreover, refers the Buddhist formula *Oṁ maṇi padme Hūṁ* ('Yea! O jewel in the lotus! Amen'), which at the present day is the most sacred prayer of the Buddhists in Tibet (see art. JEWEL [Buddhist], § 7). The persistence of this application of the lotus is indicated by the fact that it often appears not only in modern Indian brass images of Hindu gods, but even in seated portraits of Mahārājas of the 19th century.

The lotus seat and pedestal have an almost universal application in connexion with the figures of Hindu mythology. Thus Brahmā appears seated on Viṣṇu's navel lotus. The three great gods of the Hindu triad, Brahmā, Śiva, and Viṣṇu, with their respective wives, Sarasvatī, Pārvatī, and Lakṣmī, as well as Agni, god of fire, Pāvana, god of wind, Gaṇeśa, god of wisdom, Viṣṇu's incarnation Rāma, and the demon Rāvaṇa, are all found represented on a lotus seat. Viṣṇu, in addition, regularly holds a lotus in one of his four hands. A lotus pedestal also serves as a stand for images of the god Indra, of Viṣṇu and nearly all his incarnations, and of the sun-god Sūrya; in Ceylon also of Śiva and Pārvatī, as well as of Kubera, god of wealth, and in Tibet of Sarasvatī, goddess of learning.

Similarly, in the ancient Jain sculptures found at Mathurā the lotus constantly occurs as a medallion or in more elaborate floral decoration. It also appears as the symbol of the sixth Jina, or Saint. At the present day it is worshipped generally by the Hindus in India, and even by low caste Muhammadans in some parts of the country. See also art. FLOWERS, vol. vi. p. 54^a.

3. In Buddhism.—The symbolism of the lotus-flower (*padma*, *puṇḍarīka*, *utpala*) was borrowed by the Buddhists directly from the parent religion Brāhmanism. Primarily, the lotus-flower appears to have symbolized for the Aryans from very remote times the idea of superhuman or divine birth; and, secondarily, the creative force and immortality. The traditional Indian and Buddhist explanation of it is that the glorious lotus-flower appears to spring not from the sordid earth but from the surface of the water, and is always pure and unsullied, no matter how impure may be the water of the lake. It thus expresses the idea of supernatural birth, and the emergence of the first created object from the primordial waters of chaos; hence also the flower was regarded as the matrix of the Hindu creator himself, Nārāyaṇa, and his later form as the god Brahmā, who are respectively figured and described as reclining and seated upon a lotus-flower. As an emblem of divine purity, the lotus-flower is instanced in the pre-Buddhist Vaiṣṇavite *Bhagavad-Gītā* (*SBE* viii.^{2} [1898] 64, xxxvi. [1894] 189); and this was possibly its signification when it was first applied to the historical Buddha, Śākyamuni.

As an emblem of divine birth, the lotus is the commonest of motives in Buddhist art and literature, as has been noted above (§ 2). In the Buddhist paradise of Sukhāvatī, the goal of popular Mahāyāna Buddhists, where no women exist, every one is born as a god upon a lotus-flower (*Saddharma-puṇḍarīka* [*SBE* xxi. (1884) 389, xlix. (1894) pt. ii. pp. x, 62]), and there are lotus-flowers of *maṇi*-gems (*SBE* xlix. pt. ii. 36). The Western notion of the beatitude of 'lotus-eating' is possibly a memory of this old tradition of divine existence.

A form of this myth of divine lotus-birth is probably the myth which invests Buddha with the miraculous power of imprinting the image of a lotus-flower on the earth at every step that he took. The references to this are innumerable in the Pāli canon; but in the book which the present writer has shown to be manifestly the earliest of all the books of that canon, the *Mahāpadāna Suttanta* (*JRAS* 1914, p. 663 f.), the account of the infant Buddha's first seven steps makes no mention of the lotus-flower imprints which appear in the later versions.

The lotus was especially identified with the sun. This association rested doubtless upon the natural observation that the flower opened when the sun rose and closed at sunset, so as to suggest to the primitive mind the idea that the flower might be the residence of the sun during its nocturnal passage through the under world, or that it might be the re-vivifier, resurrector, or regenerator of the fresh or refreshened sun of the next day. Its very large multi-rayed flowers would also contribute to this association. It is probably from its association with the sun that we find the lotus-flower in the Gandhāra sculptures, and often subsequently, taking the place on Buddha's footprints of the 'wheeled disk of the sun with its thousand spokes.' This possibly was the source of the lotus-marked footprints.

The device of a lotus-flower in the hand seems to have symbolized not merely divine birth but the possession of life everlasting, and the preservation and procreation of life. Such was it with the Aryan queen of heaven, the Brāhmanist goddess Śrī, and her derivative, the Buddhist Tārā, both of whom have the title 'Garlanded by Lotuses' (Tantra, *Rgyud*, xv. 4). In the mystical Vedic, pre-Buddhist *Śatapatha Brāhmaṇa* the lotus was a symbol of the womb (*SBE* xli. [1894] 215); and, as we have seen, it appears to have this sense in the famous *Oṁ maṇi padme Hūṁ* formula (see JEWEL [Buddhist], § 7). Probably, therefore, such a meaning may be in part implied in the lotus held in the hand of Avalokita, the consort of Tārā, to whom that formula is now specially addressed. In the hand of Maitreya, the next coming Buddha, and other divine *bodhisattvas* of Gandhāra, the lotus in the hand, however, may have had a metaphysical significance and have denoted the preservation of the life of the law and the re-vivifying of the same. It was possibly in this sense as cherishers of the law that we find that a lotus-flower adorns the hands of many of the images of Buddhas and *bodhisattvas* who do not specially possess the attribute of a lotus held in the hand (see list below).

The gods and goddesses of Buddhism who hold a lotus in their hand are here enumerated; this lotus, with the object which it carries, forms one of the chief conventional attributes of the particular divinity.

The simple lotus, one of the three kinds specified above, is the especial mark of Tārā, Avalokita, Padmapāṇi, and, occasionally, Maitreya. The lotus surmounted by a sword is an attribute of Amoghapāśa, Khagarbha, Siṁhanāda, Tārā, Padmapāṇyavalokita, and Maitreya; surmounted by a thunderbolt (*vajra*), it is an attribute of Mañjuśrī and mild Vajrapāṇi (*Śānta*); surmounted by a book, it is an attribute of Mañjuśrī and Prajñā Pāramitā; surmounted by a jewel, it denotes Kṣitigarbha and Ekajāta; by a sun, Samantabhadra. Among Tibetan saints the lotus is the especial emblem of the founder of the Order of Lāmas, Padmakara, 'the Lotus-born'; and Tsong-kha-pa, the founder of the Yellow-Hat reformed sect, the Gelug, has two, one on either side of him.

Images of divine symbols, such as the seven treasures (see JEWEL [Buddhist]), are figured usually upon lotus-flowers.

In Buddhist mythology the 'lotus' gives its name to two out of the twenty-four 'previous' Buddhas of the Pāli canon, namely Paduma (properly Padma) and Padumuttara, and to several *nāga* demigods, Padma, Padmottara, and Puṇḍarīka; also to several of the Buddhist hells, namely Paduma, Mahāpaduma, and Puṇḍarīka (*Sutta Nipāta* [*SBE* x. pt. ii. 121]; these appear to be named from the flower-shaped boils which torment the inmates therein). It is also used to denominate the highest number known to Buddhist computators, namely $10{,}000{,}000^{17}$, or 1 followed by 119 ciphers, which is called a *padma* or, in Pāli, *paduma*, whilst the white lotus, *puṇḍarīka*, gives $10{,}000{,}000^{16}$, or 1 followed by 112 ciphers (R. C. Childers, *Dict. of the Pāli Language*, London, 1875, pp. 315, 392).

The white lotus, *puṇḍarīka*, gives its name to one of the great canonical texts of Mahāyānist Buddhism, the *Saddharmapuṇḍarīka*, or 'Lotus of the True Law.' This is a theistic development of the Buddha-theory which represents Sākyamuni as the supreme god of the universe and the possessor of everlasting life. See following article.

LITERATURE.—This is sufficiently quoted throughout.

L. A. WADDELL.

LOTUS OF THE TRUE LAW.—No book gives a more accurate idea of the literature of the Great Vehicle or Mahāyāna (*q.v.*) than the *Saddharmapuṇḍarīka*, or *Lotus of the True Law*; and none gives a better impression of the character of the changes undergone by Buddhism in certain surroundings, from its beginnings down to the earliest times of the Christian era.

1. The Buddha in the Lotus.—In the ancient Pāli documents Śākyamuni is a man, a simple mortal, and he moves in a historical background. In the *Lotus* he is a sublime being, eternal or almost eternal, who unveils in a phantasmagoric setting the 'divinity,' *i.e.* the divine splendour and the majestic power, which Buddhists now attribute to the Buddhas; he is a god as Hindus and Buddhists understand the word—that is to say, he manifests himself especially by mythological performances, although he is a stranger to all notions of creation or of immanence. Such a being has no history; therefore, as Kern says (*SBE* xxi. p. ix), the *Lotus* is a sort of 'dramatic performance, an undeveloped mystery play. . . . It consists of a series of dialogues, brightened by the magic effects of a would-be supernatural scenery.'

Among the most characteristic episodes we may mention the silence which Śākyamuni maintains for thousands of centuries, lengthening out his divine tongue into the most distant worlds;[1] the appearance of the *stūpa* of a deceased Buddha, who had been in Nirvāṇa for a long time, but who wished to hear the *Lotus* (xi.);[2] the appearance of innumerable saints and Buddhas eager to hear the teaching of the Master, and coming from all the worlds. By means of Kern's excellent translation (*SBE* xxi.) we can appreciate the character of the 'sublime' and the 'supernatural' attributed by the Great Vehicle to the Buddha.

Although completely divine, Śākyamuni is not God in the *Lotus*. He is Buddha 'from the beginning'; he is the father of the worlds, the father of the future Buddhas and saints, the universal providence. In order to save human beings and to lead them to Nirvāṇa he appears in a human form which is illusory; he is born, teaches, and enters Nirvāṇa—at least as far as ordinary men can see; but in reality, while illusory Śākyamunis are appearing in this world, the true Śākyamuni reigns on a divine 'Mountain of vultures,'[3] surrounded by future Buddhas,[4] and imparting to them the true teaching, the true law. It is this true Śākyamuni that the *Lotus* shows.

Nevertheless, as we said, this god is not God. There is not a single word in the *Lotus* which is not capable of an orthodox, *i.e.* 'atheist,' interpretation. Śākyamuni may be styled Svayambhū,[5] 'who is by himself,' because, like all the Buddhas, he became Buddha without receiving the teaching from another. He is Buddha 'from the beginning';[6] but, just as the *Lotus* mentions a Buddha who will one day replace Śākyamuni, so we must believe that Śākyamuni is Buddha 'from the beginning of this cosmic age.' We know, moreover, that Brahmā himself is not, properly speaking, eternal. Besides, Śākyamuni is not the only Buddha; other Buddhas reign and teach at the same time as he, his equals in nature, although not necessarily in merits, glory, or activity as a saviour; every Buddha has his own 'field.'[1] If he is the father of the world, it is not because he creates human beings; it is because by his teaching he is the father of the saints or future Buddhas.

So much for speculation. In practice, in the religious sentiment that the *Lotus* assumes, Śākyamuni is really God, providence, and reward of the saints.

2. The doctrine of salvation in the Lotus.—According to the *Lotus*, the saints of the Little Vehicle (see art. ARHAT), or Hīnayāna (*q.v.*), do not attain Nirvāṇa; they believe that they will not be re-born, but they are re-born to receive the true doctrine from the heavenly Buddhas. Deliverance cannot be obtained except by first becoming a Buddha; and for that purpose it is necessary to enter the Vehicle of the future Buddhas (see art. BODHISATTVA).[2] This doctrine is set forth in various parables, the most famous of which is that of 'The Prodigal Child' (iv.); it is not without a somewhat distant resemblance to the Gospel parable.

> 'It is . . . as if a certain man went away from his father and betook himself to some other place. He lives there in foreign parts for many years, twenty or thirty or forty or fifty. In course of time the one (the father) becomes a great man; the other (the son) is poor; in seeking a livelihood . . . he roams in all directions and goes to some place, whereas his father removes to another country.' The father is vexed at having no son; but one day, when, sitting at the gate of his palace, he is dealing with the affairs of millions of sovereigns [*aurei*, *suvarṇa*], he sees his son, poor and tattered. The son thinks, 'Unexpectedly have I here fallen in with a king or grandee. People like me have nothing to do here; let me go; in the street of the poor I am likely to find food and clothing without much difficulty. Let me no longer tarry at this place, lest I be taken to do forced labour or incur some other injury.' The father orders his son to be brought to him; but, before revealing his birth to him, he employs him for some years at all kinds of work, first at the meanest kind, and then at the most important. The father treats his son with paternal kindness, but the son, although he manages all his father's property, lives in a thatched cottage, and believes himself poor. At last, when his education is completed, he learns the truth. In the same way we are the sons of the Buddha, and the Buddha says to us to-day, 'You are my sons.' But, like the poor man, we had no idea of our dignity, of our mission as future Buddhas. Thus the Buddha has made us reflect on inferior doctrines; we have applied ourselves to them, seeking as payment for our day's work only Nirvāṇa, and finding that it is already ours. Meanwhile the Buddha has made us dispensers of the knowledge of the Buddhas, and we have preached it without desiring it for ourselves. At last the Buddha has revealed to us that this knowledge is to be ours, and that we are to become Buddhas like him.

3. Episodes.—Although the former part of the book (see below, § 4) is almost entirely devoted to Śākyamuni, chs. xxi.–xxvi. glorify several Bodhisattvas. We may mention the *ἀριστεία* of Avalokita (xxvi.), which is one of the most widely read works in China (see art. AVALOKITEŚVARA); the myth of the 'healer king,' Bhaiṣajyarāja (xxii.), a Bodhisattva who sets fire to his gigantic body for the salvation of human beings, and who is none other than the sun. In the Chinese Great Vehicle the practice of burning the skull is connected with this myth. In submitting to this cruel rite, the monk fulfils the duty of self-sacrifice incumbent on future Buddhas (J. J. M. de Groot, *Code du Mahāyāna en Chine*, pp. 50, 217, 227). The history of Sadāparibhūta, 'the always subdued one,' 'the always despised one' (xix.), exemplifies 'the superiority of simple-mindedness and pure-heartedness to worldly wisdom and scepticism' (Kern, in *SBE* xxi. p. xxxi). We should not have a right idea of the *Lotus* if we did not mention the glorification of the *dhāraṇīs*, or magical formulæ (xxi.), and the glorification of the *Lotus* itself (xx.): 'He who writes this book, or causes it to be written, obtains infinite merit,' etc. We know that, in the *Milinda*, a Pāli book of the Little Vehicle, all that is required to obtain a divine re-birth is to think of Buddha when dying (*SBE* xxv. [1890] 124); with more reason, in the Great Vehicle, the tendencies of *bhakti* predominate (see art. BHAKTI-MĀRGA).

---

[1] The development of the tongue, capable of covering the whole face, is one of the signs of the 'great man' in the ancient sources.

[2] Contrary, evidently, to all Buddhist dogmas. The being 'who has attained Nirvāṇa' is 'invisible to gods and men,' since he is annihilated or has entered into eternal rest. The appearance of 'deceased Buddhas' in the *Lotus* is probably, therefore, only a case of the magical or deceptive power (*māyā*) of Śākyamuni.

[3] A hill near Rājagṛha, which was turned by the neo-Buddhists into a heavenly mountain.

[4] See art. BODHISATTVA.

[5] This is a name of Brahmā. The *Svayambhūpurāṇa* is a glorification of the Buddha of Nepāl (S. Lévi, *Le Népal*, Paris, 1905).

[6] Cf. this expression with the one described in art. MAÑJUŚRĪ. Mañjuśrī is 'the Buddha of the beginning, the middle, and the end,' therefore the Eternal and also the Absolute—quite different from Śākyamuni in the *Lotus*.

[1] See art. MAHĀVASTU for the plurality of Buddhas and ĀDIBUDDHA for the stages in the divinization of the Buddhas.

[2] With this idea is connected the theory of the double teaching of Buddha—provisional teaching (Little Vehicle) and true teaching (Great Vehicle).

4. Date of the Lotus.—The *Lotus* was translated into Chinese for the first time in A.D. 255; but this ancient translation is lost. The next one (286) contains chs. xxi.–xxvi., which criticism proves to have been added afterwards, the former ch. xxi. becoming ch. xxvii. On the other hand, the former chapters include verses (*gāthās*) and explanations in prose (the latter more recent). Kern therefore thinks that 'several centuries' separate the primitive redaction from the one which was certainly in existence before 286. Winternitz is not so generous, and places the original about the year 200. The present writer is inclined to favour an earlier date: the *sūtras* of Amitābha were translated into Chinese in 148–170, and show a Buddhology as developed as the *Lotus*. It is difficult to identify the Bodhisattvas of the Gandhāra sculpture, except Maitreya, but there is little doubt that this sculpture also shows the quasi-divinization of Buddhas and future Buddhas.

LITERATURE.—Skr. text, ed. H. Kern and B. Nanjio, Petrograd, 1908–09, Fr. tr. by E. Burnouf, Paris, 1852, Eng. tr. by H. Kern (*SBE* xxi. [1884]); the two translations are accompanied by introductions and notes (Burnouf, *Introduction à l'histoire du bouddhisme indien*, Paris, 1845, pp. 29, 60); M. Winternitz, *Gesch. der ind. Litteratur*, ii. (Leipzig, 1913) 230; works on Japanese Buddhism, especially R. Fujishima, *Bouddhisme japonais*, Paris, 1888; J. J. M. de Groot, *Code du Mahāyāna en Chine*, Amsterdam, 1893, pp. 50, 217, 227.

L. DE LA VALLÉE POUSSIN.

LOTZE.—1. General philosophical position.—Among German philosophers of the period which opens with the triumphant advance of natural science about the middle of last century, the most eminent name is undoubtedly that of Rudolf Hermann Lotze. Lotze's significance lies, above all, in his having instituted and constructed an all-embracing theory of the universe which does full justice to the claims of modern science, and at the same time conserves whatever was of real value in the results of the great idealistic movement of German philosophy in the preceding period; it was Lotze, in fact, who first directed those results to genuinely fruitful issues. To him belongs, moreover, the distinction of having stated and discussed the problems of thought with such outstanding clearness, force, and thoroughness that even in the most perplexing questions the reader is stimulated to form his own conclusions, or at least enabled to realize the difficulties that stand in the way of a definite result. The several philosophical sciences, accordingly, are indebted to Lotze's tireless intellectual labours for an effective and permanent furtherance and enrichment in numerous directions; and, indeed, it cannot be said that the results of his work have as yet been exhausted, or have been worked out in due measure by the general mind.

2. Life and works.—Lotze's early life falls within the period dominated by the thought and sentiment of Romanticism. Born on the 21st of May 1817 at Bautzen in Lusatia, he was grounded in classical study at the gymnasium of Zittau. Even as a boy he displayed that combination of critical acumen and lofty idealistic thought which characterized his riper years, and in a number of poems composed when he was about sixteen, and given to the public among his posthumous papers, we can clearly trace the rudiments of the comprehensive views which he subsequently elaborated; they reveal a maturity which amazes us in one so young. In 1834 he entered upon his academic course at the University of Leipzig, where he devoted himself to the study of medicine, and so came into practical touch with scientific pursuits and with the exact methods of contemporary natural science. Simultaneously, however, he sought to satisfy his philosophical and æsthetic aspirations by the study of German idealism, and to this end attended the lectures of Chr. Weisse. What he won from his University studies was, above all, the conviction that the mechanical mode of interpreting nature must be extended also to the organic, animate sphere, and that the current uncritical doctrine of 'vital force' must be banished from the scientific field (cf. his dissertation, *De futuræ biologiæ principiis philosophicis*, Leipzig, 1838); and this challenge to vitalism continued to be one of the leading features of his critical activity until his view at length won general acceptance.

After practising for a time as a doctor in Zittau, Lotze qualified as a Dozent both in the medical and in the philosophical faculty of the University of Leipzig (1839), and from that time to his call to Göttingen in 1844 he not only laboured successfully as an academic teacher (he had become a Professor Extraordinarius in 1842), but manifested a remarkable fertility as an author. In 1841 he published the first of his greater philosophical works, the *Metaphysik*, in which he stood forth as an independent thinker who had struck out upon fresh paths, though at the same time the powerful impetus which he had received from Hegel and Herbart is clearly traceable in the work. The distinctive feature of the *Metaphysik* is in constant presentation of the idea that that which truly exists—the ultimate root of reality—is to be found only in what by virtue of its unconditional value deserves to exist in this supreme sense. This line of thought, reminding us of Platonism and the Platonic insistence upon the supremacy of the Idea of the Good, finds pointed, if somewhat paradoxical, expression in the concluding statement of the book, viz. that the beginning of metaphysics lies not in itself, but in ethics. In 1842 Lotze issued a second work of importance, his *Allgemeine Pathologie und Therapie als mechanische Naturwissenschaften*. Here he attempts to apply without reservation the mechanical theory of things to the field of organic life, where the scientifically inadequate and, indeed, inadmissible idea of vital force had so long been resorted to; to that idea he likewise devoted a special article entitled 'Leben, Lebenskraft,' in R. Wagner's *Handwörterbuch der Physiologie* (Göttingen, 1843). In 1843 he also completed his *Logic*, in which he works on independent and often fresh lines, and strenuously emphasizes the 'spontaneity' of our thought-processes. His leading psychological views he wrought out at some length in another article in Wagner's *Handwörterbuch*, viz. 'Seele und Seelenleben' (1846), the most notable features of which were its doctrine of the substantial unity of the soul as a real entity and its unequivocal opposition to the materialistic views then forcing their way into psychology. His opinions in the field of æsthetics he set forth in a treatise entitled *Über den Begriff der Schönheit* (1845), which was soon followed by his *Über die Bedingungen der Kunstschönheit* (1847)—both appearing in the *Göttinger Studien*.

His *Allgemeine Physiologie des körperlichen Lebens* (1851) and *Medizinische Psychologie* (1852) develop the fundamental ideas of the *Pathologie*, seeking to examine more closely the validity of the procedure by which the mechanical method is extended to the organic sphere, as also to the psychological, and to define the necessary limits of that application. It is worthy of note that here

Lotze, in opposition to the parallelistic theory, quite definitely champions the hypothesis of a causal connexion between body and soul; and to this he adhered all his life. As regards the relation between the physical organism and the soul, in fact, he holds that the former is simply a system by which external stimuli are enabled to make a due impression upon the latter, and by which, again, the impulses of the soul are brought to bear upon the external world. The life of the soul is thus by no means a mere copy of the bodily life; the truth is rather that the soul governs the body, and makes it subservient to its own higher ends.

From 1856 to 1864 appeared the three volumes of Lotze's great work, *Mikrokosmus* (Eng. tr., 2 vols., Edinburgh, 1885), in which he set forth his philosophical system as a whole. His previous treatises, devoted almost entirely to a consideration of the basis of human life in nature, are here supplemented by a profound treatment of human life as expressed in history and the forms of civilization, and the work culminates in a survey of the universe from the standpoint of the philosophy of religion. The *Mikrokosmus* as a whole is dominated by the purpose in which Lotze's life-work in relation to his age took definite shape—to show how absolutely universal in its application, and at the same time how subordinate in its significance, is the function performed by mechanism in the structure of the world. It is in reality the philosophical problem of the age that Lotze here undertakes to solve; he makes it his task to refute the assumption that the modern mechanical science of nature demands as a necessary consequence a materialistic conception of the world; and his conclusion is that mechanism is simply the aggregate of the means by which the higher ideal element in the world can realize itself, and thus must not be allowed to rank as the ultimate reality. Hence, in particular, such mechanism does not conflict with that freedom of individual volition which we must postulate on moral grounds; the case is rather that it is to be conceived as simply the necessary condition of the efficient action of the autonomous will—as the mode of its self-realization. And just as little does this mechanism imply that the real world is a mere automaton, having its action fixed as by clock-work; on the contrary, the essential ground of the concatenation and process of the world is found by Lotze in the Infinite, which in the last resort can be conceived only as a living and all-embracing deity.

Lotze's next work of importance was his *Geschichte der Aesthetik in Deutschland* (1868). This work comprises (1) a history of the general points of view, dealing in the main with the æsthetics of Kant and of German idealism, but also treating of Herbart's views, and making reference to the fresh perspectives opened by the experimental method of Fechner; (2) a history of the fundamental æsthetic conceptions—'the agreeable in sensation,' 'the pleasing element in intuition,' and 'the beautiful in reflexion'; and, finally, (3) a history of the theories of art as developed in the various provinces of æsthetics.

In 1874 and 1879 respectively he published his larger *Logik* and *Metaphysik* (Eng. tr. of both, ed. B. Bosanquet, 2 vols., Oxford, 1884; *Metaphysics*², 2 vols., do. 1887, *Logic*², 2 vols., do. 1888) as the first two volumes of the *System der Philosophie* with which he hoped to crown his life-work. The third part, which was to have treated of ethics, æsthetics, and the philosophy of religion, was never completed. Lotze died in July 1881, shortly after taking up work in the University of Berlin, to which he had been called in the spring of that year. For the aspects of his final theory of the world, the composition of which in system he could not finish, we are therefore dependent upon his earlier works, especially the *Mikrokosmus*. Much valuable additional material on many points is to be obtained from the dictated portions of his lectures, edited by E. Rehnisch (9 vols., Leipzig, 1881 ff., Eng. tr., ed. G. T. Ladd, *Lotze's Outlines of Philosophy*, 6 parts, Boston, 1884–87).

3. Philosophical teaching.—The scientific foundation of Lotze's philosophy lies in his investigations of metaphysics; his chief interest is the problem of the causal connexion of things, and he arrives at a most characteristic solution of it. As the starting-point of his inquiries he takes the fundamental postulate of all natural science, viz. the assumption of a universal law of causal connexion operative among the elements of reality; or, to speak more precisely, he is concerned with the problem of 'transitive action' (*transeuntes Wirken*), *i.e.* the question how a change that occurs in an object A can be connected by a universal law with a change that takes place in a separately existing object B. In Lotze's view the fact of such connexion leaves us no option but to discard the theory that separate objects have an independent existence, and to regard all elements of reality as comprehended in a universal unity of being, in the Infinite, so that what was at first conceived as a 'transitive action' between separate substances passes into the conception of an immanent operation within a single substantial entity, the 'world-ground.' This Infinite, if it is to supply a real basis for the facts in question, cannot in the last resort be thought of otherwise than as analogous to our own spiritual being, though, of course, as raised to an incomparably higher power and freed from the limitations necessarily inherent in human nature as a finite thing. Ultimately, therefore, the world-ground is defined as an infinite spiritual being, or deity, the entire process of things being conceived as immanent in this deity, and as integrated and sustained by the unity of its being.

Lotze then proceeds to deal in a thorough-going way with the idea that this world-ground or deity forms the one ultimate basis of the existence and interpretation of all things. The elements of the real are all merely dependent parts or modifications of the Infinite; at a later period Lotze preferred to call them its 'actions.' Such actions of the Infinite he divides into two classes: first, the particles of the material world, or the atoms, which he speaks of as the 'elementary actions of the one world-ground,' but as 'actions always maintained in uniformity by it'; and, secondly, souls, the actions not always [so] maintained, but emerging at distinct points of the world-process, and for a section of that process generating a not previously present centre of 'internalization' (*Verinnerlichung*). Outside of and prior to the activity of the Infinite, however, there are no universal laws operative *per se*, nor any so-called eternal truths; there is no independently valid 'law of occurrence' (*Recht des Geschehens*) or of existence; 'law' and 'truth,' indeed, simply express the mode of realization by which the Infinite chooses to effect its will, and their validity depends absolutely upon the will of the Infinite, and lasts only so long as that will remains one with itself—a self-identity which, however, must be regarded not as a metaphysical necessity, but as a consequence of the ethical nature of the world-ground or deity, in the sense of the latter's 'fidelity to itself.'

Further, a vital constituent in Lotze's theory of the universe as originally formulated was the idea of the animate nature of all reality. The ultimate elements of the real he at first regarded as spiritual entities, as of kindred nature with the Leibnizian monads. He was led to take this view mainly by æsthetic motives, as also by the conviction that a purely material reality could have no independent existence. But, as he gradually wrought out his doctrine of the Infinite, the divine world-ground, his hypothesis of the animate nature of reality was more and more dispensed with, becoming ever the less necessary as what it had been designed to supply was equally well and, indeed, even better supplied by the fundamental position to which he latterly attained. He came at length to the above-mentioned conception of the material elements of reality as the mere 'actions of the Infinite,' maintained in a condition of uniformity, and thus differentiated in the clearest possible way from souls. Souls themselves, however, were likewise conceived as 'actions of the world-ground,' but as specially distinguished by their admirable and at bottom inexplicable capacity of feeling and knowing themselves as the active centres of an out-flowing life (*Met.* p. 601 f.). Some writers are of opinion that this view involves a denial of the doctrine of free will—a doctrine which Lotze always distinctly insists upon as an essential element in his theory of the universe, and for the sake of which he rejects, *e.g.*, the pantheism of Spinoza, notwithstanding the profound relationship between that theory and his own. Obviously, therefore, Lotze himself did not believe that his conception of souls as actions of the Infinite in any way implied the surrender of human freedom; but it is nevertheless true that he refers to the subject only in certain religio-philosophical reflexions, and never deals adequately with the crux which undoubtedly shows itself at this point, so that in his metaphysical construction he has left here a problem still unsolved.

Taken all in all, however, since the development of Lotze's thought is never guided by a purely systematic interest, but, on the contrary, takes the fullest possible account of experience, his philosophy presents a conception of the universe which is distinguished by a marvellous unity and completeness.

LITERATURE.—Of the more important works dealing with the life and philosophy of Lotze, the following may be named: E. Pfleiderer, *Lotze's philosophische Weltanschauung nach ihren Grundzügen*^{2}, Berlin, 1884; O. Caspari, *Hermann Lotze in seiner Stellung zu der durch Kant begründeten neuesten Geschichte der Philosophie*^{2}, Breslau, 1894; E. von Hartmann, *Lotze's Philosophie*, Leipzig, 1888; E. Rehnisch, 'Zur Biographie Hermann Lotze's' (see in Lotze's *Grundzüge der Aesthetik*, at the beginning), and 'Hermann Lotze' in *Neues Lausitzisches Magazin*, lxxvii. [1901]; R. Falckenberg, *Hermann Lotze*, Stuttgart, 1901 (*Frommanns Klassiker der Philosophie*, vol. xii.), and art. 'Lotze' in *Allgemeine deutsche Biographie*, suppl. vol. lii. [1907]; M. Wentscher, *Hermann Lotze*, i., Heidelberg, 1913. For further lit. cf. *DPhP* iii. [1905] 347–350.

M. WENTSCHER.

LOURDES.—Lourdes, a small town in the extreme south of France (diocese of Tarbes, department of Hautes Pyrénées), has become known as a place of pilgrimage only since 1858. In view of the insinuation that the development of this shrine represents a conscious design on the part of the Roman Catholic clergy to exploit pious credulity in the interest of the then newly defined dogma of the Immaculate Conception, it is worth while to point out that in 1858 and for some years afterwards Lourdes was one of the least accessible spots in the country. The nearest railway was at Bayonne, 80 miles off, and the road through Lourdes led nowhere except to some little-frequented health-resorts in the Pyrenees. If there were any question of deliberately organizing a fraud to impress the world, the choice of such a site would be inexplicable. Whatever judgment may be formed as to the nature of the phenomena of healing now witnessed at Lourdes, a careful study of the evidence regarding the manifestations which first brought the shrine into notice tends unmistakably to establish the good faith of all the persons primarily concerned. The history of the grotto of Lourdes is briefly this.

About mid-day on Thursday, 11th Feb. 1858, three little girls went to gather wood on the banks of the Gave. One of them, Bernadette Soubirous, a delicate child of 14, who looked much younger and who then could neither read nor write, was left behind by her companions. She was standing on a narrow strip of ground between the river and a low cliff known as the Massabieille, in which was a shallow cave or grotto with a sort of niche in the rock above it. Her attention was roused by such a rustling of the leaves as is caused by a sudden breeze, and, looking in front of her, she saw standing in the niche the figure of a beautiful young lady clothed in white and with a rosary in her hands. The figure made the sign of the cross, and the child, after doing the same, began to say her rosary. When the rosary was finished, the apparition smilingly saluted the child, and disappeared. This was the first of a series of similar apparitions of which a few details are given below. It is to be noted that, contrary to the usual experience of such visionaries, Bernadette had no clear intuition as to the identity of the heavenly visitant. Joan of Arc recognized her 'voices'—St. Michael, St. Catherine, etc.—from the first, but this was not the case here. 'A girl in white no bigger than myself' was her first description of the apparition (Cros, *Notre-Dame de Lourdes*, p. 16). The townsfolk, when they heard the tale, conjectured that she might have seen a soul from purgatory who came to ask for prayers, and, accordingly, when Bernadette went to the grotto a second time three days after, she took holy water with her and threw it at the apparition for fear the figure which she saw might be some delusion of the evil one, but the lady only smiled. Even after the sixth apparition Bernadette described her mysterious visitant in her patois as *aquéro*, *i.e.* 'it' (cf. Spanish *aquello = ecce illud*), and sometimes also as *un petito damizélo* (*une petite demoiselle*; cf. Cros, pp. 42, 302). The vision was at all times restricted to Bernadette alone; no one else saw anything or pretended to see anything—a fact which is in marked contrast to such cases as those of Marie Magontier at Le Pontinet in the Dordogne in 1889 (see L. Marillier, *Proc. Society for Psychical Research*, vii. [1891] 100 ff.) or that of Knock in Ireland in 1879–80 (see M. F. Cusack, *The Apparitions at Knock*, London, 1880). On the other hand, the child herself usually fell into a state of trance in which her features were completely transfigured, and Dr. Dozous, who went at first out of curiosity as a sceptical scientist in search of experience, testifies that the flame of a candle playing upon her hand for many minutes neither roused her from her trance nor left any trace of burning upon the skin. Bernadette, as early as 21st Feb., was subjected to the severest cross-examination by the commissary of police, M. Jacomet, and by the Procureur Impérial, M. Dutour, both of whom threatened her and her parents with punishment if she persisted. Still later, on 28th Feb., she was severely cautioned by M. Rives, the Juge d'Instruction, her proceedings at the grotto were closely watched by gendarmes, and she met with a severe rebuff, more than once repeated, from the curé, Abbé Peyramale, to whom the apparition had directed her to address herself. None the less, though timid by nature, she was never in the least shaken in her account of what she had seen, nor was she cowed by threats of punishment. Not one of the many formidable persons who cross-questioned her detected any signs either of unbecoming boldness or eagerness for notoriety or of a hysterical temperament. There is a large amount of contemporary evidence upon the point in the works of Cros, Estrade, and Dozous. As early as 27th March 1858, three physicians, appointed by the Prefect of the Department, who was anxious to suppress these manifestations, made a medical examination of Bernadette. In their report, dated 31st March (before the apparitions had come to an end), which is still preserved, the whole story of the early apparitions is recapitulated as the doctors heard it from Bernadette's own lips, and it is interesting to note its complete agreement with the account given by her many years later. Of mental disease or of any moral obliquity which would suggest the probability of conscious fraud the doctors found no trace. 'There is nothing,' they say, 'to show that Bernadette wished to impose upon the public.' On the other hand, nothing in the report suggests that the medical examiners themselves placed any faith in the story of the apparitions. They think that Bernadette was the innocent subject of a hallucination, and, while calling attention to her naturally impressionable character, they point out a certain development in the intensity of the trance with which the apparitions were normally accompanied. For the rest, they report that the child was delicate but perfectly sane and healthy-minded, and they offer no kind of suggestion that she should be put under restraint (Cros, p. 143).

It is interesting to contrast this report, which was fully justified by Bernadette's subsequent history, with the very unsatisfactory career of the two children who were witnesses of the alleged apparitions of the Blessed Virgin at La Salette in 1846, or again with Marillier's account of Marie Magontier, the child *voyante* of Le Pontinet, already referred to:

> 'I have no doubt,' says Marillier, 'so far as I am concerned, of the reality of her visions. In my opinion she certainly saw the Virgin in the crack of the wall. . . . She is no doubt subject to hallucinations; but at the same time she is ill-balanced and heavily weighted with the burden of heredity. She is the daughter of a father who was epileptic and of a mother who was doubtless insane, and she has the bearing, the character—in a word all the appearance of one suffering from hereditary degeneration. She is filled too with the morbid self-love and the enormous vanity so common among the degenerated' (*Proc. Soc. Psych. Research*, vii. 107).

According to the testimony of a number of persons who, much to the child's distress, pursued her with questions as to what she had seen, none of these undesirable characteristics was present in Bernadette Soubirous. Traps were laid to induce her to take money for herself or her parents, but her simplicity and good sense defeated them all. Though below the average in intelligence, she learned afterwards to read and write at the convent school, and until 1866 she remained engaged in humble occupations at Lourdes. She never saw the apparition again after 16th July 1858, though she visited the grotto frequently. In 1866 she became a nun at Nevers and remained there discharging the duties of infirmarian and sacristan, as far as her delicate health permitted, until her death in 1879. It is noteworthy that, though her body at the time of death was covered with tumours and sores, it was found, when the remains were officially examined in 1909, thirty years afterwards, entire and free from corruption (see Carrère, *Histoire de Notre-Dame de Lourdes*, p. 243).

With regard to the apparitions of the year 1858, it is to be noted that Bernadette always described the vision as one of ravishing beauty, and as living, moving, and speaking to her. The recorded words —for there seem to have been others which the child felt that she was bidden to keep secret as relating only to herself—are comparatively few. Though Bernadette several times asked the lady, as she had been bidden to do, to disclose her name, the apparition down to the sixteenth vision—that on March 25th—only smiled in reply. The dates and utterances of the series of apparitions are thus commemorated in an inscription upon marble which is erected near the grotto:

> 'Dates of the eighteen apparitions and words of the Blessed Virgin in the year of grace 1858. In the hollow of the rock, where the statue is now seen, the Blessed Virgin appeared to Bernadette Soubirous eighteen times—the 11th and the 14th of February, each day with two exceptions from Feb. 18th until March 4th, and on March 25th, April 7th, and July 16th. The Blessed Virgin said to the child on Feb. 18th: "Will you do me the favour (*me faire la grâce*) of coming here daily for a fortnight?" "I do not promise to make you happy in this world but in the next." "I want many people to come." The Virgin said to her during the fortnight: "You will pray for sinners, you will kiss the earth for sinners. Penitence, Penitence, Penitence." "Go tell the priests to cause a chapel to be built.' "I want people to come here in procession." "Go and drink of the fountain and wash yourself in it." "Go and eat of that grass which is there." On March 25th the Virgin said: "I am the Immaculate Conception."'

One point claims to be especially noted. These visions did not come to Bernadette at command. On two important occasions, as the inscription notices, she failed to see the apparition, viz. on 22nd Feb. and 3rd March, when she herself certainly expected to do so and when a large crowd —in the latter case some 4000 people, many of whom had spent the night upon the spot—had come long distances to assist at the manifestation. But, as sensible critics remarked even then, this arbitrary behaviour of the mysterious lady was a point in favour of the genuineness of the vision. 'If the child had simply invented the apparition,' said one of them, 'what was there to prevent its happening to-day, just as it happened yesterday?' (Cros, p. 121).

But what has given permanent significance to these occurrences was the discovery of the spring the healing virtues of which now bring hundreds of thousands of pilgrims to Lourdes from every part of the world. At the ninth apparition, on 25th Feb., the crowd of four or five hundred people who were watching Bernadette saw her rise and walk towards the grotto and then back again, moving to and fro in apparent perplexity. Finally she stooped down and began to scratch up the ground with her hand. A puddle formed, and the child then drank some of the dirty water and daubed her face with it and also ate a few blades of the grass which was growing in the same spot. Many of the spectators took this for proof that the poor girl had really gone out of her mind. Afterwards Bernadette explained that the Lady had bidden her drink of the spring, but, as she could find no spring, she had followed the apparition's directions in scraping up the ground as described. It seems absolutely certain that at that period the existence of any spring at this place was quite unknown to the inhabitants of Lourdes. By the next morning the trickle had grown to the thickness of a finger, a few days later it was like a child's arm, and since then and down to the present time it yields a quantity of water equal to 122,000 litres, or about 27,000 gallons, a day. This is the miraculous water which is the reputed source of so many miracles. The wonders of healing began almost at once, and several of them were juridically investigated by a commission appointed by the bishop of Tarbes, which occupied itself with the inquiry from Nov. 1858 to the end of 1861. It is to be noted, and the fact is proved by contemporary reports made to Baron Massy, the Prefect of Hautes Pyrénées, and to M. Rouland, the Minister of Worship, that for some months the clergy did all in their power to discourage these manifestations. They fully acquiesced when the Government erected obstructions barring access to the grotto, but the evidence of the cures that had taken place eventually bore down official opposition, and in Jan. 1862 the bishop of Tarbes, acting upon the advice of the Commission which he had appointed, issued a decree declaring that 'the apparitions (of the Blessed Virgin) have all the characteristics of truth and that the faithful are justified in believing them to be true.' Since then further ecclesiastical approbation has been given both to the apparitions and to the miracles of Lourdes in many ways, both direct and indirect, by the authority of the Holy See.

Any adequate discussion of the marvellous cures which take place at Lourdes must raise the whole question of the possibility of miracles. For Roman Catholics both the possibility and the continuance of a dispensation by which the Divine Omnipotence suspends at times the operation of natural causes are fundamental dogmas of the faith. Given the hypothesis that miracles may occur and do occur, it is difficult to imagine any facts more wonderful, either from the inveterate and organic nature of the diseases healed or from the abundance of the evidence with which the cures are attested, than the miracles worked at Lourdes. For those who wish to examine the subject for themselves no better or more convenient examples offer than the cures with which Emile Zola was brought into contact during his visit to Lourdes, and which he has introduced under fictitious names into his novel which bears that title.

Clémentine Trouvé (called in the novel Sophie Couteau) was cured instantaneously of a periostic fistula of the most aggravated kind which, down to the moment of her bathing in the piscina, was suppurating freely. Marie Lemarchand (*alias* Elise Rouquet) was also instantaneously healed. This was a most repulsive case of lupus, in which the face had been so eaten away as almost to lose the semblance of a human countenance. The evidence quoted by Bertrin in his last edition (*Histoire*, p. 363 f.) shows that seventeen years after the cure Marie Lemarchand was a healthy married woman with five children. Mme. Gordet (in the novel Mlle. de Guersaint) had been an invalid suffering from a complexus of most painful disorders, including tumour and phlegmon, for more than twelve years. The doctors declared that the only possible remedy lay in a dangerous operation, but she also was instantaneously cured in the piscina. In the case of Marie Lebranchu (Zola's La Gavotte), who was suffering from a tuberculous affection and had reached the very last stage of consumption, Zola supposes in his novel that the patient, after a temporary rally owing to the excitement of the pilgrimage, relapses soon after and falls a victim to the old disease which had never really relaxed its hold. In point of fact, the real Marie Lebranchu was in the enjoyment of vigorous health in 1908, fourteen years after the date of her cure (see for all these Bertrin, *Histoire*, who in his last edition has followed these cases up to the latest available date).

But examples of such cures are almost innumerable, and they may perhaps be most conveniently studied, especially by medical readers, in F. de Grandmaison's *Vingt Guérisons à Lourdes*, who gives an admirable choice of specially selected examples. It is not, of course, for one moment disputed that modern psychotherapeutics, and especially suggestion, have accomplished many marvels, but the instantaneousness of the cure, as witnessed more particularly in such cases as those of Pierre de Rudder, Mme. Rouchel, Gabriel Gargam, etc., can in no way be paralleled by any of Charcot's experiments at the Saltpêtrière or elsewhere. Again, there are the extraordinary cases of the healing of quite young children, as, *e.g.*, the two-year-old infant of Dr. Aumaître of Nantes, born with a club-foot and instantaneously cured at Lourdes, of which a remarkable account is given in the *Annales des sciences psychiques* (1907, p. 858 f.). It may be confidently affirmed that the more carefully the evidence is studied, the more certain it becomes that the words 'suggestion' and, still less, 'hysteria' are not capable of accounting for the phenomena witnessed at Lourdes. In the preface to a booklet on Lourdes published by R. H. Benson a few months before his death, the writer describes his meeting with 'a famous French scientist—to whom we owe one of the greatest discoveries of modern times—who has made a special study of Lourdes and its phenomena.' The conclusions of this scientist, which, as Benson says, are particularly interesting because 'he is not himself at present a practising Catholic,' were formulated by him as follows:

'(1) That no scientific hypothesis up to the present accounts satisfactorily for the phenomena. Upon his saying this to me,' adds Benson, 'I breathed the word "suggestion," and his answer was to laugh in my face and to tell me, practically, that this is the most ludicrous hypothesis of all.

(2) That, so far as he can see, the one thing necessary for such cures as he himself has witnessed or verified, is the atmosphere of prayer. Where this rises to intensity the number of cures rises with it; where this sinks, the cures sink too.

(3) That he is inclined to think that there is a transference of vitalizing force either from the energetic faith of the sufferer or from that of the bystanders. He instanced an example in which his wife, herself a qualified physician, took part. She held in her arms a child aged two and a half years, blind from birth, during a procession of the Blessed Sacrament. As the monstrance came opposite, tears began to stream from the child's eyes, hitherto closed. When it had passed, the child's eyes were open and seeing. This Madame tested by dangling her bracelet before the child who immediately clutched at it, but from the fact that she had never learned to calculate distance, at first failed to seize it. At the close of the procession, the lady, who herself related to me the story, was conscious of an extraordinary exhaustion, for which there was no ordinary explanation.'

In a lecture given by Benson in June 1914 he stated publicly that the scientist here referred to was no other than Prof. Alexis Carrel, whose marvellous experiments in the transplanting of living tissue have constituted the great sensation of recent biological research. Indeed, signs are multiplying on all hands that in the less conservative circles of the medical profession the brusque dismissal of the phenomena of Lourdes as matters already classified and fully accounted for is going out of favour. This change of attitude was emphasized not long since by the action of the medical faculty of the University of Lyons. A lady doctor, Jeanne Bon, presented a *Thèse sur quelques guérisons de Lourdes* (Paris, 1912). This University thesis was officially approved, and certain of the professors superintended its composition. It was only at the last moment that the jury took fright and found a pretext for conferring the doctorate upon the candidate in virtue of some different title. The author in her thesis maintains that genuine cases of tuberculosis, in which laboratory experiment has established the fact that pseudo-tuberculous hysteria was not in question, have been spontaneously cured at Lourdes, and that these cures are effected under conditions of extreme rapidity which conspicuously mark them off from other spontaneous cures of consumption as generally observed. Finally, it should be noticed that, in contrast to the cures of Christian Science and many other faith-healing organizations, the fullest medical investigation is welcomed at Lourdes. Medical men of all creeds are invited to attend at the Bureau des Constatations, to which a permanent medical staff is attached, and every facility for observation is afforded to all scientific inquirers. Patients who believe themselves to have been miraculously healed or benefited are urged to bring their medical certificates and to attend personally at the Bureau that the case may be properly investigated, and efforts are also made to induce them to return after an interval of a year or more to afford the staff of the Bureau an opportunity of inquiring into the permanence of the cure.

LITERATURE.—Many of the earlier books on Lourdes, notably that of H. Lasserre, *Notre-Dame-de-Lourdes*, Paris, 1868, which has been translated into many languages and of which numerous editions have been published, are lacking in accuracy or in the medical knowledge desirable in the treatment of such a subject. The best general work is undoubtedly that of G. Bertrin, *Histoire critique des événements de Lourdes*, 37th thousand, Paris, 1912 (the Eng. tr., *Lourdes: A History of its Apparitions and Cures*, London, 1908, is unfortunately incomplete, lacking most of the documents printed in the Appendixes). Other valuable works are: F. de Grandmaison, *Vingt Guérisons à Lourdes discutées médicalement*, Paris, 1912; A. Vourch, *Quelques Cas de guérisons de Lourdes et la foi qui guérit; étude médicale*^{2}, do. 1913; A. Gemelli, *La Lotta contro Lourdes*, Florence, 1912, *Ciò che rispondono gli Avversari di*

Lourdes, do. 1912; Dr. Boissarie, *Lourdes: histoire médicale*, Paris, 1891, *L'Œuvre de Lourdes*, do. 1908, *Les grandes Guérisons de Lourdes*, do. 1901–13; J. Jörgensen, *Lourdes*, Eng. tr., London, 1914; R. H. Benson, *Lourdes*, do. 1914; J. P. Baustert, *Lourdes und die Gegner vor dem Forum der Wissenschaft*, Rindschleiden, 1913; A. Castelein, *Le Surnaturel dans les apparitions et dans les guérisons de Lourdes*, Paris, 1911. An interesting early account of Lourdes in English may be found in D. S. Lawlor, *Pilgrimages in the Pyrenees and the Landes*, London, 1870, pp. 296–448.

With regard to Bernadette Soubirous and the early history of the shrine see esp. L. J. M. Cros, *Notre-Dame de Lourdes*, Paris, 1901 (a summary of the historical portion of this work may be found in *The Month*, Sept. 1910); J. B. Estrade, *Les Apparitions de Lourdes*, Tours, 1899; Dr. Dozous, *La Grotte de Lourdes, sa fontaine, ses guérisons*, Paris, 1885; S. Carrère, *Histoire de Notre-Dame de Lourdes*, do. 1912; M. Reynès Monlaur, *La Vision de Bernadette*, do. 1914. Two valuable articles by F. de Grandmaison, defending Bernadette on medical grounds from the charge of hysteria and hallucination, may be found in the *Revue pratique d'apologétique*, xvi. [1913]. There is also a large number of books and articles which discuss the phenomena of Lourdes in a critical or hostile spirit, among others, J. Rouby, *La Vérité sur Lourdes*, Paris, 1911; H. Baraduc, *La Force curatrice à Lourdes et la psychologie du miracle*, do. 1907; J. Bonjour, 'Les Guérisons miraculeuses,' in *Revue de psychothérapie*, June and July 1913; a discussion of the whole question of faith-healing by several English physicians and surgeons in *Brit. Med. Journal*, June 18th, 1910; an art. by F. W. Myers and his brother A. T. Myers in the *Proceedings of the Society for Psychical Research*, ix. [1894]; and a similar discussion by M. Mangin, 'Les Guérisons de Lourdes,' in *Annales des Sciences Psychiques*, xvii. [1902] 315–366. Two periodicals, the *Annales de Lourdes* and the *Journal de la Grotte*, provide information regarding the reputed miracles and other incidents occurring during the pilgrimage to the shrine. A bibliography of earlier books on Lourdes will be found in L. Clugnet, *Bibliographie du culte local de la Vierge Marie* (France, Province d'Auch), pt. iii., Paris, 1903.

LOVE (Psychological and Ethical).—**1. The psychology of love.**—Love, as a complex psychical experience, may be classed as a 'sentiment' or 'passion,' the term 'passion' being here understood not as an explosive emotional outburst, but as a deep and steadfast enthusiasm. Whether we prefer to call love a sentiment or a passion will depend on the point of view from which we regard it. 'Sentiment' and 'passion' stand alike for stable and complex organizations of the emotional life, but, whereas the term 'sentiment' implies a higher intellectual development and greater refinement and subtlety of emotional feeling, the characteristic feature of a passion as distinct from a sentiment is its forcefulness. A passion is an emotional complex of a predominantly forceful kind.

A passion has been defined by A. F. Shand as 'an organized system of emotions and desires.'[1] When, as in the life of the lower animals, emotional impulses are independently active, they may still exercise some mutual restraint: a dog summoned from the pursuit of a cat by his master's whistle no longer feels the pure joy of the chase, for the fear of his master's displeasure tends to neutralize the joy. But such restraint is external and contingent: it does not suggest self-restraint. Where, however, the various emotions of the soul have found an object on which they can concentrate their desire or their aversion, or have become devoted to an idea about which they cluster and develop, a system of self-restraint grows up within the emotions.

> 'In every passion there is a system of self-control regulating more or less efficiently the intensity and behaviour of its emotions.'[2]

A mother loves her child. She may tend to be jealous if an aunt or a nurse wins too much the child's affection. But, if her love for the child is genuine, she is grateful for the kindness shown to the child, and the jealousy is inwardly controlled. Or she may yearn to shield him from every danger, but will surrender him despite her fears to the inevitable perils of hardy growth. Here emotions of solicitude, fear, and selfless surrender, like those of jealousy and gratitude on the former supposition, all feel the dominance of the steady, disinterested love, and, as they feel it, tend to pass into harmony with one another.

A passion is not only organized emotion; it is also organized desire. For our emotions have their instinctive impulses, and these, when checked, tend to rise into conscious desires, into conative tendencies often urging in conflicting directions. Now it is of the very nature of a steadfast passion such as love to allow these desires and emotions place only as forms and expressions of itself; hence we find operative within the system a constant transforming influence. The emotions lose their primitive explosiveness and violence, for these disintegrating tendencies are incompatible with the centralizing, integrating work of the passion itself. As the spirit of this dominant passion circulates through all its members, exclusivenesses fall away, suspicion turns to interest, fear to respect, anger into the championship of just causes. The very form of the passion changes its character as the passion assumes mastery over the life. At first a concentrated persistency, as though set on an *idée fixe*, it relaxes and differentiates itself as the various emotions and desires become adjusted to its needs and demands, and become vehicles for its expression. The power of mere persistency passes into that of organized effectiveness. It is then a stable power, with its roots deep sunk in the vital affections and impulses; it has acquired the genuine stability which comes from organization and self-control.

As an organizing agency a passion will be functional at each point of its system, expressing itself as circumstance requires, now through this emotion or desire, now through that.

> 'In the love of an object, there is pleasure in presence and desire in absence; hope or despondency in anticipation; fear in the expectation of its loss, injury, or destruction; surprise or astonishment in its unexpected changes; anger when the course of our interest is opposed or frustrated; elation when we triumph over obstacles; satisfaction or disappointment in attaining our desire; regret in the loss, injury, or destruction of the object; joy in its restoration or improvement, and admiration for its superior quality or excellence.'[1]

From the foregoing it will be clear that, when we speak of the passion of love, we have in mind something very different from any mere passionate emotion. We have in mind a system of organized emotions and desires which, by very reason of its systematic character and the principle which unifies it, is stable, regulative, inclusive, and instinct with a profound rationality.

[1] Art. 'Character and the Emotions,' in *Mind*, new ser., v [1896] 217 f.

For the normal development of love the fundamental condition is that there shall be joy in the object.[1] If there is this, the rest will follow; if there is not this, love is doomed from the outset.

The emotion of joy is characteristically spontaneous, expansive, vital. Its very expression bears witness to this.

> 'In joy the features dilate, the eye-brows are arched, the countenance opens out, the voice is louder and fuller, the gesture more ample and vivacious. The heart and lungs dilate, and the brain works more easily and more rapidly. There is increase of mental animation and of sympathetic feeling and goodwill in all that is said and done. In a word the expression of joy is the expression of liberty and therefore of liberality.'[2]

It may also become the fundamental expression of love. And the condition for this is that this expansive emotion, whose primitive bias is to go out of itself, shall fasten round some object and give it an intrinsic value, a value for its own sake. To have a joy in anything for its own sake is the primary essential for the development of love. Indeed it is this valuation of the object for its own sake, so essential to joy as to love, that is the mark distinguishing joy from pleasure. I am pleased with an object when it gratifies some interest of mine or some instinctive impulse. It gives me pleasure because it fulfils my need. It is a pleasure in relation to my sensibility or to my activity. And we speak correctly of the pleasures of sense and of movement. But joy is not self-centred like pleasure. No doubt there is pleasure in it, for all our emotions are toned by pleasure or pain, but such pleasure is but the pleasure of the joy. There is also a self-enlargement in joy, but this is not of its essence. The joy itself attaches not to the subject but to the object, and to have joy in an object is to value it for its own sake. Joy is thus an active disinterestedness, and its instinctive impulse is not only to maintain its object, but to surrender itself to it and rest freely in it as in something of intrinsic value and promise.

To have joy in an object is to respect its individuality. This is implied in the very idea of delighting in it for its own sake. To have joy in what is real is to subordinate individual opinion wholeheartedly to the truth of the matter; to have joy in what is beautiful is to trust to the inspiration of beauty and not to the contrivance of artifice. The interests of the object dictate at each step the line of advance.

And yet, essential as joy is to the development of love, it is not the whole of love, for love includes not only joy, but sorrow, and it includes these as co-operative and interpenetrative emotions. The joy of presence is followed by the sorrow of absence, and this sorrow at absence, possessing the imagination, has a selective and idealizing influence. We remember and dwell on those aspects of the object that tend to endear it and make it appear still more worthy of our joy and devotion, so that, when the object is restored, our joy in it is deepened and strengthened by these new insights won through sorrow. Thus sorrow and joy co-operate in the strengthening of the passion of love. But of the two emotions joy is dominant, sorrow 'recessive.' For sorrow is ever a search for a lost joy, whereas joy is not a search for a lost sorrow. Moreover, were it not for the joy in retrospect and prospect which is operative in and through sorrow, sorrow would have a contracting and depressing influence over life.

Love, then, is more than its dominant emotion, joy; more than any mere synthesis of joy and sorrow and their respective impulses. It is the inclusive passion and, in this supreme sense, the master-passion.

Love and belief.—Belief, following W. James's famous definition, is the sense of reality; or, if we wish to distinguish belief from faith, the intellectual from the intuitional aspects of spiritual sensibility, we might say that faith is the sense of reality, belief the sense of truth. Peirce, in his 'Illustrations of the Logic of Science' (*Popular Science Monthly*, xii. [1877], 289 f.), defines belief somewhat differently, but with similar purport, as the goal of thought and the starting-point of action. It is essentially the self-confidence that comes from having reached beyond doubt, and in its place built up settled habits or rules of action, the assurance that one is ready to meet the contingencies of life in any direction. At root this view identifies belief with the sense of power, power being here conceived as the reality with which our life is invested when doubt passes over into belief. To have a sense of power is to believe in one's self, to be ready to set one's own personal mark on whatever one touches; in a word, to hold, in James's phrase, that the *fons et origo* of all reality is ourselves.

Now, if we turn from belief so understood to love, and ask what the passion of love has to tell us about reality, we find that for love the supremely real thing is not itself, but its object. Clearly, if belief and love are to meet harmoniously, the sense of the reality and significance of self so essential to the belief that means power must be identical with that sense of the reality and supreme worth of its object which is so essential to love. Our joy in the object must be one with our belief in ourselves.

This requirement leaves us with the question: What must the nature of that object be which we can intimately identify with our own selves? It must be at least personal, or we could not identify ourselves with it. Moreover, the view that we take of the nature of our own personality must be of such a kind that we can conceive it as identified with this personal object without being lost or absorbed in it. If the self is lost in its object, the sense of power, the belief, will also go, and there will be no reconciliation of belief and love. Thus, if belief is to be love's belief, if faith is to be love's faith, the object of love must be such that communion with it heightens our sense of personality and makes us more truly ourselves than we were before.

But, it may be objected, when I really love anything, is it not one of the most satisfying features of this experience that I get away from myself? How can I surrender myself to the call of the great starry spaces of ether or of spirit and yet continue to be impressed with the importance of my own individuality?

The question goes to the root of all ethical inquiry. It compels us to recognize that there is something which we currently call our individuality, which is yet too weak to subsist in the presence of what is really sublime in the universe and in history. This individuality, which grapples itself to a finite body and shrinks from all the great things, from the infinite, from sacrifice and from death, how is it possible to conceive any organized sentiment or passion fulfilling itself within the limits of such being as this? Sooner or later it must strike its roots home into deeper personal ground. Only a self which has these roots of the infinite about its heart can ever ask the question out of which the true science of self emerges. Only in this infinite self can the will to love and the will to power prove no longer tendencies that are mutually destructive.

2. The ethics of love.—We have spoken of love as a sentiment or passion. We have spoken of it also as a power. We might go one step further back and speak of it as an instinctive power or an instinct, as a deep-rooted conative tendency shaped and determined in connexion with the supreme end of the preservation of life, *i.e.* of natural or spiritual existence whether in the individual or in the race. There is indeed good ground for claiming love as an instinct, provided we do not forget the fundamentally conative character of all instinctive behaviour, or insist that instinct shall from the outset have at its disposal some mechanism through which it operates. There is no such mechanism in the passion for the ideal, and yet this passion has the originality and fundamental force of an instinct. But this is not the place to attempt a systematic vindication of the independence of the spiritual life. It will be enough if we assume as the fundamental postulate of ethical science that the life animated by the ideals of truth, beauty, and right is not a mere derivative from the natural life of the body, but, as a *φυτὸν οὐκ ἔγγειον ἀλλ' οὐράνιον*, in Plato's memorable phrase[1]—a heavenly and not an earthly plant—has independent instincts of its own, instincts of spiritual self-preservation, instinctive passions for the ideal and the heroic, and that the instinctive passion *par excellence* is love.

Virtue is love.—When love is conceived in this ultimate way as the creative power of a new life, it is legitimate to look upon it as the supreme virtue. By virtue we understand the special power (*δύναμις*) and special excellence (*ἀρετή*) which enable us to live the best life. Now the question 'What is virtue?' received in the ancient world a great variety of answers; but of these, three stand out as of conspicuous interest and importance. Taken together they show a progressive deepening of the conception of virtue, so that the last of the three answers, properly interpreted, is not only the maturest, but also the most inclusive answer of the three. Of these three solutions—(1) Virtue is knowledge (Socrates), (2) Virtue is the habit of right willing (Aristotle), (3) Virtue is love (the solution of Christian ethics)—the second supersedes and includes the first, and the third supersedes and includes the second. With Aristotle virtue is primarily a matter of habit and not of mere rational insight; none the less the habit of right choosing, in which virtue essentially consists, is guided by the practical reason; for to choose rightly is in all things to choose the mean, and the practical reason alone can show where the mean lies. Thus with Aristotle we reach a more inclusive conception of virtue than that given by Socrates. The Aristotelian conception is a substitute for the Socratic only in the sense that it is a deepening or transcending of it. The Socratic 'reason' is taken up into the Aristotelian 'will' and made to function in its service. Similarly the definition 'Virtue is love' does not supersede the Aristotelian definition. It simply deepens, and by so doing develops and reorganizes it. To do justice to the value of habit we must look deeper than the habit. Moral habits grow from their instinctive foundations, not automatically, but through the enthusiasm which we put into the task of their formation. Hence, when we say 'Virtue is love,' we are far indeed from denying that it involves habits of right willing. We simply emphasize the motive power which is at the root of the formation of all habits of right willing. If enthusiasm for what is good fails to express itself in decisions and habits, it is no virtue; it is no more than the capacity for virtue.

But it is especially in relation to the varied emotions and impulses, to 'whatever stirs this mortal frame,' that love stands out as the great transforming and inclusive agency, and therefore as the ultimate virtue of the spiritual life, of the life which aims at a universal or common good. Working through the emotion of anger, it is the root of moral indignation and of justice;[1] through that of fear, it makes the object loved the object whose hurt is feared. It regenerates the self-regarding sentiments, transferring their affection from the atomic, private ego to the personal and inclusive self; the competition of others, directed as it is against the merely individual self, is no longer felt as an injustice to one's true personality and therefore excites neither envy nor ill-will.

'There is no remedy but love,' writes Goethe, 'against great superiorities of others.'[2]

Nor can the inclusiveness of true love tolerate the exclusive passion of jealousy. Moreover, with the complete passing of exclusiveness not only jealousy, but pride also, is transfigured, for love is not truly inclusive until it shows itself as ready to be grateful as it is to be generous, as ready to receive as to give. Love again is inseparable from reverence, and as such is the great security of true personal dignity. The negative element is never absent from love's sense of its own freedom. Inclusiveness does not mean loss of distinction between self and not-self. Intimacy with a friend through love means increased respect for his or her personality. There is thus in all love an element of reverence which guarantees that as intimacy grows so also does the value set upon personality. Again, we reverence the object of our love because we have a joy in it for its own sake, as an end in itself, and this joy is rooted in our sense of its reality, and most intimately associated also with the sense of our own reality. Belief or faith, an emotional belief in the intrinsic value of its object, is therefore essential to love, for faith is just this sense of personal reality.[3] Once again—and this is a central point—love is the source and also the very substance of moral volition. For by 'will' we mean the whole personality as active in deliberation, decision, and resolute conduct. And, when the whole personality is volitionally active in this broader sense of the term, and this activity is motived by the idea of a common good, then we seem justified in affirming that the power which vitalizes such activity, and the moral excellence which characterizes it—in a word, its virtue—is love. Finally, love is essential to knowledge, so that, if virtue is knowledge, it is for that very reason, and still more fundamentally, love. Love, at the root of our thinking, inspires the tendency to abandon ourselves to our object and identify ourselves with it. This has the effect of facilitating concentration and whole-hearted interest; the power of cleaving to a problem through thick and thin comes with the devotion of love. The best reason is love's reason, the reason born of sympathetic insight.

'Sympathy is the general principle of moral knowledge,' and the reason is that 'it furnishes the most reliable and efficacious intellectual standpoint.'[4] 'Quickened sympathy means liberality of intelligence and enlightened understanding.'[5] Or, again, 'genuine moral knowledge involves the affection and the resolute will as well as the intelligence. We cannot know the varied elements of value in the lives of others and in the possibilities of our own, save as our affections are strong. Every narrowing of love, every encroachment of egoism, means just so much blindness to the good.'[1]

[3] Cf. W. James, *Principles of Psychology*, London, 1891, ch. xxi.; also J. R. Seeley, *Ecce Homo*, do. 1865, ch. vi.

[4] J. Dewey and J. H. Tufts, *Ethics*, London, 1909, p. 335; cf. also G. Stanley Hall, *Adolescence*, ii. 136: 'Even knowledge at its best is a form of love. Interest is intellectual love, and one of the best tests of education is the number, intensity, and distribution of interests. . . . Even philosophy is not the possession, but the love and wooing of wisdom.'

[5] Dewey-Tufts, p. 389.

So Plato, as we see in the *Republic*, connects the philosophical element in human nature very intimately with that which 'makes him fond of what he understands, and again makes him want to understand what he is attracted to,' for 'the understanding and the attraction go together.'[2] Indeed the very word 'philosophy' implies this.

But there is still one question to be faced if the inclusiveness of love as a virtue is not to be misconceived. There is such a thing as love's hate, for the lover of good is the hater of evil.[3] Hence, so long as evil actually exists, love must exclude it with all the force of its being. Now, in order that evil may actually exist, it must graft itself on to the good. For evil is a source of disintegration, and nothing can be wholly evil without being wholly disintegrated. Plato points out, in the first book of the *Republic*, that it is only in virtue of there being honour among thieves that the gang can subsist at all. Evil, in fact, can subsist in actuality only in virtue of the good which it possesses and enslaves. Hence, if love, through successive redemptions of all the elements of good contained in things evil, becomes inclusive of *all* good, evil as an actuality must cease to be. We cannot, indeed, think of it as annihilated, but we can conceive it as depressed to an infra-actual level of reality. At best it could survive as a real possibility of evil, real, that is, in relation to the will. As an actuality it would have vanished from the world. Then, and not till then, will love be inclusive of evil as of all else. For, though love cannot include actual evil, it must include at all times the possibility of evil, seeing that the possibility of evil is implied in the possibility of good, and all moral choice is ultimately a choice between possible evil and possible good. Hence, when evil shall have been reduced to the status of a real possibility, it will cease to lie outside love. Love will then be all-inclusive.

Stanley Hall, *Adolescence*, and F. W. Förster, *Marriage and the Sex Problem*, tr. Meyrick Booth, London, 1913. On the application of love as an educational principle see F. W. Förster, *Jugendlehre*, Zürich, 1904, and *Schule und Charakter*, do. 1908.

W. R. BOYCE GIBSON.

LOVE (Primitive).—The passion or emotion of love is as difficult to define as life itself, and probably for the same reasons. The following statements are useful:

> 'Simple et primitif comme toutes les forces colossales, l'amour paraît pourtant formé des éléments de toutes les passions humaines.'[4] Again, in its 'fully developed form the passion which unites the sexes is perhaps the most compound of all human feelings. Mr. Spencer thus sums up the masterly analysis he has given of it:—"Round the physical feeling forming the nucleus of the whole, are gathered the feelings produced by personal beauty, that constituting simple attachment, those of reverence, of love, of approbation, of self-esteem, of property, of love of freedom, of sympathy. These, all greatly exalted, and severally tending to reflect their excitements on one another, unite to form the mental state we call love."'[1]

Mantegazza, speaking of it as a colossal force, and Spencer, in his reference to exaltation, rightly emphasize the most remarkable characteristic of sexual love. This is the temporary raising of the individual to a higher power, the intensifying of all his capacities. A woman of the people said: 'When I am not in love, I am nothing.' Nietzsche has eloquently described this result:

> 'One seems to oneself transfigured, stronger, richer, more complete; one *is* more complete. . . . It is not merely that it changes the feeling of values; the lover *is* worth more.'[2]

For Plato love was a 'divine madness'; he was thinking of its automatism, its sweeping away of reason and even consciousness. It was perhaps this aspect that led Schopenhauer and others to condemn it as an illusion. But 'love is only a delusion in so far as the whole of life is a delusion, and if we accept the fact of life, it is unphilosophical to refuse to accept the fact of love.'[3] Ellis defines love 'in the sexual sense' as 'a synthesis of sexual emotion (in the primitive and uncoloured sense) and friendship.'[4] It is a minimum definition.

There is no doubt that the various forms of love—sexual, parental, fraternal, filial, and social—are kindred emotions. Their relative intensity decreases from the sexual to the social, but, as this decreases, extension increases, and more and more persons may be embraced. It is unnecessary to do more than mention the sociological truth that in all its forms love plays a part in society only less important than that of the instinct to live. It brings together the primal elements of the family, it keeps the family together, and it unites in a certain fellow-feeling all members of a race or nation.

I. *SEXUAL LOVE.*—Especially in its sexual grade, love has certainly during the progress of civilization become not only more refined and complex but more intense.[5] This is shown by a comparison with modern savages. Not only is the impulse weak, but the physical development is inferior, and consequently the difficulty of obtaining sexual erethism is great.[6] A social result of this last condition is the orgy, a method of periodic artificial excitement (see below). Jealousy is frequently absent, among the Central Australians to a remarkable degree.

> 'Amongst the Australian natives with whom we have come in contact, the feeling of sexual jealousy is not developed to anything like the extent to which it would appear to be in many other savage tribes.'[7]

Jealousy, however, seems to have little or no connexion with sympathetic love, but to be entirely concerned with animal instinct and the sense of property, and many savages show jealousy to as remarkable a degree as the Central Australians show its absence.

The question remains, and it is important for the study of the origin of the family, whether primitive love was merely organic desire. *A priori* it is conceivable that the family could have been established, monogamy made the type of marriage, and more or less permanent unions fixed in social habit, merely by the operation of animal instincts. Similar results of the same causes are sufficient in the case of the animal world to preserve the race and render it efficient.

The accounts available vary from pessimistic denial of anything but reproductive impulse to fulsome predication of refined and romantic emotion. The contrast illustrates the difficulty of penetrating to the psychical processes or even the social feelings of the lower races.

The Australian bride is generally dragged from home to the man to whom she is allotted. But 'love' may come after marriage from kind treatment.[1] It is pointed out that 'love' must be assumed in Australian marriages by elopement, which was a recognized form of marriage.[2]

The Papuan language possesses no word for 'love.'[3] The Hos have no word for it; but 'they feel it all the same.'[4] The Paharias are said to form 'romantic' attachments.[5]

> An observer remarks even of the Arabs that 'the passion of love is, indeed, much talked of by the inhabitants of towns; but I doubt whether anything is meant by them more than the grossest animal desire.'[6]

This statement is probably too sweeping, as also is the statement that the Bible contains no reference to romantic love.[7] Love-songs are rare among the lower races,[8] probably a mere result of the imperfect development of literature. But Polynesian peoples are adept at love-poetry,[9] which may be regarded as proving some degree of an emotional refinement, or rather irradiation, of the passion of love. At the other extreme, physical contact, it has been remarked that kissing and caressing are rare among savages, except towards young children.[10]

> Yet among the Eskimo 'young couples are frequently seen rubbing noses, their favourite mark of affection, with an air of tenderness.'[11]

Suicide, which is fairly frequent among the lower races, is often prompted by unrequited passion.[12] But there are many trivial reasons for suicide which indicate merely a rudimentary development of character, and special conditions of social structure must also be considered. It may be regarded as a general rule that love, of any degree or character, is not an essential basis of marriage. Among the majority of early tribes marriage is a matter of arrangement; spouses are allotted by the relatives, often in infancy. In many cases such 'betrothed' couples are prohibited from all association until marriage takes place. That love, however, may be a basis of permanent marriage is another matter. It is probably as essential as the needs of the offspring. Marriage by arrangement and 'the marriage of convenience' were often contracted among the Greeks and Romans. They were frequent in mediæval Europe, and occur in modern civilization. But it is certain that social developments during the last century have involved a general adoption of the principle that marriage should be based on previous mutual attachment.

In the majority of early societies the two sexes are strictly separated, at least after puberty. Such a condition precludes much sympathy between youths and maidens when marriage is to be undertaken. This segregation sometimes extends to married life; in other words, there is a development of sex-clannishness, due either to natural inclination or to a certain subjection of women. Hence it is not surprising that among peoples like those of Eastern Africa it is regarded as disgraceful in a wife to show affection for her husband.[1] Among most rude peoples the man treats the woman with more or less roughness. This is to some extent the case in barbarism and among the lower classes of civilized society.[2] The ancient Greeks, Chinese, Hindus, and Muslims represent that stage of culture in which woman is a slave, a prisoner, or both. Notions of female inferiority combine with a sense of property and of proprietary jealousy, and polygamy in some cases is a contributory factor.

The conditions indicated above show that love in 'primitive' society had little chance of development except in and after marriage. 'Love comes after marriage' is a proverb used by Plutarch and by the Eskimo savage; it is common all over the world. What is termed 'romantic' love is rare, even in the highest societies, when the married state has been established for some time. Conjugal love is more affection than passion, and affection depends on intellectual and moral sympathy; community of interests, habitual association, and mutual care of children contribute to the complete character of the emotion. These factors also are sufficient to produce permanence in marriage and to bind the family together. It is therefore unnecessary to call in the aid of teleology in general, or natural selection in particular, to explain the origin of the family. Nor is it possible to argue that 'love has played little or no part in the institution of the family'[3] (see below, § 1). The cannibal Niam-niam are said by a good observer to show an affection for their wives which is 'unparalleled,'[4] and similar statements have been made of many savage peoples.[5]

It is a justifiable conclusion that conjugal love was real, though elementary. Combined with occasional rough treatment, it was still genuine affection, based on sympathy as well as on the sexual impulse.[6] Similarly, of primitive love in general it may be concluded that it possessed the same elements, in a less developed state and capacity, as modern love in its best manifestations. We need not accept either the frequent denials of any form of love or the attribution of 'chivalrous' love to Bushmen and Congo savages.[7] Lastly, in estimating the evidence of observers, it must be remembered that their diagnoses of love are not based on one invariable scientific definition of the emotion.

1. Development of conjugal love.—The extension of the elementary sexual impulse into conjugal affection with its complex associations should be regarded as, sociologically, the most important feature in the natural history of love. This emotion seems to have developed sufficiently in primitive society to assist in breaking down collective methods of mating, which apparently (as in Central Australia) were often liable to be induced by the hard conditions of savage life. The hypothesis is frequently put forward that the family and social organization are essentially antagonistic. But the pacific way in which they work together in existing races, both civilized and barbarous, and also the fact that crude types of social organization have been broken up by the family, strongly oppose this partial view.

It is right to notice that a time came 'when the conditions of life became favourable to an expansion of the early family, when the chief obstacle to a gregarious life—scarcity of food—was overcome.'[1] But before that there was a different type of gregariousness, which, so far as it went, did possess elements antagonistic to conjugal affection, at least. It is probable that increased security of subsistence assisted the growth of this emotion and strengthened thereby the family bonds. Westermarck has argued:

> 'Where the generative power is restricted to a certain season —a peculiarity which primitive man seems to have shared with other mammals—it cannot be the sexual instinct that causes the prolonged union of the sexes, nor can I conceive any other egoistic motive that could account for this habit. Considering that the union lasts till after the birth of the offspring and that it is accompanied with parental care, I conclude that it is for the benefit of the young that male and female continue to live together. The tie which joins them seems, therefore, like parental affection, to be an instinct developed through natural selection. The tendency to feel some attachment to a being which has been the cause of pleasure . . . is undoubtedly at the bottom of this instinct. Such a feeling may originally have induced the sexes to remain united and the male to protect the female even after the sexual desire was gratified; and if procuring great advantage to the species in the struggle for existence, conjugal attachment would naturally have developed into a specific characteristic.'[2]

This is an important statement and calls for consideration. In the first place, the assumption that even the earliest palæolithic men were capable only of periodic impulse is insecurely based. That a more or less regular capacity did ultimately develop from a periodic is a different matter. Secondly, even admitting the above-mentioned view, no account is taken of the phenomena of habit. Habit is the essential factor to-day, and must always have been, in the development of conjugal affection from the primary incidence of the sexual emotion. And here habit is reinforced by many associations, one of which is the care of children. Another, itself a strong emotion, is the proprietary feeling, strengthened by habit. Even the rudest savage woman feels a right of property in 'her man,' however badly he treats her. Again, the invocation of 'natural selection' is, when analyzed, merely rhetorical. Westermarck admits that the sexual impulse is 'at the bottom' of conjugal affection and prolonged union, but he here ignores improved environment. Neither of these factors can, except by a metaphor, be identified with the agents or machinery of 'natural selection.'

The fact is that improvement of conditions and development of nerve and intelligence have been accompanied by an increase both in emotions and in their control; the emotion of love in all its grades has been no exception. To apply the doctrine of the survival of the fittest to such a development within the species is a misapplication of Darwinism, or, rather, an unnecessary extension of the doctrine.

2. Development of sexual love.—In order to estimate aright not only the course of development, but the character, of modern love in its typical form, it is necessary to note some further elements —in particular, complementary elements—in the love of man and woman. Male love is active and dominant; female love is passive and subservient.

> 'In men it is possible to trace a tendency to inflict pain, or the simulacrum of pain, on the women they love; it is still easier to trace in woman a delight in experiencing physical pain when inflicted by a lover, and an eagerness to accept subjection to his will. Such a tendency is certainly normal.'[3]

Hence various aspects of married life and of courtship:

> Among the Slavs of the lower class the wives feel hurt if they are not beaten by their husbands; the peasant women in some parts of Hungary do not think they are loved by their husbands until they have received the first box on the ear; among the Italian Camorrists a wife who is not beaten by her husband regards him as a fool.'[1] 'In courtship, animal and human alike, the male plays the more active, the female the more passive part. During the season of love the males even of the most timid animal species engage in desperate combats with each other for the possession of the females, and there can be no doubt that our primeval human ancestors had, in the same way, to fight for their wives; even now this kind of courtship is far from being unknown among savages. Moreover, the male pursues and tries to capture the female, and she, after some resistance, finally surrenders herself to him. The sexual impulse of the male is thus connected with a desire to win the female, and the sexual impulse of the female with a desire to be pursued and won by the male. In the female sex there is consequently an instinctive appreciation of manly strength and courage.'[2]

A connected result of male superiority in strength, activity, and courage is the element of protection in male love, and of trust on the side of the female. The pugnacity observed in the males, both of animals and of wild men, is one aspect of the general increase of capacity effected by passion. The intimate psychology of love reveals not only an impulse for union, but an association in the male psychosis with an impulse for destruction, and even for devouring. Love often uses the language of eating. The natural modesty and coyness of the female play an important part both in stimulating the love of the male and in refining it. 'La pudeur,' says Guyau, 'a civilisé l'amour.'[3] Connected with these differences is the relative slowness of the growth of love in woman; it proceeds by long circuiting. In men its growth is relatively rapid, and its duration generally less. Love, again, is 'only an episode in a man's life, whereas for a woman it is the whole of her life.'[4]

Biologically, courtship is a stimulus of love, a means of producing tumescence. Owing to the differences of secondary characters noted above, the love of the male is expressed chiefly in acts of courtship, that of the female in receiving them. If the preservation of love in a permanent union is analyzed, it will be found that it depends on a more or less continuous process of courtship.

A remarkable development of sexual love was made by the early Christians. This was the practice of close but chaste unions between the virgins and young men (see art. CHASTITY). The poetic or romantic exploitation of love to which the custom led (as is shown by the literature) was perhaps the only sociological result. It is possible that this became a tradition and thus influenced the mediæval valuation and practice of chivalrous love. 'For a mediæval knight the chief object of life was love.' It became a formal cult, and theoretically was defined as 'the chaste union of two hearts by virtue wrought.'[5] Dante's love for Beatrice is the highest type of the practice. Its essential condition was that the passion should be hopeless and should not be consummated in marriage. But, as with a similar ideal of love in ancient Greece, so in this case, the reality was generally immoral. The lady as a rule was the wife of another, and adultery was frequent.

In European civilization to-day the factor of intellectual and moral sympathy in love has become more pronounced with the greater freedom and higher education of women. Sympathy strengthens affection, and affection strengthens sympathy. The element of equal friendship in love has been greatly increased, and thus, curiously, in spite of the levelling which has taken place to some extent in class-distinctions, has made love between members of different social spheres more rare.

> A 'gentleman' to-day 'seldom falls in love with a peasant

girl, or an artizan with a "lady."'[1] Again, 'to a cultivated mind youth and beauty are by no means the only attractions of a woman; and civilisation has made female beauty more durable.'[2]

Meanwhile, the importance in marriage of compatibility, physical and psychical, is becoming more and more recognized by the law.

3. Social habits.—(*a*) *Restrictions on love.*—The majority of primitive peoples impose restrictions on the physical gratification of love except in the marriage relation. This tendency thus harmonizes with the biological law that mating is the final cause of love. But an errant tendency is inevitable, and many peoples have permitted it, with a proviso. Thus, 'the Jakuts see nothing immoral in free love, provided only that nobody suffers material loss by it.'[3] In many of these cases the temporary possession of a lover is regarded as a test of complete womanhood, and in most of them the practice actually serves as a kind of trial-marriage. The case is very different in civilization.

(*b*) *The law of parity.*—A social and a biological tendency act as complementary factors, the one discouraging and the other encouraging love between biological similars. The one tendency is expressed in the remarkable rules of exogamy;[4] the other, which may or may not be connected, is the tendency for those persons to be mutually attracted who are of the same grade of pigmentation. It has long been a popular belief that fair persons are attracted by dark, and *vice versa*; even that short persons are attracted by tall, and *vice versa*. A. Bain speaks of 'the charm of disparity.'

'But da Vinci affirmed clearly and repeatedly the charm of parity . . . Men fall in love with and marry those who resemble themselves.'[5]

Modern investigations have established this conclusion.[6]

One of these began from 'the popular notion that married people end by resembling each other.' The explanation was that they began by so doing. On the other hand, persons are not attracted to members of the opposite sex 'who are strikingly unlike themselves in pigmentary characters.' 'With this feeling may perhaps be associated the feeling, certainly very widely felt, that one would not like to marry a person of foreign, even though closely allied, race.'[7] But the barriers between widely different races are occasionally broken by love.

(*c*) *Seasonal love.*—Among primitive peoples there is a constant practice of what may be termed the periodic love-feast. Types of these are to be found among the Central Australians and the Dravidians of India. Certain festivals of mediæval Europe have been classed in the same category, with little foundation.[8] A prevalent deduction from these 'periods of licence' was that the morals of savages were degraded and licentious. But a closer study of savages makes it certain that their existence is 'just as little a prolonged debauch as a prolonged idyll' (as was the still earlier view, instituted by Rousseau).[9] A more recent deduction was that among the earliest men and the lowest modern savages pairing took place only in spring and at harvest.[10] The festivals in question would be 'survivals' of a primitive pairing-season. Among mammal and other animals (though not domestic), a periodic rut is general, though not universal. A doubtful statement has been made of so relatively a high type of people as the Cambodians that they exhibit a rut twice a year.[11] It is a fact that spring and harvest are among savages, barbarians, and modern peasants regular seasons both for general festivity and for special development of the sexual feelings. The reason may be partly biological, partly climatic, and partly connected with the food-supply. The probable conclusion is that, the conditions being favourable for any sort of expansion and perhaps specially so for amorous expression—an increase in the sexual impulse during these periods is established for modern peoples—the opportunity is taken by societies, which express themselves only socially, to stimulate their normally feeble sexuality and to obtain organic relief.[1]

The principle of dramatization, which is at the root of magical ceremony, may be noted in love-charms, of which all folk-custom, from the Australian to the European, has a store, and in a large class of primitive marriage ceremonies, which generally typify union. The latter are organized love-charms.[2]

The connexion between love and religion is of the same nature as the connexion between love and art and life generally.

'Very much of what is best in religion, art, and life, owes its charm to the progressively widening irradiation of sexual feeling.'[3]

4. Homosexual love.—Sexual love between individuals of the same sex is a not infrequent abnormality. 'It probably occurs, at least sporadically, among every race of mankind,'[4] and in post-Homeric Greece it became, so far as the male sex was concerned, almost a 'national institution.'[5] Cases of congenital perversion are very rare; habit and environment have been largely overlooked by investigators.[6] The majority of barbarian and civilized peoples have condemned the habit; in mediæval Europe it seems to have been regarded as connected with witchcraft and heresy.[7]

II. *NON-SEXUAL LOVE.*—**1. Parental love.**—As in the case of conjugal love, observation of primitive peoples is contradictory; but it is certain that maternal affection is universal, and paternal affection, though less intense, and often defective, is normal in the human race.[8]

According to Aristotle, parents love their children as being portions of themselves.[9] Espinas regards this love as a modified love of self or property.[10] A. Bain, however, derived parental love from the 'intense pleasure in the embrace of the young.'[11] But, as Westermarck notes, 'if the satisfaction in animal contact were at the bottom of the maternal feeling, conjugal affection ought by far to surpass it in intensity; and yet, among the lower races at least, the case is exactly the reverse, conjugal affection being vastly inferior in degree to a mother's love of her child.' He adds: 'It seems much more likely that parents like to touch their children because they love them, than that they love them because they touch them.'[12] According to Herbert Spencer, parental love is 'essentially love of the weak or helpless.'[13] Westermarck observes that 'when the young are born in a state of utter helplessness somebody must take care of them, or the species cannot survive, or, rather, such a species could never have come into existence. The maternal instinct may thus be assumed to owe its origin to the survival of the fittest, to the natural selection of useful spontaneous variations.'[14] But, as stated above, it is unnecessary to regard these instincts as cases of natural selection.

2. Filial love.—'Children's love of their parents is generally much weaker than the parents' love of their children. . . . No individual is born with filial love.' But 'under normal circumstances the infant from an early age displays some attachment to its parents,' especially to the mother. It is 'not affection pure and simple, it is affection mingled with regard for the physical and mental superiority of the parent.'[15]

Conversely, parental and, still more so, paternal affection includes a regard for weakness and helplessness. Filial love is proved to be normal in primitive races; as with other forms of love, it is both less intense and less complex than in civilization.

3. Fraternal and social love.—All peoples exhibit 'altruism of the fraternal type, binding together children of the same parents, relatives more remotely allied, and, generally, members of the same social unit.'[1] In primitive tribes social organization is the outcome of social needs, and a real social affection and friendly sympathy are proved. As before, Westermarck applies the doctrine of natural selection to this development.[2] With progress in culture social affection becomes a marked feature of religious and ethical practice and theory. Noteworthy examples are the doctrine and duty of charity,[3] in Christianity idealized by the Founder's love for all mankind and by the theory of brotherly love, and the Oriental systems, such as the *ahiṁsā* of Hindu religions.

The philosophical literature which exploits the idea of love is enormous. Plato developed the view that love is the creator of beauty, though beauty must have an objective element. Greek, Christian, and mediæval thinkers developed the connexion between love and faith, love of good and love of God. The *amor intellectualis Dei* of Spinoza is paralleled by many Oriental theories of contemplation. Throughout, love in religion stands midway between the philosophical and the human conceptions.

III. *LOVE-GODS.* — Deities embodying the abstract notion of love are hardly developed until the higher stages of barbarism are reached, but some points may be noted in the previous evolution. Animistic thought may produce, by a process of normal 'hallucination,' the belief that evil spirits, at a later stage various neutral or good spirits, behave as lovers of human beings. The peoples of the Dutch East Indies believe that evil spirits take the shape of handsome men and love their women.[4] Primitive psychology, by analogical reasoning, explains love as made of fire (the Malay notion[5]), or the state of love as one of possession. The latter animistic view is connected with any departure from the normal; the new character of the individual is regarded as due to the entrance of a spirit. The West Africans attribute love to possession by the god Legba, or Elegbra. Dreams of love are explained in the same way as in mediæval Europe with its ideas of the *incubus* and *succuba*.[6] Such a deity might develop, as others to be cited might have or actually have developed, into a deity 'of Love.' But, as usual, a deity has an indirect connexion only with this or that emotion. Many peoples, like the Finns,[7] have regarded love as a form of insanity (a variety of possession). It is doubtful whether the description of this or that deity as 'patron of love' has any more definite meaning than an indirect connexion, such as is usually the case with 'possession.' The Finns regarded the god of evil as the patron of love.[8] The Yoruba 'patroness of love,' Odudua, is 'worshipped' at erotic feasts.[9] Her connexion with love is probably indirect only. Such a connexion is frequent in the case of 'deities of fertility.' The Scandinavian Freyja, goddess of love and fruitfulness, seems to have been synthesized with Frigg, goddess of marriage.[1] Among the early Semites the Baal (like any local fetish of a hunting, pastoral, or agricultural tribe) was a source of fertility and a 'heaven-god,' and his wife, the Baalat, was therefore a goddess of fertility and of heaven. Some process, as yet uncertain, developed from this the figure of Ishtar, Astarte, Ashtoreth, worshipped at Erech as the goddess of love, and identified with Nana, the Sumerian goddess of the planet Venus (see artt. BAAL, ASHTART). The Heavenly Aphrodite of the Greeks is derived from this figure.[2] It is possible that the Hindu god of love and desire, Kāma, was developed in connexion with some such festival as the spring *Vasanta* of 'prosperity and love,' which is primitive in character, though his figure is a direct personification of an emotion.[3] A connexion is often made in early thought between love and the moon—possibly a case of the regular attribution of fertilizing power to the satellite. The serpent is occasionally connected with myths of the origin of love, and demons take the serpent-form in order to prosecute amours, or change from the human to the serpent-form on discovery.[4] The arrows of love, in folklore and poetry, seem to be due to an obvious analogy from the incidence of the emotion. Metaphor, throughout the world, speaks of the effect of love as a wound.

LITERATURE.—The more important authorities are given in the article.

A. E. CRAWLEY.

LOVE (American).—The psychology and social habits of the aboriginal American peoples are, on the whole, in line with those of other races at equivalent stages of development. But they exhibit one or two distinctive features. As an instance of the usual conflicting results of observations, there is Morgan's statement that the 'refined passion of love is unknown to the North American,'[5] and that of Catlin, that the N. Americans are not 'behind us' in conjugal, filial, and paternal affection.[6] An accidental case of difference, not due to observers, is the remarkable fact that the Nahuas possessed no word for love, while Quichua, the ancient language of Peru, had six hundred combinations of the word meaning 'to love.' Observation of this fact has led to an interesting analysis by Brinton of the expression of the idea in N. American dialects. He distinguishes four methods of linguistic reaction to the emotion of love: (1) inarticulate cries, (2) assertions of identity and union, (3) assertions of sympathy and similarity (2 and 3 are clearly not distinct), and (4) assertions of a desire. It is noted that the Mayas possessed a radical word for the joy of love, which was purely psychical in significance.[7] 'Romantic affection' is predicated, as usual, by certain observers.[8] It is clear that the Americans compared favourably with other races in the combination of love with female chastity, and in the filial and social forms of altruism. It is, for instance, stated that the Central Americans at the time of the Spanish invasion were remarkable for their brotherly love and charity to the needy. The Naudowessies

[8] G. Gibbs, in *Contrib. N.A. Ethnol.* i. [1877], quoted by E. Westermarck, *Hum. Marr.*^{3}, London, 1901, p. 508 f.

(Dakota), Californians, and Eskimos, among others, are mentioned as being exemplary in their regard for aged parents;[1] but their care for children, though marked, is not above the standard of contemporary races.[2] In short, they exhibit a slightly more highly developed stage of the social form of affection. It is worth noting that all observers attribute to the Northern Indians a measure of chivalrous feeling.

One abnormality, namely, homosexual love between individuals of the male sex, was curiously prevalent; it is sufficient to refer to the remarkable list of authorities adduced by Westermarck.[3] It is possible that the military tone of N. American life—and the practice was chiefly characteristic of the Northern aborigines—was a predominant factor, as in the cases of the Fijians and ancient Greeks.

The personification of love in the figure of a deity and the worship of erotic forces are perhaps less conspicuous, as might be expected, than in other societies. The Nahua peoples celebrated, it is said, 'a month of love,' during which many young girls were sacrificed in honour of the goddesses Xochiquetzal, Xochitecatl, and Tlazolteotl, who were patronesses of sexual love.[4] But the Central American deities, with the exception of the leading members of the pantheon, were extremely vague personalities; it is generally doubtful whether two names refer to one deity or two, and it is still more problematical what forces or properties the divine names represented. But the name Tlazolteotl seems to have a definite connexion with love, though we cannot, with Camargo, regard her absolutely as 'the Mexican deity of love.'

> 'Her home,' he states, 'was in the ninth heaven, in a pleasant garden, watered by innumerable fountains, where she passed her time spinning and weaving rich stuffs, in the midst of delights, ministered to by the inferior deities. No man was able to approach her, but she had in her service a crowd of dwarfs, buffoons, and hunchbacks, who diverted her with their songs and dances. . . . So beautiful was she painted that no woman in the world could equal her . . . whoever had been touched by one of the flowers that grew in the beautiful garden of Xochiquetzal [*sic*] should love to the end, should love faithfully.'[5] She not only inspired and provoked acts of love, but was able to hear confessions and to give absolution.

The last detail has been emphasized by Spence,[6] in connexion with the meaning of her name, to reduce the goddess to the status of a Mexican Cloacina. But, in spite of the priestly rhetoric of her description, there is enough in its latter portion to establish her as a deity of love, though probably illicit. Brasseur de Bourbourg regarded a volcanic symbol and Boturini Benaduci the high god Tezcatlipoca, as deities of love, without any foundation.[7] Equally unfounded, except in the sense of indirect connexion, are the cases of the moon (especially among the most northerly peoples) and of fire.[8] The N. Americans are slightly behind their contemporaries in the development of deities of love.

LITERATURE.—This is given in the article.

A. E. CRAWLEY.

LOVE (Buddhist).—The way in which early Buddhist literature takes account of the emotion of love is many-sided. It cannot adequately be settled, as some have tried to settle it, by a treatment that is too abstract or, again, too specialized. The hunger for unity or simplification leads some historians to assign to every departure in religious or philosophical thought one fundamental or leading idea—a view that may be attained by closing the vision to all but a few considerations. No great teacher ever discoursed systematically, or even mainly, on one subject. And it is as misleading to say, of early or any Buddhism, that love is its 'ground-thought' as to substitute any other single emotion, idea, or aspiration in place of love. A glance at the scheme drawn up by the present writer of how, and with what frequency, or other emphasis, such things are envisaged in the saints' anthology of early Buddhism[1] should suffice to give pause to such generalizations. There it is shown that the inner, or upper, circle of adherents to what was first known as the Sāsana (rule, order), or Dhamma (norm, doctrine), of the followers of the Sākyas' son found, in the goal that they had reached, not a unison, but a diversity of aspects. And it is hardly wise for interpreters of another age and tradition to contradict them.

Further, Buddhism was a movement set on foot with a view to the needs and ideals not solely, or even mainly, of the academy or the cell, but of 'all sorts and conditions of men,' in so far as these were represented among dwellers between Himālaya and Ganges. Its doctrines were not promulgated only among a chosen few; its teachers went afield without delay, waiting in the groves by village and city to converse with all and any who came to hear. It is true that its ideals, like those of Christianity, stretched far beyond and away from the range of notions and wishes common among average errant mortals. But there was that in the one movement, as in the other, which availed to draw to it the hearts of the many as well as the aspirations of the few. And among the needs and the emotions covered by the word 'love,' the teachers of Buddhism and the compilers of its sacred literature met and dealt with every variety of channel, and every degree of refinement or the reverse. We may, for clearness of reference, set out those channels of normal love as follows: (1) parental, especially mother-love; (2) filial love; (3) fraternal and kin love; (4) friendship; (5) sex love; (6) love of a superior for an inferior; (7) love of an inferior for a superior; and (8) æsthetic and ideal love. It is easy to see that other emotions are blended with these, wherever they are found, but it is no less true that the word 'love' is much used for each one of the eight.

As a doctrine based with great and very frequent emphasis on the generally current fundamental principles of morality, or social conduct (such as the veto on murder, theft, loose sex-morality, harmful speech, and intemperance), Buddhism had homilies and a benediction for all channels of love so practised as to draw men together in mutual goodwill and domestic and social happiness. These are scattered about the *Nikāyas* (collections of *Suttas*, or discourses). But the homily to Siṅgāla[2] is the most comprehensive in its scope. The Buddha is represented as interrupting the open-air morning orisons of a young layman. The latter is rendering homage to the four quarters of the firmament, the nadir, and the zenith, presumably to the several devas—the 'four great rājas' and others—who presided over them, though they are not mentioned. The layman performs these rites out of loyalty to his dead father's wishes. The Buddha substitutes for these objects of worship six objects of devotion and service as more desirable, viz. the devotion of children to parents and of parents to children, that of learners to teachers and conversely, that of husband to wife and conversely, that of friend to friend, that of master to servant and conversely, and that of layman to recluse or Brāhman and conversely. The practical forms which these six several modes of devotion or worship should take are simply and concisely described. For our present purpose it is chiefly interesting to note that they are prescribed not as mere duties or moral acts, but rather as ways of giving expression to a spirit of 'compassion' felt by the agent. Thus not only should parents in five ways take compassion on (*anu-kampanti*, lit. 'vibrate towards or after') their children, and teachers in five other ways take compassion on their pupils, but wives, in yet other five ways, should take compassion on their husbands, friends and colleagues, in yet other five ways, should take compassion on any honourable man (*kulaputta*; this would refer pointedly to Siṅgāla and his companions), in yet other five ways servants should take compassion on their master, and in yet other six ways recluses and Brāhmans should take compassion on the laity. The corresponding term in the other six cases of reciprocated service—*e.g.*, of children to parents, husbands to wives, etc.—is 'ministering to,' or 'waiting upon.' And the choice of these two Pāli words, differing as they do from those that we should find in a similar European catalogue, is interesting. The former word—to show, take, feel 'compassion'—while it is here applied, for instance, to the devotion of the good servant, is very often used in the *Suttas* for the supreme instance of the reciprocal devotion—that of a superior for inferiors—to wit, the compassion moving a Buddha to spend himself 'for the welfare, the happiness of many folk, for the good . . . of gods and men,'[1] and 'to live perpetually moved towards the welfare of all that lives and breathes.'[2] It was this spirit that he prescribed for those whom he sent forth as missionaries.[3] For all these six forms of mutual service or devotion a Christian catalogue would probably use the word 'love,' however much the sources and outlets of the emotion so termed are shown to differ. The fact that the Buddhist catalogue does not bring in its ethics to supplement, or flow from, Siṅgāla's religious beliefs, but supersedes the latter by the former, and, again, the fact that it substitutes the 'divine emotion' of compassion and the practical devotion of ministry for our more familiar and pregnant 'love' show us the need that there is for caution in making affirmations about love in Buddhism. It may help us further towards some, or away from other, conclusions if we examine in brief detail some of these forms as met with in the five *Nikāyas*.

1. Parental love.—The typical form of intense and self-surrendering devotion is that of mother-love, just as the type of overwhelming sorrow is that of the bereaved mother.[4] The wise man should cleave to a genuine friend—a watchful, loyal, sagacious, sympathizing friend—as the mother is devoted to her child.[5] And not only to his friends:

> 'E'en as a mother watcheth o'er her child,
> Her only child, even with life itself,
> So let us for all creatures, great or small,
> Develop such a boundless heart and mind,
> Ay, let us practise love for all the world,
> Upward and downward, yea, before, behind,
> Uncramped, free from ill-will and enmity.'[6]

This simile is quite in keeping with the chosen term 'being moved, *or* vibrating towards,' or 'compassion,' since mother-love contains so large an element of passionate, protecting pity.

2. Sex love.—No case is found of a woman seeking death or religion through the death not of her child, but of her husband. *Satī* does not appear in Buddhist literature. The anthology mentioned above has one case, vouched for by the Commentary only, of a man leaving the world because of his young wife's death from snake-bite.[1] And women are recorded, in text and commentary, as having left the world because their husbands had forsaken it for religion. The power of sex to enthrall is fully acknowledged,[2] as is that of sex-repulsion.[3] But there was no one ancient and moving 'Canticle' of sex-love calling for spiritualized annexation to the Buddhist books, such as we possess in the legacy left by Hebrew Scriptures to the Christian apostles. No allegory of the 'compassion' of a Buddha for his adherents is found in the pretty love-song of the *Sutta* called 'The Questions of Sakka.'[4] Conjugal love—a blend of sex-feeling, parent-feeling, and friendship—finds beautiful expression in old Indian literature, but in poems that are younger than early Buddhist books. This is possibly the outcome of a social evolution—an evolution which a century or two of Buddhist ethics as to the right devotion in husband and wife may have done much to bring about. It may be noted in this connexion that the Aśokan rock and pillar edicts, although they are now and then didactic on family relations, are silent as to conjugal life. Again, it is perhaps a pathetic touch in the Anthologies that shows woman at her best ready for the comradeship, but man blind to it. Mahā-Kassapa, who headed the Order at the Buddha's death, and Bhaddā Kapilānī, famed as a preacher, were, by commentarial tradition, husband and wife, and not in their final birth only. They left the world by mutual agreement, having gone through the form of marriage to please their kin. She, in the poems attributed to her, glories in her ex-husband's gifts and in their 'spiritual friendship' and common vision of the truth. His much longer poem reveals him as both the anchorite and the friend of mankind, even of the outcast, but has no word concerning her.[5] It is conceivable that the larger, more heterogeneous group composing the family in ancient India may have hindered the evolution of the conjugal relation. According to the sidelights thrown by the *Suttas* on domestic life, a girl left her home to enter the house not of her husband, but of her father-in-law.[6] She became more or less the servant of him and his wife as well as of her husband. Reference also is occasionally found to a second wife:

> 'Woeful when sharing home with hostile wife.'[7]

3. Love towards the Buddha.—Filial love alone is the form wherein early Buddhist devotees gave expression to their feeling for the founder of their rule and doctrine. They confessed themselves not seldom as the 'own mouth-born' sons and daughters of the Buddha[8]—a sentiment which, in the later commentarial records, finds an echo in these children being termed severally 'my son,' etc., by the Master.[9] Yet, so far as the present writer knows, none of the usual terms for love or affection is applied to him, and certainly no one is spoken of as loving him by 'taking compassion upon' him. He, as father, teacher, 'recluse,' is ministered to or waited upon; it is he who 'takes compassion' on children, disciples, and laity. Honour, worship, or homage, faith or confidence, and the term *pasanna*, which may be rendered 'resting in,'

'satisfied with'—such are the expressions for the emotion felt, but not 'love.' The Indian words for love were not sufficiently elastic to cover this relation—a relation which was not the less deep and genuine, whether it was expressed in terms of the self-surrendering devotion of a believing and adoring 'heart' or of the intellectual love of the philosophic mind :

'I see him with my mind as 't were mine eyes,
By night, by day, incessant, watching ever.
I reverence him while waiting for the morn.
And thus methinks I'm ever with him dwelling.

. . . .
Truly my mind with him is joined, O brāhman.'[1]

The emancipating force of his teaching drew the imagination :

'So I, leaving the men of vision cramped,
Come as the swan flies to the mighty sea.'[2]

And the charm or majesty of his presence drew by way of sense :

'O wondrous fair the All-enlightened shines

. . . .
Like a great storm-cloud in the summer sky,
Thou on thy followers pourest precious rain,
. . . noble of aspect, whose skin
Resembleth gold, say, what is friar's life
To thee with presence so supremely fair?'[3]

This adoration for his person is usually accepted, but not always :

'Long have I wished, lord,' said the devoted Vakkali on his deathbed, 'to draw near to behold the Exalted One, but now is there no more strength left in me to come!' 'Let be, Vakkali, what hast thou to do with seeing this poor frame of me? He who seeth the Norm, he it is that seeth me; he that seeth me is he who seeth the Norm.'[4]

And indeed it was the conviction that, in this man of the long and tireless ministry, carried out purely from sweet compassion for the sons of men, such wisdom and goodness, charm and power, were combined as to banish, while and where he lived, the need for superhuman objects of worship from his followers, and which, long after he had passed away, aided the theological evolutions of Mahāyānism—the conception, namely, of Mañjuśrī, and Avalokiteśvara, wisdom and compassion personified. And Maitreya or Metteyya, the future Buddha, has been conceived as one who will revive the spirit of lovingkindness among men.[5]

4. **Love towards deities.**—For deity, or the deities of its age, early Buddhism finds no need of adoring devotion. No deities in our sense of the word exist for it. All *devas* are more like our conception of angels, beings differing from mankind only in degree and in quality of physical and mental characteristics. They inhabited other more or less adjacent worlds or spheres. On earth were nature-spirits or fairies, usually termed *devatā* (lit. 'deity'). All were to be treated with goodwill and friendliness, but nothing further. They were believed to have the power of communicating with man, and are found rebuking and admonishing the lax or lazy recluse. But in the case of the chosen few—a Buddha and his Arahants—it is the *devas* who render homage and minister to the man, not the reverse.[6]

5. **Ideal love.**—The emotion of ideal love, though it was not reserved for any personified deity in Buddhism, and though it played largely round the person of the founder, was not otherwise atrophied. It never appears as associated with the whole of that cosmodicy which, for the more intellectual Buddhists, takes the place of a theodicy. Devotion bestowed on a 'cosmic mechanism,'[7] not planned by divine wisdom, and involving for each and all so much unspeakable suffering, was not to be looked for. But the Norm, as doctrine and as a part of that cosmos, in Pāli *dhamma* and *dhammatā*, constituted for the intelligent adherent a source of austere affection (*rati*). Admiration for *dhammatā* is a refrain in the Brethren's anthology,[1] and the expression 'love for the Norm' (*dhammagatā rati*) is met with; *e.g.* (here called 'the Ideal'):

'Is his love set on the Ideal,
. . . .
Other loves that Love surpasseth.'[2]

The same emotion is aroused by the idea of Nirvāṇa (*nibbānābhirati*, a stronger form of *rati*):

'All my heart's love is to Nibbāna given,'[3]

and by that of the Sāsana, or 'religion,' 'rule' (*sāsanarati*).[4]

6. **Friendship.**—'Goodwill and friendliness' (*avyāpāda, adosa, mettā*) express, better perhaps than the overburdened word 'love,' that expanded sentiment of amity to all living things which the average man can cherish only for personal friend or comrade. The cultivation of amity (*caritas*), pity, sympathetic gladness, and equanimity formed a sort of sublimated or higher *sīla*, or code of morals, the first three of them forming a development of that 'vibrating towards,' or compassion, which is so essential an attitude in Buddhist ethics. It is to these that the Elder Revata refers in defending himself against the charge that he lived in the woods to receive stolen goods :

'Since I went forth from home to homeless life,
Ne'er have I harboured conscious wish or plan
Un-Ariyan or linked with enmity.
Ne'er mine the quest, all this long interval:—
"Let's smite our fellow-creatures, let us slay,
Let them be brought to pain and misery!"
Nay, love I do avow, made infinite,
Well trained, by orderly progression grown,
Even as by the Buddha it is taught.
With all am I a friend, comrade to all,
And to all creatures kind and merciful;
A heart of amity I cultivate,
And ever in goodwill is my delight.
A heart that cannot drift or fluctuate
I make my joy; the sentiments sublime
That evil men do shun I cultivate.'[5]

If, as certain writers think, we should refrain from applying so warm-blooded a term as 'love' to *mettā*, 'amity,' this may be justified, perhaps, on etymological grounds, and on the ground that Buddhism sets itself against passionate feeling. But it cannot be justified either by lukewarmness in the exordiums to practise *mettā* and sympathy with pain or joy or by sluggishness in the carrying out of these virtues by leading Buddhists.

It would be hard to find in ancient literature any exordium so aglow with 'goodwill towards men' as that of the so-called Four Brahma-vihāras, *i.e.* Best Dispositions, or Four Infinitudes :

'Suffusing, tender and compassionate, such an one with the rays of our loving (or sympathizing) thought, and from him forthgoing suffusing this and that quarter, the whole world with loving consciousness far-reaching, . . . beyond measure;'[6]

or, again, as that of the emancipation of mind through 'amity':

'All the means that can be used as bases for right doing . . . are outshone in radiance and glory by this, which takes all those up into itself.'[7]

If this be amity only, we can let love stand aside!

There is no specific and positive injunction to 'love your enemies,' but this is only because the true spirit of the Dhamma would label no fellow-creatures as enemies. All were either to be 'ministered unto' with honour or to be taken compassion upon in that spirit of grave tenderness for the burden of ill on earth—and in the heavens too—which is Buddhism at its emotional best. 'Conquer the wrathful by mildness, . . . the stingy by giving, the liar by truth!'[8] is the prescribed line of action.

7. **Altruism.**—Among the channels for catholic altruistic sentiment, however termed, the giving of

worldly, and the giving of spiritual, goods, Buddhist missionary labours from the earliest days are well known, and, from Aśoka's days, are matters of history. The *Sutta* describing a conversation between the Master and Puṇṇa of the Sunāparantas—a *bhikkhu* whose labours were crowned with martyrdom—is typical of the incorrigible unfaltering 'amity' of the missionary spirit.[1] Of the other kind of giving, while *dāna*, 'liberality,' is recommended, especially as a pious and profitable return to the dispensers of spiritual gifts, the absence of any systematic inculcation of 'charity,' or poor relief, is noticeable. There were poor folk and beggars, for the ideal king is described as giving largely to such.[2] But the fact that the religious 'friar' was termed almsman (*bhikkhu*), and took his place as a beggar among beggars (save that he never 'begged,' but only passed by), seems to indicate that the practice of charity at the door and in kind was a matter of course, not calling for special exhortation. Royal donors gave their charity in almshalls at each city gate.

A noteworthy feature in the developments of secedent Buddhism is the expansion, in eschatological hypotheses, of the altruistic spirit so strongly fostered, for life on earth, by the original teaching. In the early Dhamma concentrative self-training receives relatively more emphasis than any exercise in the expansion of emotional imagination. But in the altruistic patience and faith of the Bodhisattva ideal we see the mother-germ reaching a sublimity unattained in the poetic idealism of any other creed.

Pischel, *Leben und Lehre des Buddha*, Leipzig, 1906, p. 78 f., criticized in H. Oldenberg, 'Der Buddhismus und die christliche Liebe,' *Aus dem alten Indien*, Berlin, 1910, p. 1 f.

C. A. F. RHYS DAVIDS.

LOVE (Celtic).—**1. Gauls.**—The Celts do not appear to have had at any time in their history any special god or goddess of love. In later times the numerous goddesses of fertility often possess the attributes of love-patrons; and it is, therefore, probable that this conception was identified with them, if at any time it formed a special subject of worship among the Celts. We have, for example, among the goddesses of ancient Gaul one who is equated with Diana, but who possesses at the same time some of the characteristics of Venus (G. Grupp, *Kultur der alten Kelten und Germanen*, Munich, 1905, p. 160). It is possible, then, that there was a tendency among the primitive Celts to assign love-attributes to some of their deities. Thus, we are not yet certain of the form of cult addressed to the *Matres*, who were the special patrons of women, presiding at child-birth; but it was without doubt a kind of love-worship, especially that of motherhood, since these goddesses are usually represented with a child in their arms. In Christian times these wooden figures, blackened with age, were often mistaken for those of the Virgin, and, under the name of *Vierges noires*, were given a place of honour in the churches (J. A. MacCulloch, *The Rel. of the Anc. Celts*, Edinburgh, 1911, p. 45 f.; cf. also *ERE* iii. 280). Another class of divinities called *Virgines* were also closely associated with the *Matres*—in fact, this title may have been but an appellative of the latter. They were served by priestesses, whose existence has been explained by the hypothesis that many Celtic divinities were at first female, and were, therefore, served by women possessed of the tribal lore (*ib.* 317). Strabo (IV. iv. 6), copying from Pytheas, who visited the western seaboard of France about 322 B.C., gives an account of the mystic rites practised by some Samnite women who inhabited a small island in the ocean near the mouth of the Loire; and, though Strabo calls these rites Bacchic, it is very probable that they were connected with some form of love-worship.

In the betrothal rites of the founders of Marseilles there appear to be indications of the existence of a love-god. We are told that the daughter of the king, after a splendid repast, entered the room with a full cup in her hand, and extended it, by chance or otherwise, to a stranger. The father sanctioned it at once, declaring that it was a god who wished it (Aristotle, quoted by Athenæus, xiii. 36 [p. 576]). According to Plutarch (*Amatorius*, xxii., *de Mulierum virtutibus*, xx.), it was customary among the Asiatic Celts for the betrothal to take place before the altar of the goddess, who, in the case which he cites, happened to be Artemis. It is impossible to say how far those rites were influenced by the customs of the Greeks.

In spite of the miserable condition to which women were reduced among the Gauls, they were renowned for their devotion and fidelity to their husbands (see ETHICS AND MORALITY [Celtic], I. 2). Yet by the 4th cent. A.D., if we may accept the statement of the Emperor Julian (*Orat.* ii., text and tr. W. C. Wright, London, 1913, i. 218 f.; also *Ep.* 19; G. Dottin, *Manuel pour servir à l'étude de l'antiquité celtique*, Paris, 1906, p. 141), a sad change had taken place in the character of the Celtic women, especially among the Eastern Gauls.

Julian relates that the Celts took the Rhine as a judge of the fidelity of their wives. When a child was born, the father placed it on a shield and set it on the river. If the child was legitimate, it floated on the surface of the water; but if, on the contrary, it was illegitimate, it was swallowed up by the waves. We are uncertain, however, whether the tribes referred to were Celtic or German. The love-motive also existed without doubt in the cult of the Earth, the great mother of gods and men, but to what extent it is impossible to say (cf. C. Jullian, *Histoire de la Gaule*, Paris, 1908, ii. 123).

2. Irish.—In his well-known hymn St. Patrick prayed against the 'spells of women, smiths, and druids' (W. O. E. Windisch, *Irische Texte*, Leipzig, 1880 ff., i. 56). The women to whom the saint refers were probably those of the *síde*, who rejoiced in eternal youth and beauty, and whose capacity for love was so great that they would go forth themselves to woo and win mortals. Once the spell was cast, not even the greatest hero could resist. The important rôle played by these divine women in Irish mythology is revealed in the account of the adventures of Connla, where even the powerful magic of druidism fails to remove the spell.

Connla, walking on the hills of Usnech in company with his father Cond, who was supreme king of Ireland from A.D. *c.* 122 to *c.* 157, saw a beautiful damsel approaching. She was attired in a strange garb; and, when Connla asked her whence she came, she replied: 'We are the great *síd*, hence we are called the people of the *síde*,' *i.e.* of the mound or hillock. The father wished to know with whom his son was speaking, so the damsel informed him that she had come to invite Connla, whom she loved, to the Mag Mell, 'Plain of Delight,' where dwelt King Boadag. 'Come with me,' she cried, 'Connla the Red, of the spreckled neck, flame-red, a yellow crown awaits thee; thy figure shall not wither, nor its youth nor its beauty till the dreadful judgment.' Cond then bade Corán the druid, who, like the others, heard but did not see the damsel, chant a magic song against her. She departed, but not before throwing Connla an apple, which was his sole sustenance for a month, and yet nothing diminished from it. After a while longing seized Connla for the damsel, and at the end of a month he beheld her again, when she addressed him thus: 'It is no lofty seat on which Connla sits among the short-lived mortals awaiting fearful death. The ever-living beings (*bíi bithbi*) invite thee. Thou art a favourite of the men of Tethra, for they see thee every day in the assemblies of thy father's house among thy dear friends' Again the king urged the druid to chant against her, but she made answer: 'O Cond of the Hundred Battles, druidism is not loved, little has it progressed to honour on the Great Strand. A just man [probably an allusion to St. Patrick inserted in the saga] will come with a great following; and his law will destroy the incantations of druids from passing the lips of black, lying demons.' She then told Connla of another land, in which was no race save only women and maidens. When she had ended, Connla gave a bound into her ship of glass, and they sailed away. From that day to this they have never been seen, and no one knows whither they went (for the text of this saga see Windisch, *Irish Grammar*, tr. N Moore, Cambridge, 1882, pa

---

[1] *Majjhima*, iii. 267 f.

[2] Rhys Davids, *Dialogues*, i. 177.

134–136; Fr. tr. in d'Arbois de Jubainville, *L'Épopée celtique en Irlande*, Paris, 1892, pp. 384–390; and a summary in K. Meyer and A. Nutt, *Voyage of Bran*, London, 1895–97, i. 145 f.).

Oengus, the beautiful, sometimes called Mac Ind Óc, 'Son of the Young Ones' (*i.e.* of Dagda and Boand), is also a god of growth and fertility who possesses in a marked degree the attributes of a god of love. He has been called the Eros of the Gaels, because he was patron of Diarmaid, beloved of women, and because his kisses became birds which whispered thoughts of love to youths and maidens.

The love-motive occurs very frequently in the stories of the Tuatha Dé Danann, the youth and beauty of whose women were supposed to be unfading (S. H. O'Grady, *Silva Gadelica*, London, 1892, ii. 203). One of the earliest concerns Eri, sister of Bres, who was son of the Fomorian Elatha.

The love-motive is equally prominent in the Voyages of Bran and Maelduin, which are close parallels to the adventures of Connla. In both of these stories the happy mortal is allowed to visit Elysium, which he finds to consist of an island inhabited by an amorous queen, who gladly welcomes the mortal visitor and is equally reluctant to let him depart.

A most interesting example of the development of the primitive love-theme is found in 'Cúchulainn's Sick Bed.'

This saga relates that one day Cúchulainn was struck with a horse switch by two strange women, one of whom was attired in green and the other in red, and in consequence of this blow he lay till the end of the year without speaking to any one. Then came a stranger who sang verses promising health and strength to the hero, if he would accept the invitation of the daughters of Aed Abrat, to one of whom, Fann, it would give heartfelt joy to be espoused to Cúchulainn. Fann, daughter of Manannán mac Lir, who had been abandoned by her husband, had conceived a great affection for Cúchulainn, and the stranger, whose name was Líban, had been sent by her own husband, Labraid of the Quick Hand on the Sword, to tell Cúchulainn that, if he would come and fight against Labraid's enemies, he should have Fann as his wife. After sending his charioteer Lóeg to visit the Plain of Delight, the great hero accepted the invitation and went to overthrow the opponents of Labraid. After remaining a month with Fann, he returned to Ireland, promising to meet her again at a trysting place. Emer, his wife, having heard of this, went with fifty maidens, all armed with knives, to attack the lovers, and, when Fann saw them, she appealed to Cúchulainn for protection, which he promised. He was then bitterly upbraided by Emer for having disgraced her before all the women of Erin. Once they were together in dignity, and they might be so again if he desired. Cúchulainn took pity on her; and a contest then arose between the two women for the possession of the hero. The fairy queen finally yielded to the mortal, saying:

> 'Woe! to give love to a person,
> If he does not take notice of it;
> It is better to be turned away
> Unless one is loved as one loves.'

When Manannán became aware of this, he came east to seek Fann, and no one could see him but Fann alone. He gave her choice to remain with Cúchulainn or go with him. She answered: 'There is, by our word, one of you whom I would rather follow than the other, but it is with you I shall go, for Cúchulainn has abandoned me—thou too hast no worthy queen, but Cúchulainn has' (d'Arbois de Jubainville, *Épopée celtique*, pp. 170–216; Nutt and Meyer, i. 153–157; ed. Windisch, i. 205–227).

Without multiplying examples, it is obvious that the woman is usually the aggressive figure in Irish mythology. In Christian times where beliefs revealing the pagan love-theme have survived, the method of procedure is different, the man pursuing the woman, often against her wishes. Thus, when King Fiachna was fighting against the Scots and in great danger of his life, a stranger appeared to his wife, announcing that he would save her husband's life if she would consent to yield herself to him. She agreed with reluctance; and the child born of this union was the 7th cent. King Mongán, of whom the annalist says: 'Every one knows that his real father was Manannán' (*Leabhar na hUidhre*, facsimile reprint, Dublin, 1870, p. 133ª, 19).

In the Cúchulainn cycle the love-motive is usually one of wild lust; and, as these stories doubtless reflect, to a great extent, the condition of society at the beginning of the Christian era, we can form from them an idea of the status of woman at that period. In his analysis of the *Táin*, the great epic of Ireland—which depicts to a great extent the morals of Connaught—H. Zimmer has pointed out that Medb, the heroine of the expedition, had been the wife of Conchobar, but, having abandoned him, married in succession two chiefs of the same name, Ailill, the second of whom is her husband at the beginning of the account ('Der kulturgeschichtliche Hintergrund in den Erzählungen der alten irischen Heldensage,' *SBAW*, 1911, pp. 174–227).

An idea of the unusual prominence of the love-motive in the early Irish saga can be formed from the list of titles given in d'Arbois de Jubainville's *Essai d'un catalogue de la littérature épique de l'Irlande* (Paris, 1883).

Thus on pp. 34–37 there are twelve stories bearing the title *aithed*, or 'elopement,' among the more important of which are *Aithed Blatnaite, ingine Puill, maic Fhidaig, re Coinchulainn*, or 'Elopement of Blatnat, daughter of Pall, son of Fidach, to Cúchulainn' (cf. G. Keating, *Hist. of Ireland*, tr. J. O'Mahony, New York, 1866, pp. 282–284); *Aithed Derdrenn re maccaib Usnig*, or 'Elopement of Derdriu to the sons of Usnech,' identical with *Longes mac n-Usnig*, or 'Exile of the Sons of Usnech (ed. Windisch, i. 67–82); and *Aithed Grainne re Diarmait*, or 'Elopement of Grainne to Diarmait' (*Book of Lecan*, fol. 181; Brit. Mus., Harley MSS, 5280, fol. 25). In addition to *Cath na Suirghe* and *Cath Tochmarca*, 'Battle of the Demand in Marriage' (d'Arbois de Jubainville, p. 82 f.), there are six sagas bearing the title *compert*, or 'conception' (92–94), of which the most famous are *Compert Conchobair*, or 'Conception of Conchobar' (*LL* 106), and *Compert Conculainn*, or 'Conception of Cúchulainn' (Windisch, pp. 134–145, 324 f.). *Eachtra an Phalais Dhroidhachtamhuil*, or 'Adventures of the Enchanted Palace' (d'Arbois de Jubainville, p. 124), is concerned entirely with love, as is also *Óen-ét a-mnas Ailella*, or 'Single Jealousy of Ailill' (178). There are five stories with the title of *serc*, or 'love' (205 f.), of which *Serc Fhinn go criocaib Lochand*, or 'Love of Finn in Norway,' deserves to be mentioned (Roy. Ir. Acad., Ossianic MS, 1789–1818). As for those with the title of *tochmarc*, or 'demand in marriage,' there are at least twenty (224–231). Of these, mention may be made of *Tochmarc Becfola* (ed. and tr. B. O'Looney, *Proceedings of the Royal Irish Academy*, i. [1870] 174–183), *Tochmarc Emere la Coinculainn*, or 'Demand in Marriage of Emer by Cúchulainn' (Windisch, p. 324 f.), *Tochmarc Etáine* (*ib.* 117–133), etc.

3. Welsh.—In Brythonic mythology the naturalism common to the Irish sagas has been greatly refined, and magic, especially in the form of the love-potion, assumes greater prominence. The nearest approach to a goddess of love is found in Branwen, 'White Bosom,' daughter of a sea-god, who has been called the 'Venus of the northern sea' (C. I. Elton, *Origins of English History*,² London, 1890, p. 291). She was in all probability a goddess of fertility, but reappears as Brangwaine in romance, giving a love-potion to Tristram, which in itself is perhaps a reminiscence of her former attributes as a goddess of love. Dôn, the Welsh equivalent of Danu, was also perhaps a goddess of fertility, and had for her children Gwydion, Gilvæthwy, Amæthon, Govannon, and Arianrhod (MacCulloch, p. 103). All these divinities play a more or less important part in the story of Gilvæthwy's illicit love for Goewin, the 'foot-holder' of Math in the *Mabinogion*.

Resorting to magic, Gwydion succeeded in obtaining for Math from the court of Pryderi certain swine sent him by Arawn, king of Annwfn, for the purpose of aiding him in his love affair. The trick was discovered, and a battle ensued, in which Gwydion slew Pryderi by enchantment. Having discovered that Gilvæthwy had seduced Goewin, Math transformed him and Gwydion successively into deer, swine, and wolves. It is also implied that Gwydion was the lover of his own sister Arianrhod, by whom he had two children. MacCulloch suggests (p. 106) that these are mythic reflexions of a time when such unions, perhaps only in royal houses, were permissible. Arianrhod, on her part, while being the mistress of her brother, pretends to be a virgin and refuses to acknowledge her children.

The more or less universal type of the treacherous wife is found in the story of the unfaithful dawn-goddess, Blodenwedd, who discovers the secret of her husband's life and then places him at the mercy of her lover (T. W. Rolleston, *Myths and Legends of the Celtic Race*, London, 1911, p. 383).

In the Welsh romances the element of love, due principally to foreign influences, assumes the aspect of woman-worship. This new attitude towards love is already apparent in Kulhwch and Olwen, which is comparatively an ancient tale, and is further developed in later stories like Peredur and The Lady of the Fountain (see A. Nutt, *Celtic and Mediæval Romance*, London, 1899). It is the main symptom of the extent to which, in comparison with the Irish, Welsh literature had lost its pure Celtic strain (Rolleston, p. 345 f.). The relations between the sexes in Wales have already been discussed in ETHICS AND MORALITY (Celtic), III. 1–7.

LITERATURE.—This has been sufficiently indicated in the article.

JOHN LAWRENCE GERIG.

LOVE (Chinese).—The importance of love as an ethical principle is recognized by Chinese moralists. This can be made sufficiently evident from the classical books.

When asked about benevolence (*jên*), Confucius replied: 'It is to love all men' (*Anal.* xii. 22). 'Jên is the characteristic element of humanity, and the great exercise of it is in loving relatives' (*Doct. of Mean*, xx. 5). 'The benevolent embrace all in their love; but what they consider of the greatest importance is to cultivate an earnest affection for the virtuous' (Mencius, VII. i. 45).

From these passages it appears that the general affection of love is modified in accordance with the claims of kinship and virtue. The ethical nature of true love is further brought out in such sayings as these:

'The Master said, "It is only the truly virtuous man who can love or who can hate others"' (*Anal.* iv. 3). 'The Master said, "Can there be love which does not lead to strictness with its object?"' (*ib.* xiv. 8).

The importance of love as an ethical principle may also be seen in what is said of 'reciprocity' (*shu*). This is '*jên* in action, to put oneself in another's place.' Primacy is given to it as the rule of life (*Anal.* xv. 23). It is not merely 'Not to do to another what I would not have done to myself,' but, more positively, 'To serve my father as I would require my son to serve me . . . to set the example in behaving to a friend as I would require him to behave to me' (*Doct. of Mean*, xiii. 3). In the Confucian ethic, however, the exercise of love is limited by retributive justice.

'Some one said, "What do you say concerning the principle that injury should be recompensed with kindness?" The Master said, "With what then will you recompense kindness? Recompense injury with justice, and recompense kindness with kindness"' (*Anal.* xiv. 36).

Specially interesting in connexion with the place of love in Chinese ethics is the philosopher Micius and his doctrine of universal love, as the bond of a perfect social state. The Confucian ethic has its religious counterpart in the classical representation of Shang-ti as benevolent and righteous (cf. art. GOD [Chinese]).

Of love in the narrower sense as between the sexes, neither its more romantic aspects nor its depravations are unreflected in Chinese literature from the *Shi King* and *Shu King* down to present-day novels. In view of too evident grossness of thought and life, one is surprised to find the religious sphere so clean. There is, *e.g.*, polytheistic superstition, but no grossness in the religious worship reflected in the classics, though it is true that regrettable features appear in popular superstition —spiritual beings may be attracted by the fair looks of maidens and call them to the other world to be their wives; prostitutes may worship a goddess of their own.

According to E. H. Parker (*Studies in Chinese Religion*, London, 1910, p. 7), 'there is a considerable amount of disguised linga worship, especially in the south of China.' He adds, 'In any case, prayers for children, offered up by women, are common enough in every province.'

Such prayers are in themselves innocent, but in some cases the accompanying ritual worship of the idol invoked is somewhat suspect, and is shy of publicity. Still it is substantially true that there is in China no deification of vice or any public practice of immoral rites.

LITERATURE.—In the classical religion and ethics, see the relevant vols. of *SBE*; and E. Faber, *Mencius*, Shanghai, 1897. For examples of popular superstition cf. H. C. Du Bose, *The Dragon, Image, and Demon*, London, 1886, chs. 19, 21.

P. J. MACLAGAN.

LOVE (Christian and New Testament).—I. **Divine love.**—The highest and most satisfying faith which the human mind has attained, or can attain, is formulated in the sublimely simple confession, 'God is love' (1 Jn $4^{8.16}$). This is interpreted as meaning not only that God, self-conscious and moral, creates, sustains, and orders all things in love, but that love is His very essence; and the spiritual conflict of the ages has been, and is, waged against the forces opposing this first principle of religion and ethics, the acceptance or rejection of which leads logically to optimism or pessimism. A few expressions of the belief that eternal love subsists at the heart of all things, and manifests itself through them, may be chosen as typical.

'Let me tell you why the Creator made the universe. He was good . . . and desired that all things should be as like Himself as possible' (Plato, *Tim.* 29 E). 'The Lord is good to all; and his tender mercies are over all his works' (Ps 145^9). 'For thou lovest all things that are, and abhorrest none of the things which thou didst make; for never wouldst thou have formed anything if thou didst hate it' (Wis 11^{24}). 'And we know that to them that love God all things work together for good' (Ro 8^{28}). 'O tender God, if Thou art so loving in Thy creatures, how fair and lovely must Thou be in Thyself' (Suso, quoted by W. R. Inge, *Christian Mysticism*^{3}, London, 1913, p. 302). For lovers of Nature Wordsworth expresses the conviction that nothing

'Shall e'er prevail against us, or disturb
Our cheerful faith, that all which we behold
Is full of blessings' (*Tintern Abbey*, 132 ff.).

There is no dubiety in R. C. Trench's large utterance:

. . . 'We and all men move
Under a canopy of love,
As broad as the blue sky above'
(*The Kingdom of God*, 4–6);

or in Browning's *cri du cœur*:

'God! Thou art love! I build my faith on that'
(*Paracelsus*, v. 51).

And in Carlyle's words there is at least a wistful longing to believe:

'O Nature! . . . Art not thou the "Living Garment of God"? . . . Is it, in very deed, He, then, that ever speaks through thee; that lives and loves in thee, that lives and loves in me?' (*Sartor Resartus*, 'The Everlasting Yea').

It is common knowledge, however, that this splendid creed of three syllables is not only severely tested but strenuously contested. The notion that love is the ultimate reality of things—that transcendent love is Creator and Lord of the world, and immanent love the life which pulsates through it, the Spirit ceaselessly operant in Nature and humanity—is pronounced by many to be a delusion and a snare. One of the champions of popular free-thought thus emphatically expresses himself:

'That God is love is a very lofty, poetical and gratifying conception, but it is open to one fatal objection—it is not true' (R. Blatchford, *God and My Neighbour*, London, 1907, p. 23).

One of the leaders of philosophic thought confesses that in the loss of this faith 'we are confronted by one of the great tragedies of life' (J. M. E. MacTaggart, *Some Dogmas of Religion*, London, 1906, p. 297). So manifest and repellent is the blending of good and evil in human lives that Swinburne makes the chorus of one of his dramas sing:

'The high gods . . .
. . wrought with weeping and laughter,
And fashioned with loathing and love . .
The holy spirit of man'
(*Atalanta in Calydon* [*Poems*, London, 1904, iv. 259]).

The bitter pagan belief, that the gods take the same pleasure in the sufferings of mankind as cruel children in the torture of flies, still has its adherents, finding expression, for example, in Thomas Hardy's pessimistic dictum, 'The President of the Immortals (in Æschylean phrase) had ended his sport with Tess.' Some critics of the world-order do not hesitate to declare that 'for all the Sin wherewith the Face of Man is blacken'd' God needs to take as well as give man's forgiveness (Omar Khayyām, quatrain lviii.). Worst of all, science hesitates to say that God is love. The belief so dear to the heart of Linnæus, that the phenomena of Nature bear witness to the benevolence of the Creator, is supposed to have received a staggering, if not a fatal, blow from the principle of evolution, so that no comforting rod or staff, but only a broken reed, appears to be left in the hand of the man

> 'Who trusted God was love indeed
> And love Creation's final law—
> Tho' Nature, red in tooth and claw
> With ravine, shriek'd against his creed'
> (Tennyson, *In Memoriam*, lvi.).

Confident assertions on the one side and the other help at least to make the issue clear, while they may also suggest that strong feeling is apt to be generated in the attempt to solve the problem of problems. Every man admits 'the one absolute certainty that he is ever in the presence of one Infinite and Eternal Energy, from which all things proceed' (H. Spencer, *Ecclesiastical Institutions*, London, 1885, p. 843). The question is whether that Energy is controlled by love, or, rather, is identical with love—whether the All-Great is the All-Loving.

(*a*) What answer comes from the heart of Nature? That a struggle for existence, with a resultant survival of the fittest and extinction of the unfit, has gone on through geological ages and is still going on is one of the demonstrated truths which modern science has added to the sum of knowledge. And many evolutionists find it difficult, if not impossible, to imagine a God of love ordaining and witnessing that secular conflict. But do they fairly interpret the struggle? The indictment against Nature which was frequently heard in the early and somewhat hysterical days of the evolution doctrine is now generally admitted to have been based upon half truths. Unqualified assertions that 'nature is one with rapine,' that any little wood is 'a world of plunder and prey' (Tennyson, *Maud*, IV. iv.), that 'the cosmic process has no sort of relation to moral ends' (T. H. Huxley, *Collected Essays*, London, 1898, p. 83; cf. 197), that all progress is attained by the methods of the gladiatorial show or the battle-field, are seen to be almost a libel. For the whole range of life upon the earth—vegetal, animal, social—bears witness to something quite different from hatred and strife. The two main activities of all living things are nutrition and reproduction, and, while the object of nutrition is to secure the life of the individual, the object of reproduction is to secure the life of the species. If one great factor of evolution is concerned with self-assertion, another is concerned with self-sacrifice, and it is not too much to assert that the world is not only an abode of the strong, but a home of the loving.

'Nature has more to say than "Every one for himself." There has been a selection of the other-regarding, of the self-sacrificing, of the gentle, of the loving' (J. A. Thomson, *The Bible of Nature*, Edinburgh, 1908, p. 179).

If Rousseau erred in closing his mind to everything but the love, peace, and harmony of Nature, we are equally at fault if we find in her nothing but discord and cruelty.

'Love is not a late arrival, an after-thought, with Creation. It is not a novelty of a romantic civilization. It is not a pious word of religion. Its roots began to grow with the first cell of life that budded on this earth.' It is 'the supreme factor in the Evolution of the world. . . . The Struggle for the Life of Others is the physiological name for the greatest word of ethics—Other-ism, Altruism, Love' (H. Drummond, *The Ascent of Man*, London, 1894, pp. 276–281). 'The principles of morality have their roots in the deepest foundations of the universe,' and 'the cosmic process is ethical in the profoundest sense' (John Fiske, *Through Nature to God*, London, 1899, p. 79).

If, then, creative evolution is God's theophany—His method of unfolding His purpose and revealing Himself—the facts of the case, on a wide and impartial survey, go far to prove that His central energy, or ruling motive, and therefore His true Name, is Love. And to Divine overtures of love the human heart cannot fail to respond. Viewing the world as mysteriously 'full of God's reflex,' Charles Kingsley exclaims, 'I feel a gush of enthusiasm towards God' (*Charles Kingsley: His Letters and Memories of his Life*, London, 1877, i. 56).

It must be admitted, however, that there is another side. Nature's physical and vital forces do not all inspire confidence, making us 'very sure of God' and ready to acclaim the sentiment, 'All's right with the world.' There are times when it is not easy to 'rise from Nature up to Nature's God,' or to maintain that He has done all things well. The facts that disturb one's faith in the benevolence of the Creator are too many and too conspicuous to be ignored. The life of the forest and the jungle is not all idyllic. The wolf does not lie down with the lamb, nor the lion eat straw like the ox. The tiger and the tarantula are no less real than the fawn and the dove. It is impossible to forget Nature's ruthlessness to the unfit or her savage outbreaks of fire and flood and tempest. Over against Natura Benigna we have always to set Natura Maligna, as T. Watts-Dunton does in a group of sonnets (*The Coming of Love*). And the existence of positive evil in the world has driven not a few observers, especially those who have been victims, to the conclusion that God, whether personal or impersonal, is no more than an irresistible and inexorable Force, indifferent to pain, regardless of life, and therefore to be dreaded, hated, or scorned, rather than trusted and loved. This is the view which lends a tragic pathos to the *Prometheus Vinctus*, the book of Job, and other literature of religious doubt.

With the best 'will to believe,' many a man cannot wholeheartedly affirm that 'the Variety of Creatures . . . is so many Sounds and Voices, Preachers and Trumpets, giving Glory and Praise and Thanksgiving to that Deity of Love, which gives Life to all Nature and Creature' (William Law, *The Spirit of Love* [*Works*, London, 1892–93, viii. 35]).

At the best the evidence is conflicting. Nature speaks with two voices. We can never be quite sure whether she is a kind mother or a cruel stepmother. Love is not seen at a glance to be her primal law. The men of science who decipher the testimony of the rocks do not feel constrained to proclaim with one accord that God is good, and, though they may comfort themselves with the reflexion that in Nature's infinite book of secrecy only a little has been read, and acknowledge that there is no religion without mystery, yet the inquiring spirit of man is troubled. Devout but open-eyed spectators of the world-drama are sometimes 'perplexed in the extreme.' They feel as if Nature were betraying the heart that truly loves her.

'God is love, transcendent, all-pervading! We do not get *this* faith from Nature or the world. If we look at Nature alone, full of perfection and imperfection, she tells that God is disease, murder and rapine' (H. T. Tennyson, *Alfred Lord Tennyson; A Memoir*, London, 1897, i. 314).

And, if 'to be wroth with those we love doth work like madness in the brain,' it is the crowning sorrow to doubt the God whose lovingkindness is better than life (Ps 63^3).

(*b*) But the God who speaks ambiguously through Nature reveals Himself also through humanity. He has His dwelling 'in the mind of man' (Wordsworth, *Tintern Abbey*, 99). Here it must not be forgotten that the isolation of the human species from the rest of the sentient creation is now known to be unscientific. This fact only makes the growth of ethical ideas and ideals the more wonderful. The basis of society is the family, and the cosmic process which has brought into existence the conscious personal relation between mother and child cannot be said to be indifferent to ethical ends; rather it may be held to exist for the sake of such ends. While Huxley is right enough in maintaining (L. Huxley, *Life and Letters of Thomas*

Henry Huxley, London, 1900, ii. 268) that moral purpose, in the strict sense, is 'an article of exclusive human manufacture,' he is wrong in denying it a place in the cosmic process. Human nature is an integral part of nature. If Nature is personified, human life is her crowning achievement.

> The development of 'the moral sentiments, the moral law, devotion to unselfish ends, disinterested love, nobility of soul—these are Nature's most highly wrought products, latest in coming to maturity; they are the consummation towards which all earlier prophecy has pointed' (J. Fiske, *op. cit.* p. 130).

Now, these constitutive elements of the moral life are the root and ground of that assurance of Divine love which must be regarded in the first instance as an instinct or intuition of loving hearts. The writer of the Song of Songs makes a Hebrew maiden, inspired by her passion of holy love, exclaim: 'For love is strong as death . . . the flashes thereof are flashes of fire, a very flame of the Lord' (8^6). This means not only that the pure love which glows and burns in the human breast is a fire kindled and cherished by God, but that it is an emanation from, and in quality identical with, His own uncreated flame of love. He 'never is dishonoured in the spark He gave us from his fire of fires' (Browning, *Any Wife to Any Husband*, iv.). Follow the gleam, and it leads to God. The natural is seen to be supernatural. 'The spirit of man is the lamp of the Lord' (Pr 20^{27}). The prophet Hosea, made wise by a patient love outwearing mortal sin in his own home, had the truth flashed upon his mind that a human affection which bears, hopes, believes, endures all things, and never fails, is explicable only as a radiation from the love of God, a revelation of the heart of the Eternal. His own ideal conduct in the supreme moral crisis of his life sensitized his mind to receive a new and true image of the Absolute. His forgiving pity, his redeeming love, his confidence in the ultimate triumph of good, gave him an unerring insight into the controlling principle of the Divine character. Love, he sees, is paramount in heaven and earth, and justice is its instrument. Love is therefore the *Leitmotiv* of his prophecy, his master-key to the mysteries of religion and history. He dares to make his own *confessio amantis* the preface to a stupendous love-tale, of which the scene is the world and the hero is God. He represents Israel's patient Divine Friend as saying, 'I delight in love, and not in sacrifice. When Israel was a child, then I loved him. . . . I drew them with cords of a man, with bands of love' (6^6 11$^{1.4}$; cf. 3^1 14^4). Later prophets and lawgivers reiterate Hosea's teaching in many beautiful forms—'I have loved thee with an everlasting love: therefore have I continued lovingkindness unto thee' (Jer 31^3). 'He will rest in his love, he will joy over thee with singing' (Zeph 3^{17}; cf. Dt 4^{37} 7^{18} 10^{15}, Is 48^{14} 63^9). 'But it is not too much to say that the entire faith and theology of later Israel grew out of Hosea, that all its characteristic views and ideas are first to be found in his book' (C. H. Cornill, *The Prophets of Israel*^{4}, Chicago, 1899, p. 53).

(*c*) Jesus linked His gospel with the prophecy of Hosea by repeatedly quoting the words 'I will have mercy and not (ritual) sacrifice' (Mt 9^{13} 12^7). No one was so swift as He to discover the evidences of Divine love in Nature. The beauty of flowers, the ways of birds, the benediction of the rain, the glory of clouds, and the splendour of the sun in its strength spoke to Him of a goodness that was over all and in all. He sanctioned the religious use of Nature. He assumed that God is omnipresent in the external world. But that was not His whole message. Nature's goodness was not His evangel. Least of all did He worship Nature.

> 'Know, man hath all which Nature hath, but more,
> And in that *more* lie all his hopes of good'
> (M. Arnold, *To an Independent Preacher*, 5 f. [*Poet. Works*, London, 1890, p. 5]).

And it is the spirit of the Ideal Man—His personal expression in word and deed—that constitutes mankind's surest evidence of the love of God. In His compassion for the multitudes, His tenderness to sinners, His hope for the vilest, His yearning to bring back the lost, His forgiveness of those who 'know not what they do,' He is the Revealer of God. He changes Israel's Lord of Hosts into mankind's 'Our Father.' The writer of the Fourth Gospel represents Him as saying, 'He that hath seen me hath seen the Father' (Jn 14^9), and the love of God which is in Christ Jesus our Lord is a fact which science must reverently accept. Christ is indeed the crown of evolution, fulfilling not only the spiritual ideals of Israel, but the æonian ethical strivings of Nature.

> 'Our first reason, then, for believing that God is Love, is the authority of Jesus Christ—His declaration and manifestation of the fact as God incarnate. That is to say, all the cumulative and complex proofs of Christianity are proofs to us of this fact, which simply is the kernel of Christianity. If Christianity is true, God is Love' (J. R. Illingworth, *Christian Character*, London, 1904, p. 87).

(*d*) The apostles always interpret Divine love in the light of Christ's sacrifice. The love which inspired the early Church was more than that of the Father who makes His sun to shine on the evil and on the good. It was that of the Father who withheld not His own Son, but delivered Him up for us all; that of the Son who laid down His life for the sin of the world. In the NT the identification of Divine love with atonement is axiomatic. 'Herein is love'—in a Divine initiative which provided a propitiation for sin (1 Jn 4^{10}). Personal faith centres in 'him that loveth us, and loosed us from our sins by his blood' (Rev 1^5), in 'the Son of God, who loved me and gave himself for me' (Gal 2^{20}). It was His Spirit of sacrifice that conquered the intellect as well as the heart of the ancient world. His age-long empire is the expression, not of the love of power, but of the power of love. He can never cease to be hailed as

> 'Strong Son of God, immortal Love.'

2. Human love.—Great and true conceptions of love have not been confined to any single nation. In the Greek classics love is often something much higher, purer, and nobler than sensual passion or natural desire. This fact appears clearly in the cosmogonic myths. The Eros of Hesiod is not 'erotic' in the later sense of the word. His Love is the fairest of the gods, who rules over the minds and councils of gods and men, the great uniting power, who brings order and harmony among the conflicting elements of Chaos. To the lofty mind of Plato love is the sympathy of affinities, the instinctive rushing together of kindred souls, the harmony of spirits, not without such a touch of natural feeling as strengthens without dishonouring the union. And the Stoics laid the foundation of a noble ethic in their conception of the brotherhood of men, regarded as akin to God, or even as children of one great Father.

> 'For we,' says the *Hymn* of Cleanthes, 'are Thine offspring, alone of mortal things that live and walk the earth moulded in the image of the All' (cf. Ac 17^{28}).

But Christianity raises love to a higher mood, smites it with a new ardour, purifies it by the touch of God, making the natural love of man and woman sacramentally holy, and changing the bitterest foe into a potential friend as 'the brother for whom Christ died.' The very vocabulary of love is changed, Eros, a word too often profaned, giving place to Agape. The natural elements of conjugal love, real and imperious enough, but consecrated now to the highest uses, have superadded to them the intimate communion of heart and soul. The genius of love is seen to be sacrifice, which has its source and sanction in God's eternal self-giving.

> 'Thrice blest whose lives are faithful prayers,
> Whose loves in higher love endure'
> (Tennyson, *In Memoriam*, xxxii.).

Only of such lives can it be safely said that 'love is an unerring light, and joy its own security' (Wordsworth, *Ode to Duty*, 19 f.). The strongest affection decays unless it is rooted in idealism. The house of life cannot be built on the shifting sand of passion. Love faints and fails unless it is braced by the sense of duty. Lovelace's hero, going to the wars, says to Lucasta:

> 'I could not love thee, dear, so much,
> Loved I not honour more.'

It is always the 'higher love'—patriotism, the passion for liberty, the enthusiasm of humanity, the zeal for God's Kingdom, any one of which may claim love's final sacrifice—that gives the affections of the home a purity and an intensity never dreamed of in the life of pampered individualism. When Christ says, 'He that loveth father or mother . . . son or daughter, more than me is not worthy of me,' He is calling men to the ideal life, which includes whatsoever things are pure and lovely and of good report. 'We needs must love the highest when we see it' (Tennyson, *Guinevere*, *ad fin.*).

The truth is that the heart's deepest instinct—its passionate 'amoris desiderium'—cannot be satisfied with an earthly affection. The Hebrew poet speaks for the human race when he says that, as the hart pants for the water brooks, so his soul pants after God, thirsts for the living God (Ps $42^{1.2}$).

> 'The most philosophical students of love from Plato and Plotinus to Augustine and Dante have felt that it demands, in the last resort, an infinite object and an infinite response' (Illingworth, p. 88).

Modern science has immeasurably widened man's mental horizon, and the vaster the material world becomes the greater is the spirit's unrest in its cage of sense. It suffers from 'the malady of the ideal,' and is restless till it rests in God. The deepest thoughts of a nation are expressed by its artists and poets. Rossetti painted human love languishing for fullness of life, but evermore fearing death. Watts painted divine love leading life *per aspera ad astra*. Tennyson protests that his love would be half-dead to know that it must die (*In Memoriam*, xxxv.), while his faith in immortality stays itself on his deathless love of a friend.

> 'Peace, let it be! for I loved him, and love him for ever: the dead are not dead but alive' (*Vastness*, *ad fin.*).

At the close of life his supreme wish was to

> 'learn that Love, which is, and was
> My Father, and my Brother, and my God!'
> (*Doubt and Prayer*, 7 f.).

Browning repeats in a hundred forms his reasoned conviction that

> 'There is no good of life but love—but love!
> What else looks good, is some shade flung from love—
> Love gilds it, gives it worth'
> (*In a Balcony* [*Works*, London, 1886, p. 17]).

And he is certain that love cannot be quenched by death.

> 'No: love which, on earth, amid all the shows of it,
> Has ever been seen the sole good of life in it,
> The love, ever growing there, spite of the strife in it,
> Shall arise, made perfect, from death's repose of it'
> (*Christmas Eve*, v. 97–100).

If love is thus proved to be the essential character alike of God and of the sons of God, this result profoundly affects all human relationships. (*a*) True intercourse with God Himself is a fellowship of love. To be right with Him is to have the heart of a lover or a child. Though the OT breathes many passionate longings for such an intercourse, the NT alone exemplifies it in its perfection. The bare notion of such a divine fellowship was strange to the Gentile, whose relation to the object of his worship was always cold and distant. Jesus lived in uninterrupted filial communion with His Father, teaching His followers to do the same. It is their high privilege to keep themselves in the love of God (Jude ^{21}), and so to have His love shed abroad in their hearts by the Holy Spirit given to them (Ro 5^{5}).

(*b*) The knowledge of God can be attained only through love. In love's lore a 'dry light' helps but little. Theology at its best, like 'divine philosophy,' is always charged with feeling. 'Pectus facit theologum.' Selfishness absolutely disqualifies the student of divine things. God reveals Himself to those who tread, like Himself, the 'love-way'—the path of lowly service. 'Even as the eye,' said Plotinus, 'could not behold the sun unless it were itself sunlike, so neither could the soul behold God if it were not Godlike' (*Ennead*, I. vi. 9). Not to sympathize is not to understand. Love is the great hierophant of the mysteries of God. He that willeth to do the will of God shall not doubt His highest teaching (Jn 7^{17}); but he that loveth not his brother whom he hath seen, and therefore cannot love God whom he hath not seen (1 Jn 4^{20}), has lost 'the key of knowledge' (Lk 11^{52}).

(*c*) The ideal society consists of persons animated and united by the spirit of love, each seeking the good of all and all of each. The programme of Christianity is the renewal of human life and the reconstruction of human society, on the basis of the faith that 'God is love.' While hatred has a fatal power of division, love is the bond of perfectness (Col 3^{14}). Human associations are strong and stable in proportion as they are welded together by that brotherly love which is the law of the kingdom of heaven.

> 'Love rules the court, the camp, the grove,
> And men below, and saints above;
> For love is heaven, and heaven is love'
> (Scott, *Lay of the Last Minstrel*, III. ii. 5–7).

(*d*) As man's chief good, love is a task as well as a gift—an *Aufgabe* as well as a *Gabe*. It is not a passive sentiment or an involuntary emotion. The verb 'to love' has an imperative mood, which the greatest lawgivers—Jesus as well as Moses—frequently use. To this extent Christianity as well as Judaism is legalistic. The practice of love is the highest exercise of freedom. 'The love of the will' is no less real than that of the heart (Illingworth, p. 101). Love's rise and progress are dependent on a continuous effort, and the more perfect it becomes the more does it embody the inmost desires and strongest impulses of the soul. It is more than good-nature, which is no satisfactory basis for ethics; more than good intentions, which are proverbially delusive; it is a good will—which, according to Kant, is the one absolutely good thing in the universe.

(*e*) All duties spring ultimately from the one duty of love. It is more than a poetic fancy, it is a literal fact, that, 'as every lovely hue is light, so every grace is love.' Augustine describes virtue as the unfolding of love—'Virtus est ordo amoris'—and in reference to the cardinal virtues he says:

> 'I would not hesitate to define these four virtues which make such an impression upon our minds that they are in every man's mouth: temperance is love surrendering itself wholly to Him who is its object; courage is love bearing all things gladly for the sake of Him who is its object; justice is love serving only Him who is its object, and therefore rightly ruling; prudence is love making wise distinctions between what hinders and what helps itself' (*de Moribus*, i. 15 [25]).

The law of love is called the royal law (*νόμος βασιλικός*, Ja 2^{8}), because, being supreme in dignity and power among the principles which control human action, it brings all the others into subjection to itself.

> 'All thoughts, all passions, all delights,
> Whatever stirs this mortal frame,
> All are but ministers of Love,
> And feed his sacred flame' (Coleridge, *Love*, 1–4).

(*f*) And love is perfected when even its most laborious duties are performed with gladness. It is true that 'tasks in hours of insight will'd can be through hours of gloom fulfill'd' (M. Arnold, *Morality*, 5 f. [*Poet. Works*, p. 256]). But the moral life needs the heart to aid the will. It never flourishes long if its roots are left dry. Its strength and fruitfulness are always traceable to hidden springs of affection. Schiller was justified in complaining that Kant made too much of the categorical imperative and too little of the æsthetic side of morality—the beauty of holiness. Duty is not perfectly done unless a great love makes the yoke easy and the burden light. Under this potent influence, each of a thousand thoughtful deeds becomes a 'labour of love' (*κόπος τῆς ἀγάπης*, 1 Th 1^{3}). Ferdinand in *The Tempest* (III. i. 7) says that the mistress whom he serves makes his 'labours pleasures,' and Jacob's seven years seemed to him but so many days because of his love (Gn 29^{20}). Moral education advances rapidly when a man can say from the heart, 'To do Thy will, O Lord, I take delight.' It is not enough that morality be 'touched' by emotion; it needs to be transfused with the spirit and transfigured by the glory of love.

> 'No heart is pure that is not passionate; no virtue is safe that is not enthusiastic' (J. R. Seeley, *Ecce Homo*^{3}, London, 1866, p. 8).

It thus becomes evident that, before the activities of love can be spontaneous, a man's very nature must be changed. 'Every one that loveth is born of God' (1 Jn 4^{7}). That which is natural, the self-life, is first, and afterwards that which is spiritual, the life of self-renunciation. And nothing changes the natural into the spiritual like the contemplation of the sacrifice of Christ.

> 'Thou hast no power nor may'st conceive of Mine,
> But love I gave thee, with Myself to love,
> And thou must love Me who have died for thee!'
> (Browning, *An Epistle*, *ad fin.*).

Many have found it possible to conceive for Christ 'an attachment the closeness of which no words can describe' (Seeley, p. 187). To cherish a love for Him is to love His Kingdom, which ideally embraces the whole human race. Where the AV reads 'We love him, because he first loved us,' the RV has 'We love, because he first loved us' (1 Jn 4^{19}), which may be rightly interpreted, 'We love the Son of Man and, for His sake, every son of man.' Christ's constraining love is at once the impulse and standard of all Christian love—'that ye should love one another, as I have loved you' (Jn 15^{12}). Judaism supplied the law of love (Dt 6^{5}, Lv 19^{18}), Christianity supplies the power—the grace which came by Jesus Christ (Jn 1^{17}). It seems *a priori* impossible to love the world that hates us, but it is morally impossible not to love the world which God has so loved. Faith works by love (Gal 5^{6}), and works miracles.

> 'The gospel . . . desires the text "Love thy neighbour as thyself" to be taken quite literally. . . . Is, then, this demand reasonable, and is its fulfilment possible? The coolly reasoning, common-sense intellect answers "No," a thousand times over. . . . The gospel replies to this *No* with a decided, quiet *Yes*' (W. Bousset, *The Faith of a Modern Protestant*, London, 1909, p. 77 f.).

While, however, all finite love flows from God's infinite love, it is not always conscious of its source. It may well up pure and strong in a heart which has never been able by searching to find out God. And it is none the less acceptable to God though He is not yet its object. This truth is exquisitely expressed in Leigh Hunt's poem of 'Abou Ben Adhem,' who, though not yet one of those who love the Lord, has it revealed to him that, because he loves his fellowmen, his name stands first among those whom love of God has blessed. And it is expressed more authoritatively in Mt 25, where our Lord proclaims that deeds done in love to the least of His brethren are accepted as done to Himself. Those who do them are unconscious Christians. Their merit, of which they are astonished to hear, is real, and their reward, which they never sought, is sure.

> 'For they love goodness, and to love goodness is in fact to love God. . . . While, therefore, the unbelief of men who lead good lives must always cause regret to the Christian, the goodness of their lives need not perplex him, as being implicitly due to the same cause which has for himself become explicit' (Illingworth, p. 102).

George Herbert calls sin and love the 'two vast, spacious things' which it behoves every man to measure (*The Agonie*, 4). The one seems, but the other is, infinite. And the stronger subdues the weaker. Where sin abounds, grace—which is Divine love in its redeeming energy—superabounds (Ro 5^{20}). And all hope for the world lies in the fact that a God of holy love is, through His Spirit in His children, for ever wrestling with its sin.

> 'Is not God now i' the world His power first made?
> Is not His love at issue still with sin,
> Visibly when a wrong is done on earth?'
> (Browning, *A Death in the Desert*, 211 ff.).

Augustine uses a still finer figure than that of the arena. He speaks of 'the glory of love . . . alive but yet frostbound. The root is alive, but the branches are almost dry. There is a heart of love within, and within are leaves and fruits; but they are waiting for a summer' (*In Epist. Joannis ad Parth.* v. 10). The leaves of the tree are for the healing of nations torn by passions of hatred. And, with eyes opened by eating of the fruit, men find their *Paradiso* in letting their desire and will be turned,

> 'Even as a wheel that equally is moved,
> By the Love that moves the sun and the other stars'
> (Dante, *Par.* xxxiii. 144 f.).

JAMES STRAHAN.

LOVE (Greek).—I. *GODS OF LOVE.*—**1. Introductory.**—Gods of love, whether co-ordinate with, or actually in opposition to, deities presiding over marriage and fertility, are products of a relatively late development. Doubtless, too, the moment of gratification gave rise to certain 'momentary gods,' and served to fix their permanent influence in the cultus; this group will include Aphrodite Πρᾶξις in Megara (Paus. I. xliii. 6), Aphrodite Πόρνη in Abydos (Athen. xiii. 572 C; cf. R. Meister, *Griechische Dial.*, Göttingen, 1882-89, ii. 230), Aphrodite Μιγωνῖτις in Gythium (Paus. III. xxii. 1), and Aphrodite Περιβασώ in Argos (Hesych. *s.v.*; Nicand. frag. 23 [Schneider]). In Provence the phallic demon Τέρπων was dedicated to her service (*IG* xiv. 2424), and the comic poet Plato (i. 648 [Kock]) enumerates a group of kindred figures in her retinue. Another special goddess is the Ῥαψώ of an inscription from Phalerum (J. N. Svoronos, *Das athen. Nationalmuseum*, ii. [1903] 495), whose character may be deduced from the epithets δολοπλόκος and Μαχανῖτις (Paus. VIII. xxxi. 6) applied to Aphrodite. With this single exception, however, Aphrodite is everywhere the most prominent figure.

2. Aphrodite.—Aphrodite was originally by no means merely a goddess of love; on the contrary, she also presided over the development of female life from the period of youth, and a relic of this conception survives in the story that she nurtured the daughters of Pandareus (Hom. *Od.* xx. 68). At marriages sacrifices were offered to her in conjunction with Hera and the Charites (*Etymologicum Magnum*, 220, 54) or else to her alone (in Hermione [Paus. II. xxxiv. 11]); in Sparta the bride's mother made a sacrifice to Aphrodite Hera (*ib.* III. xiii. 9). Aristophanes (*Nub.* 52, *Lysistr.* 2) speaks of Aphrodite Κωλιάς as specifically the goddess of women; and the Γενετυλλίδες, the goddesses of birth, belong to her circle (schol. to Aristoph. *Thesmoph.* 130, *Lysistr.* 2; Hesych. *s.v.*). In an epigram of Theocritus (no. 13; cf. U. von Wilamowitz-Möllendorff, *Textgesch. der Bukoliker*, Berlin, 1906, p. 118) a woman of Cos thanks her for the fruits of her marriage. The prayers of widows for a second husband were directed to her (Naupactus [Paus. X. xxxviii. 12]); in Sparta she was entreated to retard the coming of old age (*ib.* III. xviii. 1; *Carm. Pop.* frag. 2 [Bergk]).

In addition to these functions, however, she promoted increase and growth in the larger world of nature, as appears from such epithets as Δωρῖτις (Cnidus [Paus. I. i. 3]) and Εὐδωσώ (Syracuse [Hesych. *s.v.*]), which can hardly apply exclusively to the δῶρα Κύπριδος. To her, as the goddess of fertility, the goat was sacred, and she rides upon it (A. Furtwängler, *SMA*, 1899, ii. 590 ff.; P. Gardner, *Mélanges Perrot*, Paris, 1902, p. 121 ff.).[1] Moreover, sacrifices of swine were offered to her, as to Demeter, at the festival of the Ὑστήρια in Argos (Athen. iii. 96 A; the name of the festival is ancient, as is shown by the mode of its formation; cf. Ἀνθεσ-τήρια); as also in Cos (W. Dittenberger, *Sylloge inscrip. Græc.*², Leipzig, 1898, p. 621), Thessaly, and Pamphylia (Strabo, ix. 438).[2] And, just as goddesses of the field and of fertility, like the Charites and the Horæ (*qq.v.*), were often represented as triads, so we find three Aphrodites in one temple at Thebes (Paus. IX. xvi. 3), and also—probably derived therefrom—in Megalopolis (*ib.* VIII. xxxii. 2).[3] In this broader capacity she was worshipped along with Zeus, as was Dione (who in Homer is her mother) in Dodona (*ib.* III. xii. 11; *IG* xii. 5. 220, where the names of Aphrodite and Zeus Ἀφροδίσιος occupy the first place in a dedication; *ib.* 551 *additam.*). Her association with Hermes is, no doubt, to be understood in the same way (Paus. VIII. xxxi. 3; *IG* xii. 5. 273; C. Michel, *Recueil d'inscr. grecques*, Brussels, 1896–1900, nos. 832, 33; *Ancient Greek Inscriptions in the British Museum*, London, 1874–93, iv. 796; F. Hiller von Gaertringen, *Inschriften von Priene*, Berlin, 1906, no. 183). To her as the tutelary goddess of the meadow and of fertility, of the prosperity of man and beast, pertain also the dedications made to Aphrodite—probably as thanksgiving for εὐετηρία—by those who were leaving office, as found in Halicarnassus (*Ancient Inscr. in the Brit. Mus.*, iv. 901), Cos (*IG* xii. 5. 552), Paros (*ib.* xii. 5. 220), Megara (*ib.* vii. 41), Acræ in Sicily (*ib.* xiv. 208 ff.), and elsewhere. As the protectress of a whole people she is called Πάνδημος (cf. *CGS* ii. 658), and in this capacity she was actually accorded a πομπή at Athens (*IG* ii. Suppl. 314*c*). She invites human beings generally, not merely the sexes, and is thus called Ἑταίρα (Wilamowitz-Möllendorff, in G. Wentzel, Ἐπικλήσεις Θεῶν, Göttingen, 1890, p. 4) and Ἅρμα (Plut. *Amat.* xxiii., though a reference to marriage is also possible here).

Then the sinister aspect of her character as an earth-goddess is likewise duly brought out; she bears the epithets Ἐρινύς (Hesych. *s.v.*) and Μελαινίς (Paus. II. ii. 4; Athen. xiii. 588 C; Paus. VIII. vi. 5, IX. xxvii. 5), as does Demeter in Arcadia; in Thessaly there was a festival of Aphrodite Ἀνοσία or Ἀνδροφόνος (Nilsson, p. 378), which, it is true, seems to have had a reference to female love; probably Περσιθέα (Hesych. *s.v.*) is also to be interpreted by this conception. According to an ancient theogony, she, together with the Erinyes and the Moiræ, is descended from Kronos (schol. Soph. *Œd. Col.* 42). A kindred figure is the Nemesis of Rhamnus (Phot. *s.v.* Ῥαμνουσία Νέμεσις; cf. Wilamowitz-Möllendorff, *Antigonos von Karystos*, Berlin, 1881, p. 10), while in Smyrna, again, we find two Νεμέσεις (*CGS* ii. 595 B, C; interpreted by F. G. Welcker, *Griechische Götterlehre*, Leipzig, 1857–63, iii. 34).

In Aphrodite was merged another goddess, the pre-Hellenic Ariadne or Ariagne; the result is most clearly seen in Delos, where she acquires the name Hagne (*BCH* vii. [1883] 308), and in Amathus, where a festival in which the two sexes exchanged garments was celebrated in the grove of Aphrodite Ariadne (Nilsson, p. 369). Then in Cyprus we find a goddess of Spring named Aphrodite θεὰ Ϝηρπό(μ)πα (R. Meister, *SSGW*, 1910, p. 247), who appears again in Crete as Ἄνθεια (Hesych. *s.v.*), and in Pamphylia, where her priestesses are called ἀνθηφόροι (*CIG* ii. 2821 f.). Certain glosses of Hesychius (*s.vv.* θύλλα and ἀοῖα) which bring her into relation with the May-pole have likewise to do with this aspect of her character. In Amathus she is thought of as androgynous under the name of Ἀφρόδιτος (Hesych. *s.v.*); in Phæstus, similarly, we find the androgynous dæmon Leucippus (Nilsson, p. 270). It is usually supposed that the Aphrodite cult of this district was derived from the worship of Astarte, and that it spread thence over Greece (most recently Nilsson, p. 362; cf. also *ERE* ii. 118ᵃ). It has already been noted, however, that the Aphrodite cult of the Greek motherland presents certain features which cannot be explained as importations. There is also the fact that androgynous forms are unknown as regards Astarte (W. Baudissin, *PRE*³ ii. 156), and that such are shown to be Hellenic by the figure of Leucippus and the festival of Ariadne in Amathus. The epithet Ἀνίκατος, borne by the goddess in Cyprus (*SSGW*, 1910, p. 245), is certainly met with elsewhere only as an attribute of Oriental goddesses (O. Weinreich, *Ath. Mitt. des deut. archäolog. Instituts*, xxxvii. [1912] 29, note 1), but the name ἄμαχος θεός (Soph. *Ant.* 800) suggests that it was peculiarly congruous with Greek sentiment. Moreover, E. Sittig (*De Græcorum nominibus theophoris*, Halle, 1911, p. 105) has noted that there are in Cyprus no Phœnician theophoric names formed with 'Astarte.' It is true that in the ancient Greek tradition likewise there are only 'comparative,' but no theophoric, names derived from that of the goddess of love,[1] but the same holds good as regards Eros (*ib.* p. 110). In view of the early relation between Cyprus and Arcadia, it is of great importance to note that her birth-place was transferred not only to Cyprus or Cythera, but also to the River Ladon (Hesych. *s.v.* Λαδωγενής). On the other hand, it is not to be denied that the figure of Aphrodite shows a considerable admixture of Oriental features. Such are certainly the ritual prostitution of Paphos and Corinth (Nilsson, pp. 365, 376), the worship of Aphrodite Οὐρανία (*CGS* ii. 629), and perhaps the fact that her image was armed (*ib.* 654). Her relation to Ares, which is frequently ascribed to epic influence, has not been satisfactorily explained (cf. K. Tümpel, *Fleckeisen's Jahrb.*, Suppl. xi. [1880] 641). Another doubtful point is the Hellenic origin of Aphrodite Εὔπλοια, the goddess of navigation (H. Usener, *Legenden der heiligen Pelagia*, Bonn, 1879, xx.); she may quite well have been evolved from the goddess of Spring, who was brought across the sea from Cyprus (cf. Theognis, 1275 ff.). On the other hand, we must certainly assign a Semitic origin (see W. R. Smith, *Rel. Sem.*^{2}, London, 1894, p. 471) to the sacrifice of an *ovis pellita* to Aphrodite in Cyprus.[1] The worship of Aphrodite was also influenced by foreign deities in other districts; on the Black Sea there was an Οὐρανία of Scythian origin (Herod. iv. 59, 67), the lady of Apaturon (B. Latischev, *Inscrip. Pont. Eux.*, Petrograd, 1885–90, ii. 19).

---

[1] Gardner's attempt to find an Oriental origin for this feature is rendered abortive by the fact that the goat has no place in the Astarte cult; similarly Furtwängler's efforts to interpret Aphrodite Ἐπιτραγία as a goddess of light are futile, as the aureole with which she is occasionally portrayed merely implies that at a later period she was identified with Οὐρανία.

[2] Farnell (*CGS* ii. 646) and M. P. Nilsson (*Griechische Feste*, Leipzig, 1906, p. 386) are undoubtedly wrong in seeking to trace in all these instances a connexion with Adonis; such a connexion finds no support in tradition, and, so far as the Argive festival is concerned, is contravened by the fact that there was no State cult of Adonis in Greece.

[3] Cf. H. Usener, in *Rhein. Museum*, lviii. [1903] 205, where he points out that the distinguishing names given by Pausanias must be of late origin.

[1] Even Ἀφρόδιτος (*IG* vii. 585) and Ἐπαφρόδιτος are 'comparatives'; there is no Ἐπαφροδίσιος at all.

The function of the goddess was in historical times narrowed down to that merely of the protectress of love. It is only as such, with the exception already noticed, that she is recognized in the Ionic epic, and it is therefore worthy of remark that her cult was introduced into Smyrna (Tac. *Ann.* iii. 63) and Ephesus (Michel, *Recueil*, 839 A 5, B 25) by means of oracles. Even at a later period theophoric names formed from 'Aphrodite' rarely occur in Ionia proper (Sittig, p. 108). Her temples in that region were almost all devoted to the goddess of love. In this capacity, too, she absorbed Peitho, who had originally an independent cult (in Sikyon [Paus. II. vii. 7]), but subsequently became sometimes an epithet (*IG* ix. 2. 236), sometimes an attendant, of Aphrodite (Weizsäcker, in Roscher, iii. 1797), as is aptly shown by the figure of Farnesina (*Mon. dell' Inst.* xii. [1885] 21). She usually appears as the goddess of female love, although the Aphrodite Αργυννίς of Bœotia (Phanocl. *ap.* Clem. Alex. *Protr.* ii. 38 [*PG* viii. 17]; Athen. xiii. 603 D; Steph. Byz. *s.v.* Ἀργύννιον) seems to have had to do with παιδικὸς ἔρως, as is certainly true of the Aphrodite Σκοτία of Phæstus (*Etym. Mag.* 543, 49; in Crete the boys were called σκότιοι [schol. to Eur. *Alc.* 989]). As Aphrodite was brought into relation with the evening star in the myth of Phaon-Phaethon (Wilamowitz-Möllendorff, *Hermes*, xviii. [1883] 416 ff., *Sappho und Simonides*, Berlin, 1913, p. 33 f.), it is easy to see why maidens should murmur their love-pangs to the moon-goddess (schol. to Theocr. ii. 10; Hesych. *s.v.* οὐρανία αἴξ), just as in the Erotic Fragment (6) the lover invokes the stars and the συνερῶσα νύξ.

3. Eros.—Besides Aphrodite the only Greek love-deity of real importance is Eros. He too had a more general function as a deity of procreation, viz. in Thespiæ, where he was worshipped as a stone fetish (Paus. IX. xxvii. 1), as also probably in Parion, in Laconian Leuktra (*ib.* III. xxvi. 5), and in the sex-cult of the Lycomids (*ib.* IX. xxvii. 2; cf. Furtwängler, *Jahrb. des deut. archäolog. Instituts*, vi. [1892] 116 f.). In Elis he is represented beside the Charites, and to the right of them (Paus. VI. xxiv. 7), *i.e.* as their leader, like Hermes elsewhere. From his procreative aspect arose the cosmic character which he bears in Hesiod and among the Orphics. In consequence of the obvious derivation of his name, however, he remained all along the god of sensual desire. His cult had only a narrow range. In Laconia and Crete sacrifices were offered to him before a battle (Athen. xiii. 561 C), and the connexion between these and pæderasty has been explained by E. Bethe (*Rhein. Mus.* lxii. [1907] 445). We are told also that in the Academy he had an altar which was supposed to have been erected in the period of the Pisistratidæ (Athen. xiii. 609 D; Plut. *Sol.* 1), but Euripides (*Hipp.* 538) asserts that offerings were never paid to him at all. In literature and art his figure was always a mutable one, and he is the subject of no clear-cut myth (J. Boehlau, *Philolog.* lx. [1901] 321, and cf. O. Waser, in Pauly-Wissowa, vi. 487). Alcman (frag. 38 [Bergk^4]) calls him a boy; Anacreon sometimes obviously regards him as a youth (frags. 2, 47), while in other passages (*e.g.*, frag. 62) one may well doubt whether he thinks of him as a personal deity at all. But this indefiniteness of outline, which persists throughout the subsequent period, is counterbalanced by the magnificence of the associated conception. While Sappho (frag. 1) naively prays to Aphrodite, who inflicts and removes the pains of love, Æschylus (frag. 44 [Nauck^2]) extols the might of that craving which pervades all that lives, and depicts the shattering effects of ἀπερωπὸς ἔρως (*Choeph.* 599); and the other two great tragedians give expression to similar ideas regarding the destructive and enravishing power of Ἔρως (Soph. *Ant.* 781; Eur. *Hipp.* 525, 1268, *Iph. Aul.* 543). Thereafter philosophical speculation seizes upon the conception, and exalts it to heights before undreamed of. Plato (*Conviv.* 187 D), playing upon the etymology of the words, contrasts Οὐρανία and Πάνδημος as sacred and profane love—a contrast having no foundation in their essential meaning, but dominating their usage for the future.

4. Later developments.—In the sphere of common life the deities of love declined as the practice of hetærism gained ground. In this period the Ἀφροδίσια became a characteristically hetæristic festival (Nilsson, p. 374). Besides Eros we now find Ἵμερος and Πόθος, 'Longing' and 'Fulfilment' (Paus. I. xliii. 6; on the meaning of Πόθος cf. Wilamowitz-Möllendorff on Bion's *Adonis*, v. 58), and in other districts Ἀντέρως (Paus. I. xxx. 1, VI. xxiii. 3, 5). The earlier tradition still makes itself felt in the verses in which the bearded Eros of Simias (*Bucolici Græci*, ed. U. von Wilamowitz-Möllendorff, Oxford, 1905, p. 147) describes his powers, but coincidently, from the period of the vase paintings ornamented with gold, a multitude of dallying Erotes find their way into art and literature, as shown by the epigrams of the Anthology and the paintings found in Pompeii. Among the Hellenistic societies the Aphrodisiasts were largely represented (F. Poland, *Griechisches Vereinswesen*, Leipzig, 1909, p. 189 ff.), though it is true that there were among them numerous foreign (Syriac) cults. The high favour enjoyed by Adonis also served to revive the worship of Aphrodite; the deities of love in general now reached their highest vogue, and it is in this period that we first meet with theophoric names derived from Aphrodite, though no doubt—with but few exceptions—in the lower ranks of society (Sittig, p. 108). Aphrodite and Eros are no longer deities of the procreative impulse, but are the guardian spirits of love in the modern sentimental sense. It is worthy of note that unhappy lovers now frequent the supposed tomb of Rhadine and Leontichos, the heroine and hero of the romance of Stesichorus (Paus. VII. v. 13). Syncretism once more laid hold of the figure of the love-goddess, and combined it with that of the healing mother of the gods (*IG* iii. 136), while the recollection of her larger function survives in the literary tradition, as appears in the Proem of Lucretius, and as reveals itself also, immediately before the collapse of the ancient religion, in the *Pervigilium Veneris* (*Anth. Lat.* i. 144 [Riese and Bücheler])—the last memorial of antiquity to the goddess whose influence pervades the universe.

LITERATURE.—The more important works have been cited in the course of the article. The reader may also consult: W. H. Engel, *Kypros*, Berlin, 1841, ii. (materials); A. Enmann, 'Kypros und der Ursprung des Aphroditekults,' in *Mém. de l'Acad. Imp. de St. Pétersbourg*, xxxiv. [1886] p. xiii; L. Preller and C. Robert, *Griechische Mythologie*^{4}, Berlin, 1887–94, i. 345, 501; W. H. Roscher, art. 'Aphrodite,' in Roscher; A. Furtwängler, art. 'Eros,' *ib.*; P. Weizsäcker, art. 'Peitho,' *ib.*; K. Tümpel, art. 'Aphrodite,' in Pauly-Wissowa (to be used with caution); O. Waser, art. 'Eros,' *ib.*

KURT LATTE.

II. *ETHICAL IDEAS.*—**1. The Homeric age.**—It remains to examine what ideas concerning the emotion of love and its ethical value were characteristic of the Greeks; and the survey will reveal considerable develpoment in consequence of political and social movements, together with a certain variety of contemporary opinions in the most important eras. The charming pictures of domestic affection which are to be found in the Homeric poems, such as the parting of Hector and Andromache (*Il.* vi. 370 ff.) or the meeting of Odysseus and Penelope (*Od.* xxiii. 85 ff.), and even occasional comments like 'there is nothing mightier and better than when husband and wife keep house with united hearts' (*Od.* vi. 182 ff.), and the tenderness of the allusion to the soft voices of the youth and maiden while they are courting each other (*Il.* xxii. 128), reflect a condition of society in which wedded love was highly prized. This was the natural outcome of the respect with which women were treated, and of the comparatively high degree of liberty which they enjoyed.

---

[1] The πρόβατον κωδίῳ ἐσκεπασμένον (Joh. Lydus, *de Mens.* iv. 65) is doubtless to be understood in this sense; cf. J. Marquardt, *Privatleben der Römer*^{2}, Leipzig, 1886, p. 476.

2. Post-Homeric development.—The causes which led to the disappearance of the Achæan monarchies are imperfectly known to us (see art. KING [Greek and Roman]), and the evidence available does not enable us to trace the course of the changes which lowered women in public estimation by depriving them of their earlier freedom. But signs of their depreciation may be observed even in the utilitarian precepts of Hesiod regarding marriage (*Works and Days*, 700 ff.); and the same tone pervades the invective of Semonides of Amorgos (frag. 7), whose pattern wife is the offspring of the busy bee blessing with material increase the gathered store of her mate (line 83 ff.). It is remarkable that the same simile is employed by Ischomachus in describing to his wife the duties which he expects her to perform (Xen. *Œcon.* vii. 32), and the whole of the training prescribed in Xenophon's dialogue (*op. cit.* vii.–x.), as well as casual allusions to domestic happiness, shows that the Attic ideal was satisfied by the loyalty of a careful and thrifty housewife (Lys. i. 7). In historical times an ordinary Greek marriage was so entirely prompted by motives of convenience that we read without surprise the typical sentiment of the Athenian orator:

> 'While we keep a mistress to gratify our pleasure and a concubine to minister to our daily needs, we marry a wife to raise legitimate issue and to have our property carefully preserved' ([Dem.] lix. 122).

3. Sappho.—It must not be supposed that in the meantime the passionate outpourings of the lover failed to find adequate expression in literature. In this respect the poems of Sappho occupy so peculiar a position that an attempt must be made to define it. Sappho, a poetess of such eminence as to have been accounted the rival of Homer and to have earned the title of the tenth Muse (*Anth. Pal.* VII. xiv. 15; cf. Strabo, p. 617), owed most of her reputation to the fervour of her love-poems. Yet in estimating their tendency we encounter unusual difficulty, partly because, notwithstanding the additions made in recent years, only scanty fragments of her writings survive, and partly because comic poets and later gossip-mongers have shrouded her name in unmerited scandal. It is generally admitted that the story of her unrequited love for Phaon and of her despairing leap from the Leucadian rock are fictions due, perhaps, to a misunderstanding of her own words (U. von Wilamowitz-Möllendorff, *Sappho und Simonides*, Berlin, 1913, pp. 24–40). The grosser suspicions, such as those indicated by Seneca in his reference (*Ep.* lxxxviii. 37) to the discussion of Didymus 'an Sappho publica fuerit,' are not to be supported by such doubtful evidence as frag. 52, and are contradicted no less by the soundest part of the tradition, which represents her as a wife and a mother (Suid. *s.v.* *Σαπφώ*; cf. Sappho, frag. 85), than by the sincerity and freedom of her genuine utterances. The psychological problem presented by frags. 1 and 2 and Berlin frags. 2 and 5 is to understand how the yearning affection inspired by the loss or departure of one of her girl friends came to be expressed in terms usually reserved for the rapturous emotions of sexual love. The solution, so far as the evidence permits us to form a definite conclusion, is to be sought in the character of a remarkable personality. If Sappho was the inspiring genius of a society of beautiful and high-born maidens, who sought at her hands instruction in the poetic art (frag. 136), and with whom she lived on terms of intimate affection, there was no reason why she should not, with a different intention, have anticipated the behaviour of Socrates to his young disciples, by giving utterance to her whole-hearted devotion in the language of passionate love. The parallel was drawn in antiquity by Maximus Tyrius (xxiv. 9), who was, doubtless, not the first to suggest it; and in modern times the good name of Sappho has been defended by F. G. Welcker (*Kleine Schriften*, Göttingen, 1816, ii. 80–144) and, more recently, by von Wilamowitz-Möllendorff (*op. cit.* pp. 17–78).

4. Tragic and other poets.—The poetic treatment of love was usually confined, as, *e.g.*, by Mimnermus and Anacreon, to its sensual aspect, and it is clear from the history of the tragic stage that a serious preoccupation with the causes, symptoms, or effects of love was considered unworthy of a poet who aspired to be true to his calling. Hence Aristophanes (*Ran.* 1043 f.), in the character of Æschylus, attacked the degeneracy of Euripides in exhibiting on the stage the lust of Phædra and Stheneboea, whereas the elder poet had never been guilty of describing a woman in love. The unfairness of this criticism is sufficiently demonstrated by the nobility of the female portraits to be found in the extant plays; but it is particularly important to observe that here, as in some other respects, Euripides was the herald of a new development in imaginative literature of which the climax has probably been reached in the extraordinary popularity of the romantic novel during the last hundred years. To this we shall presently return. If we exclude certain features in the psychological studies of Euripides, however, the dominant conception of love figured its victims as entirely passive, since love was an over-mastering force which, entering into a man's body, permeated it so completely that he was no longer able to control his impulses. Love was a particular phase of possession by a demonic being as popularly conceived (cf. Plut. *Amat.* xviii. p. 763 A), and was consequently described as a disease (Soph. *Trach.* 544) or a madness (Eur. frag. 161). The medium which conveyed the mysterious influence was the faculty of sight (Æsch. *Ag.* 427 f.; Thuc. II. xliii. 1; Arist. *Eth. Nic.* ix. 5. 1167*a* 4). The lover's glance was a physical emanation from the eye, which, making its way straight to the eye of the beloved object, was met in its course by the responsive gaze speeding as fast towards the lover (Soph. frag. 433; Heliod. iii. 7; Plut. *Quæst. Conv.* v. vii. 2, p. 681 B). The shaft of light then came to be regarded as a weapon (*βέλος*, *τόξευμα*) which inflicted a wound upon its victim (see *ClR* xxiii. [1909] 255 ff., where copious illustration is given). But the love-god had his wings as well as his bow and arrow (Eur. *Hipp.* 530 ff.). For, by another figure, every violent transport of emotion, including poetic inspiration (Pind. *Isthm.* v. 64) and fear (Apoll. Rhod. iv. 23), as well as frenzy (Eur. *Bacch.* 332) and love (Plat. *Phædr.* 246 D, etc.), was represented in the guise of soaring wings, as if under such influences the agent were lifted out of his normal sphere into a higher region by some supernatural force. Sophocles, in a famous fragment (frag. 855 N.²), characterizes the love-goddess, here a personification of the passion itself, in the following words:

> 'Love is not love alone, but is called by many names; it is Death, it is immortal Might, it is raging Frenzy, it is vehement Desire, it is Lamentation; in Love is all activity, all peace, all that prompts to violence.'

Over and over again stress is laid upon the irresistible power of Love: he is the mightiest of all the gods (Eur. frags. 269, 430; Menand. frag. 235, iii. 67 K., frag. 449, iii. 129 K.); and not one of them (Soph. *Trach.* 443), not even Zeus himself (Eur. frag. 684; Menand. frag. 209, iii. 60 K.), can withstand his attack.

> 'He is not wise,' says Deianira in the *Trachiniæ* (441 f.), 'who stands forth to contend with Love, like a boxer at close quarters.'

It is not difficult to imagine the result of this assumption upon the attitude of the average Athenian citizen. The celebrated ἱερόδουλοι of the Corinthian Aphrodite (cf. Pind. frag. 122 and art. HIERODOULOI [Græco-Roman]) help to explain the absence of moral reproach directed against the notorious ἑταῖραι of Athens. Resistance to the onset of Love is no less reprehensible than it is futile (Eur. frag. 340), though excessive indulgence is as much to be deprecated as entire abstinence (Eur. frag. 428). Such self-control as was exhibited by Agesilaus in refraining, despite the violence of his passion, from accepting the kiss offered by a beautiful Persian boy (Xen. *Ages.* v. 4 f.) was so rare that the historian felt it to be altogether marvellous.

5. Pæderasty.—The passage last quoted confronts us with that form of the love-passion, the love of boys, which has come to be known as 'Greek love,' and has tarnished the whole fabric of Greek morality. There is no trace of this custom to be found in the Homeric poems; for the assertion of such relations having existed between Achilles and Patroclus is not, so far as we can tell, earlier than Æschylus (frag. 136 [*Tragicorum Græcorum Fragmenta*², Leipzig, 1889, p. 44]). But there is no doubt of its antiquity, at any rate, among the Dorian branch of the Greek race. This is established by the evidence of certain Theraic inscriptions (*Inscriptiones Græcæ insularum maris Ægæi*, ed. F. Hiller von Gaertringen, iii. [1904] 536 f.); by the relation between the εἰσπνήλας and ἀΐτας in the disciplinary system of Spartan training (Plut. *Lyc.* xvii. f.; Ælian, *Var. Hist.* iii. 10, 12); and by the curious custom of the Cretans, according to which the lover carried off his favourite by a show of force, and was more or less seriously resisted according to his supposed merit (Strabo, pp. 483, 484). The inveteracy of the habit may be attributed to its long descent from a primitive period when continuous military service involved a scarcity of women (Bethe, in *Rhein. Mus.* lxii. 438 ff.). Moreover, it is fair to admit that the results of such companionship were by no means invariably bad.

> T. Gomperz has well remarked that 'the sentiment in question appeared in as many, if not more, varieties and gradations, than the love of women at the present day. Here, as elsewhere, a noble scion was often grafted upon a savage stock. Devotion, enthusiastic, intense, ideal, was not infrequently the fruit of these attachments, the sensual origin of which was entirely forgotten' (*Greek Thinkers*, Eng. tr., London, 1901–12, ii. 380).

Such an elevation of sentiment is the easier to understand if we bear in mind the continually increasing segregation of the sexes to which reference has already been made, and which, owing to the natural craving for sympathy and affection, left a gap to be otherwise filled. Widely spread as the evil undoubtedly was,[1] there were many—probably an increasing number—who were keenly alive to its disgrace. But sentiment varied among different communities, and, as compared with Athens, Thebes and Elis were subject to an unenviable notoriety in this respect (Xen. *Symp.* viii. 34; Plat. *Symp.* 182 D).

6. Philosophic love.—Such was the state of society when the teaching of Socrates began to open a new era in the progress of morality. By putting sexual desires more or less on the level of the other bodily wants (Xen. *Mem.* IV. v. 9, *Symp.* iv. 38), Socrates scarcely advanced beyond the prudential standpoint of the ordinary person. But his character, so completely vindicated by Alcibiades in the *Symposium* (215 A ff.), was free from any suspicion of vice; and, though he sometimes ironically pretended to be enamoured of beauty (Xen. *Mem.* VI. i. 2, *Symp.* iv. 27), and actually described himself as the lover of his younger companions and pupils (Xen. *Symp.* viii. 2), yet he energetically repressed the erotic tendencies of his associates (Xen. *Mem.* I. ii. 29, I. iii. 8), and required that a spurious love should be converted into a true friendship aiming solely at the moral improvement of the beloved object (Xen. *Symp.* viii. 27). Plato developed his master's teaching on this subject by connecting it with the innermost core of his philosophical system, and, in the dialogues *Symposium* and *Phædrus*, he expounded with matchless literary skill his doctrine respecting the true nature and purpose of love. The argument in the *Phædrus* (250 A) starts from the hypothesis of the immortality and pre-existence of the soul, which in its ante-natal state was associated with the eternal verities of the ideal world. Now, the ideas of Justice and Temperance are scarcely visible in their earthly counterfeits, and their apprehension is difficult and seldom attained. But Beauty is always so conspicuous that its phenomenal representation attracts at once the admiration even of those who are strangers to the mysteries of wisdom, and are engrossed in their mortal surroundings. Thus souls from which the glories of the images once beheld have faded by contact with earthly clogs, so far from being sanctified and inspired by the sight of beautiful forms, are stirred only with fleshly desire. But it is different with the lover who is also a philosopher, and his progress is described in the lecture of Diotima reported by Socrates in the *Symposium* (pp. 210, 211). The true lover, by contemplating the beauty of the beloved object, is immediately reminded of absolute Beauty itself. With his personal admiration for his beloved freed from the trammels of bodily fetters, he sees even more keenly the beauty of mind and character of which the outward form is only the reflexion. Presently he perceives the common kinship of beauty wherever it is manifested in action or thought, and learns that its complete apprehension is the task of a single science. Lastly, passing entirely from the individual to the universal, his soul is so greatly purified as to become re-united with the idea of Beauty itself, which is the ultimate source of all beautiful persons and things belonging to the phenomenal world. Such is the significance of τὸ ὀρθῶς παιδεραστεῖν (*Symp.* 211 B), or τὸ παιδεραστεῖν μετὰ φιλοσοφίας (*Phædr.* 249 A).[1] Plato's philosophy left its mark upon subsequent ethical speculation, but was too much exalted to affect the opinion of the ordinary citizen. Aristotle distinguished perfect friendship between good men based upon character from the spurious friendship of lover and beloved aiming at pleasure or utility (*Eth. Nic.* viii. 4. 1157*a* 1 ff.). Whereas the Epicureans entirely rejected love as a violent impulse attended by frenzy and distraction (Epic.

---

[1] The free use of the word παιδικά in this relation is itself significant.

[1] J. Burnet has recently undertaken to show that the whole of the doctrine commonly attributed to Plato was actually propagated by Socrates (*Greek Philosophy*, i., 'Thales to Plato,' London, 1914, p. 140). It is obviously impossible to discuss the question here.

frag. 483 [Usener]), the Stoics followed closely in Plato's footsteps by recommending it to the Wise Man as an attempt to produce friendship with youths who displayed in their beauty a capacity for virtue (Diog. Laert. vii. 129; Stob. *Ecl.* ii. p. 115, 1 [Wachsmuth]; Cic. *Tusc.* iv. 70, etc.). Plotinus, as might be expected, adopted the rules laid down in the *Symposium* as a means of approach to the supra-rational and transcendent First Being (Porphyr. *Vit. Plotin.* xxiii.). On the other hand, Plutarch, whose dialogue entitled ἐρωτικός aimed at reconciling conflicting views by a return to the commonsense point of view, while he was largely influenced by Platonic imagery, vindicated the claim of woman as the proper object of a divinely inspired passion (21, p. 766 E ff.). We even find Plato condemned altogether as unworthy of serious attention by such writers as Dionysius of Halicarnassus (*de Admir. vi dicendi in Demosth.*, p. 1027), Athenæus (508 D), and Heraclitus, the author of the Homeric Allegories (76, p. 101, 19).

7. Romantic love.—In the meantime we are able to trace the growth in Greek literature of the romantic love-story in which the hero and heroine, who have fallen in love at first sight, after a series of adventures are at last happily united. The realistic treatment by Euripides of certain tragic subjects was undoubtedly one of the causes which contributed to the appearance of the domestic drama known as the New Comedy. Among the stock elements in the plots of Menander and his rivals we find the intrigue of the son of a rich citizen with a slave-girl who often proves to have been originally a free-born Athenian exposed by or otherwise lost to her parents; the overreaching of an unsympathetic parent or a rascally pander by the cunning of a devoted slave or parasite; and the ultimate reconciliation of all parties, leading to the marriage of the happy lovers. But pathos and sentiment were entirely alien to the cold atmosphere and artificial mechanism of these plays. A new tone—that of sympathy with the fortunes of the lovers—asserted itself for the first time in some of the masterpieces of Alexandrian literature. Whether this was merely the result of the diffusion of the Hellenic spirit outside the confines of the city communities through the countries which then constituted the civilized world, or more specifically of closer acquaintance with popular Eastern tales such as that of Abradates and Panthea in Xenophon (*Cyrop.* v. i. 3, VI. i. 31 ff., iv. 2–11, VII. i. 29–32, iii. 2–16; see J. P. Mahaffy, *Greek Life and Thought*², London, 1896, p. 254; E. Rohde, *Der griechische Roman*², p. 583 ff.), it is impossible now to determine. The vigour of Alexandrian love-poetry receives its best illustration in the third book of Apollonius's *Argonautica*, where the growth of Medea's passion for Jason, the conflicting interests prompting her to struggle against it, and her final submission to an irresistible emotion are depicted with poetic power of a very high order. There is no doubt that Vergil made Apollonius his chief model when constructing the well-known episode of the loves of Dido and Æneas. Another example was the love-story of Acontius and Cydippe described by Callimachus in the course of a digression in the *Ætia*, the conclusion of which has recently been discovered in one of the Oxyrhynchus Papyri (no. 1011 [=vii. [1910] 15 ff.]). The various features which became common to the writers of these romantic narratives have been summarized (A. Couat, *La Poésie alexandrine sous les trois Ptolémées*, Paris, 1882, pp. 140–160; J. P. Mahaffy, *op. cit.* p. 256 ff.) as follows: (1) the minute portraiture of the personal beauty of the lovers; (2) the sudden interposition of the love-god at their first meeting; (3) the record of the misfortunes obstructing the fulfilment of their wishes; (4) the description of the pangs of thwarted love; and (5) the importance attached to the preservation of the virgin purity of the heroine amidst all her trials and dangers until her final reunion with the hero. It is unnecessary to follow in detail the influence exerted by the art of Callimachus and Philetas upon Latin poetry, and especially upon the works of Catullus, Propertius, and Ovid; but mention should be made of the Μιλησιακά of Aristides, which had an extensive circulation in the Roman era (Ovid, *Trist.* ii. 413; Lucian, *Am.* i.). This was a collection of erotic tales put together in the 2nd cent. B.C., whose general character may be inferred from Petronius, Apuleius's *Metamorphoses*, and Lucian's *Asinus*. The work of Parthenius dedicated to Cornelius Gallus was different in both scope and purpose: it consisted of excerpts relating to the misfortunes of lovers and drawn from various historians and poets. The characteristic features of the romantic love-story enumerated above were closely followed by the later romance-writers (ἐρωτικοί; cf. art. FICTION [Primitive] (*j*)), who were the direct inheritors of the Alexandrian tradition and became extremely popular in the Middle Ages (I. Bekker, *Anecd. Græca*, Berlin, 1814, p. 1082). The best of these novels was the *Æthiopica* of Heliodorus (3rd cent. A.D.), who was preceded by Xenophon, the author of the *Ephesiaca*, and followed by Achilles Tatius (*Leucippe and Clitophon*) and Chariton (*Chæreas and Callirrhoe*). The *Daphnis and Chloe* of Longus was constructed according to the same plan, but under the influence of the pastoral *Idylls* of Theocritus. To these names should be added the fictitious love-letters of Alciphron and Aristænetus, which aimed at restoring the Attic flavour of the New Comedy.

LITERATURE.—Several of the authorities consulted have been indicated above. Certain portions of the subject-matter are covered by E. Bethe, 'Die dorische Knabenliebe,' *Rhein. Mus.* lxii. [1907] 438 ff.; E. Rohde, *Der griechische Roman*², Leipzig, 1900. For the ethical development in general, see the authorities quoted under ETHICS AND MORALITY (Greek), and especially L. Schmidt, *Die Ethik der alten Griechen*, Berlin, 1888, i. 204–208; J. Denis, *Histoire des théories et des idées morales dans l'antiquité*², Paris, 1879, ii. 122–154.

A. C. PEARSON.

LOVE (Jewish).—The dictionaries define love as 'a feeling of strong personal attachment, induced by that which delights or commands admiration.' The subdivisions of this sentiment comprise the impulses of attachment, due to sexual instinct, or the mutual affections of man and woman; the impulses which direct the mutual affections of members of one family, parents and children, brothers and other relatives; the attachment that springs from sympathetic sentiments of people with harmonious character, friendship; and, finally, the various metaphorical usages of the word, as the love for moral and intellectual ideals. To the last class belongs the religious concept of love for God, while the particular Biblical conception of God's love for Israel is closely related to the idea of paternal affection.

1. Sexual love.—Love for woman as an irresistible impulse is most strongly represented in Canticles in the words:

> 'Love is strong as death; jealousy is cruel as the grave: the flashes thereof are flashes of fire, a very flame of the Lord. Many waters cannot quench love, neither can the floods drown it: if a man would give all the substance of his house for love, he would utterly be contemned' ($8^{6f.}$).

The passion of sexual instinct which must be elevated by a feeling of love is repeatedly referred to in the same book ($2^{6f.}$ 3^{5} $5^{6.\ 8}$ $8^{3f.}$; see also $1^{3f.\ 7}$ $2^{4f.}$ $3^{1\text{-}4.\ 5.\ 10}$ 7^{7}), and sensuous life of the low physical type is often mentioned either directly (Pr 7^{18}) or as the most natural metaphor for reprehensible inclinations (Hos 3^{1}). The Biblical stories give us repeated instances of the power of sexual passion, as in the case of Samson (Jg 14^{16} $16^{4.\ 15}$), where the demonic power of woman over man leads man to ruin. Similar is the case of Shechem (Gn 34), though in his case the love for Dinah is not of the strictly carnal nature which characterizes the relation between Samson and Delilah. The love of King Solomon for many strange women—a prototype of the baneful influence of the harem on politics in the Orient—is given in the Bible (1 K 11^{1}) as the cause of the downfall of the wisest of kings. The Rabbis consistently prove from this story that it is impossible for any man to guard against the influence of woman, and use this fact as support for the theological doctrine that law is unchangeable; for even Solomon, who thought he was wise enough to be safe from having his heart turned away by women (Dt 17^{17}), fell a victim to their influence (*Ex. Rabbā*, ch. vi., *Tanḥūmā*, *Ex.*, ed. S. Buber, Wilna, 1885, p. 18).

With equal force sexual passion is described in the case of Amnon, raping his stepsister Tamar (2 S 13), when, after the gratification of the brutal impulse, Amnon's passion turns into hatred and disgust (v.^{15}), a story which has a remarkable parallel in Max Halbe's tragedy *Jugend* (Berlin, 1893). The term 'love' is also used with regard to other physical pleasures, as love for delicacies (Gn 27^{4}).

2. Matrimonial and parental love.—The higher conception of matrimonial love as an attachment which elevates sexual relationship, just as the latter without such relationship is degrading, is often referred to both in principle and in illustrative story. The case of Jacob, who was willing to work seven years in order to gain Rachel, and the remark that those seven years passed by like 'a few days' (Gn 29^{20}), as well as the hope of Leah that the birth of her third son would make Jacob love her (v.^{34}), show that ideal matrimonial relations are to be governed by spiritual affection. Thus the marriage of Isaac and Rebekah, arranged by their parents, ripens into love (Gn 24^{67}). A further stage to the relation of Jacob and Leah is that of Elkanah and Hannah (1 S 1^{8}), where the husband tries to console his wife, longing for the blessing of children, by saying, 'Am I not better to thee than ten sons?' David is spurred by the love of Michal to do great acts of valour (18^{28})—a conception of life akin to that of troubadour times. Even in the story of Esther the king's love for the queen (Est 2^{17}), while in many ways showing the characteristics of an Oriental despot, willing to give half of his kingdom away in order to gratify the whim of an odalisk, is presented as an attachment seizing the king with the force of a sudden passion. Such passion is referred to in the case of a captive of war, and the law requiring that she be allowed time to become assimilated to her environment is dictated by a delicate understanding of womanly feelings (Dt 21^{10-14}). The placing of duty above personal feeling underlies the law for the conduct of a man who has two wives, one of whom is beloved, and the other hated (vv.$^{15-17}$). It is worthy of note that Rabbinical apologetics explains the love as a tribute of piety and hatred as being 'hated by God' (*Sifrē*, ed. M. Friedmann, Vienna, 1864, p. 113). At the same time Rabbinic ethics derives from this law a condemnation of polygamy as leading to domestic trouble (*ib.*). In a warning against sexual licence the author of Proverbs advises (5^{19}) devotion to 'the loving hind and the pleasant doe'; and the author of Ecclesiastes gives as a recipe for happiness the advice:

> 'Live joyfully with the wife whom thou lovest all the days of the life of thy vanity . . . for that is thy portion in life' (9^{9}).

It is significant that such advice was put in the mouth of King Solomon. In full harmony with this conception of domestic felicity, as the highest ideal of life, are many Rabbinical statements.

> 'Of him who loves his wife like himself and honours her more than himself, Scripture (Job 5^{24}) says: "Thou shalt know that thy tent is in peace"' (*Yᵉbhāmôth*, 62*b*).

Closely related to this conception of love is the love of children, so often referred to in the OT, and already implied in the many passages praising the happiness derived from the possession of children (Ps 127^{3-5} 128^{3}, Pr 17^{6}) and the misfortune of not having children, as in the case of Rachel, who would rather die than live without them (Gn 30^{1}), and in the similar case of Hannah (1 S 1). The love of Jacob for Joseph, because 'he was the son of his old age' (Gn $37^{3f.}$), and the love for Benjamin, who, in addition to being a son of his father's old age, was the only one left of his mother (44^{20}), are so naturally presented that they show the psychological continuity of human nature. The same feature of truly human life is seen in the story of Jacob and Esau, where the father loves the daring hunter Esau, while Rebekah feels more affection for Jacob, the young man of domestic habits (25^{28}). Such affection does not rest in the blood, but is often stronger in persons attracted by congenial feelings. There is hardly in the whole world's literature a nobler expression of devotion than the words spoken by Ruth to Naomi (Ru $1^{16f.}$), and the words of felicitation spoken to Naomi on the birth of Ruth's son, that Ruth's love for her is greater than that of seven sons (4^{15}), are felt by the reader of to-day as a profound truth, just as they were at the time when they were written. A similar feeling of affinity is that of the faithful servant, of which the law takes cognizance in the case of a slave who would rather stay in the house of his master than go free (Dt 15^{16}, Ex 21^{5}).

3. Friendship and wider love.—The love of friends is naturally presented in comparison with that arising from sexual and blood relationship. David says of Jonathan: 'Thy love to me was wonderful, passing the love of women' (2 S 1^{26}). A true friend is one 'that sticketh closer than a brother' (Pr 18^{24}). False friends who fail in the hour of need are often referred to (Ezk $16^{33.\,36f.}$ $23^{5.\,9}$, Hos $2^{9.\,12.\,15}$, La 1^{19}, Ps $109^{4f.}$). The happiness that friendship brings in poverty is contrasted with abundance and hatred (Pr 15^{17}). In correct interpretation of this experience the Rabbis speak of the natural friendship of the ostracized for each other, naming the proselytes, slaves, and ravens (Talm. *Pᵉsāḥîm*, 113*b*). As specimen of the highest love the Rabbis give the case of David and Jonathan (1 S 20^{17}), and contrast it with that of Amnon and Tamar, showing that the first, because unselfish, lasted, while the second, being based on carnal passion, could not last (*Ābhôth*, v. 16).

Love, as not limited to friends, but extended to all mankind, is a principle the priority of which Jewish and Christian theologians have been contesting with one another. On the Jewish side it was claimed that the command, 'Thou shalt love thy neighbour as thyself' (Lv 19^{18}), is universal. As proof for this conception it was adduced that the commandment of love in the same chapter is extended to the stranger, 'for ye were strangers in the land of Egypt' (v.^{34}),[1] and that, therefore, it expresses implicitly the idea of Hillel (*q.v.*)—a teacher of the 1st cent. B.C.—'What is hateful unto thee do not unto thy neighbour; this is the whole Torah, and all the rest is its commentary' (Talm. *Shabbath*, 31*a*). It is claimed that in the same sense Rabbi Aqîbā, a teacher of the 2nd cent., said: '"Love thy neighbour as thyself" is a great principle[2] in the Torah' (*Sifrā*, *Qᵉdhôshîm*, ch. 4; *Yᵉrūshalmī Nᵉdhārîm*, x. 3). Christianity, on the other hand, claims that Jesus, in the parable of the Good Samaritan (Lk 10^{30-37}), was the first to answer the question, Who is my neighbour?, in the universalistic sense.[1] One might introduce the argument that the Rabbis interpret the commandment, 'Love thy neighbour as thyself,' as teaching a humane method of execution, evidently implying that even the criminal remains our neighbour (Talm. *Pes.* 75*a*). The Hebrew word *ôhēbh* ('lover') for friend is also used in the social sense, as in the case of Hiram and David (1 K 5^{15} [EV 5^{1}]).

---

[1] See also Dt 10^{18}.

[2] Or the fundamental principle.

True love is tested by the sincerity which will not hesitate to rebuke and which will accept rebuke (Pr 9^{8}), but, on the other hand, loving friendship will overlook faults (10^{12} 17^{9}). In the same sense the Talmud reports that Johanan ben Nūrî praised his companion Rabbi Aqîbā for having loved him more each time that their teacher chastised him on the ground of a charge made by Johanan (*Arākhîn*, 16*b*). For this reason controversy on religious questions between father and son, teacher and disciple, will promote their mutual love (*Qîddūshîn*, 30*b*). At the same time it is commanded to suppress hostile feelings. In Talmudic casuistry the question is asked, What precedes, if a man see at the same time his enemy's and his friend's ox or ass lying under his burden (Ex 23^{5})? The answer is given that he must first help his enemy 'in order that he train himself in subduing passion' (*Bābhā Mᵉṣî'ā*, 32*b*). Love is also used in the plain social sense, as when it is said that 'breakfast removes jealousy and brings love' (*ib.* 107*b*). The making of friends is true greatness. He is a strong man who can turn his enemy into a friend (*Ābhôth R. Nāthān*, ch. 23). Just as true friendship is praised and recommended, so false friendship is condemned. The Rabbis warn man to keep at a distance from high officials, for 'they pose as lovers, when they have use for you, and will not assist you in the time of distress' (*Ābhôth*, ii. 3). The utilitarian point of view in friendship is presented in the case of Canaan who—so the Talmud says—admonished his sons to love one another, but at the same time to love all vices (*Pᵉsāḥîm*, 113*b*). On the other hand, it is cited as an expression of true love, when Rabbi Judah han-Nāśî, while the spiritual head of the Jewish community, repealed his own decision in a legal case when he heard that Rabbi Jose had decided differently.

4. Metaphorical uses.—Love in the metaphorical sense is used very frequently in connexion with wisdom, especially in the introduction to Proverbs (4^{6} 8^{17}); see also the counterpart of loving folly or hating wisdom (1^{22} 8^{36}). As true wisdom is identical with the Torah, we find the love of the Torah (Ps $119^{97. 163}$) and of God's commandments (vv.$^{47\text{f.}\ 159}$) monotonously repeated in the long Psalm, which evidently is the work of an early Pharisee who anticipates the ideal presented in the sayings of the Fathers:

> 'Turn it [the Torah] over and turn it over, for everything is in it, speculate over it, grow old and grey with it, and never depart from it, for there is no higher conception of life than this' (*Ābhôth*, v. 22).

This conception is repeated innumerable times in theory and story. In commenting on the passage, 'This day thou art become the people of the Lord thy God' (Dt 27^{9}), the Rabbis say:

> 'Israel had indeed become God's people forty years previously, but Scripture wishes to say that to one who studies the Torah earnestly, it becomes new every day' (*Bᵉrākhôth*, 63*b*).

As an example of such devotion Joshua is quoted (*Mᵉnāḥôth*, 99*b*), to whom God said, not in the sense of a commandment, but in the sense of a blessing, that the Torah should not depart out of his mouth (Jos 1^{8}).

The love of instruction—in Hebrew synonymous with reproof (Pr 12^{1})—wisdom (29^{3}), purity of heart (22^{11}), righteousness (Ps 45^{7}), and kindness (Mic 6^{8}) are characteristic traits of the pious, just as to love their opposites is characteristic of the wicked (Ps $52^{5\text{f.}}$). The injunction of Micah (6^{8}) to do justice, to love mercy, and to walk humbly with God is presented by a Rabbi of the 4th cent. as the sum-total of 'the 613 commandments of the Torah' (*Makkôth*, 24*a*). The true disciple of Aaron is, according to Hillel, 'he that loves peace and pursues it' (*Ābhôth*, i. 12; cf. Ps 34^{14}). To Rabbinic theology ethical conduct and ritualistic conformity are equally divine commands (*ib.* ii. 1), and therefore the righteous is he who practises God's laws without regard to material advantage. Moses took care of Joseph's remains (Ex 13^{19}) while the Israelites were busy trying to secure the booty of the drowned Egyptians, which shows how he loved God's commandments (*Sôṭāh*, 13*a*), for to bury the dead is the highest of the cardinal virtues (see To 1^{17-19} $2^{3\text{ff.}}$, Mt 8^{21}, Lk 9^{59}). Fulfilling God's commandments at a great personal sacrifice is another proof of love. The legend reports that Rabbi Gamaliel bought a palm-branch at a thousand drachmæ to fulfil the divine commandment (Lv 23^{40}) even while on board a ship (*Sukkāh*, 41*b*). A similar story of a great number of ducats paid for an *ethrôg* (citron used on the same occasion) is told by L. Münz, *Rabbi Eleasar genannt Schemen Rokeach*, Trèves, 1895, p. 115. God's sanctuary, as a place where only the righteous may set their foot (Ps 15^{1}), is also an object of love for the righteous (26^{8}). In a eudæmonistic sense love is advised for the practical pursuits of life in the Rabbinic saying:

> 'Love Mᵉlākhāh [work in the sense of man's occupation], avoid office and seek not the acquaintance of those in power' (*Ābhôth*, i. 10).

As devotion to practical pursuits, love is mentioned in the case of king Uzziah, who is praised as one who 'loved husbandry' (2 Ch 26^{10}). Perhaps the obscure passage in Ec 5^{9} is to be interpreted in this sense of a king who is devoted 'to the field.' The popularity of a king is referred to as love in 1 S 18^{16}. As a love of the ruler for the people the Rabbis define the devotion to public improvements in the case of Joshua, who is said to have built roads and erected public buildings (*'Ērūbhîn*, 22*b*). Time-serving is implicitly condemned in those who 'love the rich, while the poor is hated by his own neighbour' (Pr 14^{20}). Prophets who seek their own material advantage are denounced as 'watchmen loving to slumber' (Is 56^{10}), and the people steeped in materialism are said to 'love cakes of raisin' (Hos 3^{1}).

A special theological aspect of love in the metaphorical sense is the use of the word as referring to the mutual relation of God and Israel, both in Biblical and in Rabbinical literature. The traditional liturgy speaks very often of God's love for Israel in giving it His commandments, especially Sabbath and holy days, and this love is often referred to in the Bible as the love of a father for his children, as that of a loving husband, and especially as that of a bridegroom (Dt $7^{8. 13}$ 23^{7}, 1 K 10^{9}, 2 Ch 2^{11} 9^{8}, Is 43^{4} 63^{9}, Hos 3^{1} 9^{15} 11^{1} 14^{4}, Mal 1^{2} 2^{11}). Inasmuch as Israel is ordained to maintain the heritage of Abraham to do justice (Gn 18^{19}), God loves justice and righteousness (Ps 33^{5} 37^{28} 146^{8}, Is 61^{8}) and hates him 'that loveth violence' (Ps 11^{5}). As Zion stands for the embodiment of all that is noble, God loves Mount Zion (78^{68}); and, as Israel's patriarchs were the living representatives of this ideal, God loves them and, for their sake, their descendants (Dt 4^{37}). Just as Israel is not selected by God for His power, but for His righteousness (Dt 7^{8} 10^{15}; cf. Pr 15^{9}), so He loves the humble (Is 66^{2}) and His symbol, the stranger (Dt 10^{18}). Prosperity is not a sign of God's love, and affliction is not a sign of His hatred, for the Lord often 'correcteth him that he loveth' (Pr 3^{12}; see Job 5^{17}). Yet prosperity is repeatedly quoted as a token of God's love, as in the case of Solomon (2 S 12^{24}). In a satirical sense the correctional value of suffering is referred to in a Talmudic story.

---

[1] M. Lazarus, *Die Ethik des Judentums*, Frankfort, 1898, pp. 144–183.

> R. Ḥānînā calls on his friend R. Johanan who is ill, and asks him whether he loves his sufferings. Johanan answers: 'Neither the sufferings nor their reward' (*Berākhôth*, 5*b*).

The case of king Manasseh (2 Ch $33^{12\mathrm{f.}}$) is quoted as proof that suffering ought to be received with love (*Sanhedrîn*, 101*b*).

As a fundamental doctrine R. Aqîbā presents the principle that God loved mankind, for He created man in His image; He loved Israel, for He called them His children; and, furthermore, Israel is beloved by God, for He gave them a most precious gift, His Torah (*Ābhôth*, iii. 14). R. Aqîbā evidently wishes to grade God's love as the love of mankind in general, of Israel in particular, and of the law-observant Israelite as the best beloved. God, according to Rabbinic ethics, loves especially the humble and peaceful (*Berākhôth*, 17*a*), and more generally him who is beloved by his fellow-men (*Ābhôth*, iii. 10). Modesty is the best means to gain God's love.

> 'I love you, says God to Israel, because, when I elevate you, you humble yourselves, for Abraham called himself "dust and ashes" (Gn 18^{27}), and Moses said of himself and Aaron: "What are we?" (Ex 16^{8}), and David called himself: "I am a worm, and no man" (Ps 22^{6})' (*Ḥûllîn*, 89*a*).

God loves, says the Talmud in a different passage (*Pesāḥîm*, 113*b*), him who is calm, temperate, and humble, but hates him who is a hypocrite, who does not offer testimony when he knows something of the case, and who sees his neighbour commit a wrong and testifies, although he is the sole witness (gossip). Most probably in the sense of condemning luxury in the building of synagogues R. Ḥisdā, who lived in Babylonia in the 3rd cent., says, commenting on Ps 87^{2}:

> 'God loves the gates, ornamented with the Hălākāh [play on words: *ṣîyūn*, 'heap of stones,' and Ṣîyôn] more than all synagogues and schoolhouses' (*Berākhôth*, 8*a*).

It is consistent with this principle that the true Israelite who is beloved of God is in the sense of St. Paul (Ro 2^{28}) the spiritual Israelite, and therefore the heathen who came to Hillel to be converted, and desired to be assured that he might become high priest, was satisfied when he heard that 'the stranger who comes with his staff and wallet has the same rights as the Israelites who are called God's children' (*Shabbāth*, 31*b*). Israel is beloved by God, for the *Shekhînāh* accompanies them wherever they are exiled (*Megillāh*, 29*a*). A distinctly polemical idea is found in the statement of R. Jose, who says: 'God loves Israel so that they need no mediator' (*Yômā*, 52*a*), probably an antithesis to the statement in the Gospel of John (3^{16} 14^{6}). Yet the Rabbinic theologians considered also a miracle a proof of divine love (*Ḥăgîgāh*, 26*b*; *Ta'ănîth*, 20*a*).

The correlate term to God's love for Israel is Israel's love for God. It is enjoined as a duty in Dt 6^{5}, and this section is the principal part of the daily morning and evening devotion, thus practically enjoining the doctrine of Jesus (Mt $22^{37\mathrm{f.}}$), which makes this the principal commandment. The injunction to love God is typical of the Deuteronomic code (5^{10} 7^{9} 10^{12} and often) and of the Psalms, where the pious are called lovers of God, of His salvation, or of His righteousness (5^{11} 31^{23} 40^{16} 97^{10} 119^{132} etc.). To those who love Him God will do good (Ex 20^{6}, Dn 9^{4}, Neh 1^{5} 13^{26}, Mal 1^{2}), and therefore Abraham (Is 41^{8}, 2 Ch 20^{7}) and Solomon (1 K 3^{3}) are called lovers of God, and Jehoshaphat is reproved for loving God's enemies (2 Ch 19^{2}), whom the pious must hate (Ps $139^{21\mathrm{f.}}$).

An important theological discussion, leading back to the early days of Christianity, is carried on in the Talmud between R. Eliezer and R. Joshua, whether the piety of Job is to be found in his love or in his fear of God (*Sôṭāh*, 27*b*). The love of God is characterized in the Talmud by man's conduct, which sheds lustre on his religion (*Yômā*, 86*a*). As Zion stands for Israel's ideal, the pious are those who love Zion (Ps 122^{6}) and the wicked those who love strange gods, often presented by the metaphor of adultery and sinful love (Is 57^{8}, Jer 2^{25} 8^{2}, Ezk 16^{16}, Hos 2^{17} 4^{18}). From a practical point of view the Talmudists say that one who marries his daughter to a Rabbi (*Kethûbhôth*, 111*b*), or one who studies the Torah with no expectation of worldly glory (*Nedhārîm* 62*a*), loves God. A special sign of the love of God is submission to His decrees, as in the case of Hananiah ben Hezekiah and his school, who wrote down 'the scroll of the fasts' (a chronicle of Israel's misfortunes) because they rejoiced at the tribulations, thus exemplifying the spirit of Job, who served God out of love.

See, further, 'Semitic and Egyptian' section below, §§ 2, 4.

Joseph, 'Jewish Ethics,' in *Religious Systems of the World*, London, 1901, pp. 695–708.

G. Deutsch.

LOVE (Muhammadan).—Although in the Qur'ān the vengeance and wrath of Allāh are more forcibly depicted than His mercy and love, any one reading the successive revelations in chronological order, as far as possible, will observe that the latter conception was gradually gaining ground from the hour when the Prophet's struggle for recognition began to the day when his victory was no longer doubtful. The epithet *wadūd* ('loving') is applied to Allāh in a *sūra* of the oldest Mecca period (lxxxv. 14); but, with this exception, and a few others dating from the period immediately before the Prophet's migration, all the Qur'ānic references to divine love occur in those chapters which were revealed at Medina. It is likely that his settlement in a city where he could not fail to be brought into contact with Christian ideas co-operated with the happy change in his fortunes and caused him to emphasize the milder aspects of Allāh in a corresponding degree. Of these references, which are about thirty in number, most are brief statements that God loves various classes of men—*e.g.*, the beneficent, the patient, those who trust in Him, fight for Him, keep themselves pure, and so on—and that He does not love various other classes, such as the transgressors, the proud, and the unjust. Muḥammad denies the claim of the Jews and Christians to be the children and, in a peculiar sense, the beloved of Allāh (v. 21). Man's love of God is mentioned in three passages: some men take idols which they love as much as they love Allāh, but the faithful love Allāh more than anything else (ii. 160); those who love God must follow His Prophet, then God will love and forgive them (iii. 29); if any of the faithful apostatize, Allāh will fill their places with men whom He loves and who love Him (v. 59).

Many traditions ascribed to the Prophet on the subject of divine love go far beyond the somewhat arid and perfunctory allusions in the Qur'ān, but there is no reason to suppose that they are genuine. They belong to the mystical doctrine which developed under Christian influence in the 2nd cent. of Islām, and which in the course of time established itself, as a guiding and inspiring principle, at the centre of Muhammadanism. The following examples are often cited by Ṣūfī authors:

'When God loves a man, his sins hurt him not; and one who repents of sin is even as one who is without sin' (*Qūt al-qulūb*, Cairo, 1310 A.H., ii. 50. 15).

God said: 'False are they who pretend to love Me, but when the night covers them sleep and forget Me. Does not every lover love to be alone with his beloved? Lo, I am near to those whom I love. I hearken to their secret thoughts and prayers, and I am the witness of their moaning and lamentation' (*ib.* ii. 60. 22).

God said: 'My servant draws nigh unto Me by works of devotion, and I love him; and when I love him, I am the ear by which he hears and the eye by which he sees and the tongue by which he speaks' (cf. al-Qushayri, *Risāla*, Cairo, 1318 A.H., 169, penult; there are several versions of this tradition).

It is obvious that the doctrine of divine love will assume different forms according to the relative orthodoxy of its exponents. We often find it linked with mysticism of an ascetic or devotional type, while in other cases it accompanies a thorough-going pantheism, or occupies various points between those extremes. The subject is exhaustively treated by Ghazālī in bk. vi. of his *Iḥyā* (Būlāq, 1289 A.H., iv. 280–349). Only a brief abstract can be given here, but this will suffice to show the scope and development of the doctrine as it is set forth in the most popular and authoritative encyclopædia of Muhammadan ethics.

Love (*ḥubb*) is the natural desire for that which gives pleasure; when that desire grows intense, it is called 'passion' (*'ishq*). Each of the bodily senses takes pleasure in different objects. Similarly, the spiritual sense, whose organ is the heart (*qalb*), has its own objects of pleasure which are imperceptible to the bodily senses. Ghazālī enumerates five chief causes of love: (1) *Self-interest.* Every one desires to preserve his life or to make it as perfect as possible. Therefore men hate death and seek wealth, children, etc. (2) *Beneficence.* Men love those who benefit them. This is indirectly a species of self-love. (3) *Disinterested love of good.* Sometimes a good man is loved for his own sake, not for any advantage that may be derived from him. (4) *Love of beauty* (moral or spiritual), when the whole pleasure which it gives consists in the perception of it. (5) *Spiritual affinity.* Ghazālī then proceeds to demonstrate that all these motives have their ultimate source in God, who is the sole object of true and perfect love, although love of God necessarily includes love of the Prophet and the saints. The strongest and rarest motive, he says, is spiritual affinity. Man is called to an *imitatio Dei* in respect of certain attributes, according to the tradition, 'Form yourselves on the moral nature of God' (*takhallaqū bi-akhlāq Allāh*). He becomes near to God through his acquisition of knowledge, benevolence, compassion, and other virtues. But, underlying this, there exists between God and man a real and intimate relation, of which Ghazālī speaks with the utmost caution as an ineffable mystery which is revealed to theosophists. It is indicated by the verse of the Qur'ān where God says that He breathed His spirit into man, by the divine command given to the angels to worship Adam, and by the tradition that God created man in His own image.

Every human sense and faculty seeks a particular end, which constitutes its pleasure. The spiritual faculty—it is described by different names, *e.g.*, reason, faith, illumination, insight—seeks to know the essences of all things. God is the highest object of knowledge; therefore knowledge of God is the highest pleasure. The gnostic (*'ārif*) inevitably loves that which he knows and contemplates; and his love increases in the same degree as his knowledge. Both spring up together in his heart when he has purged it of worldly desires and sensuous impressions. What he longs for is perfect contemplation and perfect knowledge. The former, though it is not attainable in the world of phenomena, may be enjoyed in the beatific vision hereafter, but perfect knowledge of the Infinite Reality can never be reached either in this world or in the next. Consequently the gnostic's longing (*shawq*) is everlasting; even in the bliss of union with God he moves unconsciously towards an unrealizable perfection.

Having defined love as the soul's desire for that which gives it pleasure, Ghazālī points out that the term is metaphorical in its application to God, who wants nothing and regards nothing except His essence and His essential attributes. When it is said that God loves certain men, the intended meaning may be expressed as follows: God raises the veil from their hearts in order that they may behold Him spiritually, and enables them to draw nigh unto Him, and has eternally willed that they should so draw nigh by means of works of devotion, which are the cause of their becoming pure within, and of the raising of the veil from their hearts, and of their attaining to the rank of nearness to God. All these are acts of favour, involving no change in the divine perfection, but inwardly transforming the person who is the object of them. How shall a man know that God loves him? Ghazālī answers this question by enumerating the signs which characterize the lovers of God, since their love of Him is the best proof that He loves them. The true lover yearns to meet God and therefore desires death, or, if he be unwilling to die, it is because he feels that he is not yet ripe for the heavenly vision; he is assiduous in worship and good works, for disobedience cannot co-exist with perfect love; he loves recollection (*dhikr*) of God, and he loves the Qur'ān, which is the Word of God, and the Prophet and his fellow Muslims and all God's creatures, yet he has no joy but in solitary communion with his Beloved, knowing that the more he loves God in this world the greater will be his bliss in the world to come. Some long for paradise, and they shall enter it, but God will give Himself only to those who have fixed their desires on Him. According to Ghazālī, true love always contains an element of fear: the lover dreads lest God should turn away from him or deprive him of contemplation, not on account of such sins as are committed by ordinary men, but to punish him for the hidden deceit (*al-makr al-khafī*) of insincerity, spiritual pride, preoccupation with spiritual delights, and similar offences against divine love, from which no one except the firmly grounded theosophist is secure.

In his concluding chapters Ghazālī explains the meaning of two terms, *uns* and *riḍā*, which denote states connected with the fruition of mystical love. *Uns* is the joy of immediate contemplation of the divine beauty without regard to any possibility that the present experience may be transcended at some future time. Such persons flee from intercourse with mankind, and when they appear in the company of others they are really alone. God allows them to address Him familiarly and to use a freedom of speech that would be considered blasphemous in any one less enraptured. *Riḍā* ('satisfaction') signifies willing acquiescence in whatever God has ordained. The lover cheerfully accepts tribulation and suffering at the hands of men, because he sees that God is the only real agent, and that all good and evil is divinely decreed. Ghazālī shows that prayer is not incompatible with *riḍā*. He also refutes those who use the doctrine of *riḍā* as an argument in favour of antinomianism.

In more advanced and pantheistic forms of Ṣūfīism the term 'love' becomes a symbol for the soul's aspiration to attain *fanā*, *i.e.* to lose itself in union with God. Especially do the Islāmic mystical poets exhaust all the resources of erotic imagery in order to describe the subtleties of a passion that is wholly pure and spiritual; though sometimes the same style may be deliberately adopted as a mask for other sentiments or as an artistic device. The selflessness associated with the highest types of human love makes it an apt emblem of the ecstasy in which the mystic passes away from consciousness of his individuality and lives only in the eternal and universal. The following lines by Ḥallāj are often quoted:

'I am He whom I love, and He whom I love is I;
We are two souls dwelling in one body.
When thou seest me, thou seest Him,
And when thou seest Him, thou seest us both'
(L. Massignon, *Kitāb al-Ṭawāsīn*, Paris, 1912, p. 134).

As the true lover thinks only of his beloved, so the true mystic thinks of nothing but God. Such meditation, however concentrated it may be, cannot in itself produce love, which is a divine gift of rapture beyond the reach of learning; it is the inevitable effect of love, not its cause. By emancipated Ṣūfīs the word 'love' is constantly employed to denote the essential spirit of all religion as contrasted with particular creeds, the ardent inward feeling of adoration as distinguished from ritual ceremonies and forms of worship. Love is the harmonizing and unifying element that transcends sectarian differences.

'Because He that is praised is, in fact, One,
In this respect all religions are one religion'
(Jalāl ad-dīn Rūmī, *Masnavi*, abridged tr., by E. H. Whinfield, p. 139).

'None of the two and seventy sects with mine
Agrees, nor any faith but Love Divine.
Saint, sinner, true believer, infidel,
All aim at Thee: away with name and sign!'
('Omar Khayyām, ed. E. H. Whinfield, London, 1901, no. 287 [translated by R. A. Nicholson]).

Thus the value of religious systems, including Islām itself, is only relative, and depends on their power to inspire love. Acts of devotion inspired by any other motive are worthless. There is no paradise except union with the Beloved, and no hell except separation from Him. These doctrines lead many Ṣūfīs into a position that practically coincides with free thought. On the other hand, if love of God stands in sharp antithesis to conventional religion, it is equally opposed to logic, philosophy, and every form of intellectual activity. Real knowledge does not come through the mind; it is a divine revelation that flashes upon the hearts of those whom God loves. Possessing 'the light of certainty,' the lover wants no evidence for his faith, and scorns the demonstrative arguments of the theologian.

REYNOLD A. NICHOLSON.

LOVE (Roman).—Nothing is more significant of the practical character and the prosaic morality of the early Roman than his attitude towards love. In the earliest known period of Roman religion, the so-called 'religion of Numa,' we do not find a single trace of any deity connected with love. Now, inasmuch as all phases of life had their representatives in the world of the gods, the conclusion would seem to be inevitable that, while there was, of course, natural affection, there was no pronounced development of sentiment, along either moral or immoral lines. Immoral expression was checked by that extraordinary self-restraint which characterized a people who were instinctively conserving all their energies for future conflicts; and expression along moral lines was discouraged by the severely practical view of marriage merely as an institution for the propagation of the race. So far as we are able to tell, therefore, we have in the case of the early Romans a people without any deity of love. In the course of Rome's development she was destined to receive a goddess who was eventually to represent in her world all that the Greeks included under the concept of Aphrodite. This goddess was known as Venus, and was, from about the year 300 B.C. onwards, identified with Aphrodite; but she did not exist in Rome before Servius Tullius, for we have absolutely no trace of her in the 'calendar of Numa.' On the other hand, the name *Venus* seems Latin, and it is certainly Italic and not Greek;[1] and the fact that, when the Romans learned of Aphrodite, they called her by this name seems to indicate that she was known to them before Aphrodite was, and that there was sufficient resemblance between her and Aphrodite to make an identification possible. Our first task, therefore, is to find what is known about Venus in the period before Aphrodite arrived. All books on Roman religion, except a few of the most recent ones, are full of information about an Italic, a Latin, and even a very early Roman Venus. It is our duty first to examine these statements.

1. The question of the Italic Venus.—In general the assertion is made that in very early times there was present throughout Italy the cult of a goddess who was called Venus. But a closer examination shows that many of the facts adduced to prove this statement are of very doubtful value. (1) It has been repeatedly said that this goddess of gardens was especially worshipped in Campania, that, in other words, she is the Venus so famous at Pompeii, the *Venus Pompeiana*. But this is false, for the Venus Pompeiana is the Venus whom the veterans of Sulla brought to Pompeii when they were settled there, the goddess of the *Colonia Veneria Cornelia*, a combination of Venus-Aphrodite and Felicitas (see below, § 3). Her cult, therefore, does not antedate the first cent. before Christ. (2) We hear of the worship among the Oscans of a goddess akin to Venus, a certain *Herentas* (mentioned in three Oscan inscriptions: two from Herculaneum [R. von Planta, *Gramm. der oskisch-umbrischen Dialekte*, Strassburg, 1892–97, ii. 510], and one from Corfinium [*ib.* ii. 546]). In one of these inscriptions Herentas has the cognomen *herukinaí* (=*Erucinæ*, *i.e.* the Aphrodite of Mount Eryx in Sicily). This proves, therefore, that the goddess resembled Aphrodite; it tells nothing of Venus, so far as any early Italic cult is concerned.[1] (3) We are in a similar position regarding *Frutis*, for whom we have two passages: Cassius Hemina, quoted by Solinus, ii. 14, who tells us that in the country of the Laurentes Æneas dedicated the statue of Aphrodite, which he had brought from Sicily, to 'Mother Venus who is called Frutis'; and Paulus, in the excerpt from Festus (p. 90), who says that the temple of Venus Frutis was called *Frutinal*. But these passages show merely that an otherwise unknown goddess Frutis[2] was identified with Aphrodite, and again nothing is gained for the old Italic Venus. (4) There are, however, traces of a very early Venus cult at Lavinium and Ardea. Strabo (p. 232) tells us that Lavinium had a temple of Venus which was the common property of all the Latin cities (*i.e.* the Latin league), and that it was in charge of priests from Ardea; further, that near Ardea itself there was a shrine of Venus, which served as a meeting-place for the Latins. These statements must be taken at their full value, in spite of the fact that suspicions readily suggest themselves. It is suspicious, for instance, that Pliny (*HN* iii. 56) and Pomponius Mela (ii. 4) refer to a place in this region as Aphrodisium—an unfortunate name for an old Latin cult. Following the ordinarily sound principle that on solemn occasions the Romans often made sacrifice at the mother-city of a Roman cult, Wissowa tries to prove (*Religion und Kultus der Römer*^{2}, p. 289) that Ardea was the source of the Venus-cult in Rome, because in 217 B.C. the Decemviri (later Quindecimviri), who had charge of the Sibylline books, commanded the Romans to sacrifice to Venus at Ardea (Livy, XXII. i. 19). The Roman cult may well have come from Ardea, but this reference scarcely proves it, for the sacrifice was made under Greek auspices, and the connexion of Ardea and Rome in the Æneas-legend was likely to suggest such an act, merely as one step in the metamorphosis of the Æneas-legend into a State dogma, which was taking place during the 3rd cent. B.C.

2. Traces in Rome of the early worship of Venus.—If a search for early traces of an Italic Venus is not very rewarding, an attempt to discover early traces in Rome itself is still less so. The three old cults of Venus ordinarily quoted are Venus Cloacina, Venus Libitina, and Venus Murcia, all of them old, but not one of them originally or at any time officially connected with Venus. (1) *Venus Cloacina.* Cloacina was the goddess of the *cloaca*, and possessed a shrine on the north side of the Forum, near the Comitium, at a point where the Cloaca Maxima entered the Forum.[3] No ancient writer refers to her as Venus Cloacina until Pliny (*HN* xv. 119, and, depending on him, Servius, *ad Æn.* i. 720) makes Cloacina a cognomen of Venus. Starting from this, a passage in Obsequens (8, from the year 178 B.C.), where he speaks of a fire in the Forum as having absolutely destroyed the temple of Venus, has been interpreted to mean a temple of Venus Cloacina. On the contrary, the presence of an old Venus-temple near this point may have been the origin of the false association of ideas.[4] (2) *Venus Libitina.* The old Roman goddess Libitina, whose cult was connected with the burial of the dead, and whose sacred grove on the Esquiline was the headquarters of the undertaking establishments of Rome, had originally no connexion with Venus. Later she was popularly confused with Venus, forming Venus Libitina—a combination which never existed in the actual cult. It is easy to see two or three things which led to this: the presence eventually of a temple of Venus not far from the shrine of Libitina; the association of Aphrodite with graves, and her cognomen ἐπιτυμβία; lastly, Venus's own cognomen *Lubentina*, or *Libentina*, which was readily confused with Libitina.[1] (3) *Venus Murcia.* Murcia was an old Roman goddess, whose nature was entirely forgotten in the closing centuries of the Republic, but whose name was kept alive by association with a shrine (*sacellum*) in the valley of the Circus Maximus on the Aventine side. The locality was known as *ad Murciæ* or, later, as *Murcia vallis.* Subsequent generations, trying to find who Murcia was, connected her with *Murtia*, *Murtea*, *Myrtea*, and so thought that they had found in her a cognomen of Venus, the goddess of the myrtle.[2]

[4] On Cloacina cf. Plaut. *Curc.* 471; Livy, III. xlviii. 5; Pliny, xv 119; Obseq. 8 [62]; for her image on a coin see H. Cohen, *Description historique des monnaies de la république romaine*, Paris, 1857, 'Mussidia,' 6, 7; cf. H. Dressel, *Wiener Studien*, xxiv. [1902] 418 ff.

Little thus remains of an old Venus-cult in Rome, except the temple near the shrine of Libitina, which need not be older than the 3rd cent. B.C. We have seen, therefore, that there are very slight traces of early Italic Venus-worship, and still slighter ones of specifically Roman worship. The existence of the Italic name Venus, by which Aphrodite was known at her introduction into Rome, compels us to presuppose some sort of an Italic deity with that name, who was known and worshipped before the coming of Aphrodite. There is another possibility, which we venture merely to suggest, namely, that we have in Venus a case which resembles in part the case of Hercules and Castor-Pollux, and in part that of Mercury. Like Hercules and Castor-Pollux, she may have been originally a Greek deity, who moved up through Italy, and became nationalized into a Latin cult at Ardea, just as Hercules was at Tibur and Castor-Pollux at Tusculum. On the other hand, the name may have been derived, like that of Mercury, from the translation into Latin of an explanatory cognomen. But, whether Venus was from the beginning a Latinized form of Aphrodite or an original Italic goddess later identified with Aphrodite, one clue to her character is afforded us in the fact that, when the directly Greek Aphrodite came (and, of course, she came before the Æneas-legend), it was especially her function as a goddess of gardens that appealed to the Romans. This function, secondary in Greece, seems to have been primary in Rome.[3]

3. The coming of Aphrodite.—We do not know exactly when or how the Aphrodite-cult came into Rome—probably not at first by order of the Sibylline books. She came, however, before the Æneas-legend, though, of course, Aphrodite and Æneas were subsequently inseparably connected. The first datable temple is in 295 B.C., and the first official proclamation of the Æneas-dogma by the State was in the year 282 B.C. Naturally Aphrodite was known before 295 B.C., and the Æneas-legend had been circulated privately before it was publicly proclaimed. The two oldest temples of Venus-Aphrodite in Rome were the one in the grove of Libitina, the date of whose foundation is unknown, but was probably in the 3rd cent. B.C., and the one founded in 295 B.C. near the Circus Maximus. The dedication day of both these temples was August 19th, which was also the festival of the *holitores*, or kitchen-gardeners (Varro, *de Ling. Lat.* vi. 20)—a proof of the emphasis laid upon Aphrodite's function as goddess of gardens. The temple of 295 B.C. was, however, in its origin connected with Venus-Aphrodite as a goddess of love rather than of gardens, for it was built by the ædile, Q. Fabius Gurges, from the fines obtained from the punishment of women taken in adultery (Livy, X. xxxi. 9). During the First Punic War the Romans became acquainted with the cult of Aphrodite on Mount Eryx in Sicily; during the Second Punic War, in the year 217, this goddess, under the name of Venus Erycina, was formally introduced into Rome at the command of the Sibylline books, and given a temple on the Capitoline. A generation later, in 181 B.C., another temple[1] of Venus Erycina was built outside the Porta Collina. But, though Aphrodite may have come in first as the goddess of gardens, this deity of Mount Eryx was pre-eminently a goddess of love, with a pronounced accent upon illegitimate love. A reaction was inevitable, and about the beginning of the 2nd cent. B.C. an altar was erected to Venus Verticordia (Ἀφροδίτη Ἀποστροφία [cf. Paus. IX. xvi. 3; L. Preller and C. Robert, *Gr. Myth.*, Berlin, 1894, i. 368]), who 'turns the heart back' from evil passions (cf. Val. Max. VIII. xv. 12; Pliny, *HN* vii. 120; Solin. i. 126). In 114 B.C. a temple was erected to this same goddess (Ovid, *Fasti*, iv. 133 ff.; Obseq. 37; cf. Oros. V. xv. 22) as an atonement for a prodigy which showed the anger of the gods on account of the unchastity of three Vestal virgins. We do not know where this temple was (Servius, *ad Æn.* viii. 636, wrongly places it in the valley of the Circus Maximus, confusing it with Murcia). Thus by the end of the 2nd cent. B.C. Rome was equipped with two forms of the worship of the goddess of love—the Venus of Mount Eryx, representing licentious love, and the Venus Verticordia, domestic affection. Finally, during the last century of the Republic, Venus assumed three more forms. First, under the leadership of the dictator Sulla, who translated his name *Felix* into ἐπαφρόδιτος and devoted himself especially to the worship of Aphrodite, we have the rise of the cult of Venus Felix, a combination of Venus and Felicitas. This is the Venus Pompeiana (cf. *CIL* iv. 26, 538, 1520, 2457) of whom we find so many pictures at Pompeii; secondly, we have Venus Victrix, for whom, in company with Felicitas, Pompey erected a temple in connexion with his theatre, in 55 B.C.; and lastly comes the Venus Genetrix of Julius Cæsar, the mother of the Julian house, for whom the dictator built a temple in the middle of his Forum (46 B.C.). Thus the tradition was established that Venus was the especial protectress of the Imperial house—a tradition which must have influenced Hadrian in the building of his magnificent temple of Venus and Roma (on the site of the present church of S. Francesca Romana), in A.D. 135.

It is scarcely necessary to add that Amor, Cupid, etc., are merely the Latin translations of the names of Greek gods of love, and that they are confined in Rome entirely to poetry and art, and were never the recipients of an actual cult.

Thus we have seen that, so far as we are able to tell, Rome began life without any deities of love; that her first genuine goddess of love was the

---

[1] On Libitina cf. Dion. Hal. iv. 15; Plut. *Quæst. Rom.* 23; Ascon. *in Milon.* 34; *CIL* vi. 9974, 10022.

[2] On Murcia cf. Varro, *de Ling. Lat.* v. 154; Livy, I. xxxiii. 5; Pliny, xv. 36; Fest. p. 148; Serv. *ad Æn.* viii. 636.

[3] On Aphrodite as the garden-goddess cf. the cult-name Ἀνθεία (Hesych. *s.v.*); the gardens at Paphos, ἱεροκηπίς (Strab. p. 683); the Urania ἐν Κήποις in Athens (Paus. I. xix. 2); and the Aphrodite ἐν καλάμοις at Samos (Strab. p. 343; Athen. xiii. 572 F). On Venus as garden-goddess in Rome cf. Nævius, quoted by Paulus, p. 58, where Venus=*holera*, 'vegetables'; Plaut. *Men.* 371 (cf. Pliny, *HN* xix. 50); Varro, *de Re Rust.* I. i. 6; Fest. p. 265; *CIL* iv. 2776; and the frequent references in *CIL* vi. to the Venus Hortorum Sallustianorum; cf. Huelsen, *Röm. Mitt.* iv. [1889] 270 ff.

[1] This temple is not to be confused with the Venus Hortorum Sallustianorum (*e.g.*, *CIL* vi. 122), which R. Lanciani thought he had located (*Bull. arch. com.* xvi. [1888] 3 ff.; cf. Huelsen, *Röm. Mitt.* iv. 270 ff.).

Greek Aphrodite; that even here the Greek ideas of Venus Erycina were offensive to her feelings, so that a corrective was sought and found in Venus Verticordia; that in the last century of her Republic three of her great rulers paid homage to Venus as their especial protectress; and, finally, that the example of Julius Cæsar's cult of Venus Genetrix elevated Venus into the goddess of the Imperial household during a large part of the Imperial period which followed.

JESSE BENEDICT CARTER.

LOVE (Semitic and Egyptian).—**1. Among the primitive Semites.**—No written records or oral traditions have come down to us from that remote time when the forefathers of the several branches of the Semitic race dwelt together in the desert of Central Arabia. Our knowledge of that period is derived solely by the comparative method of research, which assumes that common elements in the life, thought, and language of the later Semites are an inheritance from their early ancestors. The love-songs of the Babylonians, the Egyptians, the Hebrews, and the Arabs disclose many common features that we may unhesitatingly assume to have belonged to primitive Semitic thought.

The poems of the pre-Muhammadan Arabs in particular have preserved the ancient type with remarkable fidelity. For generations this poetry was transmitted by oral tradition, but in the second, or the third, century of Islām the songs were collected and written out by the grammarians. The most important collections are the *Ḥamāsa*, which contains 884 songs, or fragments; the *Mu'allaḳāt*, or seven most famous poems; the *Mufaḍḍalīyāt*, a collection of thirty odes, the *Dīwāns*, or collected poems, of Labīd; and the *Kitāb al-Aghānī*, which contains the traditions in regard to the lives of the poets and the circumstances of the composition of their songs.

Love is the emotion that finds most frequent expression in the old Arab poetry. Every *ḳaṣīda*, or ode, begins normally with an account of the poet's affection for some woman and his grief at separation from her, and continues with a description of the way in which he solaces himself for her loss by war, or by adventure on his fleet camel or horse. The *ḳiṭ'a*, or fragment, the other main type of Arabic lyric, is often merely a portion of an ode. Where it is an independent composition, it usually has love for its theme. The seven *Mu'allaḳāt* are all love poems, and the 124 songs of the fourth division of the *Ḥamāsa* all treat of this subject.

These poems show that, although Arabian society had already passed into the patriarchal stage in the pre-Muhammadan period, yet many traces of a primitive matriarchal organization still survived (see *ERE* ii. 116ᵇ). The greatest liberty existed in the relations between the sexes; and women were free not only to choose their husbands, but even to receive in their tents lovers of other tribes. During the winter the rainfall was sufficient to cover the great steppes of the Nejd with scanty verdure, and to replenish the springs that dried up in summer. Then the tribes forsook their permanent headquarters by the perennial springs, and wandered far and wide over the plains. The clans were brought into new temporary relations, and their men and women had the opportunity to become mutually acquainted. The result was numerous inter-tribal attachments.

The poets relate how they first met their lady-loves, and were captivated by their charms. Imra al-Ḳais hid the clothes of 'Unaiza while she was bathing, and would not return them until she promised to carry him home with her on her camel. Duraid fell in love with al-Ḫansa, herself a poetess, while, scantily clad, she was anointing a sick camel with pitch. Under such circumstances it is not surprising that the bards were able to describe the charms of their mistresses with as great detail as those of a favourite she-camel. Large parts of the poems are devoted to word-pictures of the beloved that are as circumstantial as the praises of the 'fairest among women' in the Song of Songs. As among the modern Orientals, fatness and heavy perfumes are specially admired in women. When an attachment was established, the poet made secret visits by night to the tent of his inamorata. If she were a maiden, she went out with him into the solitude of the desert, dragging a heavy garment behind her to obliterate the footprints in the sand (*Mu'allaḳa* of Imra al-Ḳais, 28 ff.). If she were a mother, she remained in her tent, receiving his caresses with one hand, while with the other she stilled her babe (*ib.* 18). The poet protested his devotion and fidelity, and besought her to cease coquetry, and give him her love; and, he assures us, his entreaties were not in vain. Often the lady belonged to a hostile tribe, and such visits were accomplished only by stealing past the sentries at the risk of life (see *ERE* ii. 116ᵃ). The poems are full of accounts of such love-adventures, and Imra al-Ḳais even boasted to 'Unaiza of the number of women that he had loved in the past (*op. cit.* 7, 18).

All this came to an end with the cessation of the winter rains and the drying up of the springs and the pasture. Then the tribes moved away to their distant homes, and the lovers were separated.

The poets tell us how they visited the spot where the tent of the beloved had stood and found it deserted. They called to mind the happy hours that they had once spent there, and shed bitter tears, and refused to be comforted. All the poems of the *Mu'allaḳāt* begin with this theme, and they show rare beauty and pathos in its treatment.

Love of family and friends also finds frequent expression in the old Arab poetry, particularly in the laments, one of the most numerous and most beautiful products of the lyric art.

This passion, like all strong human emotions, was ascribed to the direct influence of a divinity. Possibly in the earliest times a special dæmon presided over love in distinction from the powers that presided over reproduction and birth. Traces remain of an old Arabian god Wadd, *i.e.* 'love' (see J. Wellhausen, *Reste arabischen Heidentums*², Berlin, 1897, pp. 14–18; *ERE* i. 662). Little is known about his character, but he may be a personification of love similar to other Semitic gods such as Gîl, 'joy,' and Paḥad, 'fear' (Gn 31$^{42. 53}$). His erotic character is evident from a verse of Nābigha preserved by Ibn Ḥabīb and cited by Wellhausen (p. 17):

'Farewell Wadd, for sporting with women is no longer permitted us, since religion is now taken seriously' (*i.e.* since the introduction of Islām).

However this may be, it is certain that, long before the separation of the Semitic races, the function of inspiring love had been assigned to the great mother-goddess 'Ashtar, the giver of springs and the producer of life in all realms of the organic world. Under the varied forms that this divinity assumed in different Semitic lands she was everywhere the goddess of love. The love that she inspired was not merely sexual, but also maternal, paternal, fraternal, and social. In the ancient Arab poetry she is occasionally mentioned by the titles al-Lāt, 'the goddess,' and al-'Uzzā, 'the strong,' and the infrequency with which she appears is almost certainly due to Muslim substitution of Allāh for al-Lāt. In other Semitic literatures she is constantly described and invoked as the awakener of love (see ASHTART, vol. ii. p. 115 f.; ATARGATIS, *ib.* 165 f.; ISHTAR, vol. vii. p. 430).

This goddess was the chief divinity of the Semites in their primitive matriarchal stage of social organization. She was the analogue of the human matriarch, free in her love, the fruitful mother of her clan, and its leader in peace and in war. In her supremacy there was a potentiality of monotheism peculiar to the Semites; and it is a fact of deep importance for the growth of the religion of Israel that its starting-point in primitive Semitic religion was not the deification of nature, but the deification of maternal love. In the cult of the mother-goddess there existed in germ the message of the Prophets that God is most truly revealed in unselfish human love, and the message of the gospel that the supreme revelation of God is the perfect love of Jesus Christ.

2. Among the Hebraic Semites.—When the matriarchal form of society gradually gave place to the patriarchal, it was no longer natural to think of the chief deity of the tribe as a mother, but rather as a father. Two things might then happen to the old mother-goddess ʿAshtar. (1) She might be degraded to the position of consort of one or more male gods. This was the step taken in Babylonia, Syria, Canaan, and most other parts of the Semitic world. It involved a surrender of the incipient monotheism that was characteristic of primitive Semitic religion, and an adoption of polytheism. It also involved an over-emphasis of the sexual element in the conception of deity. (2) ʿAshtar might change her sex and become a father-god. Thus the monotheistic tendency of primitive Semitism would be preserved, and the paternal element would be blended with the maternal in the conception of the tribal god. This was what happened in the branch of the Semitic race to which the Hebrews belonged. In S. Arabia, Abyssinia, and Moab, ʿAshtar changed her sex and became the masculine ʿAthtar (=ʿAshtar) who retained feminine characteristics (see *ERE* ii. 115^b; cf. also vii. 429^b). In Ammon and Edom also the tribal god was masculine and had apparently no feminine associate. Jahweh was originally a god of this sort. He was the father of His people, who united maternal characteristics with paternal, and who reigned without a consort. This is a phenomenon of great interest in the development of Hebrew monotheism. By it sexual dualism, the curse of other Semitic religions, was avoided, and at the same time maternal tenderness was retained as a fundamental element in the conception of the deity.

3. Among the ancient Egyptians.—Our knowledge of love and gods of love among the Egyptians is derived partly from the pictures and inscriptions on the monuments, and partly from occasional references in the elegant literature, but mainly from collections of popular love-songs. The chief of these are the London MS (Harris 500), which dates from about 1400 B.C.; the Turin MS, which dates from about 1200 B.C.; the Gizeh ostracon, from about 1350 B.C.; and the Paris fragment, which may be a copy of an original of the Middle Empire. These were first published by C. W. Goodwin, *TSBA* iii. [1874] 380, and G. Maspero, *JA*, 8th ser., i. [1883] 5; and in a much more correct edition and translation by W. M. Müller, *Die Liebespoesie der alten Ägypter.* They contain true folk-poetry, free from the artificialities and tediousness of the conventional Egyptian classics and of the ordinary Oriental literature, and in their simplicity and directness they make a strong appeal to modern taste and interest. The poems in these MSS show the same loose arrangement that is seen in the Hebrew Song of Songs.

The Egyptians belonged to the Hamitic stock, which was closely related to the Semitic; and from the earliest times they were mixed with infusions of Semitic population. It is not surprising, therefore, that their conceptions of love were similar to those of the ancient Semites. In the earliest times they seem to have been organized matriarchally (see A. Erman, *Life in Anc. Egypt*, Eng. tr., London, 1894, p. 155), and at this time their marriage was exogamous; but with the adoption of agriculture they passed over to a patriarchal organization and endogamous marriage. In order to retain their small farms in the family, marriage with a sister, or half-sister, became a common practice, just as among the Hebrews and settled Arabs marriage with a cousin on the father's side was usual (*ib.* p. 154). Hence in the poems the regular name for 'lover' is 'brother,' or 'sister,' as in the Song of Songs the 'fairest among women' is called 'sister,' *i.e.* 'kinswoman.'

In spite of the patriarchal endogamous organization of society, the ancient freedom of the matriarchal exogamous organization was still accorded the Egyptian women, as among the pre-Muhammadan Arabs. The liberty of the Egyptian women was without a parallel in the ancient world, and is rivalled by only a few of the most progressive modern communities. In every respect, legally and socially, they were on an equality with men. In sexual relations they were as independent as their brothers. They were free to marry the men of their choice, and a case is on record of a daughter who threatened to starve herself if she were not permitted to marry as she pleased. Under these conditions the danger of sexual licence was as great on the part of the women as on that of the men (*e.g.*, Potiphar's wife, Gn 39); at the same time an honest, equal love was attained between men and women that has not since been possible until modern times.

An interesting result of this independence was that women wooed men as often as men wooed women. In the love-poems the 'sister' speaks more frequently than the 'brother.' The maiden is sent out by her mother to catch wild fowl in nets, but she confesses that she has been so distracted by thoughts of her beloved that she has caught nothing all day (Müller, *Liebespoesie*, p. 22). She invites her beloved to walk with her in the park between Memphis and Heliopolis, and runs to meet him with her hair decked with flowers and a flower fan in her hand (*ib.* 29); she invites him to hunt with her in the green marshes that are full of birds and flowers (*ib.* 20); she takes him bathing with her, and lets him see her charms through a dress of fine diaphanous linen (*ib.* 41). When he does not respond quickly enough to her advances, she plies him with wine until he becomes more yielding (*ib.* 39); and, when this means fails, she resorts to love-philtres, though she knows that this is punishable by beating with rods (*ib.* 17). She asks him why he does not take her to cook for him, since she is so lonely without him (*ib.* 23). When she has won his love, she describes her transports of joy, and tells how she silences his every excuse for leaving her (*ib.* 14). She chides the dove (the bird of ʿAshtar) for disturbing the meeting with her lover by its cooing (*ib.* 24). When he has left her, she walks in the garden, and every flower tells her something about him (*ib.* 26). The fig offers its shelter to her as a trysting place (*ib.* 39), the pomegranate threatens to tell her secret (*ib.* 39), the sycamore promises not to reveal what it has seen (*ib.* 40). Sometimes, as in other lands, the lover does not come when he is expected; then the maiden mourns for him, suspects that he has stayed with another girl, and hopes that he may make the new love as miserable as he has herself (*ib.* 25). Sometimes the 'sister' is cast off by her 'brother'; then she raises a bitter lament, and prays the gods to restore him to her (*ib.* 28).

The 'brother' also expresses his emotions, although less often than the 'sister.' Unlike the Semites, the Egyptians did not admire fatness, but preferred a girlish, undeveloped figure. Their beauties had a fair complexion, large dark eyes, whose expressiveness was enhanced by pointing the edges of the lids with stibium, masses of jet black hair, red lips, white teeth, quantities of jewellery, particularly earrings, garlands of flowers on the head and around the neck, and, above all, plenty of heavy perfumery. The poems dwell on the 'scent' of the beloved more often than on any other feature (cf. Ca 1^3). The 'brother' is smitten by the charms of his 'sister' (Müller, pp. 16, 44); her love fills him as honey mixes with water, or as a strong spice penetrates a perfume (*ib.* 15); he is ensnared by her locks, as a wild goose is caught in a net (*ib.* 16); he is sick from love, and cannot be cured until she comes to him (*ib.* 18). When he goes on a pilgrimage to a temple, he can think of nothing better to ask of the gods than a meeting with her, and he begs each of them to give her his favourite flower to adorn her for his coming (*ib.* 18). He longs to be her slave, to be scolded or beaten by her, if only he may be with her (*ib.* 19); her handmaid, that he may see her lovely form, her washerman, that he may smell the perfume of her garments, her ring, that he may be ever on her hand (*ib.* 43). He swims a river full of crocodiles in order to meet her, and is filled with ecstasy when he sees her (*ib.* 42). Her kiss intoxicates him like beer (*ib.* 42).

In connexion with these poems a number of gods, such as Ptah, Sekhmet, Nefer-Atum, and Amon (*ib.* 18, 23), are invoked to favour one's suit; but the proper divinity of love was Pet, 'the sky,' who, under the forms of Nut, Neith, Bast, Hathor, and a variety of other local names, was the chief Egyptian goddess. She was conceived either as a celestial cow, whose belly formed the dome of the sky, or as a woman raised up from the embrace of her brother-husband, the earth-god Keb. Under the form of Hathor, 'abode of the sun,' at Denderah she attained the greatest glory, and became one of the chief divinities of the empire. Here she was depicted as a benevolent-faced woman with the ears of a cow, or with a head-dress consisting of the horns of a cow enclosing the solar disk (see *ERE* vii. 430^{a}). Since she was originally a sky-goddess, her function as love-goddess must be regarded as secondary, and as due to Semitic influence. The Semites who settled in Egypt in the earliest period found in her characteristics as mother and as cow the nearest counterpart to their own mother-goddess 'Ashtar, and accordingly attributed to her all the erotic qualities of the latter. Thus she early became the Egyptian form of 'Ashtar, and the two goddesses were regarded as identical both by the Asiatic Semites and by the Egyptians. The Canaanite 'Ashtart was depicted with the attributes of Hathor, and Hathor with the attributes of 'Ashtart. During the XIXth dynasty 'Ashtart received extensive worship in Egypt under her own name, or under the epithet of Ḳadesh (see *ERE* iii. 182^{a}, 184^{b}).

4. Among the Hebrews.—We know that love-poetry existed among the ancient Hebrews from such incidental allusions as Am 6^{5}, Is 5^{1} 23^{16}, but specimens of these compositions have as a rule been excluded from the books of the OT. Only the Song of Songs, thanks probably to an allegorical exegesis, has found a place in the sacred canon. This is to be regarded as a collection of folk-songs, similar to those found in modern Palestine, which were sung at weddings in the villages round about Jerusalem. As such it is an invaluable source of information in regard to the Hebrew conception of love. The collection as a whole dates from the Persian or Greek period, but its individual songs may have a much greater antiquity. Besides these primary sources, we have numerous incidental references to love in the other books of the Bible.

The earlier writings of the OT show that women enjoyed much of the freedom that existed among the primitive Arabs and the Egyptians. They dared to love even before they had been wooed (1 S 18^{20}), and they were allowed to express their choice in marriage (Gn 24^{58}). In the Song of Songs the woman is fully as ardent as the man.

The same passionate intensity that existed among the primitive Semites was found also among the Hebrews. The Song of Songs bears a close resemblance to the love-poetry of the ancient Arabs and of the Egyptians. It describes the physical charms of the beloved with the same sensuous detail (*e.g.* 4$^{1-15}$ 7$^{1-7}$ 5$^{10-16}$), and it praises the joy of love with an ardour that is surpassed by no other literature ancient or modern (*e.g.*, 1$^{2.\ 4}$ 2$^{3-5}$ 4$^{9.\ 10.\ 16}$ 5^{1} 7^{10}–8^{4}). This erotic tendency led the early Israelites into all sorts of sexual excesses. Polygamy, concubinage, and prostitution remained unchecked down to a late time, and brought no disgrace to either man or woman. Married women were required to be chaste, but no limits were set to the licence of the men. Love led often to crimes of violence (Gn 34^{2}, 2 S 11. 13); but, on the other hand, it also produced beautiful instances of self-sacrificing devotion (Gn 24^{67} 29^{20}, Hos 3^{1}) and of persistent, though unrequited, love (Gn 29$^{18.\ 32}$). The OT shows also numerous cases of strong paternal love (Gn 25^{28} 37^{3}, 2 S 12$^{15-17}$ 18^{33}), and the love of David and Jonathan stands out conspicuously as the most perfect friendship in all literature (1 S 18^{1} 20^{17}, 2 S 1^{26}).

With all these forms of love Jahweh, the God of Israel, was closely connected in the early Hebrew consciousness. There is strong evidence that He was originally the tribal god of the Kenites who dwelt at Mount Sinai, and that He first became the God of Israel through the work of Moses. Among the Kenites He can have had no consort, for otherwise she would have been adopted by Israel at the same time when He was accepted; but in the old Hebrew religion we find no trace of any such goddess. Jahweh must, accordingly, have belonged to the class of Semitic gods that have been considered above (2), namely, mother-goddesses that were transformed into father-gods in consequence of the transition from the matriarchal to the patriarchal form of society. As such He united with paternal characteristics all the maternal characteristics of the ancient Semitic chief goddess 'Ashtar. (1) He was a god who manifested Himself in life-giving springs (*ERE* ii. 285^{b}). (2) He was the producer of vegetation, and sacred trees stood in His sanctuaries (*ERE* ii. 286). (3) He was the creator of animals; the Passover was celebrated in acknowledgment of His gift of the young of the flock, though these were still known as '*ashtarôth* (Dt 7^{13} 28$^{4.\ 18}$). (4) He presided over sexual love; circumcision, a primitive Semitic rite of preparation for marriage, was the special badge of loyalty to Him (Ex 4$^{24f.}$, Gn 34). In swearing by Him the hand was placed 'under the thigh' (Gn 24$^{2.\ 9}$ 47^{29}). The *ăshērā*, the symbol of the mother-goddess, stood originally beside His altar (2 K 13^{6} 18^{4} 21^{7} 23$^{6.\ 15}$). The *qᵉdhēshîm* and *qᵉdhēshôth*, or temple-prostitutes (see art. HIERODOULOI [Semitic and Egyptian]), were connected with His temples in pre-prophetic times, and did not disappear until after the Deuteronomic reformation (1 K 14^{24} 22^{46}, 2 K 23^{7}, Hos 4^{14}, Dt 23^{18}). (5) He was the giver of children (Gn 21^{1} 30$^{2.\ 22}$, 1 S 1^{20}). His most characteristic blessing was 'be fruitful and multiply' (Gn 1^{22} etc.). A plausible etymology of His name is that it means 'He who causes to live,' *i.e.*, gives children and the young of the flocks and herds. To Him as the giver of offspring the first-born of animals and the first-born child were originally sacrificed, as to the mother-goddess 'Ashtar (Ex 22^{30} 34^{19} 22^{29}, Ezk 20$^{24-26.\ 31}$). (6) He showed maternal love in His care of His people (Hos 11$^{1-4}$, Is 49^{15} 63^{9}). (7) He was the moral governor of His people (Ex 21–23. 34). (8) He gave oracles for the guidance of His people (1 S 14$^{18-20.\ 36-42}$ 28^{6} 30^{7}). (9) Like the old mother-goddess, He was a god of war, who fought for the defence of His children (Ex 15$^{3f.}$ 17^{16}, Jg 5^{23}, 2 S 5^{24}, Dt 23^{14}). (10) By a natural association of thought He was also, like 'Ashtar, a storm-god, who came in the thunder-cloud to fight for His people (Jos 10^{11}, Jg 5$^{4f.}$, 1 S 12^{17}, Ps 18). (11) He was the destroyer as well as the giver of life (Gn 7. 12^{17}, 2 S 24^{13}). For the analogies of these traits in 'Ashtar-Ishtar see *ERE* ii. 115 f., vii. 429–431. These facts seem to show that the Kenite Jahweh was the old Semitic goddess of love and fertility who had been transformed into a father. These maternal traits were never wholly lost in the later development of the religion of Israel.

The message of Moses, that Jahweh, the God of the Kenites, had taken pity on Israel and had determined to rescue it from the bondage in Egypt, laid an altogether new emphasis upon the love of this god. His affection for Israel was not necessary, like that of a parent for a child, but was free and moral, like that of a husband for a wife. Henceforth the redeeming love of Jahweh in the deliverance from Egypt and in the gift of the land of Canaan became the keynote of the religion of Israel. From His people He demanded exclusive worship and a love for Him like His love for them. As early as the Song of Deborah His worshippers are called His 'lovers' (Jg 5^{31}). It is clear also that from the first Jahweh demanded a kindness to fellow-Israelites similar to that which He had shown when He delivered the nation from bondage. Thus for Israel Jahweh became the God of love in an ethical sense that had not yet appeared in any other Semitic religion.

After the conquest of Canaan Israel was confronted with the problem of the relation of Jahweh to the gods of Canaan. This problem was solved by the identification of Jahweh with the *bᵉʿālîm* and other male divinities of the land, so that their sanctuaries and rites became His, and they ceased to exist by being absorbed into Him (*ERE* ii. 291^{b}). With 'Ashtart, 'Anath, and other goddesses the case was different. They could not be identified with Him, and He had no consort with whom they could be combined; consequently they remained His rivals with whom He waged war to the death. In all the pre-Exilic literature Jahweh is never once said to inspire sexual love, although this was certainly one of His primitive functions, apparently because this was regarded as the work of His rival 'Ashtart. Everything connected with the sexual life and with birth rendered one 'unclean,' that is, 'tabu' from participating in the worship of Jahweh, because of the association with the hated mother-goddess; yet, with curious inconsistency, Jahweh was still regarded as the giver of children.

In the Prophets from Hosea onwards the moral love of Jahweh that had appeared already in the Mosaic religion received fresh emphasis. In his love for his wife Hosea saw 'the beginning of Jahweh's speaking' unto him (Hos 1^{2}). When she forsook him for her lovers and plunged into the depths of degradation, he found that he could not give her up, and, when the opportunity came to buy her as a slave and to take her back to his home, he eagerly embraced it (3^{1-3}). Through this experience of unselfish love in himself he received his vision of the love of Jahweh for Israel. Jahweh had taken Israel as His bride at the time of the Exodus and had loved her ever since with unfailing fidelity; she had forsaken Him for the *bᵉʿālîm* of Canaan, yet He could not give her up. He must send her into exile to reform her, yet He would not cease to love her; and, when she repented, He would restore her. This message of Hosea is echoed by all the other pre-Exilic prophets, and finds its noblest expression in the words of Jer 31^{3}, 'I have loved thee with an everlasting love.' It is the recognition that in unselfish human love the truest revelation of the character of God is found.

In return for His love Jahweh demanded the undivided love of Israel. This teaching found its classical expression in Dt 6^{5}, 'Thou shalt love Jahweh thy God with all thy heart, and with all thy soul, and with all thy might.' The recognition of Jahweh's love for Israel carried with it the realization that He required love in the Israelite's treatment of fellow-Israelites. This thought runs through all the pre-Exilic prophets, and is finally summed up by the Holiness Code (*c.* 600 B.C.) in the words, 'Thou shalt love thy neighbour (*i.e.* fellow-Israelite) as thyself' (Lv 19^{18}). Even the alien residing in Israel was to be treated kindly (Dt 10^{19}, Lv $19^{33f.}$), but the extension of such treatment to the foreigner was not yet imagined (Dt 14^{21} 15^{3}, Lv $25^{44f.}$). The interpretation of Jahweh's love in the terms of wedded love reacted also upon the conception of marriage. In the post-Exilic period monogamy became the rule, prostitution was condemned, and men were urged to cleave in fidelity to the wives of their youth (Pr 5^{3-23} 9^{13-18} 31^{10-31}). This higher ideal of marriage is nobly expressed in Ca $8^{6f.}$: 'Love is as strong as death, passion as insatiable as Sheol. The flashes thereof are flashes of fire, a very flame of Jahweh. Many waters cannot quench love, neither can the floods drown it. If a man should give all his possessions in exchange for it, would any one despise him?' Here wedded love is regarded as more precious than all worldly possessions, and as a flame kindled by Jahweh Himself in the soul. An utterance of such purity and profundity concerning love is not found in the whole range of classical literature.

Jesus took up the prophetic conception of the love of God for Israel, and clarified and intensified it by teaching that love was not merely an attribute, but the very essence of the divine nature. The Prophets said, 'God has love'; Jesus taught, 'God is love' (1 Jn 4^{16}). He also declared the universality of God's love, which had not yet been grasped by the Prophets (Jn 3^{16}). He reaffirmed the old commandments, 'Thou shalt love Jahweh thy God with all thy heart,' and 'Thou shalt love thy neighbour as thyself,' and gave them new meaning by His juxtaposition of them, through which love to man became the supreme expression of love to God, and by His new interpretation of 'neighbour' as meaning every fellow-man (Mk $12^{30f.}$, Lk 10^{25-37}). He recognized that in Himself God's love to man and man's love to God and to man were perfectly manifested, and therefore He proclaimed Himself as the supreme revealer of God and the reconciler between God and man.

See, further, 'Jewish' section above.

LOVE-FEAST.—See AGAPE.

LOYALTY.—1. Derivation and definition.—The connexion between the common meaning of this word and its derivation is obscure enough to suggest that a clearer apprehension of its significance may be gained by considering its probable origin. 'Loyalty' is the Anglicized form of the French *loyauté*; its base is *loi*, and corresponds to the English 'law' and the Latin *lex* (stem *leg*). French has also *légalité* and English 'legality,' the late Latin abstract term being adopted without change either of meaning or of form.

Now *loi* in French, and more particularly in the derivative *loyal*, means in respect of its denotation much more than 'law' in the limited sense of a definite written code. It is a generic term, and stands for that which ought to be obeyed; its source may be the will of an acknowledged ruler or ruling class, or it may be popular consent, or it may be personal agreement, whether by contract or by voluntary allegiance. It stands, moreover, for the law of nature and the dictates of reason and conscience, more especially and imperatively if these are conceived in terms of religion as manifestations of the Divine command. Law to the ancient Hebrew of the last few centuries before our era meant this last, and, in so far as it evoked his sentiment of loyalty, it meant little else. To every man the object of his loyalty is as *loi*, or 'law,' in the sense of our inquiry—the authority whose claim on his allegiance he, as a true man, admits. Furthermore, in the natural exercise of his quality, the loyal man applies it to all persons and groups of persons in whom he recognizes any claim of bounden duty or faithful service.

But not only is the range of application wide; the claim for loyal service goes very deep: it is the service of those who desire to serve, and to do so up to the limit of their ability. The law is to be within them, written on their hearts, as the Scripture says, and incorporate in their will. The whole of Ps 119 is, indeed, an expression of the loyalist spirit in application to the Divine law. The devotion expressed by this loyalist in religion is entire; the Divine law is conceived as not perfectly apprehended by him, but he sets no limit to his desire to fulfil it to the end. It is by this note of unlimited purpose, upheld by faith and chastened by humility, that the loyalty of the Psalmist stands out in contrast to the spirit of precise legality, limited by the letter of the law and its tradition, that marked certain developments of a later era. This distinction between the loyalist and the legalist may be found in all times and all places. It applies to allegiance of every kind, whether it be to the supreme law however conceived, or to human ordinance by ancient tradition, modern statute, authoritative utterance of prophet or king, the word of a leader, the rule of a commander. There is the legalist who does what he is told, breaks no rules; he keeps faith to the word that is written and can be read. There is the loyalist who does this but can by the very nature of the spirit that is in him be counted on for more, who puts his whole mind into his duty, who forms his spirit in accordance with the spirit of the purpose to be served.

Loyalty, then, may be defined as the quality of character which issues in free devoted service to the appointed person or the appointed cause. Thus the perfectly loyal person is certain to obey, to serve, despite all obstacles, at all costs, to the best of his ability. And the best of his ability implies that he uses all means to make himself efficient in knowledge and skill and in understanding the requirements laid upon him. The perfect loyalist of story corresponds to this description. We always find him carrying out his instructions—which are his *loi*—with zealous care to undertake them so that, by fulfilling them in the spirit as well as in the letter, the purpose may be accomplished even should the letter fail. He has to be intelligent, alert, resourceful—not merely obedient to precise instructions given—and these qualities he needs the more in proportion to the importance and difficulty of his task. It follows that the development of perfect loyalty throughout a company requires that the duties should be accurately apportioned in accordance with the abilities of each member. It requires also that opportunities for the training and exercise of latent abilities should be given to all. This ideal does, in fact, appear, both in pagan heroic story and in mediæval romance, as characterizing bands of pre-Christian heroes and bands of Christian knights.[1] The unwritten law—not mere personal law, but a pact of comradeship—that bound the Round Table knights to mutual loyalty, and to the king above all, is a notable case in point. The two chief cycles of Irish Gaelic story are noteworthy also in this connexion. Later comes the age of chivalry with its blossom of romantic lore. Fealty and loyalty are main dramatic motives in all these.

2. Loyalty and fealty.—'Fealty,' from Latin *fidelitas*, 'faithfulness,' has an equivalent in all the Romance languages, and so has 'legality.' But loyalty was neither of these. English adopts the French *loyal* to mean 'law-fulfilling' in the sense of the Sermon on the Mount, and distinguishes it from 'lawful,' or 'legal,' which means allowable, and from 'law-abiding,' which connotes submissiveness to the law, the passive quality of the orderly citizen. German translates by specialization and slight change of significance, using such words as *Untertanentreue* (fidelity in a subordinate) and *Vaterlandstreue* (fidelity to the Fatherland); the quality, of course, exists in many diverse applications, and, though fidelity or fealty is not identical with loyalty, the one characteristic is apt to be accompanied by the other. Loyalty connotes a certain specialization of good faith and faithfulness towards the person, principle, ideal, or covenant in respect of which it is expressed; it lays stress on this obligation of specialized fealty rather than on any wider duty of humane comradeship and general goodwill. Nevertheless, there is close affinity between those qualities, the deeper motives of which so widely overlap. The good comrade who, in time of danger or trouble, takes up his responsibilities with settled mind and faithfully sustains them is apt for loyal service wherever his allegiance is given. This is often understood to be given when it is not as a fact, in which case we have either the sturdy rebel or the disloyal man.

The giving of allegiance is in effect a vow to serve; the standard case of loyalty coincides, therefore, with the standard case of fealty in which a pledge of service is given, as, for instance, by oath of allegiance to a king, by marriage vows between two persons, or by acclamation—and vote—in tribal assemblies, when law was promulgated and accepted thus. The standard cases are the same, but in the development of thought the two ideas differ. Loyalty specializes in respect of the object of service, fealty in respect of faith to the pledge. Of these the latter is the more necessary for virtuous character, and so it has been judged by the common sense of mankind, as the testimony of language shows. So long as men were either free or under strict rule, they were simply required either to keep their covenants in the former case or to do what they were told in the latter; faith and obedience were their primal social virtues. The conception of religion, for instance, as consisting in a covenant with the god, was a distinct advance on its conception as a slave service by which he was to be propitiated. The Bible as a whole contains the story of man's progress in religion from the slave service of the bondsman, through covenant, to the free man's willing recognition of a law which it is at once his bounden duty and his delight to obey, and thence to conformity of mind with the Divine purpose for mankind and thus to 'the glorious liberty of the sons of God.' Here we have the specific evolution of loyalty in its highest application, as at once the supreme duty, the supreme delight, and the social virtue of man. On a much smaller scale of motive and in a murkier atmosphere we might trace it in application to finite secular affairs.

3. Personal honour expressed in devotion to social ends.—The free development of fealty by self-discipline to social ends, and of loyalty as a particular case, may be studied in the literature of chivalry and romance. The practice of knightly vows, however, is much older and pre-Christian; so far as records go, it was specially characteristic of the people and the social conditions reflected in Celtic hero lore. The champion of the Gaelic stories is essentially a free man, free of feudal and —except for the spirit that binds him—free of tribal bonds. Social affection binds him too, but honour is his only law. The young hero from his childhood is educated carefully in all manly accomplishments, and in all social courtesies, including respect for women, children, and grey hairs. He emerges from his tutelage free, comradelike, and courteous, a strong individual. But this is not all. Not the least important part of his education is the contribution which he makes to the formation of his character by laying bonds or obligations (in the Gaelic *geis*) on himself that he will or will not do certain things. The obligation never to refuse assistance to a woman frequently occurs, and may supply occasion for the turning-point of the story. Others are of the nature of obligations to a king, leader, or comrade, or to all the members of a band. King Arthur and his Round Table come to mind, or, for those who know Gaelic story, Fionn and the band of heroes whose story has been a fund of moral instruction for western Irish children to this day. Some stories turn on a conflict of two loyalties, each claiming dominion over the loyal soul. The discussion of such difficult situations, however, is not in terms of loyalty, but in terms of keeping faith; in a certain typical case where the vows appear to be of equal weight the decision is given on grounds of common sense quite modern in complexion, whether one agrees with them or not.

---

[1] Thomas Malory, *Morte d'Arthur*; see also the Celtic originals in the Welsh *Mabinogion*.

This practice of self-made vows in the social interest has, no doubt, been a principal factor of moral education, in its best form of self-discipline for the sake of service, among the peoples of N.W. Europe, where mild forms of government by loose tribal organization of free men prevailed. Faith to a self-made vow covers all cases of voluntary allegiance, and so, as the feudal system was established throughout Europe, it availed itself instinctively of this free man's social virtue by the institution of the oath of fealty from the feudal subordinate to his over-lord. At this point loyalty emerges; fealty and respect for authority maintain each the other and are fused. Fealty, however, is not exhausted in the compound. It remains as the quality of faith to the pledge once given, the central virtue of the self-respecting hero who cannot be false to his word. Carried to the point of fulfilment in spirit, rather than merely in letter, this implies not being false to the reasonable expectations involved in mutual understandings between his fellows and himself. The ideal of the honourable man signifies all this. Such a one is 'loyal,' or 'leal,' so far as his conduct goes, but in his motive he is primarily 'feal.' It may be that only he himself is aware of the difference. As a rule, no doubt, the motives are mixed, but it seems probable that in many, or indeed most, cases either one or the other is the backbone of the composite characteristic. If so, it is important that in the education of each person sufficient demand should be made on the leading trait to evoke it strongly, and sufficient social opportunity given to direct its practical expression in terms of the other—the faithful soul realizing itself in service to others, the loyal spirit fulfilling its service by self-reliant intelligence and steadfast faith.

4. **Political loyalty and its object in feudal and modern times.**—Loyalty connotes attachment to some definite authority which has a right to be served. The growth of the feudal system in Europe was favourable to the special personal turn which its application took. The political problem was the organization of many small groups into one large inclusive group, or nation, especially for purposes of defence against some common foe. The moral strength of such a national organism consisted largely in the series of loyalties from man to master that bound each to his feudal superior, from the lowest vassal upwards to the supreme over-lord or king. Each primary group was sufficiently small, and grouped round a leader sufficiently well known, to bring out men's normal instincts to follow their chief, to cleave to him truly, to give him allegiance, acclaim him lord, and be his men. This is loyalty of the most picturesque and primitive type, steeped, moreover, in a high mood to which religious enthusiasm is akin. What the man was to the lord, the lord was to his over-lord, and so the national system was linked up unit by unit into larger units all under the supreme over-lordship of the king. The system of loyalties, as signified in this actual system of political allegiances, would in the perfect State have likewise been linked up, all loyalty centring in the king. When the kings of France succeeded in making all the under-feudatories take the oath direct to the king, they established themselves as the centre beyond all doubt. Under absolute personal government the king stands for *la loi*; his will—bound more or less by his coronation oath—is the standard and subject-matter of service due; his under-lords are subordinates commissioned to use their subordinates as his servants in so far as he may require.

The reality, to be sure, was never so systematic, and bred many other qualities, bad and good, besides its modicum of high-toned loyalty. It is, however, certain that such a system would profit by encouragement given to so useful a quality. Thus the situation was favourable to much praise of loyalty as a prime virtue in the mouths of the upper classes and, for this and other better reasons, in the mouths of their dependents—poets and men of letters generally, lawyers and all who had to do with the executive government, whether on the national or on the local scale.

As feudalism declined, or was broken up, the source of authority gradually defined itself anew as duplex in form: (1) the king administering the realm in accordance with the law, and (2) Parliament, *i.e.* the *élite* of the nation, Lords and Commons, wielding sole power by joint action with the king to change the law. The Lords were, in the first instance, the true peers of the king—the displaced feudal lords—and the old sentiment of feudal loyalty continued for long to be expected more or less by them and conceded less or more. As local magnates of one sort or another, they have in this country had a prolonged and honourable reign. In France they disappeared from view politically, as did the king himself, at the Revolution, and as later did the pseudo-king or emperor in 1870. England is still in process of change as regards the sentiment of the rural masses towards the aristocratic classes; but certainly it is no longer necessary to consider loyalty as a sentiment greatly affecting the relations between ordinary people and the Parliamentary peers who are lords of the soil. No historic sentiment of the kind attaches personally to the elect of the people in the House of Commons. Each commands the loyalty of his own supporters in his own constituency, so long as he and they are in general agreement on political issues. But he is not in any sense *la loi* to them, except in so far as he adopts, and with sufficient ability expounds, those principles of national policy which are common to them and him. Their feeling to him is rather that of fealty—not the maximum of fealty—than of loyalty: they support him so long as he continues to support that policy with which they continue to agree. Personal loyalties, of course, emerge, but they are not in the nature of the case. There is a very real loyalty, however, to 'the party' as a whole—either party—and to the leader of the party, also, more especially when he is an outstanding figure satisfactory to the moral sense, arresting to the imagination, strong and of a good courage.

But for the civilized world of Europe in general little importance in the first instance attached to

Parliament in any form as an object of loyalty. The king and the law emerge from the feudal system as claimants by moral right on the service of men. The sphere of service to which loyalty properly applies lies beyond and includes the sphere of duties and restrictions enforced under fear of punishment. Loyal service to the king included, as of course, loyal obedience to the law; but loyalty, no doubt, was more consciously directed to the king and fused with a sentiment rising to passionate personal devotion. The Bourbons in France and the Stuarts in England assumed themselves to be kings by Divine right after the manner of the Roman emperors—in effect, claimed all loyalty, and from many obtained it, as due to the king. The revolt in England took its stand on the law as binding on the will of kings, and claimed restitution of the people's rights as guaranteed by ancient charter. The English Revolution of the 17th cent. was, in effect, not a revolution but a restoration of the ancient constitution, cleared, however, of feudal complications, the great Whig families standing with the common people, and the Royalists, who more especially esteemed themselves as loyalists, with the defeated dynasty. In due course there emerged from the welter of pitiful plots and gallant endeavour on the one hand, and conflicting interests around the court *de facto* on the other, the British Constitution—or rather its first edition—with all its 20th cent. characteristics latent, and sure to develop, in it.

Here it is, a sufficiently complex object of loyal regard:

(1) The law of the land as the one authority which *all* must obey; and all commands by persons in office must be in accordance with it.

(2) King, Lords, and Commons making one Parliament; and these three only, and by consent of each, can change that law, order taxation, or decree the appropriation of the revenue to the uses of the Executive Government.

(3) The King and his ministers, by whose advice all his decrees are made, whom he appoints by the established custom of the constitution from the leaders of the political party which commands a majority in the House of Commons; the maintenance of this custom is guaranteed by the Commons' hold on the Power of the Purse.[1]

So there emerged slowly in England the modern State, which has emerged elsewhere more suddenly and with less of the attractive complexity of detail which links it with its own historic past. This is what stands for *la loi* to the modern Englishman. As an object of loyalty it has advantages over some other examples of the 'Mixed State.' Not only is the British Constitution built as it is in order to preserve intact the ancient liberties of the people, but it has been built, bit after bit, by the very act of maintaining them. It is apt, therefore, to excite a high degree of enthusiasm in the minds of all those who care about history, all those who lay store by the liberties of the people and the powers of the House of Commons. To them the members of that House, and especially the two front benches, whichever party is in power, constitute the political aristocracy, in the fine Platonic sense. If they are loyal citizens, they will be loyal in the full sense to their own front bench, and law-abiding to the other front bench if it happens to be in power. In stormy times, when great principles, on one or other or both sides, are at stake, the adherents of the party likely to be defeated steady their minds to bear the shock by a very real loyalty, pitched finely in the more abstract key of devotion to the Crown and Constitution, whatever betide. This sentiment is effectively upheld by the consciousness of historic continuity throughout all changes, each having been effected by self-evolution within the Constitution itself; the King's prerogatives that have come under the power of the Commons have done so by the King's consent; the House of Lords, too, in 1911, submitted to the limitation of its veto.

5. Grades and modes of loyal sentiment in modern life.—Among persons outside the large circle who take deep interest in political problems the sentiment of political loyalty is probably in many cases practically non-existent, or at least very shallow, except, indeed, when roused by some real or imaginary national danger. This, no doubt, is the reason why some newspapers bristle with intimations of national danger when, a general election being at hand, it seems necessary to awaken the latent patriotism of voters. Of the others—the great majority, it may be hoped—there are those to whom the ideal of the nation to be served, in some small way or other as one can, makes a constant appeal as steady as that of his lord to the devoted henchman. For some this social service lies entirely outside the sphere of State control; for others it consists in service under, or co-operation with, the State. In all cases it is better done by those who understand the ways of the public administration as it is related to their work, so that they may use it to better effect by working loyally with it. State Insurance, Old Age Pensions, and recent legislation for the benefit of children are cases in point; voluntary workers disposed to loyal co-operation can do much. No form of loyalty is more honourable than this.

Quiet, non-political people, whose sphere of work or leisure does not impinge at all on public affairs, do very often, nevertheless, take a keen interest in the doings of the State and have a certain loyalty for King and Constitution, or King and Country, which, though not productive of any service, is quite real in its way. Without party-bias for the most part, they are proud of the whole complex system under which they live, with preferences in attachment, it may be, to one or other constituent in it. This class includes all 'armchair politicians' except that large section of 'armchair political critics.' There is the 'philosophic radical,' watching for signs of the social millennium in the House of Commons. There is the Tory gentleman of 'the good old school,' who has not lost faith in the future, and still sees the Constitution as he would wish to see it. There is the genuine Royalist, who anticipates great things in the future, of which he seldom speaks, from the character and ability of the Royal family, and believes generally that events are moving steadily in the direction of absolute monarchy, world-wide and British, a century or so hence. Others there are, without any preconceptions as to an absolute best towards which we are tending, who have a comfortable loyalty for things as they are. These, if they have votes, tend to support the ministry of the day. Their existence is one reason why it is better in general, when the sands are running out, for the ministry to dissolve than to resign.

6. Loyalty in the public services.—Persons who are in the service of the State are, of course, the servants of the Executive. Efficient service according to agreement, reticence in confidential matters, and abstinence from public comment on the policy either of the ministry they serve or of the opposition they may have to serve—these make up the obvious minimum of their bounden duty. To reach the maximum two things are needed: (1) zeal in the service because it is the service, and (2) self-identification with the instructions under which they work, or loyal adherence to the leader under whom they serve. Under adverse circumstances these conditions may fail to be possible in whole or part; in that case the loyal temper still shows itself by putting the best face upon the matter and keeping silence.

---

[1] Since the battle of the Constitution had been fought to a large extent on the people's claim to be taxed only by their own consent, given by a majority of their elected representatives in the House of Commons, it was inevitable that the Power of the Purse should be stoutly claimed and rigorously retained by the Commons; and from this it followed, by the logic of events, that no ministry could remain in power that did not command the confidence of the Lower House.

It is in the military and naval services more particularly that the idea of service, as to the king direct, counts for most. Here we are back to primitive requirements. The soldier is under bond to risk his life at the word of command. Respect for this word is vital to his character—respect without limits—and this, in the last resort, is self-devotion unto death. The good soldier's loyalty, no doubt, is often fealty pure and simple, as, *e.g.*, it certainly is when he has naturally no sentimental tie to the service in which he finds himself. Normally, however, we may take it to be a compound mixed in various proportions, into which enter loyal attachments to his sovereign, his country, his leader, his comrades, and the flag he follows, the last being a symbol of all these things and of his own self-respect as bound to stand or fall by them.

7. Problems arising from the complexity of the modern State.—Casual reference has been made above to non-political loyalty as between friends, lovers, kindred, and the members of a voluntary group or a natural social order. Clearly this is not the primary application of the word, but the tendency to use it in this, rather than in the political, sense appears to be on the increase. This is due, no doubt, to that confusion of ideas as to the political object of loyalty consequent on the complexity of the modern State. Angry politicians are apt to use the word 'disloyal' rashly to denote persons who differ from themselves as to the right balance of power in the State and the focus, consequently, of right loyalty. Thus claims have sometimes been made in the name of loyalty to right of attack on the lawfully constituted State, as, *e.g.*, in the case of constitutional reform to which a minority strongly objects. This implies confusion of ideas between the State in some special sense—*e.g.*, apart from the principle of development which it contains—and the State as it is, including its provision of a sovereign authority empowered by law and precedent to make changes in all things, including itself. A somewhat wilful confusion of ideas to the opposite effect is also possible between hostility to the *personnel* and policy of the ministry of the day, which is the normal motive-force that sways the political pendulum, and disloyalty to the sovereign Parliament which happens to be led by that ministry, and the majority of which takes responsibility for its doings. The complex character of the modern State lends itself to such confusion of feeling in times of stress and change. Every attempt at large reform divides the citizens into two camps, each vowing loyalty to its own ideal of the State in some particular. This is party loyalty, which is quite consistent, as the inner circles fully understand, with perfect loyalty to the actual State as by law established—that self-conserving, self-developing organization of King, Lords, and Commons with which we are all familiar. An attractive focus for the loyal sentiment of the simple or careless citizen, who makes no attempt to join issue in the political dialectic, is provided by the presence in the trio of the hereditary monarch in his uplifted place, holding his supreme veto to be used only on the side of the majority in the House of Commons, subject to the delaying powers of the House of Lords. The number of persons in Britain whose sole effective loyalty centres in attachment to the Crown is probably large; it counts doubtless for much also in the British colonies.

8. The focus of loyalty in republican nations.—In republican States this focus is supplied—so far as it is supplied at all—by a more vivid consciousness of the organized nation as a self-governing whole, the ark of whose covenant is the Constitution. The ideal of the republic as the lode-star of loyal sentiment is highly developed in France. The French mind has perhaps a natural genius for the concrete ideal, as indeed is perhaps implied by its turn of speech in favour of thought—eloquent thought—by means of generic terms that fire the imagination. In the United States of America loyal affection is rather to the composite nation in reference to all its interests, each more or less on its own—a wonderful 'Union' of diverse elements, run by a carefully planned political machine, which would do its work much better if all the citizens in every section were more enthusiastic in serving it according to their lights. The ideal of the Republic as an organization of free citizens for purposes of self-government seems to have lost for a time something of its pristine freshness and attractive force. At any rate, it is of the United States rather than of the United States Republic that many Americans think as the focus of their political loyalty. This much may be said in their defence. The good of the nation is, of course, in all cases the ultimate end of the political art, and the final object, therefore, of that sentiment which reveres as its proximate end the national institutions.

9. The ideal of loyalty.—To be loyal is to be much more than law-abiding. Whether the object be a person to whom we owe duty or affection, the community of persons to which we belong, the institutions under which we live, the service to which we are pledged, or the law—human or divine—by which we ought to regulate our conduct, the loyal man is distinguished from the law-abiding man as one who serves with his whole heart and mind, making of himself a veritable organ of expression for the purpose, or the master, or the mandate, under which he serves. No voluntary sins of commission, omission, or ignorance does he permit himself. We realize him at his time of special effort in a passion of service, every faculty awake and urgent to achieve his end. And in the intervals of passivity his mind is clear and steady—stayed, as it were, on his whole nature as a rock. Self-training to this effect in any school of wholesome service must work like a leaven on character as a whole. Even under questionable conditions of service it goes far, as all experience of public service shows, to make a man. But it must be remembered that, without either a morally attractive cause or wise and sympathetic leadership, the loyal sentiment which is the motive of self-training is not adequately evoked.

History and literature abound in examples. Three lines of thought, independent of each other and contrasted, may be distinguished in their logical order here.

(*a*) *The heroic romance of Western Europe*, developing through the centuries from its original sources in Classic, Celtic, and Norse or Germanic lore, deals largely in loyalties within the smaller social sphere, intimate, personal, and glorified by affection. Patriotic loyalty in this dawn of the civilized world has little to do with government, but is steeped in a vivid idealism; the race-life and the home-land are seen as of infinite value, objects in effect of religious faith, worthy of devotion through all suffering unto death. These are the primitive loyalties—to kindred, friendship, race, and land. Nor is the spirit which forms them dead; it does not die so long as a race either vaguely or clearly believes in itself as having a part of some kind in the fulfilment of human destiny. This is why the history of any nation true to itself is capable of being treated as the development of an ideal implicit from the first.

(*b*) For the ideal of personal virtue relative to civic institutions, and for the fundamental theory of the State even as we know it to-day, we go back to the Greeks, and specially to *Plato in The Republic and The Laws.* It is his conception of the individual soul in relation to the State that concerns us here. The ideal of the State, as he teaches, should be built up within the soul. Thus—wedding his thought to our inquiry—we may say that the soul of the loyal citizen is trained, or trains itself, into accordance with the ideals realized in the constitution of the State. Thus he exceeds the law-abiding, and is the loyal, man. Further, it is implied in Plato's thought that of those who have political power the loyal ones are they who cultivate their philosophic aptitude to perfect the ideal of the State in the soul, in order that they may labour to develop the organization of the real State and bring it into harmony with the ideal.

This obviously is what the sincere modern statesman does, or thinks he is doing. It is a necessary part of his loyalty that he should spare no pains to do it. Moreover, in the modern self-governing State, every enfranchised citizen shares this duty.

(*c*) Finally, we find in *post-Exilic Judaism* the supreme example of a people held together by allegiance to the law—the law embodied in a written code that he who runs may read. The Davidic monarchy had come to an end; the high priest held the supreme office as chief ruler in the little theocratic State. But from the time that Ezra had read in the ears of the people all the words of the book of the law which he had brought from Babylon,[1] the Jew who was faithful and pious felt that the law was above the priesthood and that he was to obey it and understand it for himself. Externally the Jewish people had many masters after this; internally—in his own mind—each pious Jew spent all his loyal sentiment on the law of his God. This was no short commandment, but the whole law, dealing with conduct in all social relations and with ceremonial ordinances in considerable detail. The Jew who loyally obeyed the law was, in quiet times—except for taxation—to all intents and purposes a free man. The ideal of his State in its essentials was built up in the mind of the properly instructed Jew; if a professing Jew, he obeyed, whether grudgingly, willingly, or loyally, *i.e.* with his whole heart seeking to understand and to obey more perfectly. In that perfect inward obedience his freedom was realized, though it was not his quest. The Psalms and the Prophets abound in expressions of this loyalist spirit applied to the Supreme Law:

> 'Teach me, O Lord, the way of thy statutes;
> And I will keep it unto the end.
> Give me understanding, and I shall keep thy law;
> Yea, I shall observe it with my whole heart' (Ps $119^{33\text{f.}}$).

So runs the Psalmist's typical prayer, and it continues in the same strain, asking for help to go in the path, to incline his heart aright, to turn away his heart from vanity, to establish God's word unto His servant. In NT times, when the elaborated legalism of the latter-day Pharisees prevailed, the great Master Teacher set over against it the true doctrine of loyal observance, the fulfilment of the law by being the kind of person who expresses its purpose naturally in all his acts. 'I am not come to destroy, but to fulfil' (Mt 5^{17}). 'A good man out of the good treasure of his heart bringeth forth that which is good' (Lk 6^{45}). And later, St. Paul, following the same line of thought, attains to the vision of the 'liberty of the sons of God' (Ro 8^{21}). Thus the cycle of reason on the highest as on all lower planes is complete, from the free man's fealty through loyalty to the higher liberty of devoted service to the ideal in his soul.

LITERATURE.—Little of note appears to have been written dealing directly with this subject. (1) It enters into the history of the development of the State more especially as a serviceable motive-force in the mediæval growth of the feudal system: see *Cambridge Mediæval History*, ii. [1913], ch. xx., 'Foundations of Society' (Origins of Feudalism), and F. Warre Cornish, *Chivalry*, London, 1901; *Essays on Romance and Chivalry*, do. 1870, containing reprints from Hallam and Sir Walter Scott, are also interesting. (2) The primitive ideal of heroic character to which the political virtue corresponds may be studied in Celtic and Teutonic hero lore and in their later developments, (*a*) under the influence of mediæval chivalry, and (*b*) in recent years. Sufficient exemplification will be found in *Völsunga Saga* and *Grettir the Strong*, tr. E. Magnusson and W. Morris, *Three Northern Love Stories*, London, 1875; E. Hull, *Cuchulain, the Hound of Ulster*, do. 1911; T. W. Rolleston, *The High Deeds of Finn*, do. 1910; T. Malory, *Morte d'Arthur*, ed. do. 1894, and its primitive prototype, the Welsh *Mabinogion*, tr. Lady Charlotte Guest, do. 1877.

S. BRYANT.

LOYOLA.—St. Ignatius Loyola, the founder of the Jesuits (*q.v.*), was the youngest of the eight sons of Don Beltrán Yañez de Oñez y Loyola. The name Lopez de Ricalde, by which Ignatius is often designated (so, *e.g.*, in *AS* and in the British Museum Catalogue), is a simple blunder, due originally to the carelessness of a notary. He was born in the house, or *casa*, of Loyola near Azpeitia in the Basque province of Guipuzcoa. The year of his birth is disputed. Astrain (*Hist. de la Compañía de Jesús*, i. 3 ff.), the best modern authority, assigns it to 1491, but others have thought 1495 more probable (cf. Tacchi Venturi, in *Civiltà Cattolica*, 21st July 1900). The name Ignatius, by which Loyola is now generally known, was not that which he himself used in his youth. Down to 1537 Inigo (not, however, Iñigo, as Astrain prints it) was his invariable signature, but he then began to use sometimes Ignacio, sometimes Inigo, and after 1542 Inigo hardly occurs at all. It seems certain, though early biographers intent on edification have glossed over the fact, that the future ascetic passed an unbridled youth, following the course which was then almost inevitable for all who adopted the career of arms (Astrain, i. 12–16). But at the siege of Pampeluna in 1521 he was dangerously wounded by a cannon-ball, and in a long convalescence which followed he gave himself up to reading the lives of Christ and the Saints, with the result that, after many inward conflicts, he determined to make a complete change in his own way of living. As soon as he was able to travel, he journeyed to the monastery of Monserrat, made a very devout confession, and, after a sort of vigil of arms, divested himself of his knightly attire and went forth to beg his bread. He then took refuge for nearly a year in a cavern near Manresa. The life that he led in this retreat was one of terrible self-maceration, marked by tempestuous inward trials of which he has left a relatively full account in the autobiography. It was during his stay at Manresa that he drew out at least the broad outlines of that manual of ascetical discipline so widely famed under the name of the *Book of the Spiritual Exercises*. There seems no reason to claim such originality for this system of spiritual training as to exclude the influence of earlier ascetical writers like Garcia de Cisneros of Monserrat (see J. M. Besse, in *Revue des questions historiques*, lxi. [Paris, 1897] 22–51) and especially Gerard de Zutphen and Johannes Mauburnus, Brothers of the Common Life; but, as Watrigant has shown, the combination of these materials into one instrument employed for a clearly recognized and uniformly consistent purpose is entirely the work of Ignatius, and bears the imprint of his eminently practical mind.

---

[1] 'The law of thy God which is in thine hand' it is called in the decree of the great king Artaxerxes (Ezr 7^{14}).

It must always be remembered that the *Spiritual Exercises* is not a book intended merely for reading and reflexion, but a manual of training to be put into practice. In this it differs *toto cœlo* from such a work as A Kempis's *Imitation of Christ*, and it would be as vain to expect literary graces in the *Exercises* as in a proposition of Euclid After some preliminary considerations on the end of man, the exercitant is directed, during a week or ten days and always under the advice of a competent spiritual guide, to occupy his mind with the recollection of his past sins and of the punishment which they have deserved, and to cultivate a sense of shame and sorrow, bringing external adjuncts to bear to deepen the impression—*e.g.*, by depriving himself of light, warmth, unnecessary food, and all intercourse with his fellows. After this preliminary discipline, he is introduced to the study of the life of Jesus Christ, who is set before him in two powerful military parables as a chieftain appealing for volunteers to aid Him in the task of reconquering the world from the dominion of sin and the devil. It is easy to see that Loyola's thought had been powerfully influenced by the still vivid remembrance of the struggle to rescue the soil of Spain from the yoke of the infidel. The meditations of this 'second week' of the *Exercises* are estimated to occupy another ten days. By this time it is assumed that the well-disposed exercitant will have been brought to the point of resolving to leave all things and follow Christ if God should make it plain that He was calling him to a life of humiliation and self-sacrifice. A formal election of a state of life is introduced, accordingly, at this stage, and the two remaining 'weeks' of the *Exercises* are intended to confirm the choice so made. In the third week the exercitant is bidden to use much bodily penance and to meditate upon the Passion of Christ; in the fourth he is directed to allow the body its meed of rest and refreshment, while the mind is occupied with consoling thoughts derived from the consideration of the Resurrection of our Saviour and the remembrance of the joys of heaven.

It was natural that one who laid so much stress upon the study of our Lord's life upon earth should feel the need of coming as closely as possible into contact with the scenes of those events with which his mind was filled. Accordingly, in Feb. 1523 Ignatius set out on a pilgrimage to Jerusalem, living on alms and, to a large extent, travelling on foot. He passed through Rome and Venice, and thence sailed to the Holy Land, so that almost a year elapsed before he found himself back in Barcelona. That he was specially called to labour 'for the greater glory of God' had by this time become a deep conviction, but the precise manner in which he was to further the work of Christ on earth does not seem to have been made clear to him until many years later (see F. Van Ortroy, 'Manrèse et les origines de la Compagnie de Jésus,' in *Analecta Bollandiana*, xxvii. [1908] 393–418). Still, he seems to have realized, at least vaguely, that to become an efficient instrument for good he required a better education than he then possessed. Thus we find him at the age of 33 learning the rudiments of Latin with the school-children of Barcelona (1524–26), and thence proceeding to the Universities of Alcalá and Salamanca (1526–28). A personality like that of Loyola was bound to influence men wherever he went, and it is not altogether surprising that he fell under the suspicion of the Inquisition, on account of the disciples who gathered round him and who imitated in some measure his own austerity of life. At first he seems to have been careless of what men said of him, conscious of his own integrity; but later he found that these suspicions hampered his influence for good, and he went out of his way to court and even to insist upon a judicial inquiry. The proceedings before the Inquisition, so far as they have been preserved, are printed in the *Scripta de Sancto Ignatio*, i. 580–629. Partly on account of the hindrances to his work for souls which these suspicions engendered, partly, it would seem, in the hope of finding companions more in harmony with his ideals than any whom he had yet met (see Fouqueray, *Histoire*, i. 7 f.), Ignatius, in Feb. 1528, made his way to the University of Paris. There at the Collège de Montaigu and afterwards at that of Sainte-Barbe he pursued his studies for the priesthood. At Sainte-Barbe he must, at least occasionally, have encountered Calvin, who had studied there himself and still visited it in 1533. For his support Ignatius, owing in part to his unselfish generosity to his countrymen, had to depend upon alms, and during the begging expeditions made in the vacation season to that end he visited London, Bruges, and Antwerp. Contradictions and persecutions in abundance were also still his portion, but in Paris he found at last what his heart had always craved—a group of companions capable of sympathizing in his high ideals, and of an intellectual force which lent real weight to any cause which they undertook. The story of his conquest of Francis Xavier by the constant repetition of the words 'What doth it profit a man if he gain the whole world and suffer the loss of his own soul?' is well known. An even earlier recruit was Peter Le Fèvre, whose position in the University was already an influential one. To them were added James Laynez, Francis Salmeron, Simon Rodriguez, and Nicholas Bobadilla. Laynez and Salmeron were destined to play a great part as theologians in the Council of Trent. Laynez was also to be Loyola's successor as second General of the Society. But even in 1534, when on 15th Aug. these friends met together in the chapel of St. Denys at Montmartre, and at the mass of Le Fèvre, who was so far the only priest amongst them, took vows of poverty and chastity (Astrain, i. 79), there seems to have been as yet no clear design of founding a religious Order. The third vow, which they added to the other two, pledged them only to make the attempt to undertake apostolic work in the Holy Land; but if, after a year's waiting, it was found impossible to obtain passage thither, in that case they were to place themselves at the disposition of the pope, for any work that he might assign them. This it was that actually happened. In the middle of 1537 war broke out between the Sultān Sulaimān and the Venetian Republic. There was no longer any possibility of obtaining a passage to the Holy Land. The little band of companions waited the prescribed year, and meanwhile Ignatius himself was ordained priest at Venice (24th June 1537), and he and his companions spent the interval in serving in the hospitals and in apostolic work in many different Italian towns. Eventually it was decided that they ought to address themselves to the pope, then Paul III., and, in spite of contradictions, they had a most favourable reception. It was apparently only at this time that the desirability of organization as a formally recognized religious society living under obedience seemed to take shape in their minds. It was characteristic of Ignatius that he always attached much more importance to the inward spirit than to the written letter. Even after he had recognized the fact that in order to perpetuate their work they must be bound together in some regular institute, he was reluctant to provide written constitutions. But the various stages in the development of the Order now followed rapidly. Already in 1537 the companions had found it necessary to give themselves a collective name, and they agreed that, if interrogated, they should describe themselves as belonging to the 'Company of Jesus' (Astrain, i. 89). When they had found favour with the pope, the scheme of a definite religious institute (*formula instituti*) was drafted, and approved in the bull *Regimini militantis ecclesiæ*, 27th Sept. 1540. On 4th April 1541 Ignatius, in spite of his own reluctance, was elected superior, and from that date until 1550 he busied himself at Rome in compiling constitutions. The spread of the Society was extraordinarily rapid, and, as the twelve volumes of his correspondence attest, the official business connected with his office of General steadily increased day by day until his death on 31st July 1556. Ignatius was interested, and he considered it the duty of his subjects to be interested, in every form of religious work which was for the greater glory of God. Although the Society of Jesus was the backbone of the Counter-Reformation movement, it would be a mistake to regard the Order as having been instituted with the conscious design of counteracting the religious teaching of Luther and Calvin. The central idea, which is found alike in the *Exercises* and in numberless passages of the *Constitutions*, and which may be taken as the dominant conception of the whole Ignatian spirituality, was the desire to assist in and carry on the work of rescue and sanctification for which Jesus Christ had come on earth. Loyola was not in any way a man of brilliant intellectual gifts, but he possessed clear judgment and indomitable energy; and, contrary to the idea so often formed of his religious descendants, he was by the testimony of all who knew him a man who was absolutely fearless and straightforward in all his relations with others. He was beatified in 1609 and canonized in 1622.

LITERATURE.—The first place among the sources for the life of Ignatius Loyola must always be given to the so-called 'Autobiography,' dictated by the Saint to Luis Gonzalez de Camara. A Latin version is printed in *AS*, 31st July, vii., but a more accurate text in the original, partly Spanish and partly Italian, has been provided in the *Monumenta Ignatiana, Scripta de S. Ignatio* (i. 31-98), which form part of the great collection of *Monumenta Historica Societatis Jesu* (Madrid, 1894 ff.), edited by the Spanish Jesuits. In fact, the whole contents of the *Monumenta Ignatiana*, which include a critical ed., in 12 vols., of Loyola's own letters and official documents, are of first-rate importance. An Eng. tr. of the *Autobiography* (by E. M. Rix), with notes, appeared under the title *The Testament of Ignatius Loyola*, London, 1900. See also J. Susta, 'Ignatius von Loyola's Selbstbiographie,' in *Mitteilungen des Inst. für österr. Geschichtsforschung*, xxvi. [1905] 45-106. A vast number of papers and letters which bear upon the history of Ignatius and his first companions may be found in the other volumes of the *Monumenta Historica Soc. Jesu*. The biography of Ignatius by Pedro Ribadeneira, which appeared originally in more than one redaction—the first at Naples, in 1572—is also re-edited in *AS*, *loc. cit*. A young disciple of the saint, who knew him and lived with him, Ribadeneira is an important authority. Translations of this life have been published in French and many other languages. Of the 17th cent. biographies of Loyola by far the most valuable is that of D. Bartoli, who had important original materials at his command. The best available ed. is in French, with supplementary notes, by L. Michel (Bartoli, *Histoire de S. Ignace de Loyola*, 2 vols., Lille, 1893). Of other lives the best are C. Genelli, *Das Leben des heil. Ignatius von Loyola*, Innsbruck, 1848, Eng. tr.^{2}, London, 1881; 'Stewart Rose,' *Life of St. Ignatius Loyola*^{3}, London, 1891; F. Thompson, *Life of St. Ignatius*, do. 1910. An excellent short sketch is that of H. Joly (*St. Ignace de Loyola*^{5}, Paris, 1904, Eng. tr., London, 1899). But by far the most trustworthy source of information among modern works is to be found in A. Astrain, *Historia de la Compañía de Jesús*, i., Madrid, 1902, this volume being entirely devoted to the period of the life of Ignatius. It may be supplemented for French affairs by H. Fouqueray, *Histoire de la Compagnie de Jésus en France*, i., Paris, 1910; and for those of Italy by P. Tacchi Venturi, *Storia della Compagnia di Gesù in Italia*, i., Rome, 1909. See also J. Creixell, *San Ignacio en Barcelona*, Barcelona, 1906.

Few of those who have studied the life of Loyola from an antagonistic or Protestant standpoint seem to have taken the trouble to acquaint themselves accurately even with the facts of his career. The best is perhaps E. Gothein, *Ignatius von Loyola und die Gegenreformation*, Halle, 1895, but on this see *Analecta Bollandiana*, xv. [1896] 449-454. Even more fantastic is H. Müller, *Les Origines de la Compagnie de Jésus*, Paris, 1898, on which cf. *The Month*, xciv. [1899] 516-526. Some valuable materials and criticisms are, however, contained in the work, very hostile in tone, of the ex-Jesuit M. Mir, *Historia interna documentada de la Compañía de Jesús*, Madrid, 1913. Other points of criticism are dealt with by B. Duhr, *Jesuitenfabeln*^{4}, Freiburg i. B., 1904; H. Stoeckius, *Forschungen zur Lebensordnung der Gesellschaft Jesu im 16ten Jahrhundert*, Munich, 1910 ff.

The only works of St. Ignatius besides his letters are the *Spiritual Exercises* and the *Constitutions of the Society of Jesus*. A facsimile of the 'autograph' of the Spanish original of the *Ejercicios Espirituales* was published in Rome in 1908; innumerable other editions, including several English translations, have been published in every language. The most illuminating discussion of the genesis of the *Exercises* is supplied by H. Watrigant, *La Genèse des Exercices de S. Ignace*, Amiens, 1897. As to the *Constitutions*, a facsimile of the original Spanish text has appeared, *Constituciones de la Compañía de Jesús, reproduccion fototípica*, Rome, 1898, with valuable illustrative material.

LUCK.—See CALENDAR, CHARMS AND AMULETS, DIVINATION.

LUCRETIUS.—Titus Lucretius Carus was a Roman poet (99 [?]-55 B.C.) who, in the last century of the republic, accepted the philosophy of Epicurus, and expounded it to his countrymen in a noble didactic poem, entitled *de Rerum Natura*.

1. Life and writings. — Little is known of Lucretius except a notice in Jerome's additions to the Eusebian chronicle, under the year of Abraham 1923 (=94 B.C.):

> 'Titus Lucretius poeta nascitur. Postea amatorio poculo in furorem versus, cum aliquot libros per intervalla insaniæ conscripsisset, quos postea Cicero emendavit, propria se manu interfecit anno ætatis quadragesimo quarto.'

This strange story of madness and suicide, which Tennyson has made familiar, is no doubt derived ultimately from Suetonius, *de Vir. Illust.*, and, if it comes from such an antiquary, probably has a basis of fact (cf. Lachmann on i. 922, p. 63 of his ed.; Munro^4, ii. 1 ff.; Sellar, *Roman Poets of the Republic*, p. 283 ff.). But there is an error of four or five years either in the birth year or in the age assigned to the poet, most likely in the former. According to Donatus (*Vit. Verg.*), Lucretius died on 15th October 55 B.C., and not, as Jerome's figures would imply, in 51 or 50 B.C. This is confirmed by the earliest extant mention of the poem in a letter of Cicero to his brother Quintus (*ad Quint. fr.*, II ix. 4). This letter, written early in 54 B.C., presupposes the publication of the poem and, presumably, the poet's death. For on internal evidence alone most scholars agree that *de Rerum Natura*, like Vergil's *Æneid*, never received a final revision from the author's hand; certain passages, especially in the last three books, seem to be afterthoughts or additions imperfectly adjusted to their context. In the dearth of external testimony, something may be gleaned from the poem itself. It seems clear that the author was a Roman noble, well acquainted with the luxury of the time (ii. 24-28, iv. 75 ff., 973, 1121) and with the rivalry and ambition of political life (ii. 11 ff., 40 ff., v. 1120 ff.). Strongly impressed by the crime and bloodshed of the civil wars (i. 29 f., 40-43, iii. 70-74, v. 999 ff.), he deliberately chose, almost alone among the Romans, a contemplative life (i. 922 ff., ii. 1 ff., iii. 1 ff.). Further, we see that he possessed a poet's clear, minute, exact observation with a poet's love of nature and delight in open-air scenes (i. 280 ff., 305, 326, 404 ff., ii. 144-149, 323-332, 342 ff., 349 ff., 361 ff., 374 ff., 766 f., iv. 220, 575, v. 256, 991 ff., vi. 256-261, 472), that he had unbounded reverence for Epicurus, both as a scientific discoverer and as a moral reformer (iii. 9-30, v. 1 ff., vi. 1 ff.), that Democritus and Empedocles were also objects of respectful admiration (i. 729-733, iii. 371, 1039), and that he never mentions the Stoics or the Socratic Schools, although sometimes alluding to their doctrines, 'quod quidam fingunt' (i. 371; cf. 690 ff., 1083, ii. 167-176). He dedicated the work to Memmius, the patron of Catullus, who was prætor in 58 B.C., and at that time an opponent of Cæsar. He addresses Memmius as an equal; the Lucretii belong to a gens distinguished in the early annals of Rome, and the cognomen Carus is said to be attested by an inscription. The author's purpose in writing a philosophical treatise in verse is clearly explained (i. 54 ff., esp. 106–145, 922–950, iv. 1–25). His aim is genuinely scientific—to gain our assent to certain propositions concerning the atomic theory (bks. i. and ii.) and its applications to the relations of mind and body (bk. iii.), the wraiths or images whence he deduces the popular belief in the future life (bk. iv.), the origin of our world, of civilization, and of language (bk. v.), and the phenomena of sky or earth which are supposed to come from the vengeance of the gods, such as thunder, tempests, earthquakes, and volcanoes (bk. vi.). He admits that the system which he advocates is unpopular (iv. 18 ff.), and fears that Memmius will some day fall away (i. 102 ff.). He therefore provides an antidote. Poetry is the honey at the edge of the cup which shall make palatable the medicine of truth. It is no less obvious that the sympathy evoked in the reader, the effect upon his imagination, is bound up with the philosophic poet's soaring frenzy ('furor arduus'; Statius, *Sil.* II. vii. 76). A philosophical argument is ill-adapted for hexameter verse, but the mental power and perseverance displayed in so arduous an undertaking call for unstinted admiration. The difficulties of his task spur the poet on, and to overcome them so far as may be is at once his merit and his delight. His grasp of his subject with all its perplexities and problems bespeaks a logical mind, and he is eminently successful in discovering and marshalling whole groups of particular facts which lead up to and illustrate a general principle (i. 159–214, 265–328, ii. 333–380, 581–699), in the use of analogies, and in vividly picturing the consequences of hypotheses (i. 215–264, 968 ff., 988–995). It has been conjectured that the poet followed the larger epitome of Epicurean doctrine mentioned by Diogenes Laertius (x. 39 f., 73 [Giussani, i. 10]). Whether this is so or his choice and arrangement of topics are dictated by his own immediate purpose must remain an open question. In any case the idolatry of the disciple and his close study of the master's writings (iii. 10) afford a reasonable certainty that he introduced no innovations in substance, although the exposition, with its flights of imagination, its flashes of feeling, and its insight, is all his own. In what follows attention is directed to those parts of the system only where Lucretius fills a gap in the scanty outlines left by Epicurus himself or gives a fuller treatment of particular doctrines (see EPICUREANS).

2. **Atomic theory.**—Lucretius begins by advancing the two propositions (1) that nothing can arise out of nothing, and (2) that nothing can be annihilated, which he proves separately from the order and regularity of the processes of nature, as especially seen in the generation of the species of organic life. The obvious objection that we cannot see the particles dispersed when a thing is destroyed is met with a series of analogies from the potent invisible agencies at work in the world. The existence of empty space (vacuum or void) is then proved from the impossibility of otherwise accounting for motion, which all the facts of experience confirm. The opposite view, that the world is a plenum, is next refuted mainly by the consideration that condensation and expansion no less than motion imply the existence of a vacuum. Next, the existence of any *tertium quid* other than body and empty space is denied. All other nameable things, even time itself, must be regarded as the qualities (whether essential properties or transient accidents) of these two forms of reality. Body is then divided into simple and composite, according as it is or is not conjoined with void. The composite are what we call things (*res genitæ*), the simple bodies are atoms (*materies*, *corpora genitalia*, *semina rerum*, *principia*, *elementa*, or simply *corpora*). To postulate the existence of atoms is to deny the infinite divisibility of matter. And here again Lucretius employs his favourite negative procedure, following out the consequences of infinite divisibility to absolute annihilation, which he has proved impossible. Infinite divisibility would be incompatible with the natural laws (*fœdera naturæ*) which regulate the production of things and the permanence of organic species; for, unless the constituent atoms of things are unchangeable, there will be no uniformity of nature, and it will be uncertain what can and what cannot arise.

Summing up these arguments and collecting what is said elsewhere in the poem, we arrive at the following conception: an atom is a little hard kernel of matter, quite solid and therefore immutable and indestructible (since heat, cold, and moisture, the destroyers of the composite things about us, cannot enter where no void exists). Each atom is a distinct individual ('solida pollentia simplicitate'); it is perfectly elastic; it has minimal parts, of which, however, it is not compounded, for they have no independent existence; hence it has size, shape, and weight, but no secondary qualities, no colour or temperature, no sound, flavour, or smell, no sentience, the different qualities of composite things being due to the variety of atomic shapes, which, though very great, is not infinite.

After refuting the divergent views of Heraclitus, Empedocles, and Anaxagoras (i. 635–920), Lucretius proves by a variety of arguments that both matter and space are infinite, and refutes the opposing view that all things tend to the centre of the universe and the assumption of antipodes which it involves. He subsequently deduces from infinite space and infinite matter an infinite number of worlds, which come into being, grow to maturity, and ultimately perish (ii. 1023–1174).

3. **Clinamen or swerving.**—Atoms are in constant motion. They move through space (1) by their own inherent motion, and (2) in consequence of collision. Some atoms of intricate shape form after collision a close union, thus giving rise to the things we call hard; others rebound to greater distances and thus form softer substances; others, again, do not unite at all, but wander freely through space. It is next shown how by imperceptible motions (*motus intestini*) atomic groups or molecules increase in complexity and size until they reach the limits of visibility, like motes in the sunbeam (ii. 125–141). It will help us to understand the relation between these internal atomic movements and the motion of the group of atoms as a whole, if we take Giussani's admirable illustration (i. 111 ff.): as a swarm of insects moves slowly through the air in one direction, the individual insects of which it is composed are executing all manner of far more rapid movements, some of them in divergent or even opposite directions. The first motion of atoms, always through empty space, is inconceivably rapid and uniformly in the same downward direction; the apparent upward motion of some sensible things is shown to be not inconsistent with this. But at quite uncertain times and places atoms, travelling downwards by their own weight, and therefore in parallel lines, swerve a very little from the perpendicular. The least possible change of inclination must be assumed, although it is imperceptible to the senses. Otherwise atoms would never collide, so as to unite and give birth to things, for in empty space, where there is no resisting medium, heavy and

light atoms fall with equal velocity, so that the heavier would not overtake the lighter. There is a further proof of this in the consciousness of spontaneous initiative, the power by which each living creature goes forward whither the will leads, the something which struggles and resists when we move involuntarily under compulsion (ii. 216–293). For our spontaneous movements originate in sole atoms, and their existence at all can be explained only by assuming a certain indeterminism or contingency in the movements of such sole atoms. Thus the mind does not feel an internal necessity in all its actions, nor is all motion linked together in an unending chain of cause and effect (as the Stoics maintained), but atoms initiate motion, breaking through the decrees of fate. It will be seen that the postulate of uniformity—the decrees of nature which govern the birth and growth of organic species—to which appeal is so often made in the poem, is subject to certain limitations of which our information is imperfect. This being the case, it is not altogether strange that, while M. J. Guyau deduces from the *clinamen* universal contingency in the Epicurean scheme of nature, T. Gomperz and Usener incline to regard it as no more than a consistent determinism in opposition to Stoic fatalism (Giussani, i. 125–167).

4. **Isonomy.**—The atomic motions which go on now are the same as they have always been and always will be. What they have produced they will again produce; for, the sum of matter being constant, there can be no complete change of conditions and no change in the order of nature. The main distinction is between motions which tend to foster birth and growth and those which tend to destroy, whether the aggregate formed be inanimate or an organism. The forces of production and destruction alternately prevail (ii. 1105–1140), but are so evenly balanced that, if we look to the whole universe, the result is equilibrium, as in an indecisive battle (ii. 569–580, v. 380–415). This principle of equable distribution is best known from Cicero, *de Nat. Deor.* I. xix. 50, but undoubtedly it was familiar to Lucretius. Combined with the infinity of atoms of every shape, it guarantees that fixity and perpetuation of species to which he so often appeals as a fact. That in an infinite universe the possible is also the real is the premiss underlying some of the astronomical portions of the poem (cf. v. 526–533).

5. **Psychology.**—The poet undertakes to prove that the soul is as much an actual part of a man as the hand or foot, and has therefore to refute the theory once current and last represented by Aristoxenus (iii. 130–132) that it is a harmony or immaterial relation subsisting between corporeal elements or parts of the body. Though a single nature, it consists of two parts, mind (*animus, mens*) and vital principle (*anima*), the seat of feeling, the former lodged in the breast, the latter diffused all over the frame. The single nature which mind and feeling unite to form is, like everything else, material—an atomic aggregate formed of the very finest atoms of (1) wind, (2) heat, (3) air, and (4) a nameless something in which sensation begins. The preponderance of one or other element in the single substance compounded of the four explains the diversity of character and the variety of the emotional states in animals and men. Soul and body, like mind and vital principle, form one whole, so constituted that neither can exist without the other (iii. 94–416), and this is enforced by twenty-eight arguments against the immortality of the soul (iii. 417–829), whence it follows that man's fear of death is unreasonable. The impassioned discourse on death in which these conclusions are driven home (iii. 830–1094), while sharing the defect of all attempts to 'make fear dig its own false tomb,' is yet by its moral earnestness and depth of feeling one of the most impressive passages in literature.

The atomist theory of perception is developed at great length in bk. iv. Images or films (εἴδωλα) are continually parting from the surface of things and streaming off in all directions, but we see them only when and where we turn our eyes to them. An image pushes before it the air between it and the eye. This air sweeps through the pupil and thus enables us to judge the distance of the object seen. This takes place almost instantaneously; we do not see the images singly, but there is a continuous stream of them whenever an object is seen (iv. 239–258). The theory of images is applied to those cases where the senses seem to be mistaken. The square tower at a distance looks round, because the images are blunted in their long journey through the air. In this and similar instances the eyes are not deceived. What they see they rightly see; it is the mind that errs in the inference which it draws. The error lies in the opinion which the mind superinduces upon what the senses really perceive. The sceptic contradicts himself. For how does he know that nothing can be known? By what criterion does he distinguish knowing from not knowing? The senses are true, all equally true, for each has a distinct power and faculty of its own which the others cannot challenge or convict of error, nor is a single sense at one time more certain than at another. Reasoning, since it depends upon the senses, must be false if they are false, and with the overthrow of reason life itself would be impossible (iv. 469–521). The mind, too, receives its impressions from images, but these images are finer than those by which we see, hear, taste, and smell. Moreover, they do not all come directly from the surface of actual objects; sometimes images from several distinct things unite, as a centaur, or they may be spontaneously formed by atoms in the air. In sleep, when senses and memory are inactive, images still find their way to the mind, wraiths or ghosts of the departed being one special kind. Dream images appear to move because some are coming, some going, in continuous succession, so that they appear to be the same in different postures. In the least sensible time many times are latent in which images can appear. Unless attention is directed to them, they pass unheeded. This explains why we think of what we will, and different men have different thoughts.

6. **Cosmogony.**—The working of the causes which produce, build up, and ultimately destroy worlds such as ours is described in outline as a corollary to the doctrine of the infinity of matter and space (ii. 1023–1174). The details are filled up in bk. v. The world is not eternal, as some philosophers held. Lucretius starts by proving that it is mortal, *i.e.* had a beginning and will have an end (v. 91–109, 235–415). It must be dissoluble, for it is neither impenetrable like the atom nor intangible like space, nor, like the sum of reality, can it be said to have nothing outside it into which it could pass and out of which destructive forces may come. Our world began with a chaotic jumble of discordant atoms. By the escape of the lighter atoms from the heavier this mass broke up into horizontal layers, ether at the top over air, air over the other two elements, water and earth, the sea being nothing but the moisture squeezed out as the earth condensed. In the infancy of the earth and of the world, vegetation began with herbs and bushes, and then tall trees shot up; animal life followed, first birds, then quadrupeds, last of all man, all sprung from the earth—not from the sea—and nourished by Mother Earth. The existing species are a survival out of a far greater number which the earth first tried to

produce. The monstrous births perished because they could not grow up and continue their kind. Many species must have died off, because they lacked natural weapons of defence or could not be utilized and protected by man. But the union of two incompatible natures in the fabled creations—centaurs, chimæras, mermaids—is impossible. At no time did they exist (v. 878–924). This account mainly follows Democritus, but in the primeval monsters the influence of Empedocles is discernible.

7. **Anthropology.**—Civilized society is the product of a long course of development. The sketch of man's gradual advance from primitive savagery (v. 925–1457) is not without interest and value even in the present day when so much fresh material has been accumulated and is continually enlarged. Men at first were hardier and more like the brutes than now. Knowing nothing of tillage, they lived on acorns or berries, without fire, clothes, or houses, without law, government, or marriage. Their foes were the beasts, from whose fury they suffered. Civilization began with the use of huts and skins and the ties of family life. Then came compacts with neighbours for friendship and alliance; and then speech, a natural impulse quickened by need, not due to any single inventor. The next step was the discovery of fire from lightning or the friction of branches. Further improvements led to the building of cities, the allotment of lands, and the discovery of gold. With the origin of political life is linked the origin of religion. Another important discovery was the use of metals, especially iron and copper, which were accidentally discovered when the burning of woods caused the ore to run. Hence came improvements in warfare, the extension of agriculture, and the invention of weaving. The art of music followed. When a knowledge of all the useful crafts had thus been attained, progress was complete.

8. **Religion.**—The popular faith, with its whole apparatus of prayers, vows, offerings, and divination, had been rejected not only by Epicurus, but by almost all philosophers since the feud between poetry and philosophy began with Xenophanes and Heraclitus. Lucretius is bitterly hostile; his indignation at the evil wrought by religion glows throughout the poem as fiercely as in the famous description of the sacrifice of Iphigenia (i. 80–101). But it is not merely popular superstition that he condemns; he is equally opposed to the philosophic monotheism or pantheism of Plato and the Stoics, and, in fact, to whatever is meant by the term 'natural theology.' The negative propositions which he maintains are all-important. (1) There is no purpose in nature; the argument from design is disallowed in advance; adaptation is the product of experience.

> 'Nil ideo quoniam natumst in corpore ut uti
> possemus; sed quod natumst, id procreat usum' (iv. 834 f.).

The bodily organs were not given in order to be used. On the contrary, the eye preceded seeing, and man had a tongue before he could speak. Thus the activity of the senses is explained on mechanical principles without assuming final causes, and a similar explanation holds for all other activities, nourishment by food, and growth, walking and locomotion generally, sleep and dreams. Hence (2) there is no divine providence. The course of nature is not sustained by a divine power working for the good of mankind. The flaws in the world ('tanta stat prædita culpa') at once and for ever dispose of that hypothesis (ii. 165–181; cf. v. 195–234). Hence, too, (3) the world is not divine. So far is it from being conscious and intelligent that it is the most fitting example of what we mean by insensible and inanimate (v. 110–145). (4) The world was not created by the gods. What could induce them to take such trouble inconsistent with their majesty? Or, supposing them willing to create, whence came their notion or preconception (πρόληψις) of man before he existed (v. 181–186)? On the contrary, the world and all that is therein was gradually formed by mere natural causes through the fortuitous concourse of some part of an infinity of atoms in some part of infinite space (ii. 991 ff., v. 187–194).

But negative criticism is not all. On the positive side the existence of gods is proved by the agreement of all nations, although the fables and legends told of them (ii. 600 ff.) must be rejected. The gods are blessed and immortal. They need nothing of mankind, bestow no favours, take no vengeance (ii. 646–652). Their abodes, which in fineness of structure correspond to the impalpable nature of the divine body, too delicate for our sense to perceive, are in the *intermundia* (a word not used by the poet), or lucid interspaces between the worlds. They touch nothing that is tangible for us, since that cannot touch which cannot admit of being touched in turn (v. 148–152). There is a significant reference (iii. 819–823) to the conditions under which alone immortality is possible, namely the absence of destructive forces or their being kept at bay, or being held in equilibrium by conserving forces (see Giussani, i. 239). Not content with proclaiming the true doctrine, Lucretius goes on to explain how the false arose. The belief in gods arose from the images seen by the mind in waking hours and still more in sleep. The shapes thus seen were of more than mortal size, beauty, and strength. As these shapes were ever present, and as their might appeared so great, men deemed them to be immortal and blessed, and placed their abodes in the heavens because the unexplained wonders of the heavens had already excited awe. Thus all things were handed over to the gods, and the course of nature was supposed to be governed by their nod. This fatal error sprang from the instinctive fear which associates with divine vengeance the calamity and ruin wrought by storms and earthquakes (v. 1161–1240). Lucretius more than once exults at the overthrow of this delusion (i. 62–69, ii. 1090–1104, iii. 14–30). On the other hand, it is obvious that he has gone too far in his concessions to anthropomorphism. The criticism which he successfully applies to the incongruous creations of legend, centaurs, and chimæras would, on his own grounds, be just as valid against the blessed immortals. The superhuman beings whom he reverences as gods are simply the Homeric divinities purified, refined, and rationalized.

9. **Ethics.**—In a poem professedly dealing with physics we hardly expect to find a systematic treatment of ethics, yet there are enough short notices or digressions in which the subject appears (ii. 16–61, 172 ff., iii. 14–16, 459 ff., 978–1023, v. 9–51, vi. 9–41) to establish the author's complete agreement with the teaching of Epicurus. The end is pleasure—in other words, to secure that pain hold aloof from the body, and that the mind, exempt from cares and fears, feel its own true joy (ii. 16–19). Whoever has been born must want to continue in life so long as fond pleasure shall keep him (v. 177 f.). Gratification of desires which, though natural, are not necessary affords no true happiness. The tortures of conscience make a hell upon earth. Tantalus and Sisyphus and the like are types of men tormented in this life by various lusts and passions. The pangs of remorse are emphasized as well as the constant apprehension that, though the wrong-doer has hitherto eluded gods and men, he cannot keep his secret for ever (v. 1156 f.). Epicurus is extolled as the saviour who, seeing the miserable condition of mankind, partly from ignorance, and partly from mistaken fear of the gods and of death, proclaimed those truths which

alone can bring salvation: that death is nothing to us, that the gods do not interfere with the course of nature, that the world is a fortuitous and temporary concourse of atoms, and man himself a still more ephemeral combination in that world. These are the doctrines which, he thinks, will redeem mankind. But, while master and disciple are perfectly agreed in the literal acceptance of these propositions, there is a marked difference in the spirit of their teaching. Starting with the proposition 'There is no joy but calm,' Epicurus deduces his ideal of a simple, almost ascetic life of intellectual enjoyment, spent in the society of congenial friends. By a life thus regulated according to circumstances he sought to attain the maximum of pleasure. Lucretius, too, advocates an austere hedonism; the pleasure which is the universal law and condition of existence is not indulgence, but peace and a pure heart (v. 18). From all who would live worthily he demands fortitude, renunciation, and unswerving loyalty to truth. No ancient writer was more profoundly impressed with the mystery of existence, and the ills that flesh is heir to. He assailed the foundations of belief with fanatical zeal which rises, one might almost say, to the intensity of religion. Under this aspect, his earnestness has its counterparts in the *Divina Commedia* or *Paradise Lost*.

LUGH.—See Celts, Festivals and Fasts (Celtic).

LULLISTS.—Among the figures of the 13th cent. none is more picturesque, none more representative of the great forces, spiritual and mental, of the age than Raymond Lull, 'The Illuminated Doctor,' logician, philosopher, scientist, poet, missionary, and martyr. He was born at Palma, in Majorca, in 1236, when the first spiritual enthusiasm of the Franciscan movement was dying away. During his boyhood the spiritual Franciscans were making desperate, but vain, efforts to maintain the simplicity of the original vow of poverty which had been the joy of their founder. Human nature made it inevitable, however lamentable, that an Order should possess property. Another deviation from the singleness of mind of St. Francis was, happily, inevitable also. During his life a brother was not allowed to possess a book, and learning seemed as alien as riches. But true devotion cannot be permanently content without the offering of the realms of mind as well as of soul and body. Thus we find in the lives of Roger Bacon and Raymond Lull, members of Franciscan Orders of the next generation, an enthusiasm for learning linked with an enthusiasm for Christ as intense as that of Brother Giles and Sister Clare. These are the figures whom we find toiling amid the dim foundations of the great Palace of Science, blackened by the suspicion of the narrow-minded orthodox, strenuously maintaining the nobility of the offering of science, knowledge, and thought at the foot of the Cross. They were fervent lovers of Christ who stood at the parting of the ways of Scholasticism, still recognizing and using its words and its processes, but adding the facts and inferences of a dawning science of Nature. Their lives were enthusiastic fulfilments of the command, 'Thou shalt love the Lord thy God *with all thy mind*.'

Lull was seneschal of the household of James II. of Majorca, and till the age of thirty he lived the ordinary life of a libertine noble. Suddenly conscience was aroused, and in his chamber, as he was writing love poems, he beheld the vision of Christ on the Cross, and heard Him say, 'Oh Raymond, follow me henceforth.' Then came the agony of conviction and the determination to forsake the world and follow Christ entirely. Two aims at once filled his life—to gain martyrdom, and to convert to Christianity the Saracens around. He would use no carnal weapons; he would go to the Holy Father and to Christian kings, and induce them to endow colleges for the learning of the languages of the unbelievers. For himself he would write a book so irrefutable as to ensure the conversion of Saracen, Jew, and heretic to the Catholic faith. A sermon on the renunciation of St. Francis of Assisi completed his resolution; he left wife and children with sufficient for the necessities of life, sold all else, and went forth in coarsest attire to the new life. He kept a cell for himself on Mount Randa, and there during nearly ten years he sought to fit himself for his work. By the advice of his friends he chose this solitary study in preference to the University of Paris, the centre of the intellectual life of Europe. He learnt Arabic from a Saracen whom he bought as a slave, and narrowly escaped being murdered when this infuriated Muslim realized the object of his study. The crown of his long preparation came when eight days of profound meditation were succeeded by an illumination which Lull himself always claimed as a direct divine inspiration. Under this impulse he wrote the *Ars Magna*, the first of the great works associated with his name. By its methods he felt sure that the truths of Christianity could be so irrefragably stated that the infidels could not possibly refuse acceptance of them. Nothing is more striking in the subsequent history of the philosopher and his followers than the absolute conviction, which they all shared, of the direct divine origin of the mode of reasoning here initiated. The assertion is crystallized in the title 'The Illuminated Doctor' by which he is always known among succeeding generations of Lullists. The woodcuts adorning the great folios in which Salzinger has issued his works all represent the divine beam of light shining down upon him. Enthusiastic disciples confidently appeal to the logical power of the processes as more than possible to unaided human intellect. The unbiased judgment of our own day fails to discover the same immense value or power.

It may be briefly characterized as a mechanical method by which all possible subjects may be subjected to all manner of questions, and thus a complete category of statements may be obtained. The apparatus in its original form is a number of concentric circles divided into compartments denoted by letters of the alphabet. These letters denote in different circles different ideas. Thus we have in one nine subjects: God, Angel, Heaven, Man, the Imaginative, the Sensitive, the Negative, the Elementary, the Instrumental. In another circle we have nine predicates: Goodness, Magnitude, Duration, Power, Wisdom, Will, Virtue, Truth, Glory. In another we have nine questions: Whether? What? Whence? Why? How large? Of what kind? When? Where? How? One of these circles is fixed, the others rotate, and we thus obtain a complete series of combinations, first of questions and then of statements. The precise form of the mechanism varies; in some works we have triangles of various colours intersecting each other; in others we have a tree with roots, trunk, branches, twigs, each labelled with some term contracting from the universal to the special. Letters vary in meaning with the apparatus. But in every case the general idea is the codifying of every possible statement on all subjects. The method, intended first solely as a Christian apologetic, was speedily found to be as applicable to other subjects, and among the numerous works assigned to Lull are many in which the *Ars* is applied to Medicine, Chemistry, Mathematics, Physics, and Astronomy.

Lull commenced at once to use his new weapon with all the enthusiasm of the direct emissary of God. He gave a series of lectures on its application at the Universities of Montpellier and Paris and in the monasteries of France, Italy, and Spain. The failure of his persuasions to induce monarchs or pontiff to develop fresh enterprise for the conversion of the Saracen led Lull himself, at the age of fifty-six, to land as a missionary in Tunis, there confidently expecting to win all to Christianity through his reasoning. Imprisonment and expulsion did not check his zeal; we find him ardently continuing his work wherever there were Muslims or heretics. His own islands, Cyprus, and Armenia certainly saw many converts, and the ban of death did not prevent his returning twice to Africa. The assertions of his much wider travel need further proof.

Lull's scheme for colleges for the study of missionary languages bore fruit for a time in a foundation by his own king, in 1276, of a college for Arabic at Miramar in Majorca, but it was not until the Council of Vienne, in 1311, that papal authority was given for schools for Hebrew, Greek, Arabic, and Chaldee in the Roman Curia, Oxford, Bologna, Salamanca, and Paris. It is interesting thus to realize that in Lull's enthusiasm we have the germ of the Hebrew professorships at our English Universities, as well as the broader ideas of missionary education which he and Roger Bacon alike impressed upon the Church. The same instinct which sent Lull to talk to Saracens in Arabic led him to overleap the limits of tradition and to write many of his works, both devotional and logical, in his native Catalan. He was a pioneer in that movement which, by entrusting to vernacular languages thoughts hitherto imprisoned in the Latin of the learned, gave a new dignity to national speech and a new impulse to the development of the common people: his great religious romance *Blanquerna* was written in Latin, Arabic, and Catalan; his ecstatic hymns entitled *Hours of the Virgin*, with many others of his works, in Catalan alone.

Round Raymond Lull there has gathered a misty halo of romance and unorthodoxy through his incursions into the world of alchemy. His Franciscan supporters are eager to free him from this charge, which has repeatedly brought him within danger of the censure of the Church. He is stated to have learnt from Arnauld of Villeneuve the secret of the philosopher's stone. There is a tradition, exceedingly doubtful but not entirely discredited, of a visit to England to make gold for Edward II. in return for his help against the unbelievers. Certain it is that a number of works on alchemy are assigned to his name which were obviously not written by him. It is proved that on Lull has been fixed the discredit of certain works on magic by another Raymond of Tarrega, a renegade converted Jew, which were condemned by Pope Gregory XI. But we must remember that alchemy was the beginning of natural science, that the early alchemists were religious men who commenced their works in the name of the Trinity, and that the man who believed that he had discovered a universal transmuter of the elements of thought might not unnaturally aim at a universal transmuter of the elements of matter. Lull's dominating idea was that there is one great principle running through the universe, since it is the expression of one divine mind. Scattered among his acknowledged works are repeated references showing that he thought much on alchemy, though he did not expect impossibilities from it. We can well believe that he wrote as well as thought on the subject. Indeed, Roger Bacon (*de Emendandis Scientiis*, bk. iii.) refers to the fact of such writing.

The last period of Lull's life revealed a foe within the Church against which he fought unceasingly. Round the name of Averroes (Ibn Rushd, † 1198; see AVERROES, AVERROISM), the Arab interpreter of Aristotle, had been gathering the thoughts and theories of Muslim, Jewish, and Scholastic successors, diverging gradually into the banishment of the Deity beyond the reach of prayer or care for the individual, the denial of individual immortality, and ultimately even asserting the identity of the soul of all men. Averroism thus, while using the name of a single devout Muslim, was really the composite deposit of a century of more or less sceptical thought; through Maimonides (*q.v.*) and Michael Scot it gained the ear of a section of Scholasticism and won over as votaries many in the University of Paris, the intellectual focus of the world. In attempting to save its orthodoxy it asserted that what might be true in faith might be false in philosophy. This was the special heresy against which Lull spent his life; the authorities at Paris eagerly sought his assistance in combating the heresy which threatened to capture the whole University. The contest was so keen that Lull himself was obliged repeatedly to obtain certificates of his own orthodoxy. At the Council of Vienne Lull worked hard, though apparently without success, to secure an edict forbidding the teaching of Averroism in Christian schools. It lingered for a couple of centuries longer, more and more tending to materialism and finding its chief sphere in the medical school of Padua. Lullism always provided its strongest foes.

When nearly eighty years of age, Lull set off on another missionary journey to Africa; his fervid exhortation roused the fury of the Muslim mob, and he was stoned to death at Bugia on June 30, 1315, thus gaining the coveted crown of martyrdom. The body was carried to Palma and was there interred amidst the laments of his nation.

The immense mental activity of Lull left a vast number of works, many of which have never been printed. Salzinger in his great (incomplete) edition (1721–48) gives a list of 205 treatises as undoubted, besides 93 others more or less probably assigned to his name. Perroquet (1667) names 488, and states that several authors of weight assign no fewer than 4000 to his pen. A large number of enthusiastic pupils, gathered from the lecture-halls of Paris and of the Franciscan monasteries, continued and applied his methods, and in many places Lullist schools grew up side by side with the older-established Thomists and Scotists. The aim of the Lullists was to apply a logical method to the proof of doctrines of the faith, to fight Averroism, and to fit men for missionary work. Enthusiasm for his methods was the special characteristic of the followers of the great enthusiast. This enthusiasm was speedily met by a bitter opposition. It is almost certain that Lull had been a member of the third Order of St. Francis. Rivalry between the great religious Orders, however, belittled his growing fame. The Dominican Eymeric, Inquisitor-General in Aragon (1320–99), initiated the campaign by an accusation of heresy in 500 passages taken from Lull's works. Franciscan apologists assert that Eymeric was a disbeliever in the doctrine of the Immaculate Conception, which was the special enthusiasm of the University of Paris and was warmly advocated by Lullists, and that this was the seed plot of Eymeric's opposition. The Inquisitor asserted that 200 Lullist errors had been condemned by Gregory XI. in 1376. This bull has never been found, though the papal archives have again and again been searched, and N. de Pax (1519) and L. Wadding († 1657), the annalist of the Franciscans, have made out their case that Eymeric invented it, or forged it, or confused it deliberately or accidentally with the condemnation of the works of Raymond of Tarrega, already referred to (most conveniently accessible in *AS*, June, vii. 618–623). Eymeric was degraded and subsequently sent by King John of Aragon into exile; Lullism was declared sane and wholesome in 1386 by the Inquisitor Emangaudius at Barcelona.

In 1483 Ferdinand the Catholic founded the University of Majorca, with a 'studium generale' for the study of Lull's method. Naturally it is the native island of the founder that has been most devoted to the propagation of his philosophy and has fiercely fought for its recognition. But its fortunes have varied elsewhere. In the University of Paris at times students were officially warned against its study, but about the year 1515 it attained great glory there under the inspiring teaching of Bernard de Lavinheta. Its doctrines were again and again assailed as unorthodox, and as earnestly defended. A favourable sentence was obtained from the Council of Trent and from the Inquisition at Madrid. But its foes procured the inclusion of Lull's works on the Index Expurgatorius under Paul IV. They were finally removed from the Index in 1594. The hold of Lullism on the University of Palma continued into the 18th century. In 1635 Urban VIII. ordered that its scholars during their last two years of study should daily hear lectures on the *Ars*. In 1673 Maria Anna of Austria issued an edict assigning precedence to Lullists even over scholars senior to themselves. Objections, insufficient to prevent Lull's beatification, have obstructed his canonization, though the process recounting the miracles at his tomb was presented by the bishop of Majorca in 1612. The principal charges were due to unguarded utterances that seem to ignore the necessity of faith and to bring the truths of religion within the powers of human reason. Others considered the processes of the *Ars* mere word-chopping. Later apologists like Perroquet confess that sciolists made it their boast that by this method they could speak on any subject, to any length, at a moment's notice, and Perroquet laments the undeserved obloquy which such charlatans have brought on their master (*Vie*, p. 118 f.). The specimens given of the method explain why it has now passed away. Ps 20 and Wis 6 are expounded by Perroquet as samples. We find a careful analysis of the subjects and predicates of each verse, and an exhaustive statement of their combination—the whole producing a somewhat commonplace expository commentary. Lull has become the national saint of the Balearic Isles. Here the enthusiasm never died, but the philosophic method gradually merged itself in an enthusiasm for the memory of the saint and a national pride in collecting and publishing the Catalan poems and imaginative works on which Lull's fame will finally rest. The Lullists of to-day are a number of patriotic and cultured men who are proud of their national literature and its great exponent.

LITERATURE.—*AS*, June, vii. [1867] 581–676 (30th day), gives life, and history of the disputes on orthodoxy; I. Salzinger, *Opera Raymundi Lullii*, Mainz, 1721–48, vols. i.–vi., ix., x. A. Perroquet, *Apologie de la vie et des œuvres du bienheureux Raymond Lulle*, Vendôme, 1667; K. Prantl, *Geschichte der Logik*, Leipzig, 1867 (vol. iii. deals with Lull's system); A. Helfferich, *Raymund Lull und die Anfänge der catalonischen Literatur*, Berlin, 1858, deals with his place in literature. Modern lives are M. André, *Le Bienheureux Raymond Lulle*, Paris, 1900 (edifying but uncritical); S. M. Zwemer, *Raymund Lull, First Missionary to the Moslems*, New York, 1902; and W. T. A. Barber, *Raymond Lull the Illuminated Doctor*, London, 1903. For further bibliography see U. Chevalier, *Répertoire des sources hist. du moyen âge, bio-bibliographie*, new ed., Paris, 1905–07, cols. 3891–3893.

W. T. A. BARBER.

LUMBINĪ.—A pleasaunce, or small wood, mentioned in Pāli records as the birthplace of the Buddha. It is now occupied by the shrine of Rummindēī in Nepāl, approximately in 83° 20′ E. long., 27° 29′ N. lat., about four miles north of the frontier between the British possessions and the Nepālese Tarai, and half a mile west of the river Tilār.[1]

The references to it so far traced in the N. Indian Pāli books are only three. One is in an old ballad, containing the prophecy of the aged Asita about the infant Buddha, this Asita story being the Buddhist counterpart of the Christian story of Simeon. The ballad is certainly one of the very oldest extant Buddhist documents, and must be earlier than 400 B.C. It is now included in the anthology called the *Sutta Nipāta*, and it states at verse 683 that the child was born in the village of Lumbinī (*Lumbineyye gāme*). The other two references are in the *Kathā Vatthu*, composed in the middle of the 3rd cent. B.C. by Tissa, son of Moggali. In that work (ed. A. C. Taylor for *PTS*, London, 1894–97, pp. 97 and 559) it is stated that 'the Exalted One' was born at Lumbinī (*Lumbiniyā jāto*).

Our next information is the inscription found on a pillar in Dec. 1896. The pillar had been known for years to be standing at the foot of the small hill on which the tiny shrine is situated, but the fact that the *graffiti* on the exposed part of it were mediæval and unimportant, combined with the difficulties resulting from its being in foreign territory, caused it to be neglected until 1896. When it was then uncovered, the top of an inscription was discovered three feet beneath the soil. The inscription is in old Pāli letters, and in a dialect which the present writer would call Kosalī—a dialect so nearly allied to the literary Pāli of the canon that other scholars prefer to call it Pāli. The translation is as follows:

> 'The beloved of the gods, King Piyadası (that is, Aśoka), has come in person and paid reverence; and to celebrate the fact that the Buddha, the Sākiya sage, was born here, has had a stone horse (?) made and put up on a stone pillar; and because the Honourable One was born here has remitted the tax of one-eighth on Lumbinī village (that is, parish).'

There are slight differences in the translations by various other scholars, but not as to the double insistence on the fact that the Buddha was born at the spot where the pillar was erected.[2] The letters are beautifully clear, each being nearly an inch in height. When the present writer made a copy of them in 1900, though they had then been three years exposed to the light, they seemed almost as if freshly cut. In the dim light of the cell above, containing the shrine, can be discerned a bas-relief representing the birth-scene. But the Brāhman who claims the right to the petty income arising from the pence of the peasantry refuses any proper examination of it. So far as a cursory inspection permits of a decision, it seems to be much later than the inscription.

A legend in the *Divyāvadāna*[3] purports to give the conversation between Aśoka and his guide Upagupta on the occasion of the visit recorded in the inscription. Perhaps the tradition that Upagupta, very possibly another name of the author of the *Kathā Vatthu*, accompanied him is historical. The work in question is in Buddhist Sanskrit; and, though its date is unknown, it must be at least five centuries later than Aśoka, who spoke, of course, the language of his inscription, and would not have understood the words here put into his mouth.

[3] Ed. E. B. Cowell and R. A. Neill, Cambridge, 1886, p. 389.

Still later are certain references in the Pāli commentaries written at Kāñchīpuram[1] or Anurādhapura[2] (*qq.v.*). In order to explain how the birth took place in a grove, they say that the mother, on the way to be delivered among her own people, was taken with the pains of delivery half-way between Kapilavatthu, her husband's home, and Devadaha, her father's home. This is quite probable; but, on the other hand, it may have been suggested by the meagre facts recorded in the ancient books. Neither the Buddhist Sanskrit writers nor the Pāli commentators could have understood the long-buried inscription, even had they known of its existence.

It is very interesting to see that this spot, so deeply revered by all Buddhists, should have retained its original name through so many centuries of neglect and desertion. Watters says that 'according to some accounts' it had been named Lumbinī after a great Koliyan lady who had dedicated it to public use.[3] This is quite probable. There are other instances of a similar kind; but, unfortunately, Watters gives neither name nor date of any of the Chinese books to which he refers. But we know that both Sākiyas and Koliyas found difficulty in pronouncing the trilled *r*. Perhaps this was true of all Kosala. The inscription at Lumbinī, for instance, has *lāja* for *rāja*; and Lumbinī itself is often written in Pāli MSS with a dotted L, which may represent an untrilled *r*. Thus Rummindēī stands for Lumbinī Devi, the goddess of Lumbinī. But that goddess was not really a goddess at all, nor even Lumbinī, but only the mother of the Buddha. We have no evidence as to when or how the transformation took place. And in face of the stubborn opposition of the Nepālese Government, and of the Brāhman who has taken possession of the shrine, there is very little hope of any further excavation at the site to throw light on this question, or to explain the divergent statements of Chinese writers as to what they saw at the place.[4]

LITERATURE.—See the sources cited in the article, and cf. also art. KAPILAVASTU.

T. W. RHYS DAVIDS.

LUNACY.—See INSANITY.

LUSHAIS.—The Lushais are a composite community, consisting of those groups which were absorbed and reduced to a more or less complete unity by the skill and sagacity of the Thangur chiefs of the Lushai clan in the last century. They practise *jhuming*, a form of cultivation which involves constant moves from one site to another. In this fact is found a reason for some at least of their peculiar characteristics.

Each village is a separate State ruled by its own chief, who usually belongs to the Sailo clan, whose talent for government has made them the masters of nearly the whole of the area now known as the Lushai Hills. The sons, as they reached maturity, were provided with a wife and followers, and were sent forth to found new villages. The youngest son was the heir general. Elders assist the chief in the village administration, and each village possesses, in addition to the council of elders, officers to settle where the *jhums* are to be made, a village crier, a blacksmith, and a wise man, *puithiam* (lit. 'much knower'). The population of a Lushai village consists of members of different clans and tribes brought under the unifying influence of their subordination to the Thangur chiefs. Their religion, therefore, exhibits traces of a mixed origin; there are features in it which recall some of the more notable characteristics of the systems of their congeners, east as well as in the more distant north, all of whom speak cognate dialects.

The Creator is a spirit called Pathian, beneficent, but with little concern in the affairs of men. Subordinate to Pathian is a spirit Khuavang, whose appearance to men causes illness. He is also spoken of as a personal genius—an idea which is still further elaborated in the belief in the *mivengtu*, the watchers of men. Each man has two souls, *thlarao*, the one wise and the other foolish. One *mivengtu* is good and the other evil. The *huai* are demons inhabiting water and land, are all bad, and are the causes of all sickness and misfortune; the *lashi* are spirits who are concerned only with wild animals, whom they control; the spirits of the dead need constant propitiation and receive offerings of firstfruits. Each clan has a spirit, or clan deity, *sakhua*, to whom a special chant is addressed by the *puithiam* (who must be a member of the clan), and identity of chants and ritual is a sure proof of membership of the clan.

The rites performed for the purpose of address to some definite spiritual being may be separated from the rites which seem to be efficacious without the intervention or mediacy of any definite spiritual being. The *sakhua* chants recorded by Shakespear are accompanied by sacrifices of a sow. The sacrifices to *huai*, supposed to frequent houses and villages, are various, now a pig, now a cock, and sometimes a goat being offered. Three sacrifices should be performed after marriage. Dreams afford an indication of the necessity for the performance of one of those rites. Temporary tabus, closely akin to those so common in the Nāga area, are part of the necessary liturgy. The ritual for appeasing the *huai* of the woods and waters is not dissimilar, but some of the most efficacious rites are the patent of certain clans. The villages close their gates on the occasion of an epidemic of cholera, so as to exclude all visitors from the infected area, and frighten away the demon causing the sickness by erecting a rough gate across the road leading to the distressed villages, which they man with straw figures of armed men; they suspend from the gateway the portions of the dog sacrificed in these emergencies, which are reserved for the demon—as a rule, the extremities with the heart, liver, and entrails. Some of the birth-rites are addressed to *huais*, while others are seemingly of almost automatic efficacy. In the second category of rites are those which are performed to bring back a straying soul (for men sometimes lose one of their souls), to produce children, to afford protection against sickness, to secure good hunting and to ascertain the luck of the intended chase, to benefit the crops, to obtain power over the spirits of animals and men killed in this world, and to secure freedom from the ghost of the slaughtered enemy. The series of five feasts which affect the future life in important ways are religious rites of a specially interesting nature. Most of the rites are accompanied by a regulation requiring that the social group concerned, be it a household or a whole village, shall abstain from all but the most necessary work, and shall not leave the prescribed area. The blacksmith's forge possesses sanctity, and is a place where persons who have accidentally come into contact with any noxious influence may take sanctuary and be purified. The priesthood consists of the *puithiam* and the members of special clans. Any one can acquire by purchase the *hlā*, songs or charms which form the stock-in-trade of the *puithiam*, whose success must depend largely on luck and on short memories of his failures.

[4] See Watters, *op. cit.*

The first man, Pūpawla, or the ancestor Pawla, possibly in revenge for his death, stands armed with bow and pellets at the entrance to the spirit world. Except the *thāngchhuah*, *i.e.* those who have performed the series of five rites (fasts, as they are sometimes called) in this world, none can escape his aim. Yet he spares still-born children or those who die young, for he heeds their plea that, had they lived, they too might have performed the due ritual and so been free to enter with the *thāngchhuah* into Pielrāl, where all is pleasant. Those whom Pawla wounds go to Mithi khua. Their wounds swell painfully for three years, and for a like period the scar remains. Thereafter they die again, are born as butterflies, and then die again, to reappear as dew on the ground; as dew they enter the loins of a man, and are reborn as human children. In addition to the personal advantages of the *thāngchhuah* rites, the man may take his wife with him to Pielrāl, whence there is no return to reincarnation, and he may wear certain special clothes, build a verandah at the back of his house, enjoy a window in his house, and put an additional shelf near his bed.

The Lushais are a superstitious people, and believe firmly in witchcraft; not very long ago, to test the efficacy of the belief that the victim of witchcraft would surely recover if he could but taste the liver of the wizard, they killed three whole families who were thought to be bewitching an aged chieftainess, cut the livers of the wizards out, and carried them back, only to find that the old lady had died in their absence. Naturally *le voisin ennemi* is an expert at the black art, but their neighbours return the compliment to them in full.

Certain persons, especially women, can put themselves into a trance (*zawl*) and communicate with Khuavang, from whom they acquire information as to the particular sacrifice required to cure the sick. The process of divination employed on these occasions requires the use of an egg and a shallow basket of rice, in which appears the footprint of the animal to be sacrificed. Possession by the spirit of a wild animal (*khawring*) is contagious and hereditary, and takes the form of passing from the hostess to another woman, who speaks with the voice of the original hostess. The belief in the power of men to assume the form of a tiger is common.

LUSTRATION.—See PURIFICATION.

LUTHER.—1. Life.—The career of Martin Luther naturally divides into three periods—the first, of preparation (1483–1517); the second, of protest (1517–21); the third, of construction (1521–46). He was born at Eisleben in Saxony on 10th Nov. 1483. His birthplace was only the temporary home of his parents. They had come thither from Moehra, the real home of the family, some 80 miles to the south-west. The father, as an older son, had no share in the paternal estate, and was, therefore, in straitened circumstances, until, by his daily labour in the copper mines, and by economy and thrift, he became proprietor of mines and furnaces, and an influential member of the community. Both as a child in his home and in his early school days, Luther knew what the struggle with poverty meant. As he advanced, his father was at last able to provide him with the means for a liberal education. Both his father, John Luther, and his mother, Margaretta Ziegler of Eisenach, were deeply religious, and subjected him to a discipline, continued in the schools to which he was first sent, that was legalistic rather than evangelical. His childhood was spent at Mansfeld. His elementary training was received chiefly at Eisenach, among his mother's relatives, and his University course at Erfurt, an institution which, at his entrance in 1501, was over 100 years old, and the most numerously attended of the German Universities. Intended by his father for the legal profession, he devoted his first years at Erfurt to classical literature and philosophy. While he read with absorbing interest the Latin classics, and derived from them the benefit of a wider horizon and a deeper acquaintance with human nature, it is a great exaggeration to affirm, as some recent writers have done, that they made him more of a humanist than a theologian; for he read them with a critical eye, and reacted against the excessive devotion to the purely formal that dominated the humanistic school. His teachers in philosophy were nominalists, who introduced him to Occam, Biel, and Gerson, and instilled a critical disposition towards the current scholasticism. Attaining A.B. in 1502, and A.M. in 1505, he reluctantly began the study of Law, for which he had little taste. His dissatisfaction with the calling into which his father was forcing him was intensified by spiritual conflicts, brought to a crisis by the sudden death of a friend by his side—whether by a bolt of lightning or by assassination can scarcely be determined—and by his own narrow escape in the storm that is said to have destroyed his friend. In obedience to a vow made in the moment of peril, he turned his back upon the world two weeks later, and entered the cloister of the Augustinian hermits at Erfurt (17th July 1505). Purity of life, deep moral earnestness, devotion to the study of the Holy Scriptures, and ability as preachers distinguished the Saxon Augustinians; but it is incorrect to infer from their name any special interest in Augustine's doctrine of sin and grace. With all the intensity of his nature the young novice devoted himself to the scrupulous observance of every detail of the requirements of the Order, and rose rapidly in the esteem of his brethren and superiors. He found edifying spiritual advisers in an aged monk whose name has not been preserved, and especially in John Staupitz, his Vicar General. Some of his modern critics accuse him of morbid conscientiousness and needless scrupulosity in his conceptions of truth and duty. The rules of the Order came to him with all the claims of divine commands, which he could not decline to observe in all their strictness without, in his belief, sinning against God. Nor could he be satisfied with anything less than certainty with respect to his relations to God. It matters little that, as has been recently urged, in some of his earlier discourses, composed while he was still a monk, as, *e.g.*, in the lately discovered lectures on the Epistle to the Romans, evangelical statements can be found foreshadowing his future position. For it is no uncommon circumstance for writers advancing towards a conclusion, amid many vacillations, not fully to grasp the meaning of their own words.[1] In 1507 he was ordained to the priesthood, and his father, with a large retinue of personal friends, honoured the occasion of his first celebration of the Mass; but that, even then, the breach between father and son was not completely healed appeared at the meal which followed, when the former in his blunt way reminded the clergy that obedience to parents is a command from which no dispensation could be given, and that what they esteemed a call from God might be nothing more than a delusion of Satan. Selected by Staupitz in Nov. 1508 as instructor in Philosophy in the University of Wittenberg, founded only six years before, Luther was delighted, when, four months later, as a Bachelor of Theology, it was his privilege to lecture also on the Holy Scriptures. Recalled the succeeding autumn to Erfurt, he was assigned the task of lecturing on the *Sentences* of Peter Lombard. Two years later (1511) he was sent to Rome to represent Staupitz in regard to certain business affairs of the Order. This visit was of the highest moment to Luther's subsequent career. His most recent Roman Catholic biographer, Grisar, candidly says that the Rome which he visited was the Rome of the then ruling Julius II. and his predecessor, Alexander VI.—Rome glorified by art, but the deeply degenerate Rome of the popes of the consummation of the Renaissance.[1] He was grieved by the many abuses forced on his attention; and, notwithstanding the credulity with which, as he afterwards acknowledged, he accepted much of what he there saw and heard, the hold which the papal name and authority had had upon him was greatly weakened. The story of his experience on Pilate's Staircase rests solely on the testimony published after his death by his son Paul. Rapid promotion followed, as a testimonial to the success of his mission. Receiving the degree of Doctor of Theology at the age of twenty-nine (1512), he accepted it as a special call 'to explain the Scriptures to all the world,' and broke the traditional modes of instruction by his method of lecturing. Although he retains the 'four-fold sense' of Scripture, he lays the chief stress upon finding allusions to Christ in all the prophecies of the OT, and interprets the Psalter by the gospel of the NT. From the OT books he turned to the NT, treating successively Romans, Galatians, and Hebrews. From the nominalists, Occam and Gerson, he had turned to Augustine, and from Augustine more and more to Paul. The mystical writer, John Tauler, and the anonymous author of *The German Theology* had a decided formative influence. His time, however, was largely absorbed by administrative duties. In 1515 he was appointed Vicar, with the oversight of eleven monasteries.

It was in the midst of these duties that he became involved in the controversy concerning indulgences (*q.v.*). The doctrine of indulgences was rooted in the denial of the completeness of the satisfaction for sins made by Christ. This satisfaction, it was taught, had value for original sin, and, beyond it, was made for actual sins only by commuting the penalty from one that was infinite, and beyond man's power to afford, to one that is finite and within his limitations, either in this world or in that which is to come. Penitence, it was further taught, consisted of contrition, confession, and satisfaction, made by the penitent. Such satisfactions could be made only for such sins as were recognized by the sinner. But, as in this life the knowledge of many sins escapes the notice of even the most faithful, purgatory was provided, where satisfactions could be rendered for sins unrepented of at death. Relief from such satisfactions would be found, however, in the fund of the superfluous merits of the saints acquired by their works of supererogation—a fund upon which the Church, through its head on earth, could draw, so as to grant indulgence by the payment of an equivalent. Heretofore, no more had been claimed for a letter of indulgence than an abbreviation of the pains of purgatory for those who had already departed. As the granting of these letters afforded large revenue, abuses constantly grew. It was the most convenient and effective way of raising funds for Church purposes, with percentage allotted to the agents who collected them. The luxurious habits of Leo X. and especially the completion of St. Peter's church at Rome rendered this expedient very serviceable at this time. Albrecht of Brandenburg, Archbishop and Margrave, had contracted to collect fees from this source, with the stipulation that he retain one half. He commissioned as one of his agents John Tetzel, a Dominican monk and emotional preacher, who, by his appeals to the terror of his hearers, created great popular commotion wherever he appeared, and urged them to purchase his wares. It would not be difficult to accumulate from Roman Catholic writers abundant censure of the course of Tetzel. For more than a year Luther, entirely ignorant of the connexion which both Albrecht and the pope himself had with Tetzel's traffic, had been uttering protests at a distance; but, as Tetzel drew nearer Wittenberg, the revelations made to Luther as a spiritual guide in the confessional compelled him first to appeal repeatedly to his ecclesiastical superiors, and, finally, when these appeals were fruitless, to publish his Ninety-five Theses for an academic discussion in the University. The effect which they produced, as well as the publicity which they received, was beyond all expectation. While in these Theses he strikes boldly and remorselessly at the very roots of the abuse, he is evidently still feeling his way, and has not entirely freed himself from some positions that were afterwards very forcibly repudiated.

There were formal answers the next year by John Eck and Silvester Prierias, which called forth responses, with characteristic vigour, from Luther. There was a barren conference with Cardinal Cajetan at Augsburg (Sept. 1518), and another with Miltitz at Altenburg (Jan. 1519), followed by the Leipzig Disputation (beginning 23rd June), in which, after Eck and Carlstadt had argued for days, Luther's debate with Eck began (4th July) on Church authority, significant because of the advance shown by Luther upon anything that he had previously declared, in the maintenance of the fallibility of Councils, and the censure of the Council of Constance for condemning Hus. The aid offered from the camps of humanism Luther not only declined, but repelled, as he wished to make it clear that his protest rested upon entirely different grounds from theirs. The year 1520 is noted for three monumental treatises, two polemical, one irenic and constructive. Of the former, the first was his famous 'Appeal to the Christian Nobility,' which might appropriately bear the title, 'The Responsibility and Duty of the Laity in Spiritual Affairs,' and the second, 'The Babylonian Captivity,' a scathing criticism of the sacramental system of the Roman Church. The latter, 'The Liberty of the Christian Man,' has evoked the following tribute from one of his most prominent modern critics:

> 'One cannot help asking how the same hand which delighted to shatter as with a sledge-hammer all that had hitherto been held sacred and venerable, could also touch so tenderly the chords of divine love' (Janssen, *Gesch. des deutschen Volkes*, Eng. tr., iii. 239).

The bull of excommunication promulgated by the pope on 15th June 1520 did not reach Wittenberg until four months later, and was formally burned by Luther before the students of the

University (10th Dec. 1520). On 16th and 17th April 1521 Luther appeared before the Emperor, Charles V., at the Diet of Worms, and declared that he could not recant. There were too many political complications involved to enable the Emperor to act promptly against him, and before such action could be taken the Elector of Saxony, as a precaution, had Luther arrested, while returning from the Diet, and carried to the Wartburg, overlooking Eisenach, where he remained in retirement until the following spring.

The isolation of those ten months afforded opportunity to review his work at a distance from the scene, to mature his convictions by the close and uninterrupted study of Scripture, to form some plans for the future, and to begin his most important work, the translation of the Bible into German. The NT was translated, from the second edition of the Greek Testament of Erasmus, within three months from the time when it was begun. The translation was brought with him when he returned to Wittenberg from his exile (6th March 1522), and appeared the succeeding September. The translation of the OT was a much more difficult undertaking, in which he had the assistance of Melanchthon, Aurogallus, Roerer, Foerster, and others, and was published in parts, until in 1532 the entire Bible appeared complete, followed by the Apocrypha two years later.

On his return to Wittenberg the character of his labours was much changed. He had at once to meet with decision the radical reaction against Rome, which had resorted in some cases to revolutionary, and in others to precipitate, measures. Three days after his return he began a series of eight sermons, preaching daily, into which he threw all his energy to check their excesses and, against them, to define the principles for which he had been contending. The reformation of the churches in districts no longer under the dominion of the old Church now became necessary, to prevent them from being misled by the confusion that had been introduced, and in order, by a re-organization, to build them upon solid evangelical foundations. Henceforth, while the polemic against Rome did not cease, and almost equal energy was directed against the opposite extreme, he was occupied largely with constructive work—the visitation of churches, the preparation of Church constitutions, the re-organization of schools, the revision of the liturgy, the writing of catechisms, the composition of hymns, and the publishing of popular sermons, not only for private edification, but especially as models for the inadequately prepared preachers, besides his lectures to his classes and incessant correspondence and conferences—until, from sheer exhaustion, he fell a victim to disease, while acting as a mediator between the counts of Mansfeld, and died in his native town of Eisleben (16th Feb. 1546). Among the more important events of this later period of his life are his marriage with Catherine von Bora (1525); the Marburg colloquy with Zwingli (Oct. 1529); his second period of isolation, at the castle of Coburg, during the Diet of Augsburg (1530); his conferences in 1535 with representatives of the English Church, which had an important influence on the English Reformation and its literary monuments; the Wittenberg Concord of 1536 with Bucer and other representatives of the Reformed Church; and the Schmalkald Articles of 1537. Probably the point that has occasioned most heated discussion was his relation to the bigamy of Philip of Hesse in 1540 (see W. W. Rockwell, *Die Doppelehe des Landgrafen Philipp von Hessen*, Marburg, 1904).

2. **Appreciation.**—The greatness of Luther lies largely in the versatility of his gifts and the readiness with which he could call them into service. Intensity, concentration, earnestness, directness, and action are constantly present. Beneath his efforts there is always some important practical end. His scholarship has a higher end than mere love of learning. He availed himself of the weapons of humanism, so far as he could use them, without being in any sense a humanist. He had lectured for years on philosophy, only to repudiate both the Greeks and the scholastics. His writings abound in numerous historical allusions, without suggesting that he ever could be rated as a historical investigator. It is rather his experience as a Christian that is ever leading him the more deeply into the treasures of Holy Scripture, to find therein the solution of the problems of human life.

As a professor he was neither a scientific exegete nor a systematic theologian. He cut loose from all scholastic formulæ and methods. While he could not entirely escape from the influence of mediævalism, he was in constant antagonism to its authority. Even in the class-room he was a great preacher, stimulating the thought and life of his pupils, instead of retailing stereotyped definitions. His lectures were almost entirely confined to particular books of the Bible, which he expounded with great freedom of manner.

As an author, it is in his form rather than his matter that he reflects the present moment. Eminently conservative and slow to reach a conclusion, when once he has reached it he writes in an intense glow of feeling; words crowd one upon the other with great rapidity of thought, and with wealth of illustration often of the most homely character. He never has difficulty in making his meaning intelligible. He can write with equal ease as a scholar or for the plainest of the people. He loves paradoxes. He concentrates his attention so intensely on the particular form of the subject before him as to make no qualifications in order to forestall possible incorrect inferences or misrepresentations. The whole, real Luther can be read only by placing side by side his declarations under varying circumstances, and against opponents that widely differ. Few writers, therefore, can be so readily perverted by partisans. His language is not infrequently rough, and his allusions such as were in keeping with the rude age in which he lived.

He was master of the art of translation. Not verbal exactness, but the precise reproduction of the very shade of meaning of the original in the language of the simplest people of a later age, was his aim. His German Bible is a modern book, which at last fixed the form and became the standard of modern German. His hymns are paraphrases of Scripture, or free renderings of the old Latin hymns of the Church. His sermons are most frequently expositions of long passages of Scripture, and grow naturally out of the text, as applied to contemporary circumstances and conditions; and hence generally reflect that with which his attention at the time was chiefly occupied. They have come to us mostly as taken down in shorthand by some of his hearers, and not in finished form from his own pen.

His contributions to the re-organization of churches are embodied not only in documents that bear his name, but also in those of his co-labourers, Melanchthon, Bugenhagen, and others, who applied the principles which he laid down, and acted with his constant co-operation and advice. He was the advocate of liberal culture, the study of the Greek and Latin classics, the education of women, and free public libraries. So far was he from precipitate and revolutionary methods of reform that he proceeded with the greatest caution, upholding what had been fixed and approved by long usage, until a break with the past was no longer avoidable, but, when the critical moment came, always acting with promptness and decision. His aim was not even a restoration of Scriptural models, but the continuance of whatever in life, worship, and organization was not contrary to Scripture. External union was approved only as it was the expression of a preceding inner unity. Agreement as to the faith of the gospel was the condition of all attempts at Church union, which he esteemed valuable only as the servant of faith; hence the faith was never to be adjusted to the supposed expediencies of union.

As a theologian, his chief effort, on the negative side, was to free theology from its bondage to philosophy, and to return to the simplicity of Scripture. He was dissatisfied with technical theological terms, because of their inadequacy, even when the elements of truth which they contained restrained him from abandoning them. He was not without a historical sense and a reverence for antiquity, provided that it was subjected to the tests of Holy Scripture. Scripture was not to be interpreted by the Fathers, but the Fathers were to be judged by their agreement or disagreement with Scripture. It was his especial privilege to have entered into the spirit of St. Paul as none before him, not even Augustine. Luther's theology is Pauline theology, in the language of modern times. It begins and ends with the revelation of God in Jesus Christ. Christology is the key to all knowledge of the nature and attributes of God and the doctrine of the Trinity. Christ is the interpreter of Scripture. All doctrines are to be considered in their relation to Christ. With Augustine, he taught the organic union of all men in Adam, and the organic union of all sins in original sin. Original sin is emphasized rather as the corrupt state resulting from the Fall than as the act itself whence this state proceeds—a state of spiritual death, from which man can neither of himself escape nor contribute towards his deliverance. The Incarnation presupposes man's sin. God became man in order, by His sufferings and death, to provide redemption. In the personal union, as the result of incarnation, the integrity of both natures is preserved, the divine inseparably pervading and energizing the human; the human bringing the possibility of suffering, and the divine sustaining and imparting to the human its infinite efficacy. The humiliation (*kenosis* [*q.v.*]) is not of the divine nature, but of the divine person in His human nature. Hence humiliation is not synonymous with incarnation, but is only a determination of the human nature, glorified from the very first moment of its union with the divine. Redemption is made for all men and all sins, although not received and realized by all. The doctrine of predestination, he insists, should always be treated as a supplement to Christology, since what God has predetermined concerning our salvation from eternity He has revealed in the gospel, and, therefore, the gospel itself exhibits the contents of God's eternal decree concerning salvation. The blessings of salvation, to be realized, must be appropriated by faith; but this faith is God's gift. Man cannot believe in Christ, or come to Him, by his own reason or strength. It is the office of the Holy Spirit alone to bring man to Christ and Christ to man, to call, enlighten, and regenerate. If man is saved, it is entirely by the work of the Holy Spirit in applying redemption through Christ; if he is lost, it is entirely by his own persistent resistance of the offers of divine grace. There are no degrees in justification; it is perfect and complete, however weak the faith that apprehends it, since the righteousness which it imparts is the perfect righteousness of Christ. If regarded as forgiveness, where the least sin is forgiven, all are forgiven, and where the least sin is unforgiven, none are forgiven. But justification is more even than forgiveness. Christ and man have exchanged places; so that while all the guilt of man is assumed by Christ, all the righteousness of Christ is transferred to man. Hence the confidence of man before God. Faith kindles love. As an active principle, faith not only receives what God offers, but also, through the new powers imparted with justification, exercises itself in obedience towards God, and in efforts for the good of man.

> 'It is as impossible to separate works from faith, as it is to separate heat and light from fire' (*Introduction to the Epistle to the Romans*, 1522 [*Works*, Erlangen ed., lxiii. 124 f.]). This passage has called forth the unqualified commendation of the Roman Catholic theologian, J. A. Moehler, although he incorrectly adds that it is 'in the most amiable contradiction with the Lutheran theory of justification' (*Symbolik*^{8}, Mainz, 1872, i. 163, tr. J. B. Robertson, London, 1843, i. 185).

Furthermore, the Holy Spirit comes to men only in and through the Word and Sacraments, through the word of the Law, producing sorrow for sin, and through the gospel, *i.e.*, the promise of the forgiveness of sins producing faith. The office of the Sacraments is to individualize the general promise of the gospel. The chief thing in baptism is not the water, but the Word, which, in and with the water, is applied to the person baptized. The chief thing in the Lord's Supper is not the bodily eating and drinking, but the assurance, 'Given and shed for you,' which is declared to the guests, and sealed by the elements and the heavenly mystery that they offer. Since, wherever this Word is preached, whether orally or visibly in the Sacraments, the Holy Spirit is active, Word and Sacraments become marks, designating where at least some truly believing children of God are to be found; *i.e.*, they indicate the presence of the Church, which otherwise is a matter of faith, as the Creed confesses: 'I *believe* in the Holy Catholic Church, the communion of saints.' The direct relation of each individual to Christ, unmediated by any other agency than Word and Sacrament, creates the spiritual priesthood of believers, and obliterates the distinction between an order of priests and laymen. The ministry of the gospel is not a priesthood, but an office of the Church for the administration of Word and Sacraments, in which administration ministers are only the executives of the congregation, and, through the congregation, of Christ Himself, who has called and ordained them. Distinctions of rank among ministers are not admissible by divine law, but may be very advantageous when agreed upon simply according to human law. Uniformity of Church government and ceremonies is unnecessary, however desirable it may be as a matter of expediency. The Church has no power but that of the Word. Even in regard to those matters where the Word of God allows no freedom, we have no right to attempt to constrain others by any other means than by the preaching of the Word.

> 'I will preach and talk and write against these things, but no one will I attempt to force' (*Eight Sermons preached at Wittenberg, Lent, 1523* [*Works*, Erlangen ed., xxviii. 219]). 'The Word that has created the heavens and the earth must do this, or it will be left undone' (*ib.*).

The dualism in ethics that pervaded the mediæval religionism, according to which there is an inherent antagonism between the spiritual and the material, the heavenly and the earthly, entirely disappears in Luther. The separation caused by sin is removed by redemption and regeneration, and the spiritual now pervades the material, the heavenly the earthly. Hence the believer is not only a spiritual priest, but also a spiritual king, and lord over all things; and his chastened enjoyment of them belongs to that gratitude which he owes the Redeemer who has provided them for him. Nevertheless, while by faith lord over all, by love he is servant of all, and obeys God's law from an inner necessity of his regenerated nature

LIBRARY OF
PACIFIC BIBLE SEMINAR

(cf. C. E. Luthardt, *Die Ethik Luthers in ihren Grundzügen*, Leipzig, 1867, *Geschichte der christlichen Ethik*, do. 1893, vol. ii.).

Probably with only one exception in all history, no one has been so much praised or so bitterly and incessantly attacked as Luther. The discussion of his life and deeds is constantly renewed with all the interest of almost contemporaneous occurrences. His voluminous works, many of them reaching us through the notes of others instead of from the pen of the author himself, the memoranda of friends who jotted down from memory fragments of his conversations in the bosom of his family, his most confidential letters to his most intimate associates, humorous and satirical as well as serious, afford an inexhaustible mine for students of successive generations. Researches in archives heretofore closed and in libraries where they have lain unnoticed are bringing to light MSS of decided historical importance. Thus, in the last year of last century, his lectures on the Epistle to the Romans,[1] for which scholars had long been looking, were found in so public a place as the Berlin Library, shortly after a student's notes of the same lectures had been discovered in the Vatican, and succeeding only by a little over ten years the discovery of lectures on the Psalms, belonging also to his formative period. New biographies from both friends and opponents, as well as from those who profess to apply with rigid impartiality the highest standards of historical criticism, succeed each other with a frequency that is remarkable when it is remembered that he has been dead for over three centuries and a half, showing clearly that the last word has not been said on many questions that he started, and that cannot be answered without a thorough study of his own presentations.

Literature.—(*a*) Of the more recent Roman Catholic critics of Luther and his work, the following may be mentioned: J. Janssen, *Geschichte des deutschen Volkes seit dem Ausgang des Mittelalters*, 8 vols., Freiburg im Br., 1879–94, Eng. tr., 16 vols., London, 1896–1911; H. S. Denifle, *Luther und Luthertum*², 2 vols., Mainz, 1906; H. Grisar, *Luther*, 3 vols., Freiburg im Br., 1911–12.

(*b*) Among the replies called forth are the following: J. Köstlin, *Luther und J. Janssen, der deutsche Reformator und ein ultramontaner Historiker*², Halle, 1883; R. Seeberg, *Luther und Luthertum in der neuesten katholischen Beleuchtung*, Leipzig, 1904; T. Kolde, *P. Denifle, seine Beschimpfung Luthers*, do. 1904; J. Haussleiter, *Luther im röm. Urteile*, do. 1904; W. Köhler, *Ein Wort zu Denifle's Luther*, Tübingen, 1904; G. Kawerau, *Luther in kath. Beleuchtung, Glossen zu H. Grisar's Luther*, Leipzig, 1911. The results are condensed in: W. Walther, *Für Luther wider Rom*, Halle, 1906 (an exhaustive answer to the polemics of Janssen, G. G. Evers, and Denifle); and H. Boehmer, *Luther im Lichte der neueren Forschung*³, Leipzig, 1914.

(*c*) The collected works of Luther have been comprised in seven editions of varying excellence and completeness: the Wittenberg (1539–58); the Jena (1555–58); the Altenburg (1561–64); the Leipzig (1729–40); J. G. Walch (1740–53), of which the St. Louis (1880–1910) is a thoroughly revised reprint; the Erlangen (beginning in 1826); the Weimar, the fullest and edited with greatest critical accuracy, under the patronage of the German Emperor. It was begun in 1883, and is still far from completion. For details concerning these editions see *PRE*³, art. 'Luther.' A very convenient edition of select works, edited with critical care and with introductions, is that of G. Buchwald, G. Kawerau, J. Köstlin, M. Rade, and E. Schneider, 8 vols., with 2 supplementary vols., 3rd ed., Berlin, 1905. Of greater scientific value is O. Clemen, *Luther's Werke in Auswahl*, 4 vols., Bonn, 1912–14.

(*d*) The list of biographies begins with that of Melanchthon, published the year after Luther's death, in the introduction to the second Latin volume of the Wittenberg edition of Luther's works. Mention may be made of the following: M. Meurer, Leipzig, 1843, ³1870; J. Köstlin⁵, ed. G. Kawerau, Berlin, 1903; T. Kolde, Gotha, 1884–93; M. Rade, Neustadt, 1887; A. Hausrath, Berlin, 1904; and the English biographies of C. Beard, London, 1889; H. E. Jacobs, New York, 1898; T. M. Lindsay, Edinburgh, 1900, and esp. in his *History of the Reformation*, i., do. 1907; H. Preserved Smith, London, 1911; A. C. McGiffert, do. 1911. A very condensed, but most excellent and suggestive, classification of biographers and other writers on Luther, according to schools, is the work of Boehmer, above cited, pp. 7–27. For a critical study of Luther's theology see the treatises on that title by T. Harnack, Erlangen, 1862–67, and J. Köstlin, Stuttgart, 1863, Eng. tr., C. E. Hay, Philadelphia, 1897.

HENRY E. JACOBS.

LUTHERANISM.—Notwithstanding the protests which Luther himself raised against it, the term 'Lutheran' was soon applied in the 16th cent. to the principles of which he was the chief advocate. However necessary plans for Church organization became when the attempt was made forcibly to suppress his protests, it had never been Luther's aim either to found a new Church or even within the historically existing Church to carry out any elaborately pre-arranged form of re-organization. Nor was the initiative for such re-organization taken by Luther or by those theologians who were most closely associated with him, but either by the radical extremists whom he repudiated or by the Protestant rulers, who justly realized that the churches in their realms could not be left without some form of administration.

Lutheranism starts with the assertion of the responsibility of the individual conscience to God alone in all matters of faith and life. But, in maintaining this position, it does not proclaim pure individualism, since the conscience is always bound by the Word of God, and that Word is not to be interpreted arbitrarily, but by comparing spiritual things with spiritual. In its treatment of the doctrine of the Church, the emphasis rests not so much upon the external institution, with a well-defined organization and codes of ecclesiastical laws, as upon the association of truly Christian people, maintained by their communion in the one faith of the gospel, through the activity of one and the same Spirit within their hearts and minds. The appeal, accordingly, is never made to the authority of any outward visible organization, but to the individual conscience. All Church power inheres in the Word of God.

> 'This power is exercised only by teaching or preaching the Gospel, and administering the Sacraments' (*Augsburg Confession*, art. xxviii.).

The Church has no sword but that of the Spirit with which to enforce obedience. Nevertheless, as for the administration of Word and Sacraments, external association, as well as the internal communion of believers with each other, is necessary; the external Church must always be maintained, but the form of its organization must be determined by the circumstances in which the Church is placed, the preservation of the pure Word and Sacraments being the first consideration. The preference is always on the side of that which has been historically approved, a break in the existing order being justified only when such order cannot be maintained without impairing fidelity to God's Word. It was not by any concerted action among Lutherans, nor with any thought of a united Lutheran Church, that the Church constitutions of the Reformation period were formulated, but they were prepared in various countries and provinces according to the peculiar needs of each. Externally, there were many Lutheran churches, but no one Lutheran Church. The very first word of the first article of the Augsburg Confession ('ecclesiæ apud nos') declares this. There was, however, an external bond in their common confession. This confession, properly speaking, is no particular historical document, however widely accepted among Lutherans, but the enunciation of those Scriptural principles for which the Lutheran Church peculiarly stands. Such confession, however, has found concrete expression in certain classical historical agreements that have greater or less recognition. It is not the Confession of Faith, but the faith of the Confession, that determines the Lutheranism of any individual teacher or Church body. Where the doctrines of the Confessions are held and confessed, even though the Confessions themselves be not subscribed, or even known, the Lutheran character of the teaching is established; while, on the other hand, where the contents of the Confessions are not cordially received, as a matter of faith, *i.e.* as derived from God's Word, and there is no subscription to such Confessions with qualifications expressed or with mental reservations, the test is not met. A real Confession of Faith is not so much a law as the joyful declaration of Christian freemen of the liberty that they have attained in Christ, and of the limits within which this liberty is to be found and exercised (cf. art. CONFESSIONS, vol. iii. p. 845).

---

[1] Critically edited and published, with historical introduction, by J. Ficker, *Luther's Vorlesungen über den Römerbrief*, 2 vols., Leipzig, 1908.

What are known historically as the Lutheran Confessions are not attempts to summarize the doctrines of the Holy Scriptures, as are various other Confessions in Christendom that are, in reality, systems of doctrine. The confessional development of Lutheranism has proceeded on the principle that Holy Scripture is its own interpreter, and needs no formal explanation by Church authority, unless the meaning of Scripture be involved in serious controversies that greatly agitate the Church and call for the careful guarding of the purity of the gospel from those who would pervert it. Articles of faith that have not been attacked or misrepresented need no confessional treatment. A Confession, from this view, should never be an exhaustive presentation of the Church's faith, but there should be a readiness, as new controversies arise, to meet them with the same weapons and in the same spirit with which preceding controverted points have been treated. Hence the Augsburg Confession closes with the words:

> 'If anything further be desired, we are ready, God willing, to present ampler information according to the Scriptures.'

The Lutheran Confessions have thus been determined by certain practical ends in view at several crises in the experience of the churches that call themselves Lutheran.

Of these Confessions, the two Catechisms (cf. art. CATECHISMS [Lutheran], vol. iii. p. 253 ff.), both written by Luther in 1529, are handbooks of elementary religious instruction rather than theological documents. The four theological Confessions are: the unaltered Augsburg Confession, the Apology of the Augsburg Confession, the Schmalkald Articles, and the Formula of Concord. The first of these chronologically, as well as by general recognition, the Augsburg Confession, was prepared by Melanchthon for presentation at the Diet of Augsburg in 1530. It is an irenic document, emphasizing the points of agreement with the Roman Church, in the hope that some way might yet be found to avoid a break in the Western Church. The term 'unaltered' is used to distinguish the Confession presented at Augsburg from unauthorized revisions made by Melanchthon personally in 1540 and 1542, in the interests of a nearer approach to the Reformed. The fact that the term 'unaltered' may not strictly belong to even the best text—since the original copies placed in the hands of the Emperor Charles V. have both been lost, and Melanchthon was compelled to reproduce the Confession from the very full notes of himself and his colleagues for publication the succeeding spring—does not justify the rejection of the distinction historically fixed between the two types of the Confession. The Apology of the Augsburg Confession (1531) is a full and learned defence, also written by Melanchthon against the criticisms contained in 'The Confutation of the Augsburg Confession' by the Roman theologians at Augsburg. The Schmalkald Articles (1537), prepared by Luther, with a long Appendix by Melanchthon, mark a stage in the controversy with Rome when the differences were no longer reconcilable. The Formula of Concord (1577) gives a decision concerning controversies among Lutherans, as the other Confessions had treated those which had assailed them from without (see, further, art. CONFESSIONS, § 13).

Differences between Luther and Melanchthon were intensified among their followers. These differences, due primarily to differences of temperament, training, and religious experience, caused no personal rupture between them. Melanchthon, gentle, timid, and sensitive, loved the retirement and occupations of the study, and shrank from conflict. Far more of a humanist than Luther, he was swept by the force of events, and, much to his regret, from classical studies into the current of theological discussions. He had passed through no such inner spiritual conflicts as had Luther. Accordingly, he excelled in the sphere of the formal rather than of the material. No one could give such accurate and graceful literary expression to Luther's thoughts. But, when Luther's influence was removed, he was not only vacillating, but dominated by two principles, viz. a much higher regard than Luther for patristic authority, and a greater concern for the external peace and the impressiveness of the Church's government. He was frequently involved in negotiations with respect to Church politics, which compromised his position, and brought into prominence his great contrast with Luther in this particular. Notwithstanding his sharp arraignment of scholastic methods in the first edition of his *Loci Communes* (1521), he soon manifested a bent towards the principles which he had repudiated, placed undue importance upon the philosophy of Aristotle, and became the founder o Lutheran scholasticism. The perpetuation of thes two types of thought has caused not only differences in regard to the attitude of their adherent to individual Confessions, but also a stricter or laxer standard of Confessional subscription. Th Formula of Concord is a formal repudiation o Melanchthonianism in its divergence from Luther.

Of the two principles of Protestantism, th formal and the material, it has often been observe that Lutheranism lays greater stress upon th material—'Justification by Faith alone'—tha upon the formal—'The Sole Authority of th Holy Scriptures.' While, in fact, the two ar never separated, the Scriptures are regarded a the absolute norm of revealed truth rather tha as a magazine or receptacle in which the truth i stored. For it must not be forgotten that th gospel itself was proclaimed orally before it wa committed to writing, and was no less the powe of God unto salvation where thus preached, o where taught by those who had heard it from th first ear-witnesses, than when read on the printe page. Nor can the Scriptures be correctly apprehended except as in regeneration a new spiritua sense is imparted.

> 'When even the most able and learned men upon earth rea or hear the Gospel of the Son of God, and the promise of eterna salvation, they cannot, from their own powers, perceive, apprehend, understand or believe and regard it true, but th more diligence and earnestness they employ to comprehen with their reason these spiritual things, the less they understand or believe, and before they become enlightened, or taugh of the Holy Ghost, they regard this only as foolishness or fictions, 1 Cor. 2. 14' (Formula of Concord, pt. ii. ch. ii. § 9, Eng tr., H. E. Jacobs, *Book of Concord*, p. 553).

The true interpretation of Scripture is to be foun only as the relation of each part to Christ as th centre is correctly apprehended, and this is possibl only by the regenerated man.

While protesting against all ecclesiastical authority that arrays itself against Holy Scripture Lutheranism lays great stress upon the continuou witness to the truth of the gospel, given throug the Holy Spirit, as this truth is applied and developed from age to age in believing personalities. Such believers, according to its teaching, constitute the inner spiritual organism of the Church. In this respect its doctrine is in contrast with that of Rome, on the one hand, which lays so much importance upon the decisions of the externally organized Church, and that of the Reformed, on the other, which is apt to isolate the individual from his historical relations and the mediation of those through whom Word and Sacraments reach him. The same principle obtains in its conception of the relation of the Holy Spirit to Word and Sacraments, since, besides being a source of revealed truth, it regards the Word as a real means of grace through which alone the Spirit calls, illuminates, regenerates, and sanctifies; and the Sacraments as efficacious instrumentalities by which the promise of the gospel concerning the forgiveness of sins and the grace of God is individualized.

Like all ideals, those of Lutheranism suffer various modifications as embodied in a concrete form in external organizations. The union of Church and State in European lands has not only prevented the principles of Lutheranism from being applied in entire consistency to practice, but has also often interjected adjustments of theory and policy foreign to both its spirit and its teaching. As in the time of the Reformation, so at all times since, there have been those whose intense conservatism has shown the presence of a Romanizing, or whose greater freedom that of a Reformed, tendency. Indifferentism, Unionism, Mysticism, and Rationalism have had their learned advocates among those claiming the Lutheran name, and within Church organizations known as Lutheran, just as the Christian Church has much within it for which Christianity is not responsible.

LITERATURE.—For the study of the subject the Lutheran Confessions are indispensable. The best ed. is that of J. T. Mueller, Stuttgart, 1848, ^{10}Gütersloh, 1907, containing in parallel columns the official German and Latin texts, with exhaustive scholarly introductions and minute index, Eng. tr., ed. H. E. Jacobs, Philadelphia, 1882–83, 2 vols., vol. i. containing the Confessions, vol. ii. introductions and documents; condensed ed., containing Confessions alone, do. 1911.

Next in importance for an intelligent acquaintance with Lutheranism is Martin Chemnitz, *Examen Concilii Tridentini*, Frankfort, 1565–73, and many other edd. (far more than a thorough criticism of the Decrees and Canons of Trent; it is a very full discussion also of the constructive principles of Lutheranism in doctrine, ethics, liturgics, polity, and pastoral theology); see also G. L. Plitt, *Einleitung in die Augustana*, Erlangen, 1867; F. H. R. Frank, *Die Theologie der Concordienformel*, do. 1858–65; L. P. Tschackert, *Die Entstehung der lutherischen und reformierten Kirchenlehre*, Göttingen, 1910; F. Uhlhorn, *Geschichte der deutsch-lutherischen Kirche*, Leipzig, 1911; C. P. Krauth, *The Conservative Reformation and its Theology*, Philadelphia, 1871; T. E. Schmauk and C. T. Benze, *The Confessional Principle and the Confessions of the Lutheran Church*, do. 1911; treatises on Symbolics by G. B. Winer, Leipzig, 1824, ^{4}1882, Eng. tr., Edinburgh, 1871; H. E. F. Guericke^{3}, Leipzig, 1861; R. Hofmann, do. 1857; G. F. Oehler, Tübingen, 1876; K. H. G. von Scheele, Gotha, 1881; F. A. Philippi, Gütersloh, 1883, and E. F. K. Mueller, Leipzig, 1896; *Lutheran Cyclopedia*, ed. Jacobs and J. A. W. Haas, New York, 1899; *PRE*^{3}, *passim*; *Bureau of the Census, Special Reports*, 'Religious Bodies, 1906,' Washington, 1910, ii. 340–404.

HENRY E. JACOBS.

LUXURY.—I. Historical aspects of luxury.—One of the incentives towards social progress is the desire to procure a surplus after the needs of a mere physical existence have been met. Somewhere within the limits of this surplus is that portion of it which constitutes expenditure upon luxuries. What exactly is to be termed luxury depends to a large extent on the situation and condition of a community, and, in a somewhat less degree, upon its standard of life.

Once a tribe managed to procure a sufficient food supply to maintain itself, any increase rendered possible an unproductive consumption of the excess in the form of feasting, and under these circumstances a rude form of luxury would have been evolved. Thus a primitive type of luxury must have come into existence in pre-historic times. In the early civilizations luxury made its appearance in well-defined and striking forms. In Egypt, Nineveh, and Babylon, and at Tyre and Sidon, the primary tendency towards decoration and display appears to have shown itself in relation to religious observances, and, closely connected with this, there was the pomp of the royal family, where, as in Egypt, it claimed divine authority. But the example of the supreme ruler extended sooner or later to the governing classes, and in this way luxurious expenditure by individuals manifested itself. The chief gratifications sought were the pleasures of the table in eating and drinking, of personal adornment (both in dress and by the use of costly perfumes), of buildings and monuments (such as the Pyramids), or of dwellings and their appurtenances (as, for instance, the hanging gardens of Babylon). Among the Greeks there were traces of luxury in the heroic age, such as rich armour and dresses, and artistic ivory work, but it was at Athens after the defeat of the Persians (490–480 B.C.) and in the time of Pericles († 429 B.C.) that sumptuous expenditure became a characteristic both of the State and of the individual citizens. Public festivals were conducted on a scale of great magnificence, while the erection of public buildings was carried on at an outlay which was very great for the times. What differentiates the luxury of the Greeks from that of the Eastern nations was the artistic aspect of the movement. On the Acropolis there was the Pinacotheca beautified by the frescoes of the painter Polygnotus, near which stood the immense statue of Athene Promachos, the work of Pheidias, and beyond was the Parthenon, also embellished by the sculpture of Pheidias. With the rapid increase of wealth private expenditure increased; vases for household use became more decorative, and dress was more ornate. The conquests of Alexander the Great (336–323 B.C.) introduced the somewhat crude display of the Eastern nations, and, to a large extent, degraded the externals of social life. In Rome luxury became marked after the Punic Wars. Gladiatorial games had been introduced in 264 B.C., and by 186 B.C. lions and panthers were brought long distances at great cost to stimulate the lust for sensation which was being shown by the people. Rich citizens began to spend profusely on food and table appliances—anchovies were brought from Pontus and wine from Greece. As the power of Rome grew, luxury increased, till it culminated under the Empire. Augustus claimed to have erected 408 marble pillars, and to have provided 8000 gladiators and 3000 wild beasts for the arena. Ostentation developed into the excesses of Caligula and Nero, which were copied by private individuals according to their means. In the Byzantine Empire luxury was, if possible, greater than at Rome; it was certainly more decadent. If at Athens art had glorified luxury, at Constantinople luxury debased art; the Byzantine style has almost become synonymous with over-elaboration and tasteless display. Even before the Renaissance luxury had become remarkable in Italy, more particularly at Florence; afterwards it developed and produced a by-product in the encouragement of art and commerce. The more generous expenditure of the upper classes in France during the reign of Philip IV. (1285–1314) was met by his attempted sumptuary legislation regulating dress. In England Edward III. considered that extravagance was diminishing the taxable resources of the country, and, in order to prevent the evil, the statute 'de Cibariis Utendis' was passed in 1336, by which the courses of meals were limited to two, except on the principal feast days, when three were permitted. In 1363 a further act was passed against outrageous and excessive apparel, while in 1463 there was a more detailed sumptuary law. The inflow of precious metals to Europe after the discovery of America, followed by the extension of foreign trade, increased the stock of several classes of goods which previously had been excessively rare and costly. Hence commodities which had been of great value became relatively less expensive. The improved organization of industry facilitated production, so that Adam Smith was able to point to the fact that the most common artificer's accommodation exceeded that of many an African king, 'the absolute master of the lives and liberties of ten thousand naked savages' (*Wealth of Nations*, bk. i. ch. i.). Sumptuary legislation in England may be said to have ended with the Tudors. Mercantilism, in its encouragement of manufactures, tended to permit the production of luxuries for exportation. The growth of foreign trade enabled seafaring nations to participate in it and in the re-exporting of rare and costly goods. Accordingly, though there remained a sturdy body of opinion against luxuries generally, and more especially against those luxuries brought from foreign countries, sumptuary laws ceased to be observed in England. In Scotland, on the other hand, as late as 1681 the Scots Parliament prohibited the importation of a long list of foreign commodities which were held to be 'superfluous.' The industrial revolution followed by the acceptance of the doctrine of *laissez-faire* (*q.v.*) made the State less disposed to interfere with private expenditure unless upon moral or social grounds, as, for instance, in the regulation of wines and spirits. In the 19th cent. the principle of the taxation of luxuries came to be more and more recognized, partly on the ground of restraining the consumer from a species of consumption which was hurtful to himself (*e.g.*, taxation of spirits), partly as raising revenue from what were admitted to be superfluities, and thereby collecting revenue from classes who would not pay taxes otherwise (*e.g.*, tea and sugar taxes). A few taxes may be regarded as having a sumptuary element, such as the tax on armorial bearings or those on male servants and on motor cars.

2. The economic questions arising out of the existence of luxury.—Social observers who approach the problem of luxury from the historical side are inclined to urge against it that it has been the cause of the fall of great empires. Frequently, if not invariably, luxury has been a symptom of decadence, but a closer analysis tends to show that the moral weakness had already shown itself, and, as it increased, it manifested itself in public and private extravagance, while extravagance again gave fresh impetus to the forces of political and social disintegration. In these cases it is clear that the evil lay in the abuse of luxury.

Some of the most powerful economic motives are to be found in the desire of men to realize an idea or scheme of life which seems to them an improvement on their present one. Once their mere bodily wants are satisfied, their further desires may be called luxuries. This, however, is not strictly accurate. In a great number of occupations the worker who is able to satisfy the former wants only would not be efficient. Therefore one must extend the meaning of the term 'necessaries' so as to include in it all those things which are required for efficiency. What is consumed beyond that point may well be described as consisting of luxuries. It follows that the term 'luxury' must be understood in relation to time, place, and the general circumstances. It is easy to determine whether any specific commodity is a luxury to a given individual in regard to whom the necessary data are known; the problem becomes much more difficult in the case of a whole community. Certain forms of expenditure, as a rule, do not aid efficiency, and these can usually be classed under the head of luxurious outlay; certain others, again, are usually incurred with the object of conferring distinction on the spender, and, where such can be isolated, they fall into the same class. For the rest, all that is possible is to note with care what happens in the majority of cases in order to ascertain whether a certain type of expenditure is necessary or a luxury.

In the case of individual expenditure, luxury can arise only where there is a surplus beyond physical needs. If that expenditure is so directed as to cut into the margin required for efficiency, then inroads are being made into future income-earning power. But, after full provision has been made for efficiency, there is yet another claim on the surplus—namely, that for the accumulation of capital. It is this claim that has led many economists to condemn luxury. Expenditure on luxury repays or restores the capital which was temporarily locked up in the commodities consumed as luxuries. Therefore such expenditure cannot leave production much larger than it had been before the goods were purchased.[1] Wealth which becomes capital is also consumed, but in such consumption it becomes an instrument for further production. Thus that part of the surplus which is used as capital is more fruitful as regards production than the other portion which, in the phraseology of J. S. Mill (*Principles of Political Economy*, London, 1886, bk. i. ch. iii.), is consumed unproductively.

Consumption of luxuries has other consequences which are partly economic, but which are also of considerable social and ethical importance. Expenditure on superfluities has a tendency towards a relaxation of concentrated effort. In extreme cases it weakens the moral fibre and opens the way to dangerous excesses. It not only tends to injure the person whose life is luxurious, but reacts on others by the force of example. Thus there is a contest in the fixing of the prevailing standard of living between luxury and a wise and discriminating frugality. Even in periods of national and individual prodigality there were always moralists who pleaded for a simple life, and it is the relative degree of support which either class of precepts attracts that fixes whether a particular age or a particular class can be described as luxurious or not.

In the view of luxury that has been adopted the central point is the fixing of the standard of expenditure which is required for full efficiency. As society progresses and as further resources become available, it becomes possible for a community to increase enjoyments which are largely immaterial. The enjoyment of art is a case in point. If progress is conceived in a wide sense, the highest culture becomes an element in national efficiency. Accordingly, in a wealthy nation, where the inequalities of incomes are not too great, a condition is possible where the dividing line between luxuries and the necessities for efficiency is drawn at a much higher point than in another community which is less fortunately situated. And the higher standard of living can become a step towards further advance in civilization. But, at the same time, there is a somewhat insidious danger—namely, that consumption which was begun as conducive to efficiency may be continued much beyond that point. By becoming luxurious, it reacts on efficiency, and in the end results in a check instead of an increase in progress.

---

[1] The matter is stated this way to allow for the possibility that the producer of the luxury may save a portion of the profit which he has realized from its sale. Such savings would be available for new production

LITERATURE.—[B. Mandeville,] *The Fable of the Bees*^{4}, London, 1725; I. Pinto, *Essai sur le luxe*, Amsterdam, 1762; David Hume, *Essays and Treatises*, Dublin, 1779 (pt. ii. 'Of Commerce, of Refinement in the Arts'); G. M. B[utel] D[umont], *Théorie du luxe, ou traité dans lequel on entreprend d'établir que le luxe est un ressort non seulement utile, mais même indispensablement nécessaire à la prospérité des états*, London and Paris, 1771; F. Sidgwick, 'Luxury,' in *IJE* v. (Philadelphia, 1895); E. J. Urwick, *Luxury and the Waste of Life*, London, 1908; Werner Sombart, *Luxus und Kapitalismus*, Munich, 1913.

W. R. SCOTT.

LYCANTHROPY.—The word 'lycanthropy' is used in two senses. (1) It may indicate merely a form of madness in which the patient imagines that he is an animal, especially a wolf, and acts as such. This disease was common in antiquity, and especially in the Middle Ages, doubtless as a result of the wide-spread belief that transformation into animal form was possible (§ 3). (2) It indicates the popular belief that on occasion a human being can actually transform himself, or be transformed, into a wolf or some other animal. In this form he slays and eats men. But, if wounded while in his wolf form, it is found that a corresponding wound exists on the human body from which the transformation has taken place. When wounded or killed, the werwolf's human form is restored. While the wolf transformation is that which is or was most common in Europe, it is by no means the only one. For this superstition is practically world-wide, and everywhere it is generally the fiercest and most dreaded animals whose shapes are taken. The wolf transformation has been most usual in all parts of Europe and in N. Asia from early times, but in the North of Europe the bear form is also general, and in modern Greece the boar. In Abyssinia and E. Africa the hyena form is taken; in other parts of Africa the hyena, leopard, lion, and sometimes the shark, crocodile, or even the elephant. In India and other parts of Western Asia the tiger form is usual; in Borneo and Shoa the tiger or leopard; in China and Japan the tiger, fox, etc. In N. America the wolf form is mostly found; in S. America the jaguar. But, while in regions where such wild animals have become extinct the old tales are still told, now other less harmful animal forms are believed to be taken by witches or sorcerers—*e.g.*, those of the cat, hare, etc.—and in these animal shapes considerable mischief is supposed to be done, while the idea of the wound being continuous in the animal and human shapes ('repercussion,' see § 5) also prevails.

'Lycanthropy' is derived from λύκος, 'wolf,' and ἄνθρωπος, 'man,' the Gr. form being λυκάνθρωπος (cf. κυνάνθρωπος, 'dog-man'). The common English name is 'werwolf,' lit. 'man-wolf,' A.S. *werewulf*, O.H.G. *weriwulf*, Norman *guarwolf* (*wer*, 'man'; cf. O. Ir. *fer*, Lat. *vir*, and cf. 'wergild'). The French name for werwolf is *loup-garou*. In this case *garou* has been thought to be a corruption of *wer* and *loup*, but this is uncertain. The old French romances contain the forms *warouls*, *warous*, *vairous*, *vairals*. *Bisclaveret* for *bleiz-garou* (*bleiz* = 'wolf') occurs in the *Lai* of Marie de France (§ 1). The Slavic names are O. Ch. Slav. *vlŭkodlakŭ*, Slovenian *volkodlak*, Bulgarian *vŭlkolak*, Polish *wilkolak*, White Russ. *volkolak*, Russ. *volkulakŭ*, etc. The Serbian *vųkodlak*, however, means 'vampire'; hence, probably, modern Gr. βρουκόλακας, βουρκόλακας, 'vampire,' though occasionally 'werwolf.' The Slavic form means literally 'wolf-haired,' or 'wolf-skinned.'

The wolf has long been regarded with superstitious awe. An old belief in Europe is to the effect that, if a wolf sees a man before being seen by him, the man is deprived of sight or hearing, or goes mad or dies (cf. Pliny, *HN* viii. 24; Verg. *Ecl.* ix. 53; Theocr. *Id.* xiv. 22; J. C. Lawson, *Modern Greek Folklore*, Cambridge, 1910, p. 10). J. Cardan (*de Subtilitate*, Lyons, 1554, p. 17) says that there is something in the eye of a wolf contrary to man, by which the breath is stopped, and consequently the voice. In European folklore the wolf is usually a creature of the devil (cf. the wolf-shape of Ahriman; see O. Dähnhardt, *Natursagen: eine Sammlung . . . Fabeln und Legenden*, i., Berlin, 1907, p. 146 f.).

It is obvious that lycanthropy, in so far as it involves an actual belief in shape-shifting, is connected with the wider belief in transformation into animal form, which is of universal occurrence. Men, especially medicine-men, claim or are believed to possess this power, as well as that of transforming others; it is also ascribed to the gods, spirits, demons, and ghosts of the dead, as well as to animals, which sometimes assume human form, as some of the following paragraphs will show (see METAMORPHOSIS). But the actual origins of the belief are probably to be sought elsewhere (see § 3).

1. Extent of the superstition.—In one form or another the werwolf superstition is world-wide.

It was known to the *ancient Greeks*. In Æsop the thief who pretends to be a wolf says that when he has yawned three times he will become a wolf. Circe changed men to wolves, etc., by means of drugs. The superstition is also found embedded in the myths pertaining to the cult of Zeus Lycæus, the Wolf Zeus. Lycaon, king of Arcadia, was said to have been changed into a wolf when he sacrificed a child on the altar of Zeus Lycæus.[1] In other versions of the myth Zeus came disguised as a labourer, and the sons of Lycaon slew a child and mixed its flesh with the sacrificial food set before the guest. Zeus then changed them to wolves, or slew them and transformed their father.[2] These myths probably arose from werwolf stories current in Arcadia, a district where wolves abounded. The stories took two forms.

In one it was said that at the yearly sacrifice on Mt. Lycæus he who at the sacrificial feast ate the flesh of the human victim mixed with that of animal victims became a wolf for ten years—a fate which is said to have befallen Demænetus, who afterwards became a victor in the Olympic games. If he abstained during that period from human flesh, he regained his human form.[3] In another version lots were drawn by the members of a certain family, and he on whom the lot fell was led to a lake, where he stripped and, hanging his clothes on an oak, plunged in and swam across. Emerging on the other side, he became a wolf and herded with wolves for nine years. In this case also, if he did not eat human flesh he regained his own form at the end of that time.[4]

Perhaps such stories, based on an existing werwolf belief, may have been connected with the ritual of the cult of the wolf-god, if the priests wore a wolf-skin and ate part of a human victim. This ritual wearing of a wolf-skin occurred in the cult of Apollo Soranus on Mt. Soracte, where the gild of worshippers, the Hirpi Sorani, or 'wolves of Soranus,' apparently wore skins of wolves and acted as wolves. Possibly the cult was totemistic in origin, and the Hirpi were members of a wolf clan.[5]

In *modern Greece* the old belief in lycanthropy still exists, either as such or in other forms. The name βρουκόλακας is applied in Thessaly and Epirus to those who fall into a trance or catalepsy, while their souls enter wolves and raven for blood,[6] or who in a state of somnambulism bite and tear man and beast. Stories exist of the *vrykolakas* being wounded, while next day a man is found with a similar wound, and he confesses to being a *vrykolakas*.[7] More usually, however, this word signifies a vampire in Greece. In Southern Greece the name λυκάνθρωποι is applied to men known in other parts as Karkantzari or, more usually, Kallikantzari. The Kallikantzari are beings of monstrous form, hurtful and evil, who destroy men and carry off women, and sometimes make a meal of their prey.[1] Lawson considers that the Kallikantzari represent the ancient Centaurs, whom he regards as a Pelasgic tribe of Centauri credited by the Achæans with shape-shifting. Some connexion also exists between them and the mummers of the Dionysia who represented the satyrs and Sileni. They appear and are feared from Christmas to Epiphany—the period of the Kalends when such mumming took place. In some districts, however, the Kallikantzari are equivalent to werwolves, and are regarded as men transformed into monstrous shapes, or seized with recurrent bestial madness at this period. This is attributed, *e.g.*, to the mountaineers of E. Eubœa. This madness may be congenital—*e.g.*, children born between Christmas and Twelfth Night are supposed to have a taste for human flesh. Lawson regards this as a modification of the original Kallikantzari belief caused by the werwolf superstition or by actual forms of insanity.[2] The name λυκοκάντζαροι is given to the Kallikantzari in Messenia and Crete, and in Macedonia they are called λύκοι. To escape these beings the house must be carefully closed at all openings; but a brave man may bind them with a straw rope. Various apotropæic and propitiatory rites are also in use to keep off these dreaded beings, who are 'a species of werewolves, akin to the Wild Boar and the Vrykolakas.'[3] Wicked Turks gradually turn into wild boars before death, and rush through the land on all fours, attacking wayfarers or trying to get into houses. After forty days such a being goes to the mountains, remaining there as a wild beast, but still wearing on its foot the ring which the man wore on his hand (cf. the Abyssinian *buda*, below).[4] The Bulgarians have a similar belief, but with them the transformation of the Turk takes place after death.[5] In Albania the *liouvgat* is a dead Turk with huge talons, wandering in his shroud, devouring what he finds, and strangling men.[6] Here the vampire superstition is approached (§ 4). In the Cyclades witches are thought to turn into birds at will. They are called στρίγλαι, and are akin to the Harpies.[7]

The *Romans* also knew of lycanthropy, and called those who changed their form *versipelles*, 'turn-skins.'[8] Vergil describes how by magic herbs Mœris became a wolf, and Propertius speaks of spells which have the same effect.[9] But the most detailed account is found in Petronius.

> Niceros tells how his soldier friend stripped off his clothes and addressed himself to the stars. Then he 'circumminxit vestimenta,' and all at once became a wolf, which ran howling into the woods. Niceros next heard from a widow whom he visited that a wolf had been worrying her cattle, and had been wounded in the neck. On his return home he found his friend bleeding at the neck, and knew then that he was a *versipellis*.[10] This is a typical and early version of the werwolf story.

In more modern times the superstition survives in *Italy*. Straparola tells how Fortunio received from a wolf the power of changing to wolf form, and the superstition is also referred to by Basile. At the present day in Naples the werwolf, who is a man cursed by being born on Christmas night, is known by having long nails, and runs on all fours, but retains the human form, and tries to bite. If blood is drawn from him, his madness ceases. This is a case of lycanthropy in its medical sense.[1] More akin to the true werwolf superstition is the general belief that witches can turn into black cats and do much harm, especially to children. In one case a woman caught such a cat and clipped its hair, whereupon it turned into the witch.[2]

Among the *Semites* lycanthropy was not unknown, but recorded instances of the belief are few. Among the Ṣeiʿar in Ḥadramaut part of the tribe could change into ravening werwolves in time of drought, others into vultures or kites.[3] The Arabs also regarded some men as having the nature of a hyena, and said that, if a thousand men were shut up with one of these and a hyena came, it would go at once to him.[4]

The belief among the *Celts* is illustrated by a story told by Giraldus Cambrensis.

> An Irish priest was met by a wolf in Meath and desired to come and see his dying wife. They were natives of Ossory, whose people had been cursed for their wickedness by St. Natalis, and were compelled to take two by two a wolf-shape for seven years, returning to their own form at the end of that time. The priest was persuaded to give the she-wolf the sacrament, for the other turned her skin down a little, showing that she was an old woman. Giraldus says that he was asked to give his advice on this case at the synod of Meath two years after, and that it was referred to the pope.[5]

A citation in the *Book of Ballymote* (140*b*) says that the 'descendants of the wolf' in Ossory had the power of changing themselves and going forth to devour people. St. Patrick is also said to have cursed a certain 'race' in Ireland so that they and their descendants are wolves at a certain time every seventh year, or for seven years on end.[6] These may be explanatory legends about older wolf-totem clans, later accused of lycanthropy—an already current superstition—when totemism was requiring an explanation, as in the case of the wolf-clan in Arcadia. To the same category may be referred the statements of early English travellers in Ireland to the effect that the Irish took wolves as godfathers, prayed to them to do them no ill, and used their teeth as amulets. Lycanthropy ran in families, and here also it may point to an older totem clan. Laignech Fáelad and his family could take a wolf-shape at will and kill the herds, and Laignech was called Fáelad because he was the first of them to go as a wolf.[7] In Irish and Welsh *Märchen* transformation to wolf-form of children by a stepmother or of a husband by a wife is not uncommon.[8] Giraldus already refers to the belief that hags in Wales, Ireland, and Scotland can change to hares and suck cattle for their milk, but, with St. Augustine, regards this supposed change as a delusion of the senses.[9] This belief is thus contemporary with that in lycanthropy, but long survived it. Later Celtic witches — Irish, Welsh, Manx, Scots—usually turn into hares or cats, less often into dogs, weasels, ravens, porpoises, whales, etc., for the purpose of doing mischief. In Donegal the change is said to be effected by a hair rope made of a stallion's mane and by the recital of charms. In some cases the transformation is confined to certain families. Such witch animals can be shot only with a silver bullet. When followed up, the woman has resumed her true form and is found to have a corresponding wound. A miller in Cork who saw a number of cats attacking his flour threw his knife at them and cut off the leg of one. Next morning he found his daughter with her hand cut off, and concluded that she was a witch. Hares are usually thought to be unlucky, and are suspected of being witches in disguise. The ancient Welsh laws already speak of their magical character, regarding them as companions of witches, who often assumed their shape.[1]

The *Slavic* werwolf belief is referred to under DEMONS AND SPIRITS (Slavic), vol. iv. p. 624ᵃ. Possibly the Neuri, mentioned by Herodotus (iv. 105), were a Slavic people (cf. E. H. Minns, *Scythians and Greeks*, Cambridge, 1913, p. 102 f.). The Scythians and Greeks said that every year each Neurian became a wolf for a few days and was then restored to human shape. Among the Magyars witches and wizards assume the form of horses, cats, etc. If the former are caught and shod or the latter injured, they are found next morning in human form with iron shoes on hands and feet or seriously wounded.[2] Hertz notes the sinister character of the belief through its connexion with that in the vampire, the names for both being interchangeable.[3]

The Serbians think that the *vukodlak* have annual gatherings, when they hang their wolf-skins on trees. Should such a skin be taken and burnt, the owner retains human form. A girdle of human skin laid across a threshold by a witch in a house where a wedding is taking place will cause all who step over it to become wolves. In three years' time, if the witch covers them with skins with the hair turned outwards, they resume their human form. This is a Polish belief. In White Russia the werwolf is sometimes a man transformed by the devil, and, contrary to the usual belief, he is harmless, but is driven to wander from place to place.[4]

In a Polish story a wolf seizes a girl at a merry-making and carries her off to the forest. Years after, one of the peasants meets his long-lost brother, who confesses that he was the wolf changed by sorcery, that he had carried off the girl, who had died of grief, and that then he was consumed with rage against all men and killed as many as he could. He had come to see his home once more, but must resume his wolf-form immediately, which he did.[5] In another case a peasant, released from his wolf shape, returned home to find his wife married again. He cried, 'Why am I no longer a wolf that I might punish this woman?' Immediately he was re-transformed, and killed his wife and child. The neighbours came and slew the wolf, when the body was seen to be that of a man.[6]

Olaus Magnus says that at Christmas many werwolves collect and try to enter houses to drink in the cellars. Between Lithuania, Samogitia, and Livonia is the wall of an old castle whither thousands of werwolves come to try their skill at leaping. The unsuccessful one is beaten by one of the captains or by the devil. The method of the transformation was to drink to one in a cup of ale and mumble certain words. Then he could assume or lay aside the wolf form when he pleased. The Livonian werwolves collected at Christmas, and crossed a river which had the power of changing them to wolves, like the lake in Arcadia. They resumed their human shape at the end of twelve days. In Livonia a servant whose power as a werwolf was disputed went to the cellar and soon after came out as a wolf. The dogs bit out one of its eyes, and next day the man appeared with one eye.[7]

In *Scandinavia* and *Germany* the superstition was well known, and here the wolf, and in the former also the bear, were animals into whose form the transmigration took place. Boniface, Archbishop of Mayence in the 8th cent., mentions the belief.[1] The change was caused by a man himself—*e.g.*, by donning a wolf-skin (*úlfhamr*, hence the name 'skin-changer'; cf. Lat. *versipellis*), or a wolf-girdle, or a girdle of human skin; or it might be forced upon him—*e.g.*, by throwing such a skin or girdle at him, or by shaking a wolf-skin glove at him. The girdle had sometimes magic signs on it, and was held in place by a buckle with seven catches. When the buckle was broken off, the transformation ceased. In such cases the man was a wolf or bear by night, and a man by day; or he assumed the animal form for nine days, or even for three, seven, or nine years, the eyes alone retaining a human appearance. He howled and devoured like the actual animal. Such persons were said to be *eigi einhamr*, 'not of one form,' or *hamramr*, *hamhleypa*, 'changing form.' In some instances the gift of transformation was imparted by trolls. Burchard of Worms speaks of certain *Parcæ* who at birth can cause that the child may later transform himself into a wolf or any other form.[2] In later times Finns, Lapps, or Russians were thought by Scandinavians to have the power of changing others to wolves or to bears at will,[3] and were therefore disliked. The belief was apparently much mingled with and probably influenced by the fact that wild warriors and outlaws—*e.g.*, the *berserkr*—wore wolf-skins or bear-skins over their armour or clad themselves in these, while they were often victims of ungovernable passion and acted as if they were animals.[4] This is illustrated in the earliest Scandinavian instance of the werwolf belief—that contained in the *Volsunga Saga* (chs. 5–8).

King Volsung had ten sons and a daughter, Signy, who was married to King Siggeir. Siggeir later slew Volsung and bound his sons in the stocks. There nine of them were devoured by an old she-wolf—the mother of Siggeir, who had taken this form. Through Signy's craft the tenth son, Sigmund, overcame this werwolf and went into hiding. Signy exchanged form with a sorceress, and had a son by Sigmund, called Sinfiötli. He and Sigmund took to a wandering life and, on one occasion, came to a house where two men were sleeping, with wolf-skins hanging above them. For nine days they were wolves and on the tenth day came out of their skins. Sigmund and Sinfiötli donned the skins and became wolves, and each went his way, after agreeing that neither should attack more than seven men without howling for the other. In the sequel Sinfiötli slew eleven men without Sigmund's aid. The latter, hearing of this, flew at his throat and wounded him. When he was healed and the day had come for doffing their wolf-skins, they agreed to lay them aside for ever, and burned them in the fire. Of this wild tale Baring-Gould (p. 38) has said that it is 'divested of its improbability, if we regard these skins as worn over their armour.' While this is true, and while *vargr*, 'wolf,' means also 'outlaw,' the story is an important witness to the belief itself, as is seen from the words of Goðmund to Sinfiötli, 'Thou thyself hast eaten wolves' meat and murdered thy brother. Thou hast often sucked wounds with cold mouth, and slunk, loathsome to all men, into the dens of wild beasts' (Vigfusson-Powell, i. 136).

In another wild tale from the *History of Hrolf Kraka*, Björn was transformed into a bear by his stepmother, who shook a wolf-skin glove at him. He lived as a bear and killed many of his father's sheep, but by night he always became a man, until he was hunted and slain (Sir W. Scott, *Minstrelsy*, London, 1839, p. 354).

The poet Ari has a curious tale of two 'skin-changers,' Dubhthach and Storwolf. The former took the form of a bull, the latter of a bear. They fought, and next day were found in bed badly bruised.

Modern collections of Scandinavian and German *Märchen* contain many werwolf stories.

In one Swedish tale a cottager was transformed by a Vargamor or Wolf Crone (Troll-wife), because he had not crossed himself when felling a tree. Years after, he appeared at his house, and recovered his true form when his wife gave him food.[1] In a Danish tale a man, when in his wife's company, noticed that the time of the accustomed change drew near. He bade her strike with her apron at anything which came to her. Soon after a wolf attacked her; she struck at it, and the wolf bit a piece of the apron and disappeared. Presently the man came, carrying the piece, and explained that now he was free from the curse.[2] In a N. German tale a reaper saw his neighbour gird himself with a strap and become a wolf.[3] In another a woman told her husband to throw his hat at any wild beast which came. When she appeared as a wolf among the hay-makers, a boy stabbed her with a pitchfork. The wolf changed back to the woman, who was found to be dead.[4] A Dutch story tells how a man shot with an arrow a wolf which was attacking a girl, and that the arrow stuck in the wound. Next day he heard that a strange serving-man was dying with an arrow sticking in his side. He went to see him, and found his own arrow, whereupon the man confessed that he was a werwolf.[5] In a Flemish tale a shepherd received a wolf-skin from the devil, by which he became a wolf at night. If the skin was burned, he himself would suffer as if his own skin were being burned, but would be freed from this curse. In the sequel his master succeeded in releasing him in this way.[6]

In many modern tales and also in mediæval witchcraft belief the transformation of the witch was usually into a cat, dog, hare, or duck (the bird of Freya, great mother of the witches), and these, when wounded, became the woman with a similar wound in her body. Spina says that such cat-women ate the brain of a cat and rubbed themselves with the flesh of a newly-born child which had been offered to Satan.[7]

In *England* and *Scotland* werwolf stories are scanty, but there are traces of the superstition in early literature. The word *werwulf* in the sense of 'robber' occurs in the *Laws* of Canute, and it is also found in later ballads and poems. Gervase of Tilbury refers to the existence of men called *gerulfos* in Wales, *werwolf* in England, who change their form at the change of the moon. William of Malmesbury also alludes to the superstition.

A well-known old English poem, translated from a 12th cent. French poem, is that of *William and the Werwolf*, in which the king of Spain's son, changed to wolf form by his stepmother, rescues the king of Sicily's child, whom his uncle wishes to murder. The story relates how the wolf cared for the boy, his further adventures, and the eventual re-transformation of the wolf to his human form.[8] Drayton, in his *Mooncalf* (ii. 504), tells of a man who found that by gathering a certain herb at a certain hour with appropriate spells, and eating it, he would be changed into a wolf. Having done this, he committed much havoc on sheep, etc. When he attacked an ass which was a man so transformed, the latter assumed his rightful shape and caused the people to slay the lycanthrope.

If tales of werwolves are scanty, there are innumerable tales and traditions of witches changing to hares, cats, dogs, and the like in order to do harm. No charge is more common in the 16th and 17th cent. witch trials, and frequently the belief is found, as in the case of the werwolf, that such a wer-animal can be hurt only by a silver bullet. In some instances wounding causes the witch to assume her true shape, when she is found with a corresponding wound.[9]

In *France* the earliest literary version of the belief is found in the *Lai du Bisclaveret* of Marie de France (13th cent.).

A knight went from time to time to the forest, then the haunt of many werwolves, undressed, and became a wolf. He told his wife the secret, and she obtained his clothes on one of these occasions, after which he had to remain in wolf form. As a wolf he retained human wisdom, and eventually, through the king's command, his clothes and consequently his own form were restored to him, but not before he had revenged himself on his unfaithful wife.

This story is found in other literary versions—*e.g.*, the *Roman de Renard* of the Clerk of Troies (14th cent.), in the *Lai de Melion* (ed. F. Michel, Paris, 1832), in the story of *Arthur and Gorlagon*, and elsewhere. These are all literary versions of a folk-tale.[1] The legend of St. Ronan in mediæval Brittany told how he had taken the form of a werwolf and had eaten children.[2]

Gervase of Tilbury, in his *Otia Imperialia*, tells of a certain Pontio de Capitolio, who out of despair became a werwolf in Auvergne, ate children, and wounded older people. A carpenter hacked off one of his feet, and at once he resumed his human form, and acknowledged that the loss of his foot was his salvation.

The belief survived in modern times. In Normandy the werwolf was a godless man or one under a curse, who for four or seven years must nightly assume wolf-shape and submit to castigation by the devil.[3] In Berry those who, by a pact with the devil, at the cross-roads, at midnight, become *loups-garous* can be wounded only by a ball which has been blessed or has had the Lord's Prayer or Ave Maria said over it five times. Once wounded, they take human form, and the spell which attached them to Satan is broken.[4] In Brittany, towards the end of the 18th cent., sorcerers were supposed to take the form of wolves or clothe themselves with a wolf's skin when going to the Sabbat.[5] In many parts of France every *flûteur* is supposed to lead wolves, himself sometimes changed into a wolf, whereby he is placed beyond the power of shot. He directs the wolves where to go for hunting.[6] In Périgord sons of priests must rush to a fountain at full moon and plunge into it. They emerge, clad in a goat-skin, which the devil has given them, and rush about on all fours, attacking men and animals. They resume human form by plunging again into the fountain at daybreak.[7] This recalls the Arcadian and Livonian beliefs (see above). Numerous stories relate how a *châtelaine*, transformed into a wolf, cat, etc., has a paw cut off, and is afterwards found in bed with one hand lacking.[8] In a Breton tale a werwolf hid his wolf-skin in an oven. Sympathetic magic established a link between skin and owner, so that whatever was done to the skin happened to him. A fire was lit in the oven, and the owner of the skin soon began to leap about, crying, 'I burn, I burn.'[9]

In *Portugal* a seventh son, where there were no girls, was thought to belong to the devil and to become a werwolf—a belief found also in the Azores.[10]

Cervantes, in his *Persiles y Sigismunda* (ch. 8), relates how an enchantress made advances to Rutilio, who repelled her. She turned into a wolf. He stuck his knife into her breast, and as she fell her human form came back to her.

Passing now to *Asia*, clear evidence of the belief is found in *Armenia*. Sinful women are sometimes forced by a spirit to don a wolf-skin and become wolves for seven years. Soon the wolf nature

grows in them. They devour their children, then those of relatives, then children of strangers. Doors and locks fly open before them by night. In the morning the skin is doffed. If the skin is found and burned, then the woman suffers fearful agony and vanishes in smoke.[1] In Asia Minor generally werwolves are feared especially at Christmas and in Holy Week.

In *India*, where the tiger is the fiercest creature known, its form is supposed to be adopted. Already in the *Śatapatha Brāhmaṇa* the monomaniac is said to be consecrated to the man-tiger.[2] In most instances the Hindus attribute the power of shape-shifting to the aboriginal tribes. Numerous stories are current regarding men with the power of becoming wer-tigers—*e.g.*, among the Khonds (with whom, by the aid of a god, one of a man's four souls becomes a *mleepa* tiger), the Lushais, Kukis, etc.[3]

Dalton describes how a Kol, tried for murder, maintained that his victim was a wer-tiger, which he had followed to the man's house after it had killed his wife. The relatives of the victim had admitted that they had suspected him of such power and had handed him over to the prisoner, who slew him.[4]

Sometimes the eating of a root is believed to produce the change.[5] Occasionally the witch assumes the form of a badger and carries off children.[6] Witches also ride about on tigers or in the water on crocodiles, dishevelled, with glaring eyes, and heads turned round. Wizards also have tigers as familiars, or, as a Thana belief has it, mediums are possessed by a tiger-spirit.[7] The souls of those slain by tigers are believed to pass into tigers to slay and devour in their turn, or to sit on the heads of tigers and direct them to their prey, calling out in a human voice so as to attract the unwary.[8]

In *Indonesia* the wer-tiger is very commonly believed in among the Malays, Dayaks, etc. Sometimes the power of transformation is thought to be confined to one tribe, as in Sumatra to the Korinchi Malays. There are many tales of men leaving their garments in a thicket, whence a tiger has presently emerged, or in human form vomiting feathers of fowls eaten when in their tiger form. A wer-tiger slain was found to have gold-plating in its teeth, as the man who assumed tiger form had. The Lavas of Burma are also regarded as wer-tigers. While the wer-tiger is generally very dangerous, in Java it is believed to guard plantations against pigs, and the change is effected by spells, charms, fasting, etc. In Malaysia the medicine-man is sometimes possessed by a tiger-spirit, and acts as a tiger when exorcizing a spirit from a sick man.[9]

A gruesome Malay story of a Semang who became a tiger (*Si Ridong*, 'He of the hairy face'—a euphemism), and sucked blood rather than ate flesh, is told by H. Clifford. The tiger burst into a hut where several people were collected. One of them was able to reach a shelf near the roof, and from there he saw how the tiger killed them all and drank deep draughts of blood. One girl he first played with as a cat with a mouse, and all night he tossed the bodies about and tore them, disappearing at dawn.[10] Another story tells how the transformation was seen taking place. A bride saw her Korinchi husband returning home as a tiger, which thrust its head above the top rung of the entrance ladder. 'It palpitated and changed, and the face of the husband came up through the face of the beast.' Later this wer-tiger was caught in a trap, but escaped, when it was tracked to the house. There the man was said to be sick, and soon after he and his sons disappeared. The story was reported to the District officer, and such a transformation is 'to the native mind a fact, not a mere belief.'[1]

The tiger familiar spirit is also possessed by certain men, and after their death their spirits appear as tigers, or the medicine-man has subject to him an actual tiger which is immortal (Benua of Johore).[2] The soul of a dead wizard enters the body of a tiger, and the corpse is left in the forest for seven days until the change is effected.[3] A curious Malay belief concerns the fold in which tigers possessed of human souls are penned. Periodical attacks of fierceness come on them, when they break bounds and go after their prey. Passing through one door, they become men, and on returning through another door they become tigers again. Their chief is always in human form, and enters the bodies of sorcerers when they invoke the tiger spirit.[4] The transformation into tiger form is effected in different ways: by sympathetic magic—*e.g.*, donning a *sarong* (yellow with black stripes) and repeating charms—by offerings to evil spirits, by charms, or by a mysterious poison which is supposed to affect the soul; or the power is conceived as hereditary. Among the Semang the medicine-man lights incense and invokes a spirit. Presently fur and a tail appear on him, as he himself believes, and he goes about for twelve days destroying cattle. Then he returns home and is sick, vomiting bones. During the twelve days his wife must always keep the fire burning and burn incense, else he would disappear. Such a wer-tiger cannot be shot, as it disappears so quickly.[5] Various beliefs are held regarding the transformation among the Malays—the whole body takes part in it, or merely the soul substance, the body remaining at home.

Among the wild Malays of the Patani States there is a belief in *badi*, or mischief, which remains by a body after death and devours the *semangat* or, sometimes, the liver of passers-by. Birds and beasts also have *badi* or, in the case of tigers, leopards, and jungle-cats, *pegrung* or *begrob*; and, if a man is affected by this, he goes mad, and either imitates the actions of the creature or is subject to an abnormal growth resembling one natural to it.[6]

In Lombok the crocodile form is assumed by certain men in order to destroy their enemies, and many strange stories are told of them. This form is also taken among the Klemantans, one group of whom claim the crocodile as a relative. One man found his skin become rough, his feet like a crocodile's, and a tail forming, until he was completely transformed. He made his relatives swear that they would never kill a crocodile. Many people saw him in his crocodile form.[7]

In *China* there are various wer-animals—tiger, wolf, dog, fox, etc. The change is usually a bodily one, but an ethereal human double may pass into an animal either before or after death. There are many literary notices of such transformations.

An early instance is mentioned in a document of the 2nd cent. B.C., in which, after the crisis of an illness, a man changed to a tiger and killed his brother.[8]

Such transformations are often ascribed to delirious patients, and, if the patient does not kill a man, he may return to human form. This suggests a popular confusion between the fancies of insanity and actual belief in the power of shape-shifting. Sometimes the transformation is ascribed to a community of aborigines, and is effected by magical means. In other cases the cause may be divine displeasure because of the neglect of religious duties. Here the victim goes mad and turns into a tiger. In one such instance he is covered with a spotted skin by the god, as in European cases, where a wolf-skin is used. Stories of transformation by wearing a tiger-skin are said to abound in China.

> A 14th cent. writer tells how he saw a man slowly becoming covered with hair like a tiger, his body adorned with spots and stripes. During the night he ate a hog.[1]

Other cases of this kind are of frequent occurrence. Wer-tigers and tigresses are sometimes favourably disposed and give presents. This is especially the case with wer-tigresses on behalf of those who excite their love.[2]

The wolf transformation is also known.

> In one case a peasant was attacked by a wolf and cut off its paw. By the traces of the blood he followed it to a house, where an old man was found lacking a hand. He was killed, and in dying took the form of a wolf. Before his period of transformation he had been long ill, and, after being healed, had disappeared. In another instance a youth after an illness acquired the power of sending forth his soul in the form of a wolf, and devoured children—obviously a case of hallucinatory insanity combined with cannibalism, as in European instances.

Other tales of this kind are current.

> An old woman finds her body being covered with hair and a tail forming, after which she becomes a wolf, and escapes, though sometimes she returns to see her family. In another instance a man weds a woman who is really a wolf, as also are her servants, and he is devoured by her.[3] In a 4th cent. work all wolves are said to be transformed to men after the five-hundredth year of their age.[4]

Other wer-animals are also known—*e.g.*, the dog, though here, as in the case of the fox, perhaps it is the animal that takes human form. In one instance men who are beaten become dogs; and a dog-man who was stabbed changed to a dog when dying.[5]

In China the fox superstition is a kind of inverted werwolf belief, especially in N. China. The wer-foxes dwell in the debatable land between earth and Hades, and can take human form at will—most frequently that of a young and pretty girl—but they may be detected by the possession of tails. Spirits of the dead may occupy the bodies of such foxes and revenge injuries on the living. Some legends show that the fox lives in graves and borrows human form from a corpse by instilling into himself the soul-substance. Wer-foxes can do either good or ill to men, but are grateful to those who are kind to them. Foxes in male form live with women, in female form with men; in either case a morbid erotic state is produced, resembling that caused by the mediæval *incubi* and *succubæ*. When killed in human form, all that remains is the body of a fox. Their animal form also appears spontaneously in sleep, or when they are overcome by wine, of which they are very fond. Sometimes they enter and occupy a house invisibly, acting exactly like the *Poltergeist*.[6]

It is also believed that witches can take the form of the fox, cat, or hare.[7] The tiger-ghost is also believed in.

> 'When he wishes to eat people he puts off his clothes and is changed into a striped tiger. He then advances with a great roar, and the traveller is instantly torn to pieces.'[8]

Tigers are said to make slaves of the souls of men devoured by them. These souls go before them to point out traps or to act as beaters,[9] as in the similar Indian belief.

The wer-fox superstition is found in *Japan*, but was not introduced there until the 11th century. There are different kinds of foxes. The wild fox, Nogitsune, can take any form, or become invisible, but its reflexion in water is always that of a fox. The Ninko fox can also take various forms, especially that of a pretty girl, in which shape it will even marry a man.[1] These foxes also possess men, or live in their houses, bringing luck if well treated, but they are dangerous if ill-treated. Some Samurai families are believed to own foxes, which steal for them or torment their enemies. Foxes to whom some kindness has been shown, either in their own or in human form, reward the doer of it with money, etc., part of which turns to grass. Often the house in which the fox lives is illusory and cannot be found again (see FAIRY, vol. v. p. 679). Men possessed by foxes run about yelping and eat only what foxes eat, but the possessing goblin-fox may be exorcized.[2]

The same fox-belief exists among the Ainus, and with them the fox has both good and evil powers, and can cause death. Foxes also exhume and eat corpses. But the same powers of transformation to human form are ascribed to the horse, mole, crow, etc. The spirit of the bear, dog, otter, and especially the cat, can enter into and bewitch a man as a punishment; the victim eats as a cat, wastes away, and dies mewing like a cat. This may occur when a man has killed a cat. To prevent possession by its spirit, he must eat part of it.[3] The Eskimos and some American Indian tribes also possess the fox superstition.[4]

The wer-animal superstition is found in *Africa* in connexion with a variety of savage beasts. All over N. Africa it is believed that the *jinn* can take animal forms—wolf, jackal, lion, serpent, scorpion. This is also true of the *ghūls*, who appear as men or animals, and feed on dead bodies, or kill and eat living men.[5] More akin to the werwolf superstition is the belief that twin children go out at night as cats, their bodies meanwhile remaining at home as if dead. If they are beaten by any one, they tell this to their parents next day.[6] Among the Berbers witnesses maintain that they have seen girls, when born, change into ogresses, who throw themselves on men until they are strangled.[7] Among the Abyssinians there is a wide-spread belief in the *budas*, who change into hyenas and kill and devour. They are distinguished from ordinary hyenas by greater malice. The *budas* are sorcerers; and blacksmiths, found mainly among the Falashas and Agaos, are supposed to be *budas*. Hyenas have been killed with earrings in their ears, and these are believed to be *budas*, though it has been thought that sorcerers put earrings in the ears of young hyenas to bolster up this superstition. The *budas* have a king in the neighbourhood of Abbolo to whom they bring offerings of corpses daily. As blacksmiths are a hereditary folk, their sorcery is also hereditary, but a *buda* confers the gift on his children by a mysterious decoction of herbs. Cases of transformation are believed to have been actually witnessed. In one such case the *buda* sprinkled ashes over his shoulders, and the change began. Besides killing men and drinking their blood, the *buda* takes possession of his victim, entering his body by a look, or when he is eating, or in illness. The victim becomes more or less insane, laughing like a hyena, then falling into a trance, when the *buda* speaks through him, often telling who he is and why he thus personates the patient. Sometimes the victim tries to get into the forest, where the *buda* is supposed to devour him. The *buda* is kept off by the wearing of amulets, by which also he can be exorcized. He can also transform his victims into animals, and sometimes digs up corpses to eat them. This is also done by actual hyenas.[1]

The belief in the wer-hyena occurs from the Sūdan to Tanganyika, and is perhaps strengthened by the fact that wizards at their meetings howl and caper like hyenas, eat horrible food, and commit excesses the sight of which makes the onlooker mad. Even in the daytime their glance causes a deadly sickness. Certain tribes in the Sūdan are supposed to possess this power of transformation, but it is dangerous to shoot them. One of them who was shot was seen to enter the hut of a wizard, who died soon after. The man who shot him soon followed him to the grave.[2] Generally among the black races the usual animals, besides the hyena, are the lion, leopard, and crocodile. In Nubia old women are called hyenas, and are believed to enter the bodies of these animals by night.[3] In the Sūdan the hyena shape is supposed to be assumed at an ant's nest. The Awemba wizards receive power to become wild beasts from spirits called *vibanda*.[4] The Wanyamwesi of E. Africa think that sorcerers can transform themselves into animals in order to injure their enemies.[5] In E. Central Africa witches kill men, and in the form of hyenas try to get at the graves of their victims in order to eat their flesh.[6] The Akikuyu tell of a man, who, after his marriage, went to the wilds and lived like a hyena on dead bodies. Returning home, he ate his child. His brothers killed him, but the woman's second husband also became a hyena and ate her and his child.[7] In British Central Africa the bewitcher (*mfiti*) can turn himself into a hyena, leopard, crocodile, etc. He then digs up dead bodies and eats them. Sometimes the change takes place after death, and, if the creature kills people, some method of appeasing it is adopted. The wer-hyena is thought by the Makanga to have a wife who at night opens the door of the *kraal* to admit him and then runs off with him to feast. In one case, when a goat was carried off, tracks of a hyena and of human feet were seen together.[8] Among the Tumbuka of Central Africa certain women wander about smeared with white clay, and are believed to have the power of changing into lions.[9] In W. Africa the Yoruba think that the wer-hyenas assume their animal shape at night to prey on cattle and sheep, and, if possible, on human beings, who are sometimes compelled to go out to them when they utter certain howls.[1] In Loanda the belief existed that the chief could change himself to a lion, kill some one, and then resume his own form.[2] The Ibos believe that a man's spirit can leave his body and enter into an animal. This is called *ishi anu*, 'to turn animal,' and it is done by means of a drug. If the animal is killed, the man dies; if wounded, his body is covered with boils.[3] Wilson says of sorcerers in Guinea that they can turn into leopards and change their enemies into elephants, in which form they kill them.[4] In Senegambia a sorcerer who changes to an evil animal is kept off by means of salt; or, when transformed, he leaves his skin behind him. If it is rubbed with salt, he suffers, and comes to beg that the grains of salt be removed.[5] In W. Africa generally the power of certain persons to change into leopards or to send their souls into leopards, which are then guided by the human possessor to kill such persons as are obnoxious to them, is very commonly believed in. The person so changed is called *uvengwa*, and cannot be killed. Many persons actually believe that they have thus metamorphosed themselves and done harm. Other animals—lion, panther, crocodile, or shark—are occasionally made use of.[6] One family, living at the mouth of the Congo, can change into leopards, but, if once they lap blood, they remain leopards for ever, exactly as in the case of the Arcadian werwolves.[7] In Calabar a man may become a rat, bat, or owl, etc. In this form he throws his victim into a deep sleep. He then resumes his human form, and sucks his blood, and the victim falls sick and dies. After burial, the body is taken by witches from the grave for a cannibal feast. A witch continues to have this power after death, and may still be called to cannibal feasts or summoned to aid living witches. In old days witches laid aside their skins to assume animal form. If such skins were found, pepper was rubbed into them, so that the witches could not resume them. They were thus caught, and burnt to death, care being taken to destroy the heart, in which the witch power resided.[8] In equatorial Africa the wer-leopard is also much dreaded.[9] The whole belief in such transformations is much mixed up with the existence of leopard societies, the members of which disguise themselves in leopard-skins and commit murders.

In S. Africa similar beliefs are common. The lion form is assumed by wizards on the Zambesi by means of drinking a certain liquid. They kill men and animals.[10] In N. Rhodesia even educated natives believe in the power of certain men to become evil wer-lions or leopards through magic. This is combined with a belief that the soul of the chief is transformed at death into a lion. It comes as a cub from his grave and is told to be good, but by means of a test it may be discovered to be an evil wer-lion.[11] The Barotse credit certain persons, both living and dead, with power to change to an animal—hyena, lion, serpent, or alligator—and to do harm to men or cattle.[1] Among the Baronga a secret society exists the members of which send out their spirit-bodies or go out bodily at night to devour human flesh. They leave their shadow, or the appearance of themselves, behind, but this is in reality a wild animal with which the person has chosen to identify himself. If this appearance is stabbed, a hyena rushes howling from the hut, and the real man falls through the roof with a similar wound. Such persons enter huts, take the true self of the occupant, and eat him. Only his shadow is left, and he dies next morning. Some think that such wizards are not aware of their night work. Those who have long practised it, however, are aware. Perhaps the basis of the whole idea is to be found in the dream-conceptions of hysterical subjects.[2] The Basuto also believe in wer-animals, *māhlithoumes*, men who turn temporarily into animals and kill and eat human beings. They have the tradition of the introduction of sorcery through a queen who could call troops of wolves, monkeys, etc., to her nocturnal gatherings — a belief not unlike that of the wolf-leader in France.[3] The Hottentots believe in the power of changing to lion shape and killing men or animals. This is illustrated by a story bearing some resemblance to European werwolf tales.

> A Hottentot and a Bushwoman travelling saw some horses. He bade her turn into a lion and kill one, as he knew her to possess this power. Hair appeared on her neck, her nails became claws, her features altered, and she bounded off as a lion, the man in turn climbing a tree until she re-assumed her human form.[4]

The Bushmen believed that sorcerers could assume the form of jackals, etc., and, conversely, that the lion could take human form.[5]

Similar beliefs exist among the Negroes of America, carried thence by their forefathers from Africa. In Missouri the Negroes think some cats are devils, *i.e.* witches in disguise.[6] The Voodoo is credited with the power of changing to a black wolf, dog, cat, owl, or bat at night. To stop this the human or the animal skin must be found and salted. This assumes a real change of skin.[7]

With all the *N. American Indian* tribes it was believed that wizards and witches could take the form of wolves, foxes, bears, owls, bats, or snakes —a belief which was probably strengthened by the wizards wearing skins of animals and imitating their howls, etc.[8]

> The Nishinam had a legend of a medicine-man who was seized with a spasm and went on all fours. His nails grew long and sharp, a tail grew on him, hair covered his body, and he became a bear. This transformation lasted until the spasm passed.[9]

A belief similar to that of the Chinese fox superstition exists, as with the Narraganset, and the Tlaxcalans believed in a wer-dog. The Musquakies have curious tales about trees which appear as human beings, each bearing the marks of injuries done to the other, and of an old man who, denying that he was a bear, is proved to have taken that form by the fact that his tracks and those of the bear both have traces of grease. He is therefore killed because he has 'a devil in his nose.'[10] Lafitau tells of wizards who, having taken the form of birds and been wounded, are found to have identical wounds, while the magical bolts with which the birds were shot are found in their bodies. The Chippewa sorcerer for a fee will turn into an animal and inflict injuries on the person described to him.[1]

> In a Chippewa story a boy left by his father in charge of his elder brother and sister is neglected and eats the leavings of wolves. These pity him, and he follows them. The brother one day heard a child's voice crying, 'I am turning into a wolf,' followed by a howl. Then he saw the boy half turned into a wolf. As he watched, the change became complete, and with the words, 'I am a wolf,' the werwolf disappeared.[2]

Among the higher American Indian peoples similar beliefs prevailed. Maya sorcerers could turn into dogs, pigs, etc., and their glance was death to a victim; and in Guatemala the name of the priests was derived from the fact that they could take animal forms. In Yucatan sorcerers claimed to have such powers, and one in dying confessed to a priest that he had often so transformed himself.[3] Among the Tarahumare Indians of Mexico, if a sorcerer sees a bear, he will beg an Indian not to shoot it, as it is he, or, if an owl screeches, he will say, 'It is I who am calling.'[4] The European belief in the transformation of witches into cats was carried to America.[5]

Following the belief into *S. America*, we find that the Abipone *keebet*, or priest, was believed to turn himself into an invisible tiger which could not be killed. When a *keebet* threatened to transform himself and began to roar like a tiger, the onlookers fled, believing that the change was actually taking place.[6] The people of Guiana believe in the *kenaima*, a being who can send forth his spirit to injure or cause wasting disease, or place it in the body of any animal—jaguar, serpent, bird, or insect—which follows up the victim and slays him. His spirit may also enter a man in the form of a caterpillar, and cause disease. Such a caterpillar is often withdrawn from a patient's body by a *peaiman*, or doctor, and killed, but the spirit escapes, so that the *kenaima* does not die. The animal in which the *kenaima* usually places his spirit is the jaguar or tiger—the *kenaima*-tiger —which it puzzles an Indian to kill. A certain small bird is also much feared as a *kenaima*-bird; this is shot and every scrap of it carefully burned, so that there may be one enemy the less. Certain *peaimen* are thought to have the power of sending their spirit into an animal.[7] The wer-jaguar is believed in by many of the tribes.

> A Tucuman story tells how a man saw his brother take three grains of salt, spread a jaguar-skin on the ground, and dance round it, when he became a jaguar. Much horrified, he later obtained the skin and burned it. Returning home, he found his brother dying, but was asked by him to procure a piece of the skin. He did so, and the dying man threw it over his shoulders, and became a jaguar, which fled into the forest. In this case bullets merely rebounded from the wer-animal. In a Paraguay story the man becomes a man-eating jaguar by falling prone, and is re-transformed by reversing the process. Once he was wounded by a youth, who followed him up and killed him in his den, which was filled with human bones.[8] In another tale from the Paraguayan Chaco two men who visited a village when the men were absent decamped when they heard from the women that they would soon return. When the men returned, they said that the visitors were jaguars, who had come to deceive and destroy them, and they had seen the marks

of their claws near the village. They were then pursued and killed.[1]

Among the *Melanesians* in Banks Islands the nearest analogy to the werwolf is the *talamaur*, the soul of a person which leaves the body to eat a corpse. A woman threatened to do this. Watch was kept, and, when a noise was heard near the corpse, the watchers threw a stone and hit something. Next day the woman was found to have a bruise on her arm caused by the stone which hit her soul.[2] In Lepers' Island wizards transform themselves into blow-flies and cause sickness to their victim, or into a shark and eat enemies. In Aurora magicians take the form of sharks, owls, and eagles.[3] A story from this island illustrates the belief.

> Tarkeke devoured men by turning into a fish, or entering a fish or a kind of magic image of a fish. His son found this image and got into it, when it went out to sea. Tarkeke then went after the boy and punished him.[4]

In the examples quoted it is interesting to note in how many ways the change is thought to be effected. In many instances—Scandinavian, German, Slavic, French, Chinese, and the Tucumans of S. America—it is by donning an animal skin or girdle (see GIRDLE), presumably after removing the clothing, as this is a necessary preliminary in other methods. Eating a drug or root or rubbing the body with a salve or oil is found in ancient Italy, the Netherlands, England, India, Indonesia (where also a poison infecting the soul is thought to be the cause of the change), and in Africa, and in many cases tried judicially in Europe. Charms, spells, and other magical methods also effected the change in Celtic, Slavic, Chinese, Indonesian, Cambodian, and other instances, and no doubt the use of spells accompanied the other means referred to. The power might be given by the devil (Russian), or by spirits (Awemba), or the change might be caused in a man by a witch. It might be the effect of a divine or saintly punishment or other curse (ancient Greece, China, Celts of Ireland, Normandy); or it might be the result of eating human flesh (ancient Greece), or of making use of some particular action—swimming (ancient Greece, Périgord), falling prone (Paraguay), yawning (ancient Greece); or it might be the natural gift of a seventh son (Portugal), or of one born on Christmas night (Naples) or between Christmas and Twelfth-night (Greece).

In some cases the power is ascribed to a special tribe or to a people living in a special district—Arcadians, Korinchi Malays, aboriginal tribes in China, Ṣeiʿar of Ḥadramaut. This has perhaps an equivalent in the appearance of epidemics of lycanthropy in certain places, so common in the Middle Ages and later.

Very often it is said that, when the wer-animal is wounded or killed, the human form comes back spontaneously. This is found in many European instances, and also inversely in that of the fox and dog superstition in China.

In general, where the animal skin may be separated from the man, there is still a sympathetic relation between it and him. Thus, if it is burned (Flemish, Breton, American, S. American instances), or rubbed with salt or pepper (Senegambia, Calabar, Negroes of America), he suffers terribly and may die, as in the case of the *lamboyo* in Celebes (below, p. 218 f.). On the other hand, this may release him from being a werwolf, as in the case of other men under enchantment who lose their beast nature when the skin is burned. Conversely, the seal or mermaid wife recovers it when she discovers her skin.

While in Europe the man who is a werwolf is known by his eyebrows growing together over his nose, or by a small wolf's tail growing between his shoulder-blades, in Indonesia the man-tiger as a man lacks heels or the furrow of the upper lip, or is marked by twisted feet or by peculiar actions.[1]

There are various methods of curing or ending the transformation. Burning the skin and wounding have already been mentioned. Another method was for the witch to cover the werwolf with a skin with hair turned outwards (Serbia). In the case of wounding, some special methods are referred to—the werwolf had to be scratched above the nose so as to extract three drops of blood (Brittany), and in Germany stabbed on the brow three times with a knife or pitchfork. The effusion of blood as a cure here corresponds to the drawing of blood from a witch as a well-known means of destroying her power. Naming the werwolf by his baptismal name and reproaching him were also effective.[2] In one story cited above the wife shakes her apron at her husband and so restores him. In Cambodia the werwolf is deprived of his power if struck with a hook on the shoulder.[3]

2. Lycanthropy as a theological doctrine.—Throughout the Middle Ages, but more emphatically in the 16th and 17th centuries, theologians turned their attention to lycanthropy as a branch of sorcery. The general doctrine was that by the help of Satan sorcerers could transform themselves into noxious animals, particularly wolves, for purposes inimical to others. Innumerable theologians expressed these views, and many treatises were written on the subject, while it was also discussed in general works on the evils of sorcery. Of these theologians J. Bodin is one of the best examples; in his *De Magorum Dæmonomania* (Frankfort, 1603) he maintains the reality and certainty of the transformation. Theological opinion thus coincided with popular superstition, and many of the instances cited as proofs are little better than the popular tales referred to above—*e.g.*, where a wolf is wounded and a human being is found with a similar wound soon after. The severest measures were therefore taken against lycanthropes, especially on the part of the Inquisition, and this authoritative announcement of the reality of the transformation added to the popular terrorism. People easily imagined the truth of the charges brought against those charged with them, or came forward as witnesses of the alleged facts. Indeed, the prisoners themselves often maintained their truth, showing that insanity and hallucination had much to do with the matter (§ 3). The peculiarly heinous aspect of the crime is seen in this: H. Boguet, a judge who tried many cases and who wrote many works against sorcery, drew up a code in 1601 in which he stated that, while sorcerers should be first strangled and then burned, the *loups-garous* should be burned alive.[4] The belief in sorcery as well as the theological animus against it often led to epidemics of sorcery; the people in a district, *e.g.*, became terrorized by the idea that all around them were sorcerers, or many persons, half crazy, maintained this regarding themselves. At the beginning of the 16th cent. in Lombardy, during such an epidemic, witches were freely accused of having changed into cats and entered houses to suck the blood of children.[5] Reports of many trials of reputed lycanthropes are still extant, and afford sad evidence of human credulity.

[5] Bourquelot, p. 246.

In 1521 Pierre Burgot and Michel Verdun were tried by the prior of the Dominicans of Poligny, in the diocese of Besançon. The former alleged that years before, when his cattle had strayed, a black cavalier had brought them together after he had agreed to give himself to his master, the devil. Later Verdun taught him at the Sabbat how to become a werwolf by rubbing himself with a certain ointment. Then he saw himself with four paws and his body covered with hair, while he was able to run like the wind. Verdun also transformed himself in the same way; the ointment had been obtained from his demon master. In the form of wolves they killed several children, sucked their blood, and ate part of their flesh, finding it excellent. Burgot also said that he had sexual relations with wolves. Both men were burned alive at Besançon.[1] In the same year, before the same court, three sorcerers were executed for the same crime. One of them had been wounded as a wolf by a hunter, who, following the trail, came to a hut, where he found him having his wound dressed by his wife. These lycanthropes are represented in a painting in the chapel of the Dominicans.[2] A curious case is that of Gilles Garnier, a hermit of Lyons, who, finding his solitude irksome, had taken a female companion. They had several children and lived in great misery. In 1572 a wolf terrorized the district, and the bodies of several children were found half devoured. A boy was attacked by the wolf, but his cries attracted attention. Garnier was found near the body, and at his trial before the Parlement of Dôle avowed that he was the wolf, that he had sold himself to the devil, and had obtained the power of transformation by the use of an ointment. He had killed and eaten the children, the woman also sharing in the ghastly meal. He also was burned alive.[3]

In Auvergne in 1588 the wife of a gentleman was burned alive as a werwolf. Her husband had asked a hunter to bring him some game. The hunter was attacked by a wolf, and cut off one of its paws. On his return to the château he drew the paw from his bag, when it was seen to be the hand of a woman, with a ring on the finger which the gentleman recognized as his wife's. Suspecting her, he went in search of her, and found that she had lost a hand. On her confession that she was the wolf, she was condemned.[4]

Henri Boguet, grand judge of the ecclesiastical court of St. Claude (1569–1616), was most active against sorcerers, and, according to Voltaire, boasted of having put to death more than 600 lycanthropes. His *Discours exécrable des sorciers* (Lyons, 1602) contains many instances of alleged lycanthropy, with the confessions of those accused. He believed firmly in the possibility of the transformation, whether by rubbing with an ointment or otherwise, some chapters of his work dealing specially with this subject. It is remarkable also, as showing the state of feeling at the time, that on 3rd Dec. 1573 the Parlement of Franche-Comté gave a ruling for the pursuit of *loups-garous.*[5]

Towards the end of the 16th cent. Pierre Stumf was executed at Bibburg, in the diocese of Cologne, on his own confession of having lived with a *succuba*, who gave him a girdle by which he could become a wolf, not only in his own sight, but in that of others. He had killed and eaten fifteen children in his wolf form, and had tried to eat two of his daughters-in-law.[6]

The beginning of the 17th cent. was marked by new epidemics of lycanthropy, and hundreds of executions took place.

In 1603 Jean Grenier, a boy of 14, alleged before the judge of Roche-Chalans that he was a werwolf, as a result of a demoniacal gift, and that he had eaten some children. He also accused his father of being a werwolf and possessing a wolf's skin, and another man, Pierre la Thillaire, of having his skin and ointment. The conduct of the boy in court showed that he was insane, and he was detained in a convent. Nevertheless the charge was continued against the two men. The youth was visited in his convent by De Lancre in 1610, who found that he could run on all fours with ease, and that his method of eating was disgusting. He still persisted in his delusion of being a werwolf.[7]

In 1604 at Lausanne five persons were burned as werwolves. A peasant of Cressi had cursed his child and, as a result, five sorceresses in the form of wolves had carried him off to the devil, who sucked his blood. The sorceresses then cut him up, boiled him in a cauldron, and made an ointment of his flesh.[8]

These will suffice as examples of the trials and executions for alleged lycanthropy which were so numerous at this period. Not the least noteworthy fact in the whole sordid business is that some of the writers on the subject show the most extraordinary credulity regarding the cases. Petrus Marmorius, in his *De Sortilegiis*, maintained that he had seen the change of men into wolves in Savoy.[1] Bourdin, procureur général of the king, assured Bodin that there had been sent to him from Belgium the *procès*, signed by judge and witnesses, regarding a wolf shot in the thigh with an arrow. Soon after a man was found in bed with the arrow in a wound, and, when it was drawn out, it was recognized for his own by the person who had shot the wolf.[2] Other cases are related in which cats attacked a man, who wounded them. Women were then found in bed with similar wounds, and they were at once believed to be the cats in question.[3] While the whole was generally attributed to diabolical influence, there were different ways of accounting for it. Some writers thought that there was a real transformation,[4] or that the devil clothed the men with an actual wolf-skin[5] or with one condensed out of air.[6] Others, however, thought that the devil wrought by fantasy or by means of unguents on the man or on the onlookers, so that they imagined that the man or woman was an animal, while he or she was similarly deluded.[7] Others, again, suggested that the devil caused the person in sleep to imagine that he was a wolf, and that he actually did the deeds of which he dreamed.[8] This is akin to the theory of St. Augustine, who refused to believe that the demons could actually change man's corporeal substance. In sleep or trance the man's 'fantasm' went from him and might appear to others in corporeal, animal form, while to the unconscious man himself it might then appear that he was in such a form and acting in accordance.[9] The effect of such drugs as stramonium caused hallucinations of riding through the air and of transformation, such as witches confessed to, and this may have been the food given by women to others in Italy so that they believed themselves beasts of burden.[10] Such a drug might occasionally be responsible for lycanthropic hallucination. Still others, more rational, regarded lycanthropes as lunatics who imagined themselves wolves. The last is probably the true solution of the whole matter.

3. Lycanthropy as a form of mental aberration.—Both in earlier times and even in the period when severe sentences were being passed against alleged werwolves, the existence of a diseased mental condition in which the patient imagined himself to be an animal—a form of melancholia with delirium—was clearly recognized by some. The popular belief in werwolves was not accepted by scientific writers in antiquity. Herodotus (iv. 104) would not be persuaded of the alleged transformation of the Neurians. Pausanias, admitting the transformation of Lycaon as a divine punishment, refused to believe in the recurrent transformations in Arcadia. Pliny (*HN* viii. 34) was equally incredulous. Medical writers regarded lycanthropy as a form of mental derangement. Of these, Marcellus of Side wrote a poem in which he treats lycanthropy in this fashion. The poem has not survived, but a prose version, abridged, by Ætius exists.

According to Marcellus, those afflicted by the lupine or canine madness go out at night in February, imitating wolves or dogs, and lurk among tombs. He gives the signs by which they may be known—pale face, tearless eyes, dry tongue, burning thirst, etc. He also suggests various remedies for this disease, which he regards as a form of melancholia.[1] Greek physicians knew also the *κυνάνθρωπος*, the man who imagined himself to be a dog.[2]

The existence of such a form of madness was known to the Semites, as the account of Nebuchadrezzar (Dn 4^{33}) shows.[3] Several 16th and 17th cent. writers regard lycanthropy as a form of madness. Of these Wier is the best known, though he still believed in demoniacal influence. According to him, those who believed themselves wolves were really troubled in their minds by the devil, so that in sleep they imagined that they had actually perpetrated the actions of which they accused themselves. He also cites the passage of Marcellus just referred to.[4] J. de Nynauld, a doctor who wrote on lycanthropy, thought that the lycanthropes were deluded by the devil, or that he actually gave them unguents, liquids, or powders, by which their sense impressions were affected. There were, however, natural lycanthropes, persons afflicted with *folie louvière*. He denies any actual transformation,[5] such as was insisted on by Bodin. The possibility of persons, more or less imbecile, living in a wild state in the forests, or even found among wild animals, such as wolves, was also suggested by some later writers.[6] Modern alienists take the view that lycanthropy was a form of insanity, often endemic. The patient suffers from a degradation of the personality, and imagines that he is a beast. The disease was common in the Middle Ages, because people then believed such a transformation possible. Now such melancholia with delirium is rare, because this belief hardly survives in Europe. Sporadic cases, however, are still known; in one instance the patient imagined that he was a wolf, and ate raw meat.[7]

Some of the instances cited in the previous sections may be best explained as cases of insanity of the type described. Cf. the Greek βρουκόλακας and the human Kallikantzari, the Malay instances of men with *badi*, several Chinese examples, the Japanese belief in fox-possession, the Ainu belief in possession by various animals, the Abyssinian belief in possession by a *buda*, the Nishinam man possessed by a bear, as well as various European instances. In all these the imitation of the possessing animal is noticeable, and the additional accounts of the growth of hair, claws, etc., may be imaginary, or may be exaggerated accounts of abnormal growth of hair or nails in cases of such insanity (cf. Nebuchadrezzar) or of hypertrichosis in general.[8] The instances of medicine-men pretending to become animals, and of the witnesses actually believing that they see hair and claws growing on them, are perhaps exploitations of this diseased condition.

Further examples of possession from all stages of culture are worth citing.

[8] See A. F. Le Double and F. Houssay, *Les Velus*, Paris, 1912, p. 170, and *passim*.

A. Werner, writing of the tribes of British Central Africa (among whom the possibility of transformation is firmly believed in), tells of a man who had a strong feeling at times that he was a lion, and was impelled, as a lion, to kill and mutilate. He would watch by the wayside, leap out, and stab his victim, and was undoubtedly insane. Other men believed that they were similarly transformed.[1] A boy was burned in Ashango-land because he confessed that he had changed into a leopard and murdered two men—a case not unlike certain occurring in the 16th century.[2] Some men of the Garo hill tribes are afflicted occasionally by a temporary delirium, in which they walk like tigers and shun society. This is known among these tribes as 'transformation into a tiger,' and is supposed to be caused by the application of a medicine to the forehead. Those who thus suffer do not know what has happened when they return to their senses.[3] Certain demoniacs among the Goṇḍs are believed to be possessed by the tiger-god, and will fall on a kid and devour it alive.[4] In the Malay peninsula so real is the belief in the wer-tiger that boys play a game based on the belief. In this one boy is hypnotized, and the others run off, imitating cries of fowls. Then he rises, pursues, scratches, and bites any whom he catches, or climbs trees in his assumed character. Any one who finds himself at his mercy may break the spell by calling out his real name (cf. the European werwolf instances parallel to this)—probably because this was pre-suggested to him. He is supposed to be temporarily possessed by a spirit, but it is obvious that this is on a par with actual cases of insanity, and that the boy might easily become insane, imagining himself to be a tiger. The game is also played in Sumatra and Java, where other animals are also imitated.[5] Among the Dayaks men who eat forbidden flesh are liable to penalties. They will run about the woods naked, imitating a deer, if they have eaten deer's flesh.[6] In Annam an adept who wishes to ask something from the tiger-god prays it to incarnate itself in him. He falls on all fours, growls, eats raw meat, and breaks with his teeth the vessel which contains it. When he is calmed down, he is rubbed with alcohol so that he may come to himself.[7]

Most of these cases from low levels of civilization are obviously temporary cases of insanity, actual or assumed, explained in terms of current belief regarding shape-shifting, etc. They suggest that, even among savages, with whom the general shape-shifting belief is very strong, insanity may, partially at least, have suggested actual wer-animal ideas.

In Europe, during the period when the werwolf superstition was most prevalent, the belief in the possibility of transformation and in the power of the devil over men deluded by him was generally too strong to allow of the truth of the matter being understood. Nevertheless some alleged werwolves were clearly seen to be lunatics and treated as such.

The case of Jacques Rollet, arrested as a werwolf at Condé in 1598, is an example. Two wolves were seen devouring a child's body, while a third rushed off into a neighbouring field. There a man of wild appearance was found, who claimed to be the wolf and maintained that the two wolves were his brother and cousin, and that they had killed and devoured the child. His answers at his trial were contradictory, but he clearly believed that he sometimes became a wolf by means of an ointment. His life was one of great poverty and misery, and it is not impossible that he had killed the child and devoured part of it, and that his ghastly meal was interrupted by wolves. He was sentenced to death, but the Parlement of Paris annulled the sentence and sent him to a hospital.[8] In another case related by Lercheimer, he describes how he visited an alleged werwolf in prison. He was really a lunatic, but maintained that at Easter, through the power of his master, the devil, he became a wolf, took off his chains, and flew out of the prison window. This man would have been burned alive, but Lercheimer obtained his release.[9] In a third case, at Pavia in 1541, a man maintained that he was a wolf and had killed several persons, and that he differed from other wolves merely in the fact that their skin was covered with hair, while his hair was between his skin and his flesh. He was given over to the doctors for treatment, but died soon after.[10] In more modern times such cases are sporadic. Gurney recounts that of a young man at Corfu who in a state of maniacal frenzy imitated a serpent, crawling about, hissing, and also howling like a dog.[1] In another instance, treated by Morel in the asylum at Maréville, the patient had the delusion that he was a wolf, and ate raw meat.[2]

[10] Wier, p. 453; cf. the curious description of a mad lycanthrope in Webster's *Duchess of Malfi*, act v. sc. 2.

It is obvious that in facts like these lies one explanation of the origin of the belief in lycanthropy. The unfortunate victims of melancholia with such delusions, imitating in their frenzy the cries and actions of various animals, must have suggested, both in primitive and in later times, certain aspects of the shape-shifting dogma, especially that of the werwolf. And, where the people believed in the possibility of such transformation, it was easy for them to think that such persons, when actually seen imitating the actions of an animal, were really in that animal's shape. Examples of this hallucination have already been given from among the Abipones and the Abyssinians. The frightful prevalence of this mania during the later Middle Ages and in the 16th and 17th centuries may be explained by the miserable conditions under which thousands of the peasantry lived, constantly on the verge of starvation, by their pre-conceived ideas, and by the terrorism to which so many were reduced by the wide-spread demonology, with its sinister shapes of fear and horror as well as its peculiarly vile conceptions of both cruelty and sensuality.[3] Nor is it impossible that half-insane persons, suffering constantly from hunger, may have killed and eaten human victims, whether under the delusion that they were wolves or not.[4] Necrophagy is not unknown in the annals of mental science,[5] and no crime was more commonly attributed both to werwolves and to witches at the Sabbat, and also alleged by them, than the eating of human flesh. This crime was doubtless largely hallucinatory, but it may have had a foundation in fact. Such persons may have actually covered themselves with a wolf-skin in order to terrify their victims more completely.[6] Among savages, sorcerers and medicine-men have traded on the existing delusion or dementia, and have claimed the power of transformation, as many of the above instances show. This is the case with Abipone sorcerers, and another instance is found among the Chippewa and other American Indian tribes, with whom sorcerers dress in the skin of an animal, and imitate its howls and gestures, until the spectators believe in the reality of the transformation.[7] Nicaraguan sorcerers were much feared for their supposed power of assuming animal forms. To strengthen this belief, they disguised themselves in the skins of animals.[8] In such cases, where an exact imitation of the animal's howls or movements was gone through, credulity would aid the deception, and, as the sorcerer pulled off the skin, he would be thought to have resumed his human form. Mediæval and later sorcerers doubtless also exploited the current delusion in these and other ways. This would account for such cases of the change being witnessed as have already been cited.

The constantly recurring idea that the animal change is for a certain period, so many days or years, and the statement that the person knows when the change is about to come, are also strongly suggestive of periodical or recurrent attacks of insanity.

In several of the above instances, where the change occurs through the donning of an animal's skin, there may be a trace of the fact that insane persons with lycanthropic delusions did actually heighten the delusion by wearing a skin, as perhaps in the case of the *berserkr*. In the Irish instance mentioned by Giraldus, the human body is visible underneath the skin. As far as the popular belief was concerned, in many cases the clothing was first removed. This may point to what actually occurred before the animal skin was put on. But it may be the relic of an older belief that the human skin was first removed; cf. the Voodoo instance (above, § 1, p. 213^{a}).

Perhaps the werwolf belief was also aided by such phenomena as imbecile children, brutalized, and having animal appetites. These 'wild boys' were often believed to have been stolen by animals—the bear, the wolf—and to have been brought up and suckled by them. While many stories about such children are not authentic, there are some cases in which boys were actually found in the dens of wolves in India. They could not stand upright, went on all fours, ate raw meat, and tore clothes into shreds. Various theories have been suggested to explain their having been thus brought up, but, if some cases are authentic in wolf-haunted districts in India, there may have been instances from time to time in similar districts in Europe. This would in part explain the numerous folk-stories about children suckled by animals—*e.g.*, that of Romulus and Remus.[1] The cases are of the kind described as 'idiocy by deprivation,' and, if such children survived, they would hardly differ from the insane persons who imagined they were wolves, went on all fours, and ate raw flesh.[2]

The case is parallel to that of women carried off by baboons or orang-outangs, which has doubtless some foundation in fact (see *CF*, p. 277).

4. Werwolf and vampire.—While both werwolf and vampire have a liking for human flesh and blood, there is a marked difference between them. The werwolf is a living person assuming animal form for the sake of gratifying his desire. The vampire, on the other hand, is a resuscitated corpse, which rises from the grave to prey on the living, the reasons for the resuscitation being of various kinds (see VAMPIRE). But here and there links of connexion exist. Thus in Germany, Serbia, and modern Greece it is thought that the man who was a werwolf in life becomes a vampire after death. Hence the werwolf was burned, not buried, lest he should do mischief.[3] Again, the dead sometimes appear as werwolves. King John Lackland was said to be a werwolf after his death, on the evidence of a monk of Worcester.[4] In Normandy within the last century priests watched at the grave to be sure of the good conduct of the deceased. If they saw that some lost person was about to become a werwolf, they cut off his head and threw it into the river.[5] A ghost may also appear as a wolf, like the wolf of Anspach in 1684, which was the ghost of a dead Burgomeister.[6] This corresponds to the Malay belief that ghosts of dead wizards enter the bodies of tigers, unless the son of the wizard by certain rites attracts his father's spirit to himself.[7] Similar beliefs have already been noted among the Slavs, Benua, Chinese, natives of British Central Africa, Rhodesians, etc. (§ 1). In New Zealand lizards were feared because the souls of those whose death-rites had been neglected became malignant and entered such creatures. They then gnawed the entrails of living men.[8] Demons and spirits of all kinds frequently take animal forms and act as the werwolf or vampire. Thus the French *lubin* was a spirit in the form of a wolf, which haunted churchyards to prey on the dead, like the Arabian *ghūl*, which takes the form of men or animals and eats corpses.[1] In Ethiopian lives of saints the king of the devils rides on a fire-breathing wolf and is followed by fiends in the form of wolves, while in Meroe the wicked are thought to be visited by evil spirits as wolves, jackals, etc.[2]

5. **The 'sending.'**—A phenomenon analogous to that of the werwolf is that of the 'sending'—a thing or animal, sometimes animated or even created by the sorcerer, or some part of the sorcerer himself (his soul, etc.) and sent out by him to annoy or injure people. Examples occur over a wide-spread area and at various levels of civilization. The 'sending' is a kind of familiar of the wizard. In S.E. Australia the lizard is such a wizard familiar and is sent out to do injury.[3] Among the Roro-speaking tribes of British New Guinea snakes and crocodiles are sent by sorcerers to kill. A fragment of the victim's garment is put beside the snake in a pot; then heat is applied to the pot, and the snake strikes at the fragment. Then it is let loose near where the victim passes, and attacks him because it recognizes the smell of the fragment on him. More magical is the method of the Bartle Bay sorceress, a 'sending' from whose body causes death. It leads a separate life from her after her death, or may pass to her daughter. At Gelaria this 'sending' is called *labuni*, and resembles a shadow. It leaves the woman's body when she is asleep, and causes disease by inserting bone or stone in the victim. Should any one see it, it turns into an animal, and then again takes its human form. At Collingwood Bay the 'sending' is called *farum*, and is like a limbless old woman. It turns to a mosquito and sucks the victim's blood, resuming human form at dawn.[4] In Banks Island, if any one eats a piece of a corpse, its ghost will go forth to harm a victim at the will of the eater. Here also and in the New Hebrides the *mae*, or sea-snake, acts as the familiar spirit of those who profess to have had intercourse with it.[5] Among the Malays and in Java insects and even horned deer are used as 'sendings.'[6] Among the Yoruba sorcerers use the owl as a 'sending,' and, should it be caught by the person whom it is intended to destroy, and its claws and wings broken, a similar injury is done to the sorcerer's limbs.[7] In the Cameroons a man selects a hippopotamus, leopard, elephant, gorilla, etc., as a friend, and the animal is then supposed to harm his enemies by stealth. But, if the animal dies or is slain, the man dies. Hence such animals are usually not hunted by fellow-tribesmen.[8] Matabele wizards dig up corpses, transform them into hyenas, and use them as messengers or steeds. A wounded hyena escaping into a *kraal* is thought to show that this is the dwelling of a wizard.[9] Baronga wizards send forth crocodiles, lions, snakes, etc., to kill or wound.[10] In Calabar each wizard has two owl messengers, or sends forth insects—stinging ants, beetles, etc.—into the house where he is to find his victim. Then he sends his *ikim*—a gourd—to examine the house. Insects and *ikim* report whether there is any dangerous *juju*, or medicine, in it.[1]

Bavili sorcerers will leopards and crocodiles to go and destroy, having obtained this power through a medicine rubbed into their eyes. Then the animal becomes visible to them, and they know that it is at their service.[2] In British Central Africa wizards can create lions, or sometimes inspire existing lions, to go forth and destroy.[3] Among the Bondei 'dolls' of Indian corn are animated by the sorcerer, and go forth to suck the blood of a victim, who turns sick and dies.[4] Zulu wizards send out owls and other animals, and Basutos crocodiles, to injure their victims. These are called their *amanxus*, 'attendants.'[5] The Eskimo *angakok* sends a *tupilak*—a seal made by him. Should the victim kill it, he loses all strength and becomes a cripple. This seal is made of bones of various animals, covered with turf and blood, and charmed into life by a magic song.[6] A Siberian shaman will send out a *ye-keela*, or witch-animal, to fight that of another shaman. The shaman whose *ye-keela* is worsted shares its fate. Lapland wizards sent flies and darts against their enemies, and also a kind of ball. The last was fatal to the victim as well as to any one who came in its way.[7] Witch-doctors among the Paraguay Indians send forth witch-beetles to enter their victims, and these beetles cause great terror when seen.[8] In Mexico, among the Tarahumare Indians sorcerers cause snakes, scorpions, toads, and centipedes to eat a man's heart so that he dies.[9] The Twanas explain sickness as caused by an evil animal sent by a sorcerer to eat away the patient's life.[10] In ancient Scandinavia it was believed that sorcerers could raise up a ghost or a corpse by their magic power and send it to do harm to an enemy.[11] The Indian, Benua, and Japanese examples of the animal familiar, cited above (§ 1), should also be noted.

Danish witches were believed to make a hare out of some wooden pegs and an old stocking, and send it to steal milk from cattle.[12] The Esthonians believed in magic packets made by wizards and sent forth to do all kinds of mischief—*e.g.*, to transform the victim.[13] Among the Celts the druids had the power, by singing spells over a wisp of straw and flinging it in their victim's face, to cause him to become mad, and all madness was attributed to such a 'sending.'[14]

Not dissimilar to this conception of the 'sending' is the belief entertained in Celebes regarding the wer-man. The Torajas believe that a man's spirit or inside, *lamboyo*, can go forth from him as a deer, pig, cat, ape, etc., while he is asleep at home. The *lamboyo* then assumes human form (this resembles the New Guinea *labuni*). Its victim is first made unconscious; then in human form the *lamboyo* cuts him up, eats the liver, and joins the body together again. Soon after the victim wakes, he dies. Elsewhere in Celebes a man is thought to have three souls. One of these, the *tonoana*, leaves him in sleep and acts as a werwolf, but, if it is long away or is fatally hurt, the owner dies.

[14] E. O'Curry, *Manners and Customs of the Ancient Irish*, London, 1873, ii. 203.

A wer-man in human shape arranged for a rendezvous with a woman. Her husband overheard, and followed the wer-man, whose bodily form was meanwhile at work. He struck the *lamboyo* or *tonoana*, which turned to a leaf. This he thrust into his bamboo tobacco box. Then, carrying it to the place where the man was at work, he placed it on the fire. The owner begged him not to do this. But he still kept it in the fire, whereupon the man fell dead.

In some cases this power of sending forth the soul is a natural gift, in others it is the result of contagion from another wer-man, or from anything with which he has been in contact. This contagion can be made to leave such a person in the form of snakes or worms by means of severe medical treatment. The wer-man is known by his long tongue and unsteady eyes, which are of a green colour. A wer-man, when discovered, is punished by death. In these instances the spirit is but little different from the 'sending' or familiar spirit. In some cases, however, it is thought that there is an actual bodily transformation, and here, if the animal is wounded, the man who has thus changed his form is similarly hurt when discovered, or dies.[1] Among the Oraons a witch sends out her soul as a cat, herself remaining insensible. Should it be injured in any way, she bears a similar wound.[2]

This likeness may be further extended to the kindred phenomena of the bush-soul and the *nagual*, both of which bear some resemblance to the 'sending' and to the *lamboyo* or *tonoana*. In Calabar the bush-soul is one of four souls possessed by every man. It lives in a pig, leopard, etc., unseen by its owner, but it must not be neglected by him, else the owner turns sick. Then the witch-doctor advises that an offering be made to it. If this appeases it, all is well. If not, the man dies. The witch-doctor can tell the man what sort of animal encloses his bush-soul. He then takes care that neither he nor any one else harms it, for, if it is shot or trapped, the man dies; *vice versa*, when the man dies, the bush-soul also dies.[3] Another observer, J. K. Macgregor, writes that the death of the bush-soul merely causes weakness to its owner. But it is possible for a man to purchase an extra bush-soul from a witch-doctor which is stronger than the other, and can be used for purposes of offence. He may command it to go and kill goats, if a leopard, or trample a farm, if a hippopotamus. If this soul dies, the owner also dies. The owner of a bush-soul can transform himself into the animal in which his bush-soul is.

A chief's son who had a hippopotamus for his bush-soul had been paying a visit to another chief, but sent away his canoe. Asked how he would cross the river, he replied, 'You will see.' He took the leaf of a coco-yam, placed it on the water, sat on it, and at once disappeared below the surface. Then he was seen to cross the river as a hippopotamus, and on the other side he became a man.

It should be observed also that a man's human soul, residing in himself, may leave his body through a medicine and take the souls of things that he desires out of a house. Then he materializes them, and the original articles fall to pieces.[4] In Northern Nigeria among the Angass a man is held to have a *karua* which enters him at birth, and another, its counterpart, which enters an animal. The death of the one causes the death of the other.[1] The whole belief in the bush-soul is not unlike the Roman belief in the genius. A man's health depended on that of his genius, which often resided in a snake. If that was killed, the man whose genius it was also died.[2]

The *nagual* belief is found in Central America. In this case a youth obtained his *nagual* by dreaming of an animal after a period of solitude and fasting. The *nagual*-animal is closely bound up with the man henceforward. When it dies, the man dies; when it is sick, he is sick. He has also the power of appearing as his *nagual*. Any wound caused on the animal form is then found on the man.[3] This resembles the belief in Motu, Melanesia. A lizard, snake, or stone, etc., is selected as a man's *tamaniu*. His life is bound up with it. If it dies, or gets broken, or lost, the owner dies.[4] As already seen, the *talamaur* may be the soul, and, if it is wounded, the body is found to have a similar wound. In an Eskimo story the spirit of a witch who has made a young man ill is wounded in the heel. At the same moment the witch dies in the next house.[5]

Between the werwolf superstition and the various beliefs cited in this section there are certain similarities. Of these that which recurs constantly is the belief in repercussion.

Injury to the 'sending' entails injury to the sorcerer (Yoruba, Eskimos, Siberia); injury to the animal friend entails injury to the owner (Cameroon); injury to the bush-soul, *nagual*, *tamaniu*, wer-soul, entails injury to the owner (Celebes, African instance, Oraons, Indians of Guiana); injury to the soul which takes the form of an animal entails injury to the owner; injury to the soul which enters an animal temporarily entails injury to the owner; injury to the soul absent from the body for some mischievous purpose entails injury to the owner (Eskimos, Melanesians); injury to the werwolf or other wer-animal entails injury to the man in his human form.[6]

The real point of connexion between all the beliefs is that something belonging to the man, some part of the man, or the man himself in another form is injured. The injury then, because of the vital connexion between the part and the whole, or thing owned and owner (sympathetic magic), is seen on the man himself. But it is not clear that, as Frazer supposes, the wide-spread belief in wer-animals may 'be found to resolve itself into a belief in the external soul.'[7] The wer-animal is, save in a very few instances (Khonds, Oraons, Malays, Chinese, Ibos and other W. African peoples, Indians of Guiana), the man himself transformed, not his soul. And, even where the owner of bush-soul or *nagual* is supposed to change himself into the animal containing it, or an animal of the kind, the transformation is a bodily one. The external soul, injury to which causes injury to the owner, is one thing; the wer-animal, which is really the man himself transformed, is another. But the same theory or belief in repercussion is applicable to both. It is not by any means certain that the instance on which Frazer bases his theory of the wer-animal and the external soul can support it. There is no evidence that, when the Nūtka novice is supposed to die and come to life again before becoming a member of the wolf-society, he has exchanged souls with a wolf, so that both man and wolf are werwolves, or that there is anything here akin to the bush-soul.[1] Nor again is it clear, as N. W. Thomas maintains,[2] that lycanthropy is connected with nagualism rather than with transformation, or that the wer-animal was originally the familiar of the medicine-man. The comparatively few instances of the spirit going forth as a wer-animal suggest that we are here on the track of a different if analogous superstition to that of lycanthropy with its supposed bodily transformation. Again, the familiar is hardly a form of the man himself, as the werwolf is, but rather sometimes of part of the man, or it is his messenger, which the werwolf does not seem to be.

[6] An injury done to a fantasm or double is also found to be done to the actual person (see A. Lang, *Cock Lane and Common Sense*, London, 1894, p. 51); cf. the Zulu idea that the *imamba*, or dead chief in the form of a snake, can be killed but may come to life again with the mark of the wound still upon it (Callaway, p. 225).

[7] *Totemism and Exogamy*, ii. 599 f.

There may, however, be a connecting link if we regard the phenomena of lycanthropy as based on the hallucinatory dreams of insane persons, preoccupied with ideas of transformation. Where a medicine-man is supposed to send forth his spirit either in its own shape or in that of an animal, while he remains quiescent at home, this may also be suggested by a hallucinatory dream.

It seems better, therefore, to regard lycanthropy with its bodily transformation as distinct from the transformation of the outgoing spirit, and also from the 'sending,' messenger, or familiar. They are analogous beliefs, to which similar conceptions—*e.g.*, that of repercussion—have attached themselves. But they are in origin different. In the same way, though there is much in the fairy, demon, or witch superstitions which is common to all (see FAIRY), these are really distinct in origin.

6. Conclusion.—The wide diffusion of the werwolf superstition forms an excellent example of a universal belief being worked up into a superstition or story bearing a common likeness in different regions. Without the belief in shape-shifting the werwolf superstition could not have existed. But, this being granted, persons of diseased mind in all stages of civilization easily conceived themselves to be ferocious animals preying upon other human beings. The belief itself was easily exploited by interested persons—medicine-men, sorcerers, etc.; or some of these might themselves be half-crazed, as medicine-men often are through their austerities (see AUSTERITIES). In certain cases—*e.g.*, that of the Norse *berserkrs*—the insane fit was heightened by the wearing of animal-skins; or, in others, totemism, in its later stages, may have helped the form of the superstition, as in the Arcadian and some Irish Celtic examples.

LITERATURE.—Of the numerous works written on this subject in the 16th and 17th centuries, the following are the most important: B. de Chauvincourt, *Discours de la lycanthropie*, Paris, 1599; J. de Nynauld, *De la Lycanthropie*, Louvain, 1596; Wolfeshusius, *De Lycanthropis*, Leipzig, 1591. More modern works are: R. Andree, *Ethnographische Parallelen und Vergleiche*, Leipzig, 1889, pp. 62–80; S. Baring-Gould, *The Book of Were-wolves*, London, 1865; M. F. Bourquelot, 'Recherches sur la lycanthropie,' *Mémoires de la société des antiquaires de France*, new ser., ix. [1849] 193–262; J. Grimm, *Teutonic Mythology*, Eng. tr., London, 1882–88; W. Hertz, *Der Werwolf: Beitrag zur Sagengeschichte*, Stuttgart, 1862; R. Leubuscher, *Ueber die Wehrwölfe und Thierverwandlungen im Mittelalter*, Berlin, 1850; E. B. Tylor, *PC*^{3}, London, 1891, i. 308 f.

J. A. MACCULLOCH.

LYING.—The English word 'lie' with its congeners and derivatives represents a concept which, if hard to define, is yet unique and irresolvable into any other. While it cannot be claimed either (*a*) that all persons are agreed as to what precisely constitutes a lie or lying, or (*b*) that anything like the same ethical significance has at all times and in all communities been attached to the practice generally understood to be denoted by the Teutonic word and by the words commonly regarded as its equivalents in other languages, yet in English at any rate this term, and in a somewhat less degree any word or periphrasis which is thought to be merely a covert alternative for it, is viewed and, by those to whom it is applied, is resented as conveying a reproach, or at least an opinion, generically different from any other. It would probably be conceded that nowhere has antipathy to lying and sensitiveness to the imputation of it reached a higher intensity than among ourselves; and a study of the import of the term in our own language may therefore be taken as in a manner typical and representative.

1. Sources of modern conception.—Historically the English lie has, if we may so speak, a fourfold pedigree—Saxon, Jewish, Græco-Latin, and Christian. It signifies, that is, a vice or vicious act, which derives its peculiar reputation partly from the language and sentiment of our pagan forefathers, partly from conceptions that find expression in the Hebrew Scriptures of the OT, partly from Greek and Roman thought and literature, and, as we shall contend, partly from the specific teachings of Christianity. If it be alleged against this analysis that our sensitive regard for veracity is rather of feudal origin, the objection, even if well-founded, is of no moment, that feature of feudal ethics being itself derived from some or all of the four sources enumerated.

(1) *Saxon.*—The presence in all the Teutonic languages of a substantially identical word of like meaning attests the perennial importance of the thing meant. To 'lie' is to say that which is not. And we cannot doubt that the tribesman who had the skill, and the heart, on occasion to do this undetected was held in different esteem from the man who could not or would not; whether in higher or in lower esteem, we cannot in the absence of adequate evidence be sure; that might perhaps depend on, and change with, the varying circumstances of the community.

(2) *Jewish.*—When at length on British soil the Anglo-Saxon invaders were gradually led to profess the Christian faith, that faith brought with it a moral code derived in unequal degrees from the three other sources named above, of which the most ancient and explicit was the Hebraic. Although the Decalogue contains no precept 'Thou shalt not lie,' the prohibition of 'false witness' reprobates the most frequent and injurious form of lying. Prophets and moralists enlarged the prohibition. 'The voice of the Lord crieth unto the city,' says Micah (6^{9}), 'for the inhabitants thereof have spoken lies, and their tongue is deceitful in their mouth' (6^{12}; cf. Is 30^{9} 59^{13}, Jer 23^{14}); 'Lying lips are an abomination unto the Lord' (Pr 12^{22}); 'A righteous man hateth lying' (13^{4}; cf. Ps 119^{163}). Especially guilty are 'false prophets' who in the name of the Lord 'prophesy lies . . . a lying vision . . . a thing of nought, and the deceit of their own heart' (Jer 14^{14}; cf. Zec 13^{3}).

(3) *Græco-Latin.* — Meanwhile early Hellenic sentiment viewed lying without horror; virtually, as craft, it had in Hermes a patron-god. Perjury, however, was deemed perilous, incurring the wrath of Zeus. Subsequently, as witness the gnomic poets,[1] civic morality coupled veracity with justice as laudable (cf. Plato, *Rep.* i. 331 B); and Sophocles proclaimed the ugliness of falsehood:

> 'Honourable (καλόν) it nowise is to speak lies; though when the truth brings a man dire destruction, 'tis pardonable to say even what is not honourable' (frag. 323).

Finally, philosophy pronounced falsehood intrinsically vicious. Plato (*Rep.* ii. 382 A, 389 B–D), while permitting his 'guardians' to use it, now and again, medicinally and officially 'for the benefit of the State,' bids them punish it rigorously in private individuals as 'a practice pernicious and subversive of the commonwealth,' and in his latest work (*Laws*, 730 B f.) extols truth as 'foremost of all good things'; for the truthful man is 'trustworthy, whereas he who loves wilful falsehood is untrustworthy (ἄπιστος), and he who loves involuntary falsehood is foolish.' Aristotle (*Eth. Nic.* iv. 7. 6) deems 'lying' (τὸ ψεῦδος) essentially 'mean (φαῦλον) and blameworthy.' The 'truth-lover' (φιλαλήθης) stands in notable contrast with him who rejoices in falsehood (ὁ τῷ ψεύδει αὐτῷ χαίρων), a type of character distinct from him who lies for the sake of gain or glory (*ib.* § 12). In Stoicism the viciousness of falsehood, although not expressly affirmed, is tacitly assumed. Thus ideal good is in effect defined by Seneca (*Ep.* lxvi. 6) as 'a mind set on truth.'[1] To the consistent Stoic acceptance of unverified 'opinion' as a substitute for truth or real knowledge would be equivalent to inveracity. Altogether, Greek philosophy had energetically discountenanced the art of lying, and, when Latinized, had found an ally in old-fashioned Roman prejudice against wilful untruth.

[1] *e.g.* Mimnermus, frag. 8: 'With thee and me be truth, most just of all things.'

(4) *Christian.*—The NT endorsed and deepened the injunctions of Jewish theology and Gentile ethics. 'Lie not one to another,' writes St. Paul to the Colossians (3^{9}); the Christian is to forgo all 'lying,' and this for the new and characteristically Christian reason that 'we are members one of another' (Eph 4^{25}). And with this Pauline monition the warnings of the Apocalypse agree. Into the heavenly city no 'liar' may enter (Rev 21^{7}); outcast thence is 'every one that loveth and maketh a lie' (22^{15}), where nothing is lost to the ethics of truth if by 'lie' be meant idol or counterfeit god; that, theologically, *is* the typical lie—idolatry falsifying man's conception of the divine attributes and therewith the standard of truth. In the Synoptic Gospels 'hypocrisy' (Mt 23^{28}, Lk 12^{1}) would appear to express what in St. John is called simply 'lying' (ψεῦδος), of which 'the devil' (Jn 8^{44}) is first cause. Thus for Christianity the spirit of lying is opposed to the spirit of truth as darkness is to light. It is antagonistic to God and incompatible with fellowship in the Church of Christ. And this abhorrence of lying as deadly sin, though too often grievously violated in nominal Christendom, has endured throughout the centuries, permeates our finest literature, and is reflected in the life and conduct of many a plain, honest man to-day.

2. Philosophical theories.—Theology and custom-morality apart, moral philosophers of different schools condemn lying on different grounds; the intuitionist as intrinsically repugnant to 'right reason' or 'moral sense' or 'conscience,' the eudæmonist or perfectionist because it impairs well-being and self-development, the utilitarian because, on the whole, if not in every instance, it would tend to the diminution of the sum-total of pleasure experienced. Whether the utilitarian sanction is well-founded in fact may be questioned. It is arguable that the wide acceptance of utilitarian ethics has been attended by an increased indifference to truth. Whereas lying is demonstrably contrary to other ideals—universal benevolence, perfection, or the beautiful—there is no guarantee that truth-seeking will bring either to the individual or to the community a surplus of pleasure, or that more pleasure may not be secured by an admixture of well-timed falsehood. But, even if utilitarian theory could demonstrate the all but universal inexpediency of lying, such calculative disapproval of it as hedonistically impolitic is not the same thing as hating a lie for its own sake. It is this that would seem to be ethically the point of main consequence, distinguishing man from man—the presence or absence of a deep aversion to lying as such. Of less real importance is the much debated question, too complex to summarize here, of exceptional contingencies in which, notwithstanding that aversion, it may be right to speak falsely, just as killing is sometimes right. But we may consider whether lies can be classified, and attempt a more exact determination of the essential constituents of lying.

3. Analysis and classification of lying.—The aim of a lie is to misrepresent facts, or purpose, or feeling. To be a liar is to do this habitually and wilfully. Of each particular lie the motive is normally some gain foreseen or conjectured as attainable by deceiving somebody as to (1) what has happened, (2) what one purposes, or (3) how one feels. In popular usage the term 'lie' is apt to be limited to the first kind. But I lie no less really, if (2) I promise what I have no intention of doing, or if (3), being glad, I feign sorrow. This is sometimes overlooked or even denied. With regard to declarations of purpose, it is rightly urged that unforeseen circumstances alter cases, and to promise what one may eventually see reason not to perform is no falsehood. But it *is* lying, if at the time of speaking I have not the intention professed; or if I deliberately, but insincerely, protest that in no circumstances will I change my mind; or if, having changed it, I allow those concerned to go on believing my purpose to be unchanged. The last is a very common form of falsehood. Similarly, as regards feeling, many people who would be ashamed to state that they had seen what they had not seen, make no scruple about pretending goodwill towards persons for whom they have none, with the object sometimes of getting general credit for a kindness of heart which is not theirs, sometimes of misleading the victims of their dissimulation.

Not all deceit, however, is lying. For, although the essence of lying is intent to deceive, there must be also, to constitute a lie, either (*a*) untrue words, or (*b*) such reticence as in the context (of speech or action) amounts to false statement—*e.g.*, if I say 'He gave me twenty pounds,' when in fact he gave me fifty (cf. Ac 5^{8}), or if I adopt and publish as my own an essay largely written by another man. To lie is, as Kant well says, 'to communicate one's thoughts to another through words which (intentionally) contain the opposite of that which the speaker thinks.'[1] It matters not whether the false belief is created by positive affirmation or by omission of words necessary to the establishment of a true belief.

Allegory is not falsehood, provided it is designed and adapted to embody truth. It was because early Greek mythology did not in Plato's judgment fulfil this condition that he regarded allegorizing interpretations of it as in no way bettering the case for Homer and Hesiod (*Rep.* ii. 378 D). As with allegory, so with all fiction. Stage-plays and novels exhibit in the form of 'stories' events that are not history, present or past, and yet mislead nobody. A 'story' is a lie, then, only when it falsely disowns its fictitious origin. Even pseudonymous authorship does not necessarily involve falsehood. Not all illusion is deception. Daniel is dramatically as legitimate as Hamlet or Coriolanus. But the pope who, to intimidate a Frankish king and practising on his credulity, sent him a private letter purporting to come from St. Peter was no dramatist, but a forger; and forgery is falsehood. It is doubtful whether equivocation, where a statement is equally susceptible of two meanings, one false and one true, should, because calculated to deceive, be accounted lying. As an isolated act, it probably should not. But the man who habitually equivocates is an untruthful man. Under the head of equivocation may fairly be brought many of those partially deceptive utterances which are sometimes, but unconvincingly, defended as mere social conventions on a par with the customary phraseology of address and other 'common forms of speech generally understood.'[1] If, *e.g.*, in declining an unwelcome invitation I express regret at being unable to accept it, the defence that this is a usual and well-understood way of notifying my intention, while disguising the motive, is inadequate. But, supposing I do regret the disappointment which my refusal may cause or the circumstances which render the invitation unacceptable, the phrase employed is equivocal rather than actually false. If, instead of declining, I profess 'pleasure in accepting' the invitation, the pleasure need not be wholly fictitious; for it is in my power by an effort of goodwill (*a*) to feel pleasure in accepting, and not refusing, the civility offered, and (*b*) to find altruistic pleasure in a visit not naturally attractive. By thus *choosing* to be pleased, a man determines on the side of truth what would have been equivocation. Even where there is an actual element of falsehood, we recognize degrees of insincerity. A statement which in the main reveals the speaker's purpose, feeling, or knowledge of fact, but disguises some detail, is not in the same degree vicious as an entirely misleading utterance, unless, of course, the point misrepresented is the most essential, in which case the saying may be exemplified that 'the worst lies are half truths.' Yet we cannot altogether reject the widely spread view of 'common sense,' that a direct lie stands on a different footing from any indirect device whether of hiding the truth (*suppressio veri*) or of creating a false impression (*suggestio falsi*). There is a common understanding that, when we speak, we do not state what we know to be untrue. Socially regarded, then, a direct lie is a graver breach of faith, and a worse blow to mutual confidence, than any statement, however evasive, which does not actually violate this understanding.

[1] 'Animus vera intuens, peritus fugiendorum ac petendorum, non ex opinione, sed ex natura pretia rebus imponens.'

[1] E. Caird, *Critical Philosophy of Kant*, Glasgow, 1889, ii. 337.

4. **Conclusion.**—On the whole, the main difference between ancient and 'modern' views of inveracity is that in the latter censure is directed primarily on discrepance between statement and thought rather than on the divergence from reality of a spoken, or unuttered, proposition. 'Modern' morality tends to be severe upon misstatements, apparently wilful, of particular facts, but is strangely lenient wherever 'ignorance' can be pleaded—as if ignorance was not often wilful, or reckless, indifference to truth. Many persons will habitually declare as fact anything that they do not positively know to be untrue, and, when convicted of error, take no shame to themselves. They 'thought' it was so. To Plato such untrue 'thought' or 'lie in the soul' appeared more manifestly evil than any spoken lie; and, though Christianity, supervening, emphasized the distinction between wilful sin and intellectual error, there is nothing in the NT to justify, and the Johannine writings abundantly discountenance, the 'modern' view aforesaid, which indeed rests upon nothing better than the assumption that we are entitled to ignore truth, if not to pervert it. In practice the former habit leads on to the latter. Having once entertained and echoed some untruthful allegation, a man will often shut his ears to all disproof and pervert other facts in support of it. Again, if 'lying' proper implies some kind of utterance, the wider concept of 'falsehood' includes (*a*) self-deception, and (*b*) the unuttered lie cherished in the heart and potent to vitiate judgments whether of fact or of value. The dishonest-minded man frequently propagates untruth without any formal or positive lying. If he thus on technical grounds escapes being designated a liar, he yet comes within Aristotle's description of 'the man who delights in falsehood as such.' Doubtless this permanent disposition is acquired only through repeated indulgence in lying for the sake of some particular gain. If it is seldom attained, an intermediate stage is very frequent. Many men and women rarely tell the truth, regarding it as something too precious to give away!

The relation of inveracity to 'that most excellent of all virtuous principles, the active principle of benevolence,' emerges in Butler's 'Dissertation of the Nature of Virtue.' Linking 'falsehood' as a cardinal vice with 'injustice' and 'unprovoked violence,' Butler holds that 'veracity as well as justice is to be our rule of life'; by these our benevolence must be conditioned.

Of the view which condemns lying as violation of a man's duty to himself, the typical exponent is Kant, who stigmatizes a lie as 'an annihilation of the dignity of man,' and deprecates argument from the injury done by the liar to others as confusing 'the duty of truth with the duty of beneficence' (Caird, ii. 384). On the other hand, the best English moralists of the past century, notably Sidgwick and Martineau, take a wider and at the same time a more discriminating view of the nature and harmfulness of falsehood.

M

MA'ARRĪ.—

1. **Life.**—Abu'l-'Alā Aḥmad ibn 'Abdallāh ibn Sulaimān al-Ma'arrī, the celebrated Muhammadan poet and man of letters, was born in A.D. 973 at Ma'arra (Ma'arrat al-Nu'mān), a prosperous Syrian town situated about 20 miles south of Aleppo. At an early age he became almost completely blind in consequence of an attack of smallpox, but so extraordinary was his power of memory that this misfortune did not seriously interfere with the literary studies to which he afterwards devoted himself. It would seem that at first he intended to make poetry his profession. The sums gained by writing panegyrics were often immense, and may well have tempted an ambitious youth with the example of Mutanabbī before him. Abu'l-'Alā, however, declares that his poems were not written for hire. Probably this is true in the sense that he soon abandoned a career which, lucrative as it might be, entailed dependence on the precarious favours of patronage and was destructive of every feeling of self-respect. From the age of 20 to 35 he remained at Ma'arra, a poor and comparatively unknown scholar, supported by a small annual pension paid from a trust-fund. During this time he composed the greater part of the collection of poems entitled *Siqṭ al-zand* ('Sparks from the Tinder'), in which the influence of Mutanabbī is apparent. With the object of seeking a wider field for his talents, he left Ma'arra in A.D. 1008 and journeyed to Baghdād, where he was well received by the learned men; but, instead of settling there, as he had planned, he departed after a stay of eighteen months, and, on returning home, announced his intention to retire from the world. Though, according to his own statement, it was lack of means and the news of his mother's illness that caused him

to quit the capital, there seems to be little doubt that he took this step on account of an indignity which he suffered at the hands of a powerful noble whom he was so imprudent as to offend. The remainder of his life was passed in teaching and writing. His picture of himself as a misanthropic recluse conveys a false impression. From Baghdād he returned with a reputation that not only made him the first man in his native town, but also brought disciples from all parts to hear him discourse on Arabic philology and literature. He had many friends, and his letters to them show 'a kindly interest both in men and things' (*The Letters of Abu'l-'Alā*, ed. Margoliouth, Introd. p. xxx). He complains of his poverty, but the Persian poet Nāṣir-i Khusrau, who visited Ma'arra in A.D. 1047, describes him as very rich (*Safar-nāmah*, ed. C. Schefer, Paris, 1881, p. 10= p. 35 of the Fr. tr.). Ma'arrī died in A.D. 1058.

2. **Writings.**—Besides the *Siqṭ al-zand*, already mentioned, Ma'arrī is the author of another and far more remarkable volume of poetry, entitled *Luzūm mā lam yalzam*, in reference to a technical peculiarity of rhyme, and generally known as the *Luzūmiyyāt*. These poems, written after his visit to Baghdād, contain religious, moral, and philosophical reflexions and deal with a great variety of topics. The prevailing tone is pessimistic and sceptical, but many passages occur in which Ma'arrī speaks as an orthodox Muslim. The *Risālat al-ghufrān* (described and partially translated by the present writer in *JRAS*, 1900, pp. 637–720, and 1902, pp. 75–101, 337–362, 813–847; ed. Cairo, 1907) takes the form of an epistle addressed to 'Alī ibn Manṣūr of Aleppo, who is better known by the name of Ibn al-Qāriḥ. In this Lucianic work Ibn al-Qāriḥ is imagined to have entered paradise, where he holds a series of conversations with pre-Islāmic poets, and the author discusses the opinions of the leading Muhammadan freethinkers (*zanādiqa*). His *Letters*, composed in an elaborately artificial and allusive style, have been edited, with Eng. tr., by D. S. Margoliouth. The long list of his minor works, of which only a few are extant, includes a supposed imitation of the Qur'ān, entitled *Al-fuṣūl wa 'l-ghāyāt*. Ma'arrī is said to have boasted that, if it were 'polished by the tongues of four centuries of readers,' it would bear comparison with the original (see references in I. Goldziher, *Muhamm. Studien*, Halle, 1889–90, ii. 403); but this appears to be an invention. What he attempted was probably a parody of Qur'ānic style rather than a deliberate challenge to the dogma of *i'jāz*, which claims for the Qur'ān a miraculous and inimitable perfection.

3. **Doctrines.** — It is difficult to give a clear account of Ma'arrī's religious and philosophical beliefs. Not only are they, to a large extent, negative in character, but the evidence derived from some passages in his writings is counterbalanced by other passages which, if they stood alone, would lead us to the opposite conclusion. These contradictions are most strikingly exemplified in his attitude towards Islām. Any one who wished to prove him orthodox might quote from the *Luzūmiyyāt* numerous instances in which the poet unequivocally accepts nearly all the chief Muhammadan doctrines, yet his pages are full of denials, doubts, and criticisms which, though cautiously expressed, show a strong anti-Islāmic tendency, and will convince any impartial reader that the charge of heresy brought against him by certain of his contemporaries was not unjustified. Several explanations of the inconsistency have been offered. The question is important, since whatever solution we adopt must affect our estimate of Ma'arrī. Can it be assumed that he is equally sincere when he writes as a pious Muslim and when he preaches the gospel of rationalism? That seems incredible, except on the hypothesis that Ma'arrī, while doubting the divine origin of Islām, also distrusted the human intellect, and hesitated to cut himself loose from the faith in which he was bred. Such an explanation, however, does not accord with his confident and emphatic appeal to reason as the highest authority. The following quotations from the Cairo ed. of the *Luzūmiyyāt* (A.D. 1891) illustrate his views on this point.

'Reason is the most precious gift thou hast received' (i. 151. 1). 'Traditions have come down to us which, if they be genuine, possess great importance; but they are weakly attested. Consult Reason and pay no heed to anything else. Reason is the best adviser in the world' (i. 288. 8 f.). 'Be guided by Reason and do whatever it deems good' (i. 394. 8). 'My Reason is indignant that I should lay it aside in order to follow Shāfi'ī and Mālik' (ii. 150. 3). 'O Reason, 'tis thou that speakest the truth. Perish the fool who invents traditions or expounds them!' (ii. 196. 4).

Those who hold that Ma'arrī's orthodox utterances do not express what he wholly or partly believed, but were designed to mask his real convictions and to serve as a defence against any dangerous attack, are attributing to him a course of action that he himself openly professes.

'Society compels me to play the hypocrite' (ii. 139. 4). 'I raise my voice to pronounce absurdities, but I only whisper the truth' (ii. 36. 13). 'Conceal thy thoughts even from the friend at thy side' (i. 272. 1).

His opinions were of a sort that could not be communicated without some disguise; and this necessity, which he disliked (cf. ii. 34. 2), is the source of many superficial contradictions in his writings. The suggestion that his ideas were dictated and controlled by the complex form of rhyme which he uses throughout the *Luzūmiyyāt* is inadequate as a general explanation of the facts, although it may cover part of them. Something also should be allowed for the influence of an Islāmic atmosphere and tradition upon the language of the poems, an influence to which, perhaps, their author at times consciously surrendered himself.

While Ma'arrī adopted certain ascetic practices and held certain religious and moral beliefs, his genius was essentially critical, sceptical, more apt to destroy than to construct. He could think for himself, but lacked the power of developing and combining his speculations. Unable to find rest in any religious or philosophical system, he fell into a fatalistic pessimism tempered, as not seldom happens in such cases, by a good deal of active benevolence. He claims to unfold to his readers the secret thoughts of mankind (i. 230. 15), and it is true that his poems reveal the inmost spirit of contemporary Muhammadan culture in its many-sided aspects. We are here concerned only with his main points of view and with the opinions and beliefs to which he was led by reflecting on the problems of life. For the sake of convenience the subject may be classified under a few general heads.

(*a*) *Scepticism.* — In several passages of the *Luzūmiyyāt* Ma'arrī discusses the origin and nature of religion. He ignores, although he does not formally deny, the theory of divine revelation. Religion, as he sees it, is a matter of inheritance and habit.

'They live as their fathers lived before them, and bequeath their religion mechanically, just as they found it' (i. 248. 13). 'In all thy affairs thou art satisfied with blind conformity, even when thou sayest, "God is One"' (i. 252. 2).

He disapproves of conformity (*taqlīd*), not because it is opposed to genuine faith, but on the ground that it is irrational.

'It is not reason that makes men religious: they are taught religion by their next of kin' (ii. 403. 13); cf. the celebrated verses (ii. 201. 7 ff.): 'The Muslims are mistaken and the Christians are on the wrong road, | And the Jews are all astray and the Magians are in error. | Mankind fall into two classes—the intelligent | Without religion, and the religious without intelligence.'

The whole fabric of popular religion is raised on fear, fraud, and greed (i. 251. last line, 65. 9, ii. 196. 5). The poet characterizes the great world-systems as a mass of forged traditions and doctrines which not only are repugnant to reason but have undergone vital alteration at the hands of their own adherents (ii. 20. 15, 196. 3, 404. 2, 409. 9). All of them are tainted with falsehood; no community possesses the truth (*hudā*) entire (ii. 177. 10). Ma'arrī does not shrink from applying this principle to Islām, though here, as has been remarked above, he speaks with two voices and avoids positive statements of disbelief. In the case of other religions his criticism is less restrained; thus, referring to the Crucifixion, he says (ii. 409. 7 ff.):

'If what they [the Christians] say concerning Jesus is true, where was His father? How did He abandon His son to His enemies? Or do they suppose that they defeated Him?'

He disbelieves in miracles (ii. 252. 11), augury

(i. 104. 3, 327. 10), and astrology (i. 254. 1, ii. 330. 2). On these matters he had been able to reach a definite conclusion, but he was rarely so fortunate. Experience assured him that human knowledge is a leap in the dark.

> 'There is no certainty; my utmost effort results only in opinion and conjecture' (ii. 23. 14). 'Colocynth does not know what gave it its bitterness, nor honey why it is sweet. Ye asked me, but I had no power to answer you: any one who pretends to know is a liar' (i. 103. 6).

All his metaphysical speculations close on the note of agnosticism.

> 'Some men assert that nothing really exists, but have they proved that there is neither misery nor happiness? We oppose them in this controversy, and God knows which of us is farther from the truth' (ii. 281. 1).

As regards the question of a future life, he admits that the soul may perhaps be immortal (ii. 171. 7). No one can tell whither it goes (i. 225. 7, 248. 6). It is a subtle thing, and, although it is confined in the body, the intellect cannot perceive it; will it be conscious of what befalls it hereafter? (i. 211. 6). If mind accompanies it, it may have memory of its life in this world (i. 140. 6). The doctrine of metempsychosis is not corroborated by reason (ii. 171. 9 ff.). In other passages, however, he alludes to an infinite cycle of dissolution and re-composition, of death and re-birth, as the destiny of all living beings (ii. 169. 13 ff.).

(*b*) *Pessimism.*—Amidst the welter of doubt from which he struggled in vain to escape Maʿarrī found one undeniable fact, namely, death (i. 256. 6, 291. 1 f.). Wherever he looked, he saw the cruel hand of Fate dragging all to destruction (ii. 146. 13). The life of man is a journey to the tomb (ii. 81. last line), a bridge between two deaths (i. 308. 12), a disease which only death can cure (i. 182. 3), a long torment (i. 69. penult.). Contemplating the futile pain of existence, he exclaims:

> 'May I never rise from the dead! I take no delight in living, though my fame is spread afar' (i. 426. 9 f.; cf. i. 374. 17).

Of such a view of life celibacy is the logical consequence, nor in this case could the poet be accused of preaching what he did not practise (ii. 359. 7 ff.). He held that procreation is a sin (i. 45. 3 ff., ii. 299. 4). No one has the right to increase the sum of suffering by bringing children into the world (i. 349. 13):

> 'If you wish to be kind to your sons, leave them in your loins' (i. 397. last line).

Children are burdens (i. 289. 12), and a man's son is his worst foe (i. 400. 2; cf. i. 45. 3 ff.). Fathers should provide husbands for their daughters, but should warn their sons not to marry (i. 216. 10). Maʿarrī depicts the universal misery and wickedness of mankind in terms that no satirist has surpassed. The world is a sea of raging passions which drive us to and fro until we are engulfed (i. 49. 6); it is like a carcass, and we are the dogs barking around it (i. 224. 9).

> 'When you come back to realities, every human being is wretched' (ii. 20. 7).

He repeats again and again that human nature is radically evil (i. 50. 8, 94. 3, 353. 11 f., 403. 5).

> 'Better than the best of them is a rock which commits no wrong and tells no lies' (i. 95. 12).

Good is soon burnt out, but evil smoulders for a long time (i. 270. 11 f.). The proportion of good in the world is exceedingly small (i. 315. 3). Fate, not free will, is the cause of men's wickedness, and the crow cannot change its colour (i. 311. 6 ff.).

> 'Do not seek to reform a world whose righteousness God never ordained' (i. 110. 3).

It follows that no human actions incur blame or deserve praise, and the poet says in one place (ii. 79. 10 f.) that only religious scruples prevented him from accepting this doctrine. Elsewhere he denies that men sin under compulsion (i. 354. 8, ii. 254. 3).

> 'They are unjust to each other, but the Creator of injustice is certainly just' (ii. 280. 6).

While castigating his neighbours and contemporaries, Maʿarrī does not spare himself (i. 48. 7). His pessimism extends to the future:

> 'If this age is bad, the next will be worse' (ii. 171. 17).

(*c*) *Asceticism.*—He earnestly desired to withdraw from a society of knaves and hypocrites and a world of bitter illusions.

> 'Would that I were a savage in the desert, idly smelling the spring flowers!' (ii. 28. 14). 'Be a hermit as far as possible, for one who speaks the truth is a bore to his friends' (i. 66. 1). 'The happiest man in the world is an ascetic who dies childless' (i. 212. 3).

But the value of asceticism depends on the motives by which it is inspired: the humble father of a family is superior to the ostentatious pietist (i. 208. 17 ff.). Maʿarrī seems to have learned at Baghdād, if not during his earlier travels, some peculiar doctrines and practices of Indian origin, connected more particularly with the Jains. He thinks it wrong to kill animals for food or to hurt them in any way, and therefore excludes from his diet not only meat, but also eggs, milk, and honey (i. 232. 9 ff., ii. 169. 9, 210. 13, 264. 13, 373. 9; cf. *JRAS*, 1902, p. 313 ff.). In his opinion there is greater virtue in letting go a captured flea than in giving alms to a beggar (i. 212. 9). He praises the Indian custom of burning the dead instead of burying them, and adduces practical arguments in favour of cremation (i. 235. 5 ff., 418. 20 f., ii. 407. 3). The religious enthusiasm of the Indian ascetics who throw themselves alive into the flames fills him with admiration (i. 260. 6 ff., ii. 253. 5 f.). Characteristically enough, he alleges as a reason for abstaining from wine the fact that the forbidden beverage is destructive to the intellect (ii. 312. 14, 361. 11).

(*d*) *Religion and ethics.*—Though Maʿarrī believed the whole conception of religion as a supernatural revelation to be false, he was nevertheless a firm monotheist (i. 47. 12, 279. 12, 281. 4 f.). Reason, he says, assures us of the existence of an eternal Creator (i. 249. 9), whom he seems to have identified with an omnipotent, all-encompassing Fate. Whether his idea of God is truly expressed by the orthodox phrases which he employs may be left an open question. At all events, his religious beliefs were based on intellectual conviction, not on traditional authority (i. 128. 8, 129. last line, 358. 15).

> 'Truth is not to be found in the Pentateuch: follow thy reason and do what it deems good' (i. 394. 8 f.).

Religion, as he defines it, is fear of God, renunciation of pleasures, and avoidance of sin (i. 315. 12, 361. 17, ii. 298. 12, 329. 12), but also embraces the obligation of dealing justly with every one (i. 103. 11). He asserts that all acts and forms of worship are useless without obedience to the unwritten moral law which is prescribed by reason and conscience. It is evident that he regarded this law as supreme and self-sufficing, for he never made the pilgrimage to Mecca nor did he take part in the public prayers (i. 100. 8). Virtue consists not in fasting and praying and wearing ascetic garb, but in abandoning wickedness and purging the breast of malice and envy (i. 285. 13 f.). That man is ignorant of true piety who, when he has an opportunity of satisfying his desires, does not abstain (ii. 159. 13 f.). A trivial wrong to one's neighbour will be more severely punished hereafter than neglect to fast or pray (ii. 294. 9). Maʿarrī had no sympathy with religious or sectarian prejudice.

> He observes that, 'when a religion is established, its adherents contemn and revile all other creeds' (ii. 405. last line), but his own opinion is that a Christian priest may do one more good than a Muslim preacher (ii. 93. 7). 'Were it not for the radical hatred implanted in human nature, churches and mosques would have risen side by side' (ii. 82. 5).

Worldly ambition causes theologians to write controversial books full of vain words and endless analogies (i. 249. 5 ff.).

> 'Ask pardon of God and pay no heed to what is said by Abu'l-Hudhail and Ibn Kallāb' (i. 131. 5).

While refusing to acknowledge any authority that is less than divine, the poet finds the source and sanction of his freedom in the reason with which God has endowed him.

> 'Serve God Himself, not His servants, for religion enslaves and reason emancipates' (i. 326. 13).

Though man is naturally evil, the mind can acquire virtue (i. 241. 4). Virtue must be sought and practised for its own sake without desire of praise from men or hope of reward from God : it is a consolation for the woes of this life (ii. 341. 15 f. ; cf. i. 142. 5, 312. 10, 333. 10, 437. 7). Humility should go hand in hand with charity.

> 'Do as you would be done by' (ii. 87. 7). 'Show kindness to the poor and never despise them for receiving your bounty' (i. 175. 11). 'Forget your good deeds' (i. 349. 15). 'Forgive your neighbours, but be merciless to yourself' (i. 360. 13).

Slaves ought to be treated kindly, also animals and birds (ii. 25. 16 f., 31. 4). If Ma'arrī says some hard things about women, he is far from being a misogynist, and he makes handsome amends when he declares that a good wife is man's first paradise (i. 356. 12). He regards polygamy as unjust to the wife and calamitous for the husband, but his views on the education of women must have seemed to his Muslim readers curiously old-fashioned (i. 62. 12 ff., 192. 2 ff., ii. 235. 1 ff.).

LITERATURE.—The most complete biography of Ma'arrī is contained in D. S. Margoliouth's ed. of the *Letters*, Oxford, 1898, Introd., and the best general survey of his religious and philosophical opinions in A. von Kremer, 'Ueber die philosophischen Gedichte des Abul-'Alâ Ma'arry,' *SWAW*, phil.-hist. Classe, cxvii. 6 [1889]. See also, in addition to the works cited in the art., C. Rieu, *De Abu-'l-Alæ Poetæ Arabici vita et carminibus*, Bonn, 1843 ; A. von Kremer, *Culturgeschichte des Orients unter den Chalifen*, Vienna, 1875–77, ii. 386–396, also in *ZDMG* xxix. [1875] 304–312, xxx. [1876] 40–52, xxxi. [1877] 471–483, xxxviii. [1884] 498–529 ; D. S. Margoliouth, 'Abu'l-'Alā al-Ma'arrī's Correspondence on Vegetarianism,' *JRAS*, 1902, pp. 289–332 ; R. A. Nicholson, *A Literary History of the Arabs*, London, 1907, pp. 313–324 ; H. Baerlein, *The Diwan of Abu 'l-Alā*, do. 1908, *Abu 'l-Alā the Syrian*, do. 1914 ; C. Brockelmann, *Gesch. der arab. Litteratur*, Weimar and Berlin, 1898–1902, i. 254 f.

REYNOLD A. NICHOLSON.

MACEDONIANISM.—1. Introduction.—In the closing years of the 4th and the first half of the 5th cent. the Arians, Eunomians, and Macedonians were regarded as the most important heretical groups deriving their origin from the Arian controversies. Three laws of Theodosius, dating from A.D. 383 and 384 (*Cod. Theod.* XVI. v. 11–13), are in the main directed against them, and the latest of these speaks of the three heretical designations as 'inter sacræ religionis officia pro suis erroribus famosa nomina.' About three years afterwards Jerome (*in Eph.* ii. [on 4$^{5f.}$], ed. D. Vallarsi, Venice, 1766–72, vii. 1, p. 610 C=*PL* xxvi. 528) and, as far down as 450, Nestorius (*Liber Heraclidis*, tr. F. Nau, Paris, 1910, p. 148) link together the names of Arius, Macedonius, and Eunomius in a similar way. Didymus of Alexandria, in his *de Trinitate*—a work which is not distinctly named in Jerome's *Catalogue of Authors* (ch. 109), and which, therefore, cannot have been written long before A.D. 392, and may even be of later date—regards the Arians, Eunomians, and Macedonians, whom he sometimes conjoins (ii. 11 [*PG* xxxix. 661 B], ii. 12 [*ib.* 673 B and 688 B]), as the most outstanding adversaries of orthodoxy. Augustine (*c.* 402) brings them before us as the non-Catholics of the East (*de Unit. eccl.* I. iii. 6 [*PL* xliii. 395]) ; in 415 Jerome describes them in similar terms (*Ep.* cxxxiii., 'ad Ctesiphontem' 11 [Vall. i. 2, p. 1040 B=*PL* xxii. 1159]) ; and Socrates (*c.* 440) recognizes them as the heretical sects of his time (*HE* I. vi. 41, V. xx. 1). As regards the heresy *τῶν Εὐνομιανῶν, εἴτουν Ἀνομοίων, καὶ τὴν τῶν Ἀρειανῶν, εἴτουν Εὐδοξιανῶν* (Council of Constantinople in 381 ; J. D. Mansi, *Sacrorum conciliorum . . . collectio*, Venice, 1759–98, iii. 560), we are so well informed that in dealing with them we can start from their date of origin. In the case of the Macedonians, however, the position is less favourable. It will therefore be advisable, first of all, to determine the characteristic standpoint of the Macedonians who, towards the close of the 4th and in the first half of the 5th cent., formed a definite sect distinct from the orthodox Church.

2. Sources for the history of the Macedonians from c. 383 to 450.—As sources for our inquiry we have, besides the historians of the 5th cent., the following works : (*a*) the *de Trinitate* of Didymus mentioned above (*PG* xxxix. 269–992) ; (*b*) the third of the five pseudo-Athanasian dialogues, *de Trinitate* (*ib.* xxviii. 1201–1249 : *Διάλογος Γ′ περὶ τῆς ἁγίας Τριάδος, ἐν ᾧ αἱρετικοῦ φρονοῦντος τὰ τοῦ Πνευματομάχου Μακεδονίου ἀντίθεσις πρὸς Ὀρθόδοξον*) ; (*c*) the two pseudo-Athanasian *Dialogi contra Macedonianos* (*PG* xxviii. 1291–1330, and 1330–1338) ; and (*d*) the fragmentarily preserved *Sermones Arianorum*, printed in Migne (*PL* xiii. 593–630) from A. Mai's *editio princeps* (*Veterum scriptorum nova collectio*, Rome, 1825–38, III. ii. 208 ff.). Of these four sources, the *Sermones Arianorum*, which seem to have been composed *c.* 400, or some years later, in the Latin-speaking portion of the Balkan Peninsula, are of little service for our purpose ; but what they say regarding the teaching of the Macedonians rests, to some extent at least, on what 'Soziphanes [of whom otherwise we know nothing], princeps eorum, scripsit' (613 C). As regards Didymus, *de Trinitate*, and the two sets of dialogues enumerated above, the present writer, in a recent paper ('Zwei macedonianische Dialoge,' in *Sitzungsberichte der Königlich Preussischen Akademie der Wissenschaften*, xix. [1914] 526–551), seeks to show (1) that in Did. *de Trin.* we find no fewer than thirty-one fragments (printed and numbered *loc. cit.* pp. 526–534) of a learned dialogue of Macedonian origin, written between *c.* 381 and the date of Didymus's work ; (2) that this dialogue was known to and used by the author of the third of the five *Dialogi de Trinitate*, who wrote, as it would seem, in the period between the date of Did. *de Trin.* (*c.* 392) and the Nestorian controversy (*c.* 430), and that many sections of this third dialogue have probably been taken—verbatim, more or less—from the said Macedonian dialogue ; (3) that the first of the two *Dialogi contra Macedonianos* is of prior date to Did. *de Trin.*, and that its preliminary disquisitions (i.–viii. [pp. 1292–1301]) enable us to reconstruct a *second* dialogue of Macedonian origin, considerably shorter than that mentioned in (1) above, and written between A.D. 381 and *c.* 390 (printed as no. 32 in Loofs, 'Zwei maced. Dialoge,' p. 536 f.). With these data at our disposal we are in a position to sketch the teaching of the Macedonians to a great extent from their own writings, and, in order to bring out this point clearly, we shall in the following paragraphs, when quoting from the two Macedonian dialogues in question, give the number of the relevant fragment as found in the present writer's paper cited above.

3. Doctrine of the Macedonians in the same period.—The leading doctrine of the Macedonians is found in the thesis characterized by their opponents as 'Pneumatomachian,' viz. that the Holy Spirit is not to be designated Θεός (frag. 32, lines 1–8, *Dial. c. Maced.* i. 1 [p. 1292 A] ; frag. 29, Did. *de Trin.* III. xxxvi. [p. 965 B]). The development of this thesis on its negative side seems to have been conditioned among the Macedonians by the antithetic positions of the Nicæno-Constantinopolitan Creed : the Macedonians disputed the *κυριολογεῖσθαι* of the Holy Spirit (frag. 32, ll. 8–12, *Dial. c. Maced.* i. 3 [p. 1293 B]), His *ζωοποιεῖν* (frag. 16, Did. *de Trin.* II. vii. 3 [p. 573 A]), and His *προσκυνητέον εἶναι* (frag. 32, ll. 13–33, *Dial. c. Maced.* i. 4 [p. 1293 C, D]; frag. 12, Did. *de Trin.* II. vi. 18 [p. 545 B, C]; frag. 22, *ib.* II. x. [p. 641 B]). Only *τῷ ὀνόματι τῷ τοῦ Πνεύματος συναριθμεῖται* [*sc.* *τῇ Τριάδι*] (frag. 32, ll. 33–35, *Dial. c. Maced.* i. 6 [p. 1297 C]). On the positive side it was urged that in 1 Ti 5^{21} St. Paul does not mention the Holy Spirit *ὡς συντάξας δῆθεν τοῖς ἀγγέλοις* (frag. 14, Did. *de Trin.* II. vi. 19 [p. 548 B, C]; cf. frag. 18, *ib.* II. vii. 8 [p. 581 D]: *κατάγεται . . . τὸ Ἅγιον Πνεῦμα εἰς ἀγγέλου φύσιν*); the angels, too, are *ἅγιοι καὶ πνεύματα τοῦ Θεοῦ* (frag. 4, *ib.* II. iv. [p. 481 B]). The Holy Spirit, however, was not regarded as merely one of the angels; He was described as *Θεοῦ μὲν ἥττων τῇ φύσει, ἀγγέλων δὲ κρείττων, μέσην τινὰ φύσιν καὶ τάξιν εἰληχός* (frag. 17, *ib.* II. vii. 3 [p. 576 B]). Nor is it only orthodox writers who on these grounds ascribe to the Macedonians the doctrine that the Holy Spirit is a created being, for we find it stated also in the *Sermones Arianorum* that 'Macedoniani Spiritum Sanctum iussu Patris per Filium creatum defendunt, et nuntium et ministrum Patris eum esse prædicant, sicut et nos' (*PL* xiii. 611 A). The Macedonians themselves sought rather to disguise their position here; for, although they were willing to admit that the Spirit was included among the *πάντα* of Jn 1^3: *πάντα δι' αὐτοῦ* (*i.e.* *διὰ τοῦ Λόγου*) *ἐγένετο* (frag. 32, ll. 44–46, *Dial. c. Maced.* i. 8 [p. 1300 C]; frag. 27, Did. *de Trin.* III. xxxii. [p. 957 B]), they expressly denied that He should on that account be described as *τῶν κτισμάτων ἕν* (*loc. cit.*: *οὐ κοινοποιεῖται τοῖς πᾶσι μοναδικὸν ὂν τὸ Ἅγιον Πνεῦμα*; cf. frag. 20, Did. *de Trin.* II. viii. 1 [p. 617 C]: *οὔτε εἰς θεικὴν ἀξίαν ἀνάγουσι τὸ Πνεῦμα, οὔτε εἰς τὴν τῶν λοιπῶν φύσιν καθέλκουσιν*). Even so, however, they do not advance beyond the Arian doctrine of the Spirit, as the *Sermones Arianorum* likewise assert that 'Spiritus Sanctus . . . melior et maior ceteris omnibus in tertio loco . . . *singularis* atque solus in sua singularitate dinoscitur' (*PL* xiii. 601 A).

In their interpretation of the Scripture texts on which the orthodox writers based their doctrine of the Spirit, the Macedonians proceeded partly on grounds of purely grammatical exegesis—*e.g.*, frag. 32, l. 12, *Dial. c. Maced.* i. 3 (p. 1293 B): *περὶ τοῦ Κυρίου λέγει* [*sc.* Paul, in 2 Co 3^{17}] *ὅτι ὁ κύριος τὸ Πνεῦμα*; and partly on arguments of textual criticism—*e.g.*, that in Ro 8^{11} we should read *διὰ τὸ ἐνοικοῦν αὐτοῦ Πνεῦμα*, as the one or two MSS with *διὰ τοῦ ἐνοικοῦντος, κτλ.* in the hands of the orthodox had been tampered with (frag. 25, Did. *de Trin.* II. xi. [p. 664 C]; cf. *Dial. de Trin.* iii. 20 [p. 1233 B, C]), while in Ph 3^3 the correct reading was *πνεύματι Θεῷ* not *Θεοῦ* (frag. 25, Did. *loc. cit.* 664 B, etc.; cf. frag. 25, ll. 9–13, Did. *loc. cit.* and *Dial. de Trin.* iii. 26 [p. 1244 B, C]); partly, again, they applied the principle that *οὐ χρὴ ὁμωνυμίαις ἢ συνωνυμίαις ἢ ὁμοιολεξίαις προσέχειν* (frag. 3, Did. *de Trin.* II. iii. [p. 476 A]), or that *τὰ ἀλληγορικῶς ἢ προσηγορικῶς ἢ μεταφορικῶς ἢ ὁμωνύμως λεγόμενα οὐ χρὴ εἰς δόγματος ἀκρίβειαν παραλαμβάνειν* (frag. 23*a*, *ib.* II. x. [p. 645 A]). It seems clear that the last of these devices was largely adopted by the Macedonians (cf. the *ὁμωνύμως* also in frag. 9, Did. II. vi. 4 [p. 516 C], and frag. 19, l. 19, *ib.* II. viii. 1 [p. 605 B]). A view held by the learned, and supposed—wrongly, as the present writer thinks—to have the support of Augustine (*PL* xlii. 39), viz. that certain Macedonians regarded the Spirit as a *δύναμις ἀνυπόστατος* (cf. J. A. Mingarelli's note [83] on Did. *de Trin.* I. xviii. = *PG* xxxix. 357, n. 83), cannot be verified directly from Macedonian sources. It appears to lack probability, and seems to the present writer to have no better support than the casual and forced interpretations of orthodox controversialists (Did. *de Trin.* II. viii. 1 [p. 620 A]), or the misinterpretation of certain passages in which the Macedonians distinguished between the *Πνεῦμα Ἅγιον* and the spiritual power of God inseparable from God Himself (*Dial. de Trin.* iii. 23 [p. 1240 A]; *Dial. c. Maced.* i. 20 [p. 1328 B, C]; cf. Did. *de Spiritu Sancto*, xxiii. [*PG* xxxix. 1053 A]).

As regards the Christology of the Macedonians, we have, as far as the present writer knows, only a single statement emanating directly from the Macedonian side, and unfortunately it cannot be detached with certainty from its context. In the *Sermones Arianorum* we read as follows:

> 'Macedoniani post hæc omnia [there is, unhappily, a lacuna in what precedes] corrigunt se et dicunt: Filium similem per omnia et in omnibus Deo Patri esse dicimus; his autem qui dicunt esse differentiam inter lumen natum et inter lumen non natum, non communicamus, quia nullam differentiam esse inter deum natum et inter Deum non natum dicimus; *æquales honore, æquales virtute* Soziphanes, princeps eorum, scripsit' (*PL* xiii. 613 B, C).

Is it only the words here italicized that are ascribed to Soziphanes, or are we to regard the whole statement, *i.e.* also the affirmation of the doctrine *ὅμοιος κατὰ πάντα* (and therefore *κατὰ οὐσίαν*), as a formulation due to him or some other Macedonian? Be this as it may, the present writer has now—formerly he advocated a different view (cf. *PRE*^{3} xii. 47)—no doubt that the sect of the Macedonians (and it is of the sect only that we are meanwhile speaking) were Homoiousian, not Homoousian, in their mode of thought. This is, in fact, distinctly stated—even if we leave out of account the passage just quoted from the *Sermones Arianorum*—by Didymus (*de Trin.* I. xxxiv. [p. 437 A]: *ὁμοιούσιον . . . καὶ οὐχὶ ὁμοούσιον λέγοντες*), by the author of the *Dial. de Trin.* (iii. 1 [p. 1204 C]: *ἡμεῖς* [*οἱ Μακεδονιανοί*] *. . . ὁμοιούσιον λέγομεν καὶ οὐχ ὁμοούσιον*), and by the writer of the *Dial. c. Maced.* (ii. [p. 1336 B, C]); and there are good grounds (cf. Loofs, 'Zwei maced. Dialoge,' p. 549 f.) for supposing that the passage in *Dial. de Trin.* iii. 16 (*κἂν ἓν τούτων δείξῃς, γίνομαι ὁμοουσιαστής* [p. 1228 A]) is borrowed from the longer Macedonian dialogue. There is in addition the fact that the so-called Confession of Lucian (Athanasius, *de Synodis*, xxiii. [*PG* xxvi. 721 B]), which the Macedonians, to judge from their own utterances (cf. Loofs, 'Zwei maced. Dialoge,' p. 550 f.), would seem to have regarded as *their* confession, does not contain the Homoousia. The present writer has therefore no doubt that the Macedonians of the closing years of the 4th cent. and the first half of the 5th cent. were Homoiousians in their mode of thought. Statements to the contrary are found only among Western writers who did not know the facts (Augustine, *de Hæres.* lii.: 'de Patre et Filio recte sentiunt, quod unius sint eiusdemque substantiæ'; also Philastrius [see below]), or among Arians and Eunomians, who regarded the Homoiousia as no less objectionable than the Homoousia (*Sermones Arianorum* [*PL* xiii. 611 A]: 'de Patre et Filio convenit illis'; on Philostorgius cf. J. Bidez, in the pref. to his ed., Leipzig, 1913, p. cxxiv f.). Moreover, in circles where the Homoousian orthodoxy of the later Nicæans differentiated the *τρεῖς ὑποστάσεις* in an almost polytheistic fashion (*Dial. de Trin.* iii. 6 [p. 1212 A] = *Dial. c. Maced.* i. 18 [p. 1320]), the distinction between the Homoiousian and the Homoousian way of thinking was so slight that even the author of the *Dial. c. Maced.*, who was acquainted with the Homoiousian teaching of the sect (ii. [pp. 1329 C, 1336 C]), could represent the Macedonian as saying to the orthodox: *περὶ μὲν τοῦ Υἱοῦ καλῶς λέγεις* (i. 20 [p. 1325 C]). As regards their Christology in the narrower sense, it need only be observed that, according to the *Dial. c. Maced.* (ii. [pp. 1329 C, 1333 C]), the Macedonians, like the Arians, denied that the Υἱὸς σαρκωθείς, or Υἱὸς ἐνηνθρωπηκώς, had a human soul.

4. The relation between these Macedonians and the Homoiousians of the 4th century.—What we know of the teachings of the Macedonians in the period between A.D. *c.* 381 and *c.* 430 (cf. § 3) would make it necessary to assume (even if we had no direct information on the point) that the sect was historically connected with the Homoiousian or semi-Arian party. In point of fact, however—even apart from Rufinus, Socrates, and Sozomen, whom meanwhile we leave out of account (cf. § 5, below)—that connexion can be traced in the older sources. Jerome, who, when referring (*c.* 380) in his *Chronicle* (*ad ann.* 342 [ed. R. Helm, Leipzig, 1913, p. 235 h]) to the installation of Macedonius as bishop of Constantinople, does not fail to add, 'a quo nunc hæresis Macedoniana,' regards the Homoiousian doctrine alone as the 'Macedonianum dogma' (*ad ann.* 364 [*ib.* p. 243 d]); and in the famous twenty-four anathemas of Damasus (A.D. 380 [?]), given by Theodoret (*HE* v. 11 [ed. L. Parmentier, Leipzig, 1911, p. 298; in Latin, *PL* xiii. 359 A; cf. Parmentier, p. lxxxii]), all that is said of the Μακεδονιανοί is:

> οἵτινες ἐκ τῆς Ἀρείου ῥίζης καταγόμενοι οὐχὶ τὴν ἀσέβειαν ἀλλὰ τὴν προσηγορίαν ἐνήλλαξαν.

Further, Auxentius of Dorostorum writes (*c.* A.D. 383) of Ulfilas as follows:

> 'Omoeusion autem dissipabat, quia . . . Filium similem esse Patri suo non secundum Macedonianam fraudulentam pravitatem dicebat' (ed. F. Kauffmann, *Aus der Schule des Wulfila* (=*Texte und Untersuchungen zur altgerman. Religionsgesch.*, I., Strassburg, 1899, p. 74; cf. p. 17).

By *c.* 380, however, the 'Macedonianum dogma' embraced also the Pneumatomachian thesis. The Ἡμιαριανοί, ἤγουν Πνευματομάχοι, who were condemned by the Synod of Constantinople (381, can. 1; Mansi, iii. 559), were, like the Pneumatomachian Semiariani of Philastrius (*Hær.* lxvii.; *Corpus hæres.*, ed. F. Oehler, Berlin, 1856, i. 66), indubitably, in part at least, the same as the Macedonians of Jerome. Nicetas likewise, hardly before 381, speaks distinctly of the 'Macedoniani vel eorum in hac curiositate participes' as those 'qui quæstionem de Spiritu induxerunt' (*de Spir.* v. 2 (*PL* lii. 853 B]). As the anathemas of Damasus in their opening words impugn Pneumatomachian ideas—though without applying any heretical designation—we may probably infer that Damasus was acquainted with the doctrine of the Spirit held by the Arians, Eunomians, and Macedonians. nd the reason that Auxentius does not mention the Macedonian doctrine of the Spirit is that, like Ulfilas, he had nothing to criticize in the so-called Pneumatomachian ideas.[1] For, like Origen, all the theologians who in the Arian controversy rejected the Homoousia of the Son affirmed by the Nicene Creed—Eusebians, Arians, Homoiousians, and Eunomians—regarded the Spirit as a κτίσμα subordinate to the Son. Even the Nicene Creed itself did not proscribe that view; all that it says regarding the Spirit is: καὶ [πιστεύομεν] εἰς τὸ Ἅγιον Πνεῦμα. Moreover, its partisans were at first concerned to assail only the Logos-doctrine of their opponents. At the earliest it was in the *Epistles to Serapion* (*PG* xxvi. 529–676), written by Athanasius during his exile from 9th Feb. 356 to 21st Feb. 362, that that theologian contended also for the Homoousia of the Spirit. The opponents of whom Serapion had informed him, and against whom these Epistles were directed—ἐξελθόντες ἀπὸ τῶν Ἀρειανῶν διὰ τὴν κατὰ τοῦ Υἱοῦ τοῦ Θεοῦ βλασφημίαν, φρονοῦντες δὲ κατὰ τοῦ Ἁγίου Πνεύματος καὶ λέγοντες αὐτὸ μὴ μόνον κτίσμα, ἀλλὰ καὶ τῶν λειτουργικῶν πνευμάτων ἓν αὐτὸ εἶναι (*Ep.* i. 1 [p. 529 f.])—were obviously the precursors of the Macedonians of the 5th century. This is shown by the demonstrable similarity between the *Dialogues* of Didymus and the *Epistles to Serapion* in many of their ideas, although the former is, no doubt, dependent upon the latter (cf., *e.g.*, *ad Serap.* i. 10 [pp. 556 C and 557 A] with Did. *de Trin.* II. vi. 19 [p. 548 B, C]). Not only do the opponents of Athanasius as well as those of Didymus make use of 1 Ti 5^{21} as a 'dictum probans' (*Ep. ad Serap.* i. 10; Did. *loc. cit.*; cf. also Basilius, *de Spir. Sancto*, xiii. 29 [*PG* xxxii. 117 C])—here Didymus may well have borrowed from Athanasius—but we find also that Am 4^{13} (κτίζων τὸ πνεῦμα) and Zec 4^{5} (ὁ ἄγγελος ὁ λαλῶν ἐν ἐμοί) are appealed to by the opponents of Athanasius (*Ep.* i. 9 [p. 552 B, C], i. 11 [p. 557 B]) as well as by the Macedonians of the 5th cent. (*Dial. de Trin.* iii. 26 [p. 1244 B, C] and 23 [p. 1237 C]). Above all, we have the fact that the mockery poured by Athanasius upon the τρόποι recognized by his adversaries (*Ep.* i. 7 [p. 548 B])—whom he stigmatizes as τροπικοί (*ib.* 21 [p. 580 D], 32 [p. 605 A])—recalls that Macedonian practice of resorting to ὁμωνυμίαις, συνωνυμίαις, etc., to which Didymus draws attention.

It is surprising, however, that Athanasius here makes no mention of Macedonius; as a matter of fact, he names no exponent of the doctrine which he criticizes.[1] Nor even later, when, as a result of the attitude assumed by Athanasius, of the anathema uttered by the Alexandrian Synod of A.D. 362 against all who regarded the Holy Spirit as a κτίσμα (Athan. *ad Ant.* iii. [*PG* xxvi. 800 A]), and of the acceptance of that doctrine by Meletius of Antioch at an Antiochian Synod of A.D. 363 (Mansi, iii. 366 f.), many had become interested in the Pneumatomachian question, do we hear anything, to begin with, about Macedonius himself. Neither Basil of Cæsarea, who in 372 went definitely over to the anti-Pneumatomachian side, and for that as for other reasons quarrelled with his friend Eustathius of Sebaste in the following year, and who composed his *de Spiritu Sancto* (*PG* xxxii. 67–218) in 375, nor Epiphanius, who, writing in 376, inserts the Πνευματομάχοι in his catalogue of heretics (*Hær.* lxxiv.), mentions Macedonius by name. Epiphanius, without giving any name at all, is content to characterize the Pneumatomachians as ἀπὸ τῶν Ἡμιαρείων καὶ Ὀρθοδόξων τινές; Basil, in his *de Spiritu Sancto*, likewise gives no name; but two years later (377) he states that Eustathius is the πρωτοστάτης τῆς τῶν Πνευματομάχων αἱρέσεως (*Ep.* cclxiii. 3 [p. 980 B]; on the attitude of Eustathius towards the doctrine of the Spirit as a created being cf. Soc. *HE* II. xlv. 6). In view of these facts, we must ask what was the connexion between the Macedonians and their nominal head.

5. Macedonius and the Macedonians.—This question leads us to a consideration of the life of Macedonius. It will not be necessary to discuss here the difficulties regarding the date and circumstances of his elevation to the episcopal throne of Constantinople (on these matters the present writer may perhaps refer to his art. 'Macedonius,' in *PRE*^{3}, and to E. Schwartz, 'Zur Geschichte des Athanasius,' ix., in *GGN*, hist.-phil. Klasse, 1911, p. 476 ff.).[2] Here we need merely state that Macedonius, who, according to Socrates (II. vi.), had as an aged deacon (*τῇ ἡλικίᾳ γέρων*) contested the see of Constantinople with Paul upon the death of Alexander (installed, in all likelihood, while Constantine was still reigning), found himself in secure possession of the see after what the present writer (*SK*, 1909, p. 294) regards as the final deposition of Paul in 342. He had been raised to the dignity by the anti-Nicene party, and, as regards his theological position, must have belonged to it, although, as the presbyter of Paul, he must have been in ecclesiastical communion with the latter (Athan. *Hist. Ar.* vii. [*PG* xxv. 701 A]). This does not necessarily imply that he had been an 'Arian'; for the later Homoiousians also belonged, till A.D. 358, to the 'Eusebian' group of the opposition, and even at the event which ushers in the rise of the Homoiousians, Macedonius, as documentary evidence shows, is found in that group: the Epistle of George of Laodicea, written in 358, and preserved by Sozomen (IV. xiii. 2 f.), names him first among the persons addressed. Epiphanius (*Hær.* lxxiii. 23 and 27 [ed. D. Petavius, Paris, 1622, 870 D and 875 C=*PG* xlii. 445 A, 456 B]) recognizes him as one of the Homoiousian party which was (from 358) opposed to the Acacians, the later Homoians, just as his presbyter, Marathonius, subsequently[1] bishop of Nicomedia, and Eleusius, whom he made bishop of Cyzicus (Soc. II. xxxviii. 4; Soz. IV. xx. 2), were partisans of Basil of Ancyra and Eustathius of Sebaste.[2] At the Synod of Seleucia (359) he was associated with Eleusius and the other Homoiousians in supporting Basil against the Acacians (Soz. IV. xxii. 7 ff.), and, like Basil, Eleusius, Eustathius, and other Homoiousians—as, indeed, the most prominent of them all—he was deposed by the Acacians at the end of the year 359 or in January 360 (Jer. *Chron. ad ann.* 359 [ed. Helm, p. 241 h]; Philostorg. v. 1 [ed. Bidez, p. 66; cf. p. 224]; Soc. II. xlii. 3; Soz. IV. xxiv. 3). He then retired, according to Sozomen (IV. xxvi. 1), to a place in the vicinity of Constantinople, and died there. He cannot have very long survived his deposition, as he does not appear in the important movements of his party after 364. In the interval between his deposition and his death, according to Socrates (II. xlv. 1–3) and Sozomen (IV. xxvii. 1, 2),[3] he founded a new party. Socrates states that (by letter? [see below]) he called upon his associates Sophronius (of Pompeiopolis) and Eleusius (of Cyzicus) to adhere for the future to the Antiochian formula recognized at Seleucia, *i.e.* the Confession of Lucian (cf. C. P. Caspari, *Alte und neue Quellen*, Christiania, 1879, p. 42 f.). Sozomen (IV. xxvii. 1) is more explicit:

---

[1] The words 'contra Pneumatomachos' in Auxentius, lxi. (ed. Kauffmann, p. 75), rest upon a false reading and a false conjecture; cf. K. Müller, *Ulfilas Ende*, Leipzig, 1914, p. 88 ff.

[1] The bishops Acacius of Cæsarea and Patrophilus of Scythopolis, to whom he alludes in *Ep. ad Serap.* iv. 7 [p. 648 B], were Arian Homoians.

[2] Although V. Schultze (*Altchristl. Städte und Landschaften: I. Konstantinopel*, Leipzig, 1913, p. 45, note) regards the present writer's labours on this subject as inferior to what was done nearly twenty years earlier by Franz Fischer ('De patriarcharum Constantinopolitanorum catalogis et de chronologia octo primorum patriarcharum,' in *Commentationes philologicæ Jenenses*, iii. [1884] 263–333), yet the present writer cannot withdraw his objection in principle to what he regards as an unscientific mode of using Socrates and Sozomen (*PRE*^{3} xii. 43; cf. xviii. 486), and to Schultze's and Fischer's over-exaltation of their merits.

> *εἰσηγεῖτο δὲ τὸν Υἱὸν Θεὸν εἶναι, κατὰ πάντα τε καὶ κατ' οὐσίαν ὅμοιον τῷ Πατρί· τὸ δὲ Ἅγιον Πνεῦμα ἄμοιρον τῶν αὐτῶν πρεσβείων ἀπεφαίνετο, διάκονον καὶ ὑπηρέτην καλῶν καὶ ὅσα περὶ τῶν θείων ἀγγέλων λέγων τις, οὐκ ἂν ἁμάρτοι.*

Rufinus (*HE* i. 25 [ed. T. Mommsen, Leipzig, 1908, p. 990]) somewhat earlier makes a similar statement. The tradition is nevertheless untenable. It refers in reality to the earliest public appearance of the Homoiousians, not of the Macedonians, and it displays even less knowledge of the actual beginnings of the Homoiousian party some two years previously than does Philostorgius (iv. 9 [p. 62]). Then, in the further course of the narratives of Socrates and Sozomen, the term 'Macedonians' becomes, in conformity with that report, the regular designation of the Homoiousians generally. Thus the 'Macedonians,' in the reign of Valens, draw closer to the orthodox party; they accept the *ὁμοούσιον*; they come to an understanding with Pope Liberius, and, especially in Constantinople, live in religious communion with the orthodox (cf. esp. Soz. VII. ii. 2), until at length (cf. *ib.* 3), after the death of Valens, they once more stand forth as a party by themselves. But, had the Homoiousians been in reality universally designated Macedonians, as Socrates and Sozomen assume, we should certainly have found some evidence of the fact in Athanasius and the Cappadocians. One is prompted to ask, nevertheless, whether the statement of Sozomen (V. xiv. 1), viz. that during Julian's reign *οἱ ἀμφὶ Μακεδόνιον, ὧν ἦν Ἐλεύσιος καὶ Εὐστάθιος καὶ Σωφρόνιος, ἤδη εἰς τὸ προφανὲς Μακεδονιανοὶ καλεῖσθαι ἀρξάμενοι*, can possibly be based upon mere error. We are compelled to assume that, just as in Antioch, after the installation of Euzoius, the loyal adherents of Meletius came to be called 'Meletians,' so in Constantinople the followers of the deposed Macedonius who did not attach themselves to the church of Eudoxius, his successor (Soz. IV. xxvii. 7, VIII. i. 7), were presently designated 'Macedonians.' The connexion between Macedonius and the later 'Macedonians' would thus simply be that the latter gained accessions from the Homoiousian circles of which the adherents of Macedonius, as dwellers in the metropolis, formed the best-known group in the Balkan Peninsula. This solution of the historical problem—a solution which surrenders the literal significance of the name 'Macedonians'—is certainly a possible one. For it was in the neighbourhood of Constantinople—on the Hellespont, in Bithynia, and in Thrace—that the 'Macedonians' were most numerous (Soz. IV. xxvii. 2; Soc. II. xlv. 8, IV. iv. 5); and it is from Constantinople and its neighbourhood that, with a single exception (Damasus), our oldest authorities for the use of the name (Jerome, Auxentius, Nicetas) are derived, while both Socrates (cf. V. xxiv. 9) and Sozomen (cf. II. iii. 10) wrote largely under the influence of the same local tradition. In view of the active intercourse between Rome and Constantinople, the single exception of Damasus does not mean much. Rufinus, again, may have gained his information from Jerome through literary channels (cf. Jer. *Chron. ad ann.* 364 [ed. Helm, p. 243 d] with Ruf. *HE* i. 25 [p. 990]) as well as by personal contact; and Didymus had relations with both. Moreover, the random use of the name 'Macedonians' is confirmed by the fact that, according to Socrates (II. xlv. 4) and Sozomen (IV. xxvii. 5), the Macedonians were also called 'Marathonians'; and Sozomen (*loc. cit.*) even expresses the opinion that, in view of the personal and material support for which the party were indebted to Marathonius, the name was not inappropriate.

Still, it is quite intelligible that K. Holl (*ZKG* xxv. 388 f.), especially in view of the witness of Didymus, should put forward the question whether the connexion between Macedonius and the Macedonians was not, after all, of a more substantial character. The present writer is, however, of opinion that the information possessed by Didymus is less than Holl makes out. Didymus seems, *e.g.*, to have regarded Marathonius as the successor of Macedonius (*de Trin.* II. x. [p. 633 A]: *Ἀρειανῶν τῶν χειροτονησάντων τὸν αἱρεσιάρχην ὑμῶν Μακεδόνιον καὶ μετ' αὐτὸν Μαραθώνιον*); and if, as the present writer thinks possible (cf. 'Zwei maced. Dialoge,' p. 544), the person addressed in *de Trin.* II. viii. 1 (p. 613 C) is not the author of the Macedonian dialogue, but, by a figure of rhetoric (cf. frag. 17, Did. *de Trin.* II. vii. 3 [p. 576 A]), Macedonius himself, then the information given in *de Trin.* II. viii. 1, viz. that Macedonius was made bishop by the

[2] On Eleusius, cf. Epiph. *loc. cit.*; on both, Philostorgius, viii. 17 (ed. Bidez, p. 115).

[3] It may be remarked that these two Church historians differ noticeably in their judgment of Macedonius; for, while Socrates simply disparages him, Sozomen betrays a certain admiration of the monastic ideals which he shared with Marathonius (cf. Soz. IV. xxvii 3 ff.).

Arians, but was previously a deacon of the orthodox Church, supplements that given in II. x. only by the latter—and, indeed, correct (cf. Soc. II. vi. 3)—statement. Nor is it inconceivable that Didymus obtained the name 'Macedonians' and his information regarding Macedonius from the Macedonian dialogue used by him. Yet the correspondence between what that dialogue tells us regarding the Macedonian teaching and what Athanasius must have known when he wrote his *Epistles to Serapion* is striking. Can it have been the case that the above-mentioned summons of Macedonius to Eleusius and Sophronius, referred to by Socrates (II. xlv. 2), was contained in a letter, and that this letter had come into Serapion's hands? This would explain how the Alexandrians had obtained information regarding the Macedonians at a relatively early stage; it would explain the information possessed by Didymus regarding the *αἱρεσιάρχης Μακεδόνιος*, and also the account given by Socrates (and Sozomen) of the origin of the Homoiousian party. The hypothesis is not impossible; for the first letter of Athanasius to Serapion may quite well have been written as late as A.D. 361. The point, however, cannot be decided in the present state of our knowledge.

6. The persistence or recrudescence of Homoiousianism among the Macedonians.—There is still another question to be considered. Athanasius was aware that those who were known to Serapion as opposed to the Deity of the Holy Spirit felt themselves repelled by the Arian 'blasphemy' against the Son (*Ep. ad Serap.* i. 1 [p. 529 f.]), and that they were detested by the Arians (*ib.* i. 32 [p. 605 B]; this fits in remarkably well with the situation from the beginning of A.D. 360). Somewhat later the Homoiousians ('Macedonians'), as a result of negotiations with Liberius at a synod held at Tyana in 367, passed completely over to the side of the Nicene Creed (Basil, *Ep.* ccxliv. 5 [*PG* xxxii. 917 D]; Soz. VI. xii. 2 f.; cf. Sabinus, *ap.* Soc. IV. xii. 11). Thereafter, as we read (Soc. V. iv. 1; Soz. VII. ii. 2), the 'Macedonians,' who at that time had neither a church nor a bishop in Constantinople (Soz. IV. xxvii. 6, VIII. i. 7), maintained ecclesiastical communion with the Homoousians. Thus the question arises how it came about that the later Macedonian doctrine was Homoiousian. Basil (*Ep.* ccxliv. 9 [*PG* xxxii. 924 B]) tells us that, at a synod held at Cyzicus in A.D. 376—otherwise unknown to us (Loofs, *Eustathius*, p. 17 f.)—Eustathius of Sebaste, the *πρωτοστάτης τῆς τῶν Πνευματομάχων αἱρέσεως* (cf. § 4), subscribed a formula which, together with Pneumatomachian clauses, contained statements pointing away from the Nicene Creed to the Homoiousion (*τὸ ὁμοούσιον κατασιγάσαντες τὸ κατ' οὐσίαν ὅμοιον νῦν ἐπιφέρουσι*), and that from 375 he had drawn closer, ecclesiastically, to the Homoiousian court-bishops (Basil, *Ep.* ccxliv. 7 [p. 921 A, B]; cf. 5 [p. 920 A], ccli. 3 [p. 936 B]; cf. Loofs, *Eustathius*, p. 76 ff.); Basil is of opinion that the fundamental Arian tendency of Eustathius had once more manifested itself (*Ep.* cxxx. 1 [p. 564 A]). Was this reversion of Eustathius to the Homoiousion—an act that (as he merely suppresses, without overtly rejecting, the Homoousion) did not as such altogether exclude recognition of the Nicene Creed[1]—a decisive factor in the later position of the Macedonians? Our sources do not enable us to answer the question. But to the present writer it seems beyond doubt that what is here said of Eustathius lends support to an account of similar purport given by Sozomen (VII. ii. 3), and less fully by Socrates (V. iv. 2 f.), regarding a synod held at Antioch in Caria (378). These historians record that, when, after the death of Valens (9th Aug. 378), the Emperor Gratian enacted a law (not now extant) conferring freedom of worship upon all religious parties except the Manichæans, the Photinians, and the Eunomians (Soc. V. ii. 1; Soz. VII. i. 3), the Macedonians seceded again from the Homoousians, with whom they had hitherto been in communion, abandoning the Nicene Creed, and asserting their preference for the *ὁμοιούσιος* as against the *ὁμοούσιος*. From that time a section of the Macedonians (Homoiousians) had continued to exist as a distinct party (*ἰδίᾳ ἐκκλησίαζον*), while another, breaking away from the latter, had united themselves all the more closely to the Homoousians. These statements are not altogether free from difficulties. The present writer would not lay stress upon the fact that the notice in Soz. IV. xxvii. 6 (cf. the words *οὐ γὰρ συνεχώρουν, κτλ.*), which obviously refers to this re-appearance of the Macedonians, points to the reign of Arcadius,[1] as the notice in question is manifestly erroneous. Here, indeed, Sozomen seems to have wrongly interpreted the statement of his authority (Sabinus), which he renders verbatim in VIII. i. 7.[2] May it not be the case, however, that in Soz. VI. xii. 4 we have a doublet of VII. ii. 3, clearly derived from Sabinus, and providing fresh difficulties? In VI. xii. 4 likewise we read of a synod in the Carian Antioch, where, in opposition to the Homoousion, the Confession of Lucian was made the standard; this synod, however, was held subsequently to the synod of Tyana (367), and in opposition to those members of the Homoiousian party who had gone over to the Homoousion. The present writer must admit that he finds this 'doublet'—if it is a doublet—a disturbing element. Still, it is possible that, as H. Valesius (*Adnot.* to Soz. VI. xii. 4) assumes, there were two Homoiousian synods at Antioch in Caria (A.D. 368 and 378); and, in fact, if the bishop of that city was an intransigent Homoiousian, there is much to be said for the theory. If we accept it, we must regard it as probable that the second of these synods likewise gave its adherence to the Confession of Lucian, which, as we have seen, was so highly esteemed by the Macedonians. It is in the period succeeding that date that we find the later Macedonians. For Macedonianism was simply the Homoiousianism which, on account of the doctrine of the Spirit, broke away from the Homoiousians adhering to the Nicene Creed. The fact that Epiphanius had also heard of certain Pneumatomachians who were orthodox as regards their Christology (see above) proves nothing to the contrary, since that author wrote at a time prior to the synod of Antioch; nor is our statement refuted by the fact that Gregory of Nazianzus, in a Whitsuntide sermon of the year 381, addressed the Pneumatomachians as *περὶ τὸν Υἱὸν ὑγιαίνοντες* (*Or.* xli. 8 [*PG* xxxvi. 440 B]). Gregory had as valid grounds for this friendly judgment as had the Orthodox when, shortly afterwards, at the synod of 381, they reminded the thirty-six Pneumatomachians who attended under the leadership of Eleusius of their negotiations with Liberius (Soc. V. viii. 7; Soz. VII. vii. 4).

The breach which had been started by the rupture between Eustathius and Basil, and by the synods of Cyzicus and Antioch in Caria, was rendered absolute by the Council of 381. The Pneumatomachians withdrew from the Council, and were condemned by it (cf. § 4). The amicable overtures made at the instance of Theodosius I. to the Arians, Eunomians, and Macedonians at

---

[1] Cf. Loofs, *Eustathius*, p. 78, with note 2, where, however, the defection of Eustathius from the Nicene Creed is not sufficiently recognized.

[1] J. Bidez has kindly informed the author of this art. that all the MSS read Ἀρκαδίου.

[2] *μέχρι τῆς ἐχομένης βασιλείας.* If the source here is referring mainly to the time of Valens, this would point to Gratian's reign.

Constantinople in 383—Eleusius being once more the representative of the last-named group (Soc. V. x. 24; Soz. VII. xii. 9)—were unsuccessful in winning the sect back to the Church. The Macedonians, undisturbed by the laws against heretics passed in 383 and 384 (cf. Soc. V. xx. 4; see above, § I), still remained a distinct group apart from the Church, but how far beyond A.D. 450 they maintained their position the present writer cannot say.

LITERATURE.—In addition to the Histories of Dogma and the more general works dealing with the Arian controversy, the following may be consulted with advantage: L. S. Le Nain de Tillemont, *Mémoires pour servir à l'histoire ecclésiastique*, ed. Venice, 1732–39; G. H. Goetze, 'Dissertatio historica de Macedonianis,' in J. Vogt, *Bibliotheca historiæ hæresiologicæ*, i. 1, Hamburg, 1723, pp. 165–199; *Damasi papæ opera*, ed. A. M. Merenda, Rome, 1754 (*PL* xiii. 109–442); F. F. LOOFS.

MADAGASCAR.—The religion of the Malagasy is extremely simple. They believe in one god, whom they call Zanahary, 'creator of all things'; but this god, being essentially good and, consequently, incapable of doing evil, is more or less neglected. His attributes are vague, and there is, properly speaking, no cult connected with him. Indeed, with the exception of sorcerers, there are in Madagascar no individuals or classes of individuals connected officially with any religion or cult.

1. Ancestor-worship.—The shades of ancestors, however—for all the Malagasy believe in a future life—are the objects of profound veneration, and inspire their worshippers with extraordinary awe. They are credited with all power of good and evil over the living, whom they visit from time to time. A dead husband, *e.g.*, will sometimes pay a visit to his widow, and in this case the birth of posthumous children is considered perfectly legitimate. Offerings are made to ancestors, generally of a small piece of ox-flesh and a few drops of rum, which are taken to the grave of the ancestor whose favours are sought.

2. Sorcery and fetishism.—The Malagasy do not believe in death from natural causes, except in the very rare case of extreme old age. Their idea is that death is always the effect of witchcraft or evil spells cast by sorcerers, and they are, therefore, careful to collect all hair-cuttings, nail-parings, etc., in case a sorcerer should find them and use them to work evil on their owner. The Sakalava kings were always accompanied by a servant whose sole charge was to gather up the earth upon which they had spat.

Diviners or sorcerers play a very important part in the life of the Malagasy. The natives believe that they are in communication with the spirits of the dead and can cure disease, foretell the future, discern whether the outcome of any enterprise will be favourable and what is the most suitable moment for undertaking it, indicate lucky and unlucky days, and warn against what is forbidden (*fady*). The Malagasy never embark upon any important undertaking without first consulting the sorcerer, who makes use of *sikidy*—a ceremony in which a handful of seed is spread out on a cloth, according to well-defined rules, so as to form sixteen figures, which are then interpreted with the aid of a code. The *sikidy*, which was introduced, or at least very frequently employed, by the Antimorona, has been in general use throughout the island for a long time.

The sorcerers, who are called *mpanazary*, *ombiasa*, *masina*, etc., according to the different provinces, have as one of their occupations—and that not the least lucrative—the manufacture of amulets or talismans (*ody*), which generally consist of small pieces of carved wood, bulls' horns ornamented with glass beads, or crocodiles' teeth. The horns and teeth are usually filled with earth or sand and various small objects such as gilt nails, iron-filings, and so on. After invoking the god and sprinkling the talisman with grease, the sorcerer, for a consideration, hands it over to the purchaser, who then hangs it round his neck. The result is supposed to be that the wearer is successful in all his undertakings, fortunate in love, immune from gun-shots or crocodile bites, and so on. The natives have the most implicit faith in these *ody*.

The Merina introduced the worship of national fetishes, which were very similar to the foregoing. These fetishes were regarded as royal personages, and had a special residence with officiating servants. The oldest and most famous of them was Kelimalaza.

3. Fady.—In almost every case there is some *fady* connected with these amulets and fetishes—*i.e.*, it is forbidden to do certain things and to eat certain foods. If this prohibition is not rigidly respected, the *ody* loses all its virtue and is useless. The *fady*, which occurs throughout the whole of Madagascar, is extremely curious, and recalls the tabu of the Oceanians. There are some places which are regarded as *fady* for every one, while others are *fady* only for certain families or even for certain individuals. There are *fady* days, when no one should begin anything new or start on a journey. If a child is born on one of these unlucky days, it is killed—or, rather, it was until quite recently, especially in the southern parts of the island—because it is supposed to bring evil upon its family. There are also *fady* words, *i.e.* words which must not be pronounced; naturally, these are fast disappearing from the language. As an example of this we have the words which went to make up the names of the Sakalava kings, the use of which was prohibited after their death. These *fady* are really of a religious nature; their aim is to appease the wrath of spirits and otherwise gain their favour.

4. Human sacrifice.—Human sacrifice has now been abolished in Madagascar, but it is not very long since it was the custom, when a Sakalava king was shaving for the first time, to dip the razor for this important operation in the blood of some famous old chief killed for the occasion. This ceremony was still in vogue when the king of Ménabé, Toera, who met his death in the attack on the village of Ambiky by the French troops in 1897, reached the age of manhood. Not many years ago, in accordance with an ancient custom practised in S. and W. Madagascar, the favourite wife of a great Mahafaly chief was killed on his grave, that he might not be alone in the other world; four of his servants were also put to death and their bodies laid under those of the chief and his wife, so that they might not touch the ground.

5. Crimes and punishments.—The Malagasy have no moral code. Their religion seems to authorize anything and everything, and the only recognized sin is failure to observe the external formalities of worship; such a sin of omission may be absolved by the penitent's making a small offering to the god.

Before the conquest of Madagascar by the French, justice was of an extremely summary nature (except in the case of the Merina, who had a code of laws modelled on European codes), based simply upon traditional use and wont.

Justice was meted out by the king or the village chief, and in certain tribes—*e.g.*, the Betsileo—by an assembly of the leading men of the tribe. The *lex talionis* was in universal use. The principal crimes were cow-stealing, failure to pay debts, and—the greatest crime of all—sorcery, which was always punished by death.

6. Ordeals and oaths.—In cases of doubt, recourse was had to trial by ordeal. The poison test, or *tanghin*, which has made so many victims among the Hova, is one of the best-known methods, and another test consisted in making the accused cross a river infested with crocodiles, or an arm of the sea where sharks abounded, these animals being supposed to eat the guilty and to do no harm to the innocent.

Another interesting practice is the 'water-oath.'

Into a bowl half full of water are put a bullet, some powder, earth from a sacred spot—*e.g.*, the tombs of the old kings of Imerina—and especially a bit of gold. The accused, or the two litigants in a law-suit, drink this water, vowing their good faith during the process; and all the ills that flesh is heir to are supposed to fall on those who swear falsely.

There is another ceremony similar to this—the 'blood-oath,' or *fatidra*—by which two persons promise each other mutual aid and protection throughout their lives, and enter into a voluntary relationship more intimate and binding than real blood-relationship.

To the contents of the bowl described above are added a few drops of each individual's blood, drawn from a slight cut made on his breast. While each holds in his hand the shaft of his spear or the ramrod of his gun, with the points dipped in the bowl, an orator announces the news of this fraternal union to their ancestors in an eloquent speech, and calls upon God to inflict the most severe punishment if either of them fails to keep his oath (cf., further, art. BROTHERHOOD [Artificial], § 13).

7. Exorcism.—The Malagasy have a peculiar ceremony which shows their belief in demoniacal possession and exorcism. Its aim is to cure certain maladies, and also to render thanks to God for the cure effected. This is practised chiefly in the west and south of the island, and is termed *bilo*[1] or *salamanga.* Those who are submitted to treatment of this kind are supposed to be possessed of a devil, which must be expelled.

The patient is led out of the village to a large open space where a platform 10 or 12 ft. high, with a primitive ladder leading up to it, is erected for the occasion. At the foot of this platform all the inhabitants of the neighbourhood are grouped on one side, and the cattle belonging to the invalid or his family on the other. When he arrives, dancing and singing begin, and there are great libations of *toaka* (rum), large quantities of which must be consumed by the patient. The unfortunate man is then led into the middle of the cattle, where he has to point out with a stick two oxen, one of which acts as a kind of scape-animal and is sacred to the man's parents, who treat it with every kindness, while the other is immediately sacrificed and eaten by the spectators. The patient, drunk with alcohol, noise, and the heat of the sun, has then to climb up to the platform—an operation not altogether free from risk. If he reaches the top without much help, God is supposed to be favourable to him and he will get better; if not, his case is hopeless. Once he is safely established on the mat covering the top of the platform, a woman, who has had to remain in a state of absolute chastity for twenty-four hours previously, gives him food which she has cooked specially for him, particularly newly-killed ox-flesh. If he eats it, or even pretends to do so, that is a sure sign of his speedy recovery to health and long life. The tumult of singing and shouting then begins again with redoubled energy. The sick man is left lying there, several feet above the ground, sometimes for a very long time, while those who have assisted at the ceremony intoxicate themselves with rum and gorge themselves with meat. He is then carried back with great pomp to his dwelling, where, nine times out of ten, he succumbs to the effects of his treatment.

8. Death and disposal of the dead.—Among the most characteristic customs of the Malagasy are those connected with burial of the dead. The funeral rites are not the same throughout the whole island; some peoples hide their cemeteries in the heart of the forest, among hills and rocks, in desert places, or anywhere far from the sight and sound of man; others, again, bury their dead by the side of the high road or right in the midst of human dwellings. The former, who are terrified at death and everything connected with it, are mainly found among the coast tribes, except in the south-east, where the people are of Arab origin. The latter, who like to live within sight of their last resting-place, belong to the centre of the island, and consist chiefly of the Merina, Betsileo, and other tribes civilized by the Malays.

The eastern tribes put the dead body in the hollowed-out trunk of a tree, closed with a badly-fitting lid in the form of a roof, and this improvised coffin they lay either on the ground or on a small platform in the middle of a palisade roofed over with branches and leaves.

The Antankarana make their cemeteries in the natural grottoes or rock-caves found in the numerous small islands along the coast or in the limestone mountains of the north, and here again the coffins, with beautifully carved lids, are simply laid on the ground. Some Betsileo and Bara families follow the same custom, and bury their dead in the hollows and caves which abound on the higher reaches of their mountains.

The other natives of the island bury their dead beneath the ground. The western and southern tribes—the Sakalava, the Mahafaly, the Antandroy, and most of the Bara—cover their graves with a heap of loose stones in the form of a long parallelepiped, while some Sakalava families surround their tombs with posts carved in different shapes (human beings, birds, crocodiles, etc.), which recall certain cemeteries of Oceania.

The Merina custom is to hollow out a mortuary chamber, above which they usually build a small house for those of noble birth, and for the Hova, or freemen, a small rectangular wall, where they gather together stones and blocks or fragments of quartz, with a raised stone at one end. The head is generally turned to the east.

All the Malagasy have the same idea of the impurity of a dead body and its power to communicate uncleanness to others. A funeral procession must never pass in front of the king or anywhere near his residence, and it must also avoid the neighbourhood of sacred stones. Those who have taken any part in a burial ceremony must cleanse themselves before going home.

As may be gathered from the prevalence of ancestor-worship, all the Malagasy without exception stand in awe of the dead, and desire above all things to be buried in the family tomb. When a Malagasy (in particular a Merina) dies away from home, his urgent wish is that his relatives should come, no matter how long after his death it may be, and carry his bones back to his native land. This desire is respected in almost all cases, and even to-day it is no rare thing to meet little processions of Hova carrying back the mortal remains of a member of their family wrapped in a white cloth hung on a long bamboo pole. In many cases they go as far as four or five weeks' journey from Tananarivo. When the body cannot be recovered, the pillow or mattress of the deceased is buried in his stead, or a stone or a post is erected to his memory at the side of the road or near his native village.

In Madagascar mourners cut their hair short and keep it dishevelled; they wear coarse dirty clothes, and are not allowed to wash or look in a mirror, even if they possess one—they must appear as unkempt as possible so as to keep other people at a distance. On the death, or—as the phrase goes in Madagascar, where ordinary everyday words would never be used in connexion with such high and exalted personages as kings—on the 'departure,' of a sovereign, a number of sumptuary laws came into force which had to be strictly obeyed, if one did not wish to run the risk of being considered responsible for the death of the king and of being subjected to capital punishment as a sorcerer. The following are some of the restrictions enforced on the death of Radama I. (1810–28): all the inhabitants of the kingdom, with the exception of the heir to the throne, had to shave their heads, sleep on the ground instead of in beds, use neither chairs nor tables, pass each other without greeting in the street, neither play any musical instrument nor sing, have no fire or light at night, do no work except in the fields, refuse to be carried in a palanquin, use no mirror, go about bare-headed, wear no fine clothes, and, in the case of women, keep the shoulders bare. As in the East, white, not black as in Europe, is the colour of mourning.

---

[1] The Arabic word for 'devil' is *Iblis*, and from this the Malagasy have formed *bilo*, which is the name both for the evil spirit and for the ceremony of exorcizing it.

Several Malagasy tribes—*e.g.*, the Betsileo and the Antankarana—have the peculiar and repugnant custom of not burying their dead immediately after death; frequently they even wait till decomposition has set in; and in many cases the putrid liquid is collected and set apart. Their funeral watches are naturally far from agreeable, and, to be able to live at all in the midst of the nauseating odours, the relatives and friends of the dead man drink rum all the time and burn quantities of incense, suet, and even leather. This custom, which is of Oceanic origin, comes from the desire not to bury any putrescible or impure matter along with the bones. Even the tribes which do not have this practice generally have two burial ceremonies—one consisting in simply burying the dead, and the other taking place some years after, when nothing but the skeleton remains, and when the body is finally placed in the family tomb. Sometimes, as in Imerina, the body is put into the family vault at once, but it is wrapped round with several silk *lambas* and is not placed in a coffin. Later, at a certain specified time, the ceremony of the *mamadika* takes place. This consists in changing the soiled *lambas*, and the Merina say then that they turn the bodies on their other side so that they may not get tired of lying in one position.

Funerals in Madagascar are always the occasion of feasts in honour of the dead. The richer the man is and the more cattle he possesses, the more brilliant are the orgies that are indulged in. Shots are fired and bulls are killed, the flesh being eaten at the funeral feast, and the head and horns being placed with great ceremony on the tomb of the deceased. Rum flows like water, and as long as there is anything left to eat or drink the feast continues; the funeral festivities of great and noble personages have been known to last for months.

G. GRANDIDIER.

MĀDHVAS, MADHVĀCHĀRĪS.—The Mādhvas or Madhvāchārīs are an Indian sect, one of the four *saṁpradāyas*,[1] or churches, of the Vaiṣṇava Bhakti-mārga (see art. BHAKTI-MĀRGA, vol. ii. p. 545). It has usually been stated that this sect represents an attempt to form a compromise or alliance between Śaivas and Vaiṣṇavas,[2] but an examination of the authoritative documents of the faith shows that this is far from the truth. It is therefore advisable to include in this article an account of the life of the founder of the religion, and of the legends connected with his coming.

The authorities on which the following account is based are: (1) the *Maṇimañjarī* (quoted as *Mm.*), which deals with the religious history of India down to the birth of Madhva, the founder of the sect; (2) the *Madhvavijaya* (*Mv.*), which deals with the life of Madhva himself; both these works are in Sanskrit, and are written by one Nārāyaṇa, who was the son of Trivikrama, an actual disciple of Madhva; (3) the *Vāyustuti* of the above Trivikrama; and (4) C. N. Krishnaswami Aiyer's *Śrī Madhwa and Madhwaism* (K.), which includes a summary in English of (1) and (2).

1. Accounts of the founder.—The basis of the Mādhva religion is, first, that Viṣṇu is the Brāhman of the *Upaniṣads*; and, secondly, that, whenever he becomes incarnate, he always has his son, Vāyu, the air-god, as his friend and helper. Accordingly, the first four *sargas*, or chapters, of *Mm.*, after describing the order of creation, give detailed accounts of the Rāma and Kṛṣṇa incarnations, Rāma's great friend and ally being Hanumat, the son of Vāyu, and Kṛṣṇa's ally being, not Arjuna, as we might expect, but Bhīma (cf. *Mv.* i. 41), one of the five heroes of the *Mahābhārata*, and also a son of the air-god. In both of these cases the sonship is looked upon as equivalent to incarnation. In the *Mahābhārata* Bhīma is described as having performed many glorious feats, and as having conquered many terrible demons; but in Mādhva theology these are all ignored save one, which, compared with the others, is, in the epic, of quite minor importance. In the *Vana-parvan* (*Mahābh.* iii. 11,661 ff.) it is related that Bhīma attacked certain Yakṣas or Rākṣasas belonging to the country beyond the Himālaya, and killed their leader, Maṇimat. Maṇimat had formerly offered a filthy insult to the Indian sage Agastya (the apostle of southern India), and had been cursed by him to be slain by a mortal. Such stress is laid upon this story by the Mādhvas that they maintain that the version, as we have it now in the *Mahābhārata*, was, with the sanction of Vyāsa, the author of the epic, rewritten and completed by Madhva himself (K. p. 42).

The narrative of the events in the Kaliyuga, or present age of the world, commences in the 5th *sarga* of *Mm.* At first, the knowledge of the Vedas, as taught by Kṛṣṇa and Bhīma (*Mm.* v. 1), reigns supreme. Then the Asuras conspire to spread false doctrines. The demon Śakuni, urged by Chāṇakya, the son of Lokāyata, points out that other heresies, such as those of the Chārvākas, Jains, and Pāśupatas, had all failed (9–15). Therefore Maṇimat, who alone had sufficient skill, must become incarnate as a Brāhmaṇa ascetic, and must destroy the Vedānta, under cover of explaining it (15 ff.). Maṇimat is dispatched with instructions to abolish the Vedas and Purāṇas, to ridicule the theory that Viṣṇu has *guṇas*, or qualities, and to establish the identity of the soul with Brāhman (19 ff.).

Here (29) the story digresses to tell how at that time the whole earth was under the sway of Buddhism, and to describe the efforts of Śabara and Kumārila to refute it by the aid of the *Pūrva-Mīmāṁsā* system of philosophy. The 6th *sarga* continues this, narrating the successes of Kumārila and the rise of the rival Prābhākara school.

At this stage of affairs Maṇimat is born as a widow's bastard (*Mm.* vi. 6; *Mv.* i. 46). He is hence named Saṁkara.[3] He is brought up in great poverty, and (as a slap at the monism subsequently taught by him) it is related that in his boyhood he could count only one thing at a time, never being able to see a second (*Mm.* vi. 10). He is taken to Saurāṣṭra, where, under the patronage of Śiva, he quickly masters the sacred books (14). He then goes from teacher to teacher, but is turned off by them for his heretical views. He invents his doctrine, described as *śūnya-mārga* and *nirguṇatva*, and is hailed by the demons as their saviour (24). On their advice he joins the Buddhists and teaches Buddhism under cover of Vedāntism. He makes the Vedas without meaning, and equates Brāhman with nothingness (*śūnyatva*) (46). He becomes a Śākta, and messenger of Bhairavī, who confers upon him a magic spell (51).

---

[1] It is called the *Brahma-saṁpradāya* because it is said to have been first communicated by Viṣṇu to Brahmān, who spread it through the world with the help of his brother, Vāyu. See below.

[2] *e.g.*, by Wilson, *Religious Sects of the Hindus*, p. 149.

[3] The Mādhva books uniformly change the great Śaṁkara's name to Saṁkara. The object is plain. Saṁkara means

The 7th *sārga* describes further disgraceful events in Saṁkara's life. He seduces the wife of his Brāhmaṇa host (1 ff.). He makes converts by magic arts. He falls sick and dies. His last words are instructions to his disciples to uproot the learned Satyaprajña, the last of the great teachers of the true Vedic doctrine.

In the 8th *sarga* we have the doings of Saṁkara's followers. They persecute their opponents, burning down monasteries, destroying cattle-pens, and by magic arts killing women and children (2). They forcibly convert one of their chief opponents, Prājñatīrtha, and compel him and his disciples to adopt the *māyā*-system (5). These, however, still secretly adhere to the true religion, and, after consulting Satyaprajña, determine to cause one disciple to become thoroughly learned in the *māyā*-system, who should start a line of disciples, outwardly Māyins, but really devoted to Hari (*i.e.* Viṣṇu). In this line of disciples came, in due course, Achyutaprekṣa. In his time the Lord, *i.e.* Vāyu, became incarnate as Madhva, in the house of Madhyageha, and studied under Achyutaprekṣa (34 ff.). The book ends with a brief account of Madhva's work, specially mentioning that he composed a commentary on the Vedānta Sūtras utterly destroying that made by the thief Maṇimat-Saṁkara.

It thus appears that Madhva, like Bhīma, was an incarnation of Vāyu, who came to the earth to destroy the followers of Saṁkara and all their teaching, that the true religion was delivered to the present age by Kṛṣṇa and Bhīma, that it was upheld by Kumārila in the *Pūrva-Mīmāṁsā*, and that it was revived by Madhva. Saṁkara's *māyā*-system was declared to be only Buddhism in disguise (*prachchhanna-Bauddha* [*Mv.* i. 51]). There is no trace whatever of any attempt to reconcile the Śaiva teaching of Saṁkara with Vaiṣṇavism. Here also must be mentioned one other doctrine of Mādhvism not referred to above, but of considerable importance—that salvation can be obtained only through Vāyu (*i.e.* in the present age, through Madhva), and through no one else (K. p. 68).

In *Mv.* the first *sarga* sums up briefly the contents of *Mm.*, special stress being again laid on the Maṇimat story (i. 39), and on Bhīma's close connexion with Kṛṣṇa (41). The incarnation of Vāyu is plainly stated in ii. 24. The rest of the work is a prolix account of Madhva's life, too long to analyze here. The main facts are as follows: Madhyageha Bhaṭṭa, Madhva's father (*Mv.* ii. 9, 14), was a Brāhmaṇa living at Rajatapītha[1] (6), close to the modern Udipi, a town on the sea-coast of the present district of S. Kanara, and about 40 miles due west of Sringeri, then, and still, the head-quarters of the Smārta followers of Saṁkarāchārya.

The ancient name of the country now comprising the Districts of Dhārwār and N. and S. Kanara, together with the western portion of the State of Mysore, was Tuluva, the modern Tulū, and it is here that the Mādhvas have always been strong. No census figures are available for their number, but a very rough estimate of the materials available leads us to put it at something like 70,000. Elsewhere they are very few.[2]

After the usual natal rites, the boy was named Vāsudeva, but in later years he was known as Madhva. The most probable date of his birth is the Śaka year 1119 (= A.D. 1197), but some authorities put it as late as A.D. 1238.[1] Numerous tales are told of his youthful exploits and of miracles that will be referred to below. His prowess in physical exercises was recognized by his schoolfellows, who nicknamed him 'Bhīma' (*Mv.* iii. 42–48). When he grew up, he became a pupil of the Achyutaprekṣa already referred to (*Mv.* iv. 6), and in due course, amidst a burst of prophecy from the assembled crowd, received initiation under the name of Pūrṇabodha or Pūrṇaprajña (33). He continued his studies under Achyutaprekṣa in the Ananteśvara monastery at Udipi, and finally received from him the name of Ānandatīrtha (*Mv.* v. 2), the title adopted by him in future as his pen-name. All this time, it must be remembered, he was studying the Vedānta, according to the *māyā*-school of Saṁkara.

After further study, he made a tour through southern India, having in the meantime developed his own system of dualism in opposition to the monism of Saṁkara. He journeyed along, disputing with the doctors in each town, his most important combat being at Anantapura (the modern Trivandrum) with the head of the Saṁkara monastery at Sringeri (*Mv.* v. 36). Here there seems to have been a drawn battle. The combatants parted in enmity, and thenceforth began the deadly hatred that ever after existed between the followers of the two systems. Madhva had to take refuge for four months at Rāmeśvara (v. 41 ff.), after which he returned to Udipi. The result of this first tour was to establish Madhva as the leader of a new sect and to widen the breach between him and the authorities at Sringeri (K. p. 32).

After some years of further study at Udipi, during which (K. p. 33) he seems to have completed his commentary on the *Vedānta Sūtras*, Madhva started on his second tour, this time through northern India. He at length reached Hardwār. Here, after fasting and meditation, he left his followers and went off alone into the heart of the Himālaya, where he is said to have stayed with Vyāsa, the compiler of the *Mahābhārata* (*Mv.* vii. 16 ff.). Vyāsa encouraged him to return to India and there to publish his commentary (viii. 44 ff.). He accordingly went back to Hardwār, where he widely proclaimed his doctrine, and 'ground opposing commentaries and false systems to dust' (ix. 6 ff.). He made a leisurely return to Udipi, converting more than one eminent Saṁkarite on the way (ix. 17), and finally converted his own teacher, Achyutaprekṣa (ix. 35).

There now began a period of persecution (*Mv.* xii. and xiii.), in which the Saṁkarites, led by the head of the Sringeri monastery, did all that they could to destroy the new teacher and his followers. They even went so far as to carry off Madhva's entire library, and it was restored only through the interposition of the local prince, Jaya Siṁha of Viṣṇumaṅgala. It was shortly after this that Madhva converted Trivikrama (xiii. 50 ff., xv. 64), the father of the author of *Mm.* and *Mv.* In his last years Madhva again toured to the North, and is said to have rejoined Vyāsa, in whose company he still remains awaiting the conclusion of the present age. His final journey is described in *Mv.* xvi. The date of his death was probably Śaka 1198 (= A.D. 1276), when he was 79 years old.[2] Thirty-seven different works are attributed to him, of which the most important are his commentaries on the *Vedānta Sūtras* and on the *Bhagavad-Gītā*, and his commentary on the *Mahābhārata*, entitled the *Mahābhārata-tātparya-nirṇaya*.

'auspicious,' but Saṁkara 'misbegotten' or 'rubbish.' The whole account is a ferocious libel on the founder of the system which it opposes.

[1] Probably identical with the ancient town and still existing village of Kalyāṇapura (*IGI* xiv. [1908] 314).

[2] It is, however, important to note that the Vaiṣṇavism of Bengal, founded by Chaitanya (*q.v.*), is an offshoot of Mādhvism (see Pratāpa-Siṁha, *Bhakta-kalpadruma*, Lucknow, 1884, p. 46).

[1] See Subba Rau, *Bhagavad-Gītā*, p. xi ff.; cf. Bhandarkar, *Vaiṣṇavism, Śaivism, and Minor Religious Systems*, p. 59.

[2] See Bhandarkar, p. 59. A list of the thirty-seven works attributed to him is given in Bhandarkar's *Report on the Search for Sanskrit MSS in the Bombay Presidency for 1882–83*, Bombay, 1884, p. 207.

2. Doctrines of the sect.—Mādhvism rejects not only the monism of Saṁkara but also the *Viśiṣṭādvaita*, or qualified monism, of Rāmānuja (see art. BHAKTI-MĀRGA, vol. ii. p. 545). Its followers call themselves Sad-Vaiṣṇavas to distinguish themselves from the Śrī-Vaiṣṇava followers of the latter. The basis of the whole philosophical system is *dvaita*, or dualism. By this is not meant the dualism of spirit and matter, or that of good and evil, but the distinction between the independent Supreme Being (*Paramātman*) and the dependent principle of life (*jīvātman*). There are five real and eternal distinctions (*pañchabheda*), viz. (*a*) between God and the individual soul, (*b*) between God and matter, (*c*) between the soul and matter, (*d*) between one soul and another, and (*e*) between one particle of matter and another. The account of the order of creation given in *Mm.* i. 2 ff. closely follows the well-known Sāṅkhya-Yoga system, as modified by the Purāṇas, and need not detain us. Viṣṇu, Nārāyaṇa, or Parō Bhagavān, not Brāhman, is the name given to the Supreme Being. He is endowed with all auspicious qualities (*guṇa*), and has a consort, Lakṣmī, distinct from, but dependent on, him. By her he has two sons, Brahmān, the Creator, and the Vāyu mentioned above, who is the Saviour of mankind. *Mokṣa*, or salvation, consists in release from transmigration and eternal residence in the abode of Nārāyaṇa. Souls (*jīva*) are innumerable, and each is eternal, has a separate existence, and is subject to transmigration. They fall into three groups, viz. (*a*) the lesser gods, the *pitṛs*, *ṛṣis*, kings, and a few other select classes of the good; these are destined to salvation; (*b*) those who are neither sufficiently good to belong to the first class nor sufficiently bad for the third; these are destined to perpetual transmigration (*saṁsāra*); and (*c*) demons, etc., and sinners, especially followers of the *māyā*-doctrine and other heretics who reject Vāyu; these are destined to eternal hell. Again, it must be noted that there is no salvation, except through Vāyu, *i.e.*, in the present age, through Madhva. It is also noteworthy that in this religion the idea of eternal bliss, or *mokṣa*, is balanced by the idea of an eternal hell—a logical symmetry that is missing in the other religions of Madhva's time.

The natural soul is characterized by ignorance (*avidyā*), and this ignorance is dispelled, and salvation is obtained, by right knowledge of God. This knowledge is obtainable by souls of the first class, and eighteen means are described as necessary for its attainment. Such are distaste of this world (*vairāgya*), equanimity (*śama*), attendance on a *guru*, or religious teacher, *bhakti* directed to God, due performance of rites and ceremonies (cf. the *Pūrva-Mīmāṁsā*), reprobation of false doctrines, worship (*upāsanā*), and so on.[1]

Service to Viṣṇu (*i.e.* to God) is expressed in three ways: (*a*) by stigmatization, or branding (*aṅkana*) the body with the symbols of Viṣṇu; (*b*) by giving his names to sons and others (*nāmakaraṇa*); and (*c*) by worship (*bhajana*) with word, act, and thought. Worship with word consists in (1) veracity, (2) usefulness, (3) kindliness, (4) sacred study; with act, in (5) almsgiving, (6) defence, (7) protection; with thought, in (8) mercy, (9) longing, and (10) faith. Worship is the dedication to Nārāyaṇa (*i.e.* God) of each of these as it is realized.[2]

The custom of branding symbols of Viṣṇu on the shoulders and breast is not peculiar to the followers of Madhva, being also adopted by the Śrī-Vaiṣṇavas; but among the Mādhvas, instead of being occasional, it is universal, and is declared to be necessary according to the *śāstras*. All classes, whether monks or lay, are branded. The chief of each *maṭh*, or monastery, tours among the faithful, and every time he makes his visitation the laity undergo the ceremony (K. p. 40). The sectarian marks, common to monks and laity, are, besides these brands, two white perpendicular lines on the forehead, made with *gopī-chandana* earth, and joined at the root of the nose. Between them is a straight black line made with incense-charcoal, and terminating in a spot of turmeric. Madhva did not allow bloody sacrifices. The old sacrifices were retained, but he enjoined the substitution of a fictitious lamb made of rice-meal as the victim, instead of a lamb of flesh and blood.[1] Mādhvism is also remarkable for the extreme lengths to which fasting of great rigour is carried out. The life of an orthodox Mādhva is one continuous round of fasts, and, according to one writer, this has had an injurious effect on the average physique of the members of the sect (K. p. 70). A full account of these fasts will be found in the *BG* xxii. 72 ff.

The chief *maṭh*, or monastery, of the sect is at Uḍipi, and is said to have been founded by Madhva himself. He also founded two others at Madhyatala and Subrahmaṇya respectively—both, like Uḍipi, in the coast district of Mangalor—and gave a *svāmin*, or head, to each of the three. The main settlement he divided into eight sub-monasteries, to each of which he also gave a *svāmin*. Each of these eight *svāmins* conducts the worship of Kṛṣṇa at the head monastery in his turn, his term of office lasting for two years. The change (*paryāya*) of *svāmins* thus takes place every second year, when the sun enters the sign of Makara, or Capricorn, early in January. It is the occasion of a great fair and festival. The succession of chief pontiffs is recorded in the *BG* xxii. (p. 59), and the thirty-fifth pontiff was living in 1883. There are now eighteen subsects, of which ten are the followers of the ten *svāmins* appointed by Madhva and five were started by his four immediate successors. Only two, and these still more modern, refuse to acknowledge the authority of the head pontiff at Uḍipi. The most salient doctrinal difference depends on the interpretation of the word *bhajana*, or worship, and even this is of small importance (K. p. 60).

3. Influence of Christianity.—In the art. BHAKTI-MĀRGA (vol. ii. p. 548) it was pointed out that the southern Indian reformers had probably been to a certain extent influenced by the Christianity then existing in their neighbourhood.[2] The apparent influence of Christianity is especially noteworthy in Mādhvism. Madhva's birthplace was either in the ancient city of Kalyāṇapura or close to it. Kalyāṇapura has always been reputed as one of the earliest Christian settlements in India, and here, so long ago as the 6th cent. A.D., Cosmas Indicopleustes (p. 178 f. [*PG* lxxxviii. 169]) found a bishop who was appointed from Persia.[3] These Christians were Nestorians (Garbe, p. 155). No stress need be laid on most of the childish miracles attributed to Madhva in *Mv.*, because they are such as are attributed to the infancy of many religious teachers; but some of the legends deserve a passing notice. Thus, before Madhva appeared on earth, at a festive gathering at the temple at Uḍipi the spirit of Ananteśvara (Viṣṇu) came upon a Brāhmaṇa and made him a messenger of good news to proclaim that the kingdom of heaven was at hand (K. p. 13). After the child had been presented in the temple at Uḍipi, as his parents were taking him through a forest, a *graha*, or evil spirit, opposed their way, but departed on being rebuked by the divine child (K. p. 16; *Mv.* ii. 32 ff.). When the child was five years old, his parents missed him, and after an anxious search of three days found him at Uḍipi, in the temple of Ananteśvara, teaching gods and men to worship Viṣṇu according to the *śāstras* (K. p. 16; *Mv.* iii. 1 ff.). On his southern tour Madhva multiplied food in a wilderness, to meet the needs of his followers (K. p. 27; *Mv.* v. 32). On one of his northern tours he walked across water 'without wetting his clothes' (K. p. 35; *Mv.* x. 27), and on another occasion he stilled an angry sea by his look (K. p. 48; *Mv.* xvi. 11). The substitution at sacrifices of a lamb of rice for a lamb of flesh and blood also offers a striking analogy, but, as K. p. 68 points out, it may with equal probability be ascribed to Jain influence. Under any circumstances, considering the fact that Madhva was born and brought up in the neighbourhood of Christians and that the doctrine of *bhakti* is common to all forms of Vaiṣṇavism and to Christianity, there is considerable probability that at least some of these legends grew up under Christian influence. Still more striking, however, is the central article of Mādhva belief that Vāyu is the son of the Supreme God, Viṣṇu, and that salvation can be obtained only through him. This is evidently an idea borrowed from Christianity, quite possibly promulgated as a rival to the central doctrine of that faith.

---

[1] The complete list is given by Bhandarkar, p. 60 f.

[2] *Sarva-darśana-saṁgraha*, tr. p. 91.

[1] It will be remembered that Madhva is said to have revised the *Mahābhārata*, and in this connexion it should be noted that in the southern recension of the epic, after XII. cccxliv. 20, six verses have been inserted in which it is directed that animals of flour should be used at sacrifices.

[2] The present writer takes this opportunity of withdrawing the remark made in *ERE* ii. 548^b that Alopen had visited the court of Śilāditya. See *JRAS*, 1913, p. 144.

[3] A. Burnell, *IA* ii. [1873] 274 ff., iii. [1874] 310 ff.; cf. R. Garbe, *Indien und das Christentum*, Tübingen, 1914, p. 151 ff. The passage in Cosmas is not quoted in J. W. McCrindle's *Ancient India*, Calcutta, 1877. Garbe (p. 152) considers it probable that the Kalliana of Cosmas was another Kalyāṇa farther north and near Bombay, but it seems to the present writer that the wording of Cosmas connects Kalliana so closely with Male (Malabar) that it must be the town near Uḍipi Garbe himself appears to accept this in his note on p. 273.

4. Traces of Manichæism.—In the two papers already quoted, Burnell points out that Persian immigrants were welcomed in this part of India long after the time of Cosmas, and that before the beginning of the 9th cent. A.D. they had acquired sovereign rights over their original settlement of Maṇigrāma, by a grant from the *perumal*, or local chief. Burnell goes on to suggest that these Persians were Manichæans, and that the name of their settlement meant 'Manes- (Mani-) town,' not 'Jewel-town,' as the compound would ordinarily mean in Sanskrit. Burnell's theory was attacked in the same journal and, according to Garbe (p. 152), completely controverted by R. Collins. To the present writer it seems that, in the discussion, Collins failed in his main point—the meaning of 'Maṇi' in 'Maṇi-grāma'—and that Burnell's suggestion, though certainly not proved, may possibly contain more elements of truth than Garbe was prepared to admit.[1] It seems that Burnell's suggestion that 'Maṇi' refers to Manes receives some confirmation from the Maṇimat theory of the Mādhvas. It is intelligible that Bhīma should be selected as the hero, but it is unintelligible why the altogether unimportant Maṇimat of the epic should be selected as the origin of the arch-heretic Śaṁkara. Bhīma killed many much more noteworthy demons, who would have served Madhva's purpose better; but so small a part does Maṇimat, the demon from beyond the Himālaya, play in the epic[2] that Madhva had, according to the legend, actually to get Vyāsa's permission to re-write the story, so as to make it complete. It must, on the other hand, be admitted that there is little resemblance between Manichæism and Śaṁkara's theology. The former is dualist and the latter is monist. But Mani's dualism taught the existence of two beings—light and darkness. Light had God at its head, and darkness had no god at its head. There is a certain resemblance between this and Śaṁkara's Brāhman obscured by *māyā*. At any rate, it is possible that Madhva, who (K. p. 36) could speak the language of the Mlechchhas (foreigners), may have become acquainted with Manichæism, and may have associated it in this way with Śaṁkara's theory of *māyā*. The question deserves more investigation than has hitherto been given to it.

LITERATURE.—The *Maṇimañjarī* and the *Madhvavijaya* have been already mentioned. Several editions of these have been published in India. A useful summary of Mādhva doctrines will be found on p. 16 ff. of the *Sakalāchārya-mata-saṁgraha*, an anonymous work published in the Benares Sanskrit Series in 1907. A fuller account will be found in Padmanābhasūri, *Madhvasiddhānta-sāra*, Bombay, 1883, quoted by Bhandarkar, p. 59. Finally, there is Mādhvāchārya, *Sarva-darśana-saṁgraha*, of which many editions have been published in India. Of this there is an Eng. tr. by E. B. Cowell and A. E. Gough (2nd ed., London, 1894). The system of Purṇaprajña, *i.e.* Madhva, will be found in ch. v. p. 87 ff. of the translation.

As for works in English, the earliest account of the Mādhvas is contained in 'Account of the Marda Gooroos, collected while Major Mackenzie was at Hurryhurr, 24th August 1800,' printed on p. 33 ff. of the 'Characters' in the *Asiatic Annual Register* for 1804 (London, 1806). We next have H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, reprinted from vols. xvi. and xvii. of *Asiatic Researches*, London, 1861, i. 139 ff. A useful little book is C. N. Krishnaswami Aiyer, *Śrī Madhwa and Madhwaism*, Madras, no date. This has been freely utilized in the foregoing pages. See also the following: R. G. Bhandarkar, *Vaiṣṇavism, Śaivism and Minor Religious Systems* (=*GIAP* iii. 6), Strassburg, 1913, p. 57 ff.; *BG*, vol. xxii., 'Dhārwar,' Bombay, 1884, p. 56 ff. (full account of the history, religion, and customs of the Mādhvas of the present day); and G. Venkobo Rao, 'A Sketch of the Hist. of the Madhwa Acharyas,' beginning in *IA* xliii. [1914] 233 (refers to C. M. Padmanābhāchārya, *Life of Madhvāchārya*).

For an authentic account of Madhva's doctrines see S. Subba Rau, *The Vedanta-sutras, with the Commentary by Sri Madhwacharya, a complete Translation*, Madras, 1904, *The Bhagavad-Gita, Translation and Commentaries in English according to Sri Madhwacharya's Bhashyas*, do. 1906. Both of those are in English. The preface of the latter contains a life of Madhva from the orthodox point of view; cf. also P. Ramachandra Rao, *The Brahma Sútras: Construed literally according to the Commentary of Sri Madhavácharya* (Sanskrit text), Kumbakonam, 1902.

G. A. GRIERSON.

MADHYAMAKA, MĀDHYAMIKAS.—Madhyamaka is the name of a system of Buddhist philosophy, 'the system of the middle way,' 'the system of the Mean' (μέσον); the adherents of this system are called Mādhyamikas.

1. Nāgārjuna.—The work upon which the Madhyamaka philosophy is based, the *Mūlamadhyamakakārikā*, still survives, and tradition is agreed in ascribing it to Nāgārjuna; numerous commentaries have been written upon it: Nāgārjuna's own, the *Akutobhaya*; those of Buddhapālita and Chandrakīrti, which seem to give a faithful rendering of the author's meaning; and that of Bhāvaviveka, which transmits his personal views. There are two branches of Madhyamaka, but the difference between them has not been studied, and seems to consist in a mere divergence in the method of demonstration.

All this literature is, or will soon be, accessible in the editions of the originals or in translations.[1] The *Mūlamadhyamaka* is probably the authentic work of Nāgārjuna, who flourished about the middle of the 2nd cent. A.D. We knew that this mysterious and miraculous person was the putative father of the Great Vehicle, or Mahāyāna (*q.v.*), and, in particular, the revealer of the *sūtras* of the *Prajñāpāramitā*, the teaching of which is akin to that of the Madhyamaka. It is even possible that several *sūtras* of the Great Vehicle were written with the sole purpose of stating the theories of the Madhyamaka philosophy under the guise of 'words of the Buddha.' It is difficult to determine what part Nāgārjuna took in the redaction of the *sūtras*, but respect for tradition would lead us to believe that his share was a large one. In any case, the Madhyamaka school must be held responsible for a considerable proportion of the Great Vehicle. All this must be assigned, probably, to the early centuries of the Christian era, from the first onwards.

---

[1] The following are the references to the whole controversy. Garbe (*loc. cit.*) refers only to one of Collins's communications, and does not notice any of Burnell's replies: *IA* ii. 273 (Burnell), iii. 308 (Burnell), iv. [1875] 153 (Collins), 181 (Burnell), 311 (Collins), v. [1876] 25 (Burnell).

[2] For the references see S. Sörensen, *Index to the Names in the Mahabharata*, London, 1904 ff., p. 464.

[1] See Literature at end of article.

2. The Madhyamaka system and its antecedents.—It is not difficult to show the place occupied by the Madhyamaka in the development of Buddhist philosophy from its beginning, and such a historical sketch is indispensable to a definition of the system itself.

The Buddha had given his revelation as a 'path,' or a 'way' (*magga, paṭipadā*), and had qualified this path by 'middle' (*majjhima = madhyama*), doubtless, as has been often said, because he repudiated two 'extremes' (*anta*)—an exaggerated asceticism (*tapas*), and an easy secular life (*sukhallikā*). But he had also condemned other 'extremes,' viz. contradictory theories, such as: 'Everything exists,' 'nothing exists'; 'The person who feels is the same thing as sensation,' 'the person who feels is a different thing from sensation'; 'The Buddha exists after death,' 'the Buddha does not exist after death'; and some texts—few, but explicit—prove that, at the time of the redaction of the Pāli *Nikāyas*, 'middle way' meant a 'way between certain negations and affirmations.' This way is simply the philosophy of the *dharmas* and of the negation of the individual (*pudgala*, '*τὶς*'), which is almost exactly the philosophy of the Canon, and finds, from the very first, clear and skilful expression in the theory of dependent origination (*paṭichchasamuppāda, pratityasamutpāda*).

The Canon teaches that there is no individual (*pudgala*), one and permanent, of whom we can say that he is identical with sensation or different from it, or that he survives or fails to survive the destruction of the body. The individual does not exist in himself (*pudgala-nairātmya*); he is merely a mass of *dharmas* following one another in unbroken succession, cause and effect.

But what is meant by *dharma*? This word, as Max Müller said,[1] is difficult to translate, though easy to understand. Man is a collection, a 'series' of *dharmas*; every thought, every volition, every sensation, is a *dharma*. His body is composed of material *dharmas*. Sound, colour, smell, whatever can be struck or touched, is composed of material *dharmas*. The organs of sense and intellect (*mana, indriya*) are *dharmas* of subtle matter. Concupiscence, hatred, and delusion are mental *dharmas*, 'co-ordinated with thought.'

The *dharmas* are 'realities,' things which actually exist, and nothing exists but these elementary realities, which are all doomed to destruction; some—*e.g.*, the mental *dharmas* and the *dharmas* forming the successive instants of the existence of a flame—perish moment by moment, while others sometimes last for a long time.

Just as a waggon is nothing but the collection of the parts of a waggon, so man is simply the collection of the elementary realities, material and spiritual, which constitute his pseudo-individuality. Apart from *dharmas*, man and waggon have only an ideal existence—an existence of designation (*prajñāpti*), as the Buddhists say.

It will be observed that none of these elementary realities exists in isolation, but that every *dharma* combines with other *dharmas* to form a more or less solid complex. The four chief elements (*mahābhūta*) combine in the formation of every material thing. Anger presupposes, besides delusion, an elaborate complex of intellectual *dharmas*—contact, sensations, ideas, and intellections; and this intellectual complex presupposes, at least as a rule, a physical complex—body, sense-organs, heat, vital organ, not to mention former actions to be rewarded, which are sometimes regarded as subtle matter.

All *dharma* is intimately bound up with its causes and effects; its essential nature is to be an effect and to be a cause; it is a moment in continuous time. Every thought has as determining causes (*pratyaya*) a great number of *dharmas* more or less exterior to itself (object of vision, visual organ, etc.), but its cause, properly so called (*hetu*), is the thought immediately preceding it—just as every moment of the duration of a flame depends, of course, upon the oil, the wick, etc., yet is, as a matter of fact, the continuation of the preceding moment of the flame. The Buddhists were quick to see that flame and thought are made up of 'instants' of flame and thought succeeding each other moment by moment. Extending this observation, they formulated the general theory that 'the *dharmas* perish the very moment they are born.' They perish without any other cause of destruction than their very birth or their nature; they are not merely 'transitory' (*anitya*), as the Buddha said; they are 'momentary' (*kṣaṇika*) (cf. art. IDENTITY [Buddhist]). There can be no distinction between a stone and a human being: they are both collections, more or less complex, of *dharmas*, which do not last. The collections last by constituting series, because the *dharmas* renew themselves—always the same in the case of the stone, often very different in the case of the living being. In the course of an existence our vital organs, sense-organs, etc., renew themselves without any essential modification; volition, on the contrary, creates *dharmas*—retribution, etc.—which are different from volition itself. Volition is controlled by judgment; and, when judgment is illumined by the law of the Buddha (*yoniśo manasikāra*), 'supramundane' (*lokottara*) actions become possible, and these destroy passions, desire, action, and retribution, and make for the realization of *nirvāṇa*, that is to say, the collection of mental *dharmas* begins to become impoverished and finally disappears; desire is no longer present to give life to it. Such is the philosophy of ancient Buddhism, and it can be summed up in two words: *pudgala-nairātmya*, the unreality of the individual, and *dharmānityatva* or *dharmakṣaṇikatva*, the transitory or momentary character of the *dharmas*.

This philosophy satisfied Buddhists for a long time. But it did not satisfy the Madhyamaka school, who put a more rigorous interpretation upon the word 'void,' so often applied by the Buddha to everything in general, and held that this philosophy is in its nature not free from the two 'extremes' of perpetual duration and annihilation (*śaśvata, uchchheda*), seeing that it inevitably regards *nirvāṇa* as the annihilation of a series of thoughts. The Madhyamaka school claims to find the true 'middle way' by declaring, not only the unreality of the individual (*pudgalanairātmya*), but also the unreality of the *dharmas* themselves; it denies the existence not only of the being who suffers, but also of pain. 'Everything is void.'

Nāgārjuna and his school seem to hesitate between two positions.

i. Everything takes place as if things and living beings were composed of substantial *dharmas*, and, to arrive at *nirvāṇa*, the methods defined by the ancients must be followed: eliminate the *dharmas* which generate new *dharmas* because they are associated with desire; and insert, in the complex series that constitutes our being, the *dharmas* of the knowledge that destroys desire, and so arrest the renewal of the *dharmas*. Yet we do not put an end to existence by this method, for existence is void of reality in itself, since the *dharmas* do not exist substantially; we put an end to a *processus* of 'void' (*śūnya*) *dharmas* which renew themselves in 'void' *dharmas*. It is important to know this, for the only knowledge that can arrest the renewal of unreal *dharmas* is knowledge of their radical and fundamental unreality.

---

[1] *SBE* x. [1898] 31.

The ancients saw that the essential nature (*dharmatā*) of things (*dharma*) is to be produced by concurrent causes (*pratītyasamutpanna*), 'dependently originated.' The Madhyamaka school observes that 'what is produced by causes is not produced in itself, does not exist in itself.' The essential nature of things consists in not being produced in themselves, in being void of all substantial reality—*i.e.* in 'vacuity' (*śūnyatā*). This term 'vacuity' has been variously understood. For some it is 'nothingness'; for others it is a permanent principle, transcendent and undefinable, immanent in transient and illusory things. It would be a long and difficult task to explain the mystical significance that it has in certain Buddhist books; we know that it ends by being confused with the term *vajra*, 'thunder-bolt, diamond, male organ.' One thing is beyond all doubt: for the Madhyamaka, 'vacuity' is neither nothingness nor a transcendent-immanent principle, but the very nature of what exists; 'things are not void because of vacuity' (*śūnyatayā*)—conceived as exterior to things—'but because they are void,' and they are 'void' because they are produced by causes. 'Vacuity' means 'production by causes,' and is only an abstraction, a mere word; 'void' means 'produced by causes.'

Existence (*saṁsāra*), therefore, is a complex *processus* of *dharmas* which have no reason in themselves for existing and which cannot exist substantially by reason of their causes, *i.e.* former *dharmas* which do not exist by themselves. The following formula explains this clearly: *dharmas* resembling delusions of magic or reflexions in a mirror (*māyopama, pratibimbopama*)—we might say 'contingent' *dharmas*—give birth to *dharmas* that are equally illusory. Like begets like.

The objection of the realist against the Madhyamaka is, therefore, fruitless: 'If everything is void, then existence and *nirvāṇa*, impurity and purity, ignorance and wisdom, are the same thing; and the path of salvation does not exist.'

Nāgārjuna himself formulates this difficulty, and answers it. Existence is the continuous production of phenomena not substantial but actually existent, because they are existent by the only existence that there is—void existence, or existence produced by causes. *Nirvāṇa* is the end of the production of these phenomena. Impurity is attachment to phenomena conceived as pleasant; purity is complete detachment from phenomena. Ignorance is a clinging to the substantiality of phenomena, which induces attachment; wisdom is real truth, knowledge of the vacuity of things.

Nāgārjuna, Chandrakīrti, and Śāntideva very often took this point of view, which is quite within the logic of Buddhism and not unreasonable. But, in order to give a true picture of the Madhyamaka as it is, we must add that our teachers often go much further.

ii. Just as their criticism destroys all ideas of experience and religion—the notion of movement, of time, of 'passion' (since the connexion between the passionate man and passion 'does not bear investigation')—it also destroys the notion of causality; not only do the *dharmas* not exist substantially; they do not exist at all, either in reality or apparently. They are like the daughter of a barren woman, like the beauty of the daughter of a barren woman: this beauty evidently does not exist except in so far as it may be described; but, in reality, the object described, the description, and the person describing are all similarly non-existent.

Absolute truth, which is, properly speaking, 'knowledge of a Buddha,' is a 'not-knowledge'; it is midway between affirmation and negation. The *dharmas* are like the hairs that a monk with diseased eyes thinks he sees in his almsbowl; he does not see them, for the knowledge which he has of them does not exist any more than its object. This is proved by the fact that a man with undiseased eyes has no thought about these hairs at all; he neither denies nor affirms their existence, because he knows them in their true nature (which is 'void') by not knowing them. The legitimate conclusion of this system is formulated in our sources: 'Absolute truth is silence.'

L. DE LA VALLÉE POUSSIN.

MADRAS AND COORG.—In the Government Census for 1911 the vast majority of the population in the Madras Presidency are classed as Hindus. Out of a total population of 41,870,160 in the Presidency and the small Feudatory States included in it, the Hindus number 37,230,034. The rest of the population are classified as follows: Musalmāns, 2,764,467; Christians, 1,208,515; Animists, 638,466; Jains, 27,005; Buddhists, 697; Parsis, 489; Brāhma Samāj, 374; Jews, 71; while 42 are classed simply as 'others.'

1. Christianity.—The most progressive of all these religious bodies is the Christian. Excluding the 40,928 European and Anglo-Indian Christians, whose numbers do not largely vary from decade to decade, we find that the Indian Christians have increased during the decade from 1901 to 1911 by 168,964, or 17 per cent—a rate more than double that of the increase in the total population, and one which compares favourably with an increase of 8 per cent among Hindus, and 11 per cent among Muhammadans.

The main cause of this increase in the Christian population is the movement among the out-castes of Hindu society towards Christianity that has been in progress in S. India for the last sixty years. Conversions to Christianity from the higher castes of Hindus or from the Musalmāns have been comparatively rare. On the other hand, the out-castes are being gathered into the Christian Church in the village districts in increasingly large numbers, especially among the Telugus in the northern part of the Presidency. The causes that have led to this great movement are mainly social. The out-castes are the hereditary slaves or serfs of their Hindu masters, and have been kept for many generations in a state of abject poverty and utter ignorance. They have seen in the Christian Church the hope and possibility of new life, and for the last half century have been crowding into it in thousands. The great force behind the movement, therefore, is a natural human craving for life and freedom. At the same time, there is also a strong spiritual element in the movement. In almost every district where it is in progress it has owed either its origin or its power to a few men and women of true spirituality, and the fact that a large number of the converts have to endure a very bitter persecution when they first join the Christian Church is in itself an indication that the movement is due to something higher than a mere desire for immediate temporal gain. This great movement is bound to have a very striking influence in the future, not only upon the Christian Church itself, but also upon the religious life and thought of India as a whole. A great Christian Church is steadily and rapidly rising up in India from the lowest stratum of Hindu society. The conscience of educated Hindus is becoming awakened to the injustice and the social evils inherent in the caste system. Slowly and surely the work of the Christian Church is preparing the way for a great economic, social, and religious revolution throughout the length and breadth of India.

2. **Hinduism.**—Hinduism in the Madras Presidency does not differ greatly as regards either its doctrines or its customs from Hinduism in other parts of India. One striking difference observable between the Hinduism of S. India and that of N. India is the predominance of the Brāhmans in the South, but this difference is social and political rather than religious. The Vedāntist philosophy and the monism of Śaṅkara are more widely held in the South than in the North, mainly owing to the fact that Muhammadanism, with its clear teaching on the unity and transcendence of God, has had far less influence there than in N. India. The stern and gloomy worship of Śiva, the Destroyer, which has absorbed into itself many elements of the old animistic cults, is the predominant form of Hinduism; but the worship of Viṣṇu, the Preserver, in all his manifold incarnations, has a large number of devotees, and has a special attraction for the lower castes of Śūdras whom it has admitted more freely to its temples than the rival cult of Siva.

3. **Animism.**—The prevalence of animism in the Madras Presidency is very inadequately represented by the small number of people (638,466) classed as animists in the Government Census. The large majority of the Hindus in the villages, with the exception of the Brāhmans, even when they are devotees of Viṣṇu and Śiva, are also animists worshipping the village deities, the Grāma-Devatās, as they are called in the vernacular, and a host of spirits, good, bad, and indifferent. The worship of these village deities forms an important part of the conglomerate of religious beliefs, customs, and ceremonies which are often classed together under the term Hinduism. In almost every village and town of S. India may be seen a shrine or symbol of the Grāma-Devatā, who is periodically worshipped and propitiated. As a rule, the shrine of the village deity is far less imposing than the Brāhmanical temples in the neighbourhood; very often it is nothing more than a small enclosure with a few rough stones in the centre, and often there is no shrine at all; but still, when calamity overtakes the village, when pestilence, famine, or cattle-disease makes its appearance, it is to the village deity that the whole body of the villagers turn for protection. Śiva and Viṣṇu may be more dignified beings, but the village deity is regarded as a more present help in trouble, and is more intimately concerned with the happiness and prosperity of the villagers. In the animal sacrifices offered to these deities the treatment of the blood, which is sometimes drunk by the worshippers, sometimes sprinkled upon their bodies, sometimes sprinkled on the houses or the gate-way of the village, and sometimes mixed with boiled rice and sprinkled all round the village site, and also the sacrificial feast upon the flesh of the victim, connect the sacrifices to the Grāma-Devatā in India very closely with the primitive systems of animal-sacrifice which are found all over the world. Traces of human sacrifice, too, are often found in connexion with these cults. In Mysore the present writer came across a ceremony called 'the human sacrifice ceremony,' in which the man who represents the victim, instead of being killed, is simply touched with a bunch of coco-nut flowers. Lewis Rice states that similar traces of human sacrifice are found among the Coorgs in the hill country to the west of the Mysore State, whose religion is anti-Brāhmanical and consists of the worship of ancestors and demons. With reference to the worship of Grāma-Devatās among them, he says that, as among other Dravidian mountain tribes, so also in Coorg, the tradition relates that human sacrifices were offered in former times to secure the favour of their Grāma-Devatās, who are supposed to protect the villages from all evil influences. At the present day a he-goat or a cock is often sacrificed instead of a man.

The special features which broadly distinguish the worship of the village deities in S. India from that of Śiva and Viṣṇu are three. (1) The fact that the village deities, with very few exceptions, are female. In the Tamil country, it is true, almost all the village goddesses have male attendants, who are supposed to guard the shrine and to carry out the commands of the goddesses; and one male deity, Iyenar, has a shrine to himself, and is regarded as the night watchman of the village. In the Telugu country there is a being called Potu-Razu, who figures sometimes as the brother and sometimes as the husband of village goddesses, and sometimes as an attendant. But, with the exception of Iyenar and one or two other deities, all the male deities are so distinctly subordinate to the goddesses that they do not contravene the general principle that village deities are female and not male. (2) The fact that the village deities are almost universally worshipped with animal sacrifices. Buffaloes, sheep, goats, pigs, and fowls are freely offered to them, sometimes in thousands. In the Tamil country this custom is modified by the influence of Brāhmanism, which has imbued the villagers with the idea that the shedding of blood is low and irreligious. The animal sacrifices are regarded, therefore, as offered to the male attendants of the goddess and not to the goddess herself. (3) The fact that the Pujaris, *i.e.* the men who perform the worship and officiate as priests, are not Brāhmans, but are drawn from the Śūdra castes or sometimes from the out-castes. On the other hand, in the temples of Śiva and Viṣṇu, the officiating priests are Brāhmans, no animal sacrifices are ever offered, and the principal deities are male and not female. The origin of these cults is lost in antiquity; they are certainly pre-Aryan, but have been more or less modified in various parts of S. India by Brāhmanical influence. Some details of the ceremonies used in them seem to point back to a totemistic stage of religion; some of the deities are obviously agricultural, others are the spirits of women who have died in childbirth or of men or women who have died by violent deaths, others are connected with disease and pestilence, especially cholera and smallpox; many of the deities are of quite recent origin, and it is easy to observe a deity in the making even at the present day.

Snake-worship and tree-worship are also widely prevalent throughout S. India and have become incorporated in popular Hinduism. Almost every village has its sacred *pipal* tree, representing a female, and a *margossa* tree, representing a male, planted close to each other. These two trees are married with the same ceremonies as human beings. In every house of one section of the Brāhmans (called Mādhvas [*q.v.*] or Raojis) there is a *tulasi* plant (sacred to Viṣṇu). The snake is closely connected with the worship both of Viṣṇu and of Śiva. A cobra forms the *vāhana* (sacred vehicle) on which Viṣṇu rides, and Śiva is always represented with a cobra in his hand. At the entrance of almost every village of S. India there are figures of the cobra carved on stone in bas-relief erected on raised platforms for the adoration of the public. Brāhmans and Śūdras alike make offerings at these shrines. The living serpent is very generally worshipped, and few Hindus will consent to kill one. If a cobra takes up its abode in the thatched roof of the house or in one of the walls of the compound, it is not only left undisturbed, but is fed with milk. A woman is often the priest in the worship both of trees and of serpents, and women are the chief worshippers, mainly for the purpose of obtaining offspring.

On the W. Coast in Malabar snake-worship is especially prevalent. Some families are supposed to be consecrated to the snake deity, and to exercise a peculiar influence over the deadly cobras which are reputed to swarm in their houses and crawl in and out among the members of the family without ever doing them any injury.

Demonolatry is very prevalent, especially in the Southern part of the Tamil country, and devil-dancing, performed by a class of men who are supposed to have supernatural powers over the devils, forms a weird feature of the religion of the Tamil villagers. Some diseases, especially nervous maladies, are supposed to be the result of possession by an evil spirit. Devils innumerable surround the village—water-devils, cow-devils, horse-devils, and buffalo-devils—who are always ready to pounce down upon the unhappy villager. The poor people who are supposed to be possessed by these devils are often put to terrible tortures by the exorcist. Red-hot iron needles are sometimes stuck all over their bodies, or they are bound hand and foot and then beaten with sticks.

The innumerable superstitions connected with popular Hinduism are excellently described by Edgar Thurston in his *Omens and Superstitions of Southern India.*

H. WHITEHEAD.

MADURA.—Madura is the name of an important District in S. India—280 to 380 miles south of the town of Madras. Its capital, Madura, had a population of 134,130 in 1911, and is situated 10° N. lat. by 78° E. longitude. It is a prosperous town among whose progressive people are found about 50,000 weavers. Yet, apart from government and railway works and the Scottish spinning mill, there is hardly one horse power of steam used in the whole community—by which it may be known that modern prosperity in the East is not necessarily connected with the use of most modern industrial appliances and forces.

Madura is a town of considerable antiquity. It was known to Ptolemy (VII. i. 89, VIII. xxvi. 17) as Μόδουρα, and was the centre of the ancient Pāṇḍya kingdom whose fame spread westward through the Greeks and Romans even before the advent of the Christian era. Even to-day ancient Roman coins are occasionally discovered in the town and surrounding regions.

Madura has long been designated 'the Athens of S. India'; the ancient and famed Madura College was the source and inspiration of Tamil classical literature for centuries. Many of its most popular legends gather round its poet-saints, the narrative of whose struggles and conflicts is a perennial source of delight to the people.

But it is its great Mīnākṣī temple that is the source of its pride and the centre of its life. The town is built around its sacred precincts, all the main streets running parallel to the four walls of the temple. This temple has a past which runs far beyond history into the misty realm of legend and myth.

The first historical reference is to its partial destruction by Malik Kāfūr, the famous general of the Mughal emperor, ʻAlā-ud-dīn, in 1310. He destroyed its outer wall and fourteen high towers, and left little but the inner shrines, which were saved only by an opportune dissension among the vandals.

Perhaps all that now exists of this architectural pride of S. India (except the inner shrines and contiguous courts) is not older than the 16th cent. and is largely the gift of kings of the Nayaken dynasty, by far the most prominent of whom was Tirumala Naik (1623–59).

S. Indian temples are the most spacious in the world. The Madura shrine is the third in size, but is the first in architectural excellence, best in its upkeep, and most thoroughly devoted to its religious purposes. Its outer walls, which are 25 ft. high, form almost a square (830 ft. by 730 ft.) and enclose an area of about 14 acres. Each wall is surmounted at its centre by a richly embellished *gopura*, or tower, which is about 150 ft. high. These towers are the landmarks of the country around.

Granite is almost exclusively the material used in the temple, even the roof being of granite slabs. Its monolithic pillars are legion, and nearly all of them are elaborately carved, some exhibiting marvellous patience and skill. The 'Hall of a Thousand Pillars' (correctly speaking, its pillars are only 985 in number) is the culmination of its architectural claims. Of this J. Fergusson writes:

> Its 'sculptures surpass those of any other hall of its class I am acquainted with . . . but it is not their number but their marvellous elaboration that makes it the wonder of the place' (*Hist. of Indian and Eastern Architecture*^{2}, i. 392).

This hall is eclipsed, perhaps, by only one other, the so-called Choultry, or Puthu Maṇḍapam, which is outside and to the east of the temple proper and is the most imposing of all sacred edifices in S. India. It was erected by Tirumala Naik about 250 years ago, is 330 ft. by 105 ft., and is supported by 124 richly sculptured pillars 20 ft. high. It is a worthy granite monument to one of the great kings of S. India. The whole temple is distinctly Hindu in its architecture—a style in which the arch is entirely absent and densely pillared halls predominate. Its many *gopuras* are pyramidal in form, and are a striking development of the ancient *stūpa*, or pagoda, of Buddhism.

The temple is one of the most distinguished fanes of Śaivism, representing that type of the Brāhmanic cult which first appealed to and was adopted by the Dravidian people of S. India. Because this is the more austere form of Hinduism, it is more closely allied than the mild Vaiṣṇavism to the cruel demonolatry of the aboriginal people of that region. This temple and its worship also admirably illustrate the habit of the Brāhmanic propaganda, which never antagonized a new and contiguous faith, but rather fraternized with it, then adopted its leading features, and finally absorbed it entirely. Śiva's representative in this shrine is Sokkaliṅgam or Sundareśvara. The first name is Dravidian, revealing the non-Brāhmanic or non-Aryan origin of the god who was adopted from the pantheon of the Dravidian cult to that of the Aryan. Later, this S. India manifestation of Śiva popularized the northern faith among the people of Madura by marrying the most dreaded demoness of that region, Mīnākṣī. The latter, doubtless, was an ancient queen who was slain in war, and was soon exalted to the highest place in the Dravidian pantheon. By this marriage the Aryan cult of the north was wedded to the supreme faith of the south, and the great annual marriage-festival of the temple celebrates and perpetuates the union of the two diverse cults in that region. In that most popular festival there is another interesting feature: Mīnākṣī is said to be the sister of Alahan, a popular Vaiṣṇava demon-deity a few miles from Madura, and this brother comes to attend the wedding ceremonies of his sister at Madura; but, unfortunately, he arrives a day late, and is so incensed by the fact that he will not enter the city or temple; his idol is thus kept for three days on the outskirts of the town, during which period all the people, both Śaivites and Vaiṣṇavites, fraternize together and bring their offerings to the aggrieved god. Thus, upon this occasion, we find the three cults of that region, Śaivism, Vaiṣṇavism, and demonolatry, most strikingly brought together.

In many ways the worship of this famous Hindu temple reveals a fact which outsiders can understand only with much difficulty. In a certain way, all the Dravidian people are a part of Hinduism and are loyal to that faith. But it is a Hinduism which is completely impregnated with Dravidian and animistic ideas. The worship of the Aryan deities in S. India is a pleasing pastime; but the people are still obsessed with the fear of their myriad demons, and find their chief religious concern in appeasing them in the many demon shrines which are found in every town and village. Even Kālī, the chief consort of Śiva, who also finds a prominent place in this temple, is so Dravidianized and demonized with a bloodthirsty passion that no one can separate her from the many Dravidian *ammans*, or demonesses, who haunt that region and terrorize the whole community.

It is thus that we learn what the amorphous thing called Hinduism is in S. India. In outward form it poses as an Aryan cult, but in its inner spirit it reveals the pervasive animistic genius which has characterized the Dravidian mind and heart from time immemorial. The Aryan has given to the religion its outer form and *éclat*; but the Dravidian has retained and conveyed into it all the animism which his ancestors entertained and practised. It is largely the spirit of the south robed in the garb of the north. The Madura temple furnishes one of the best illustrations of this animistic type of Hinduism.

J. P. JONES.

MÆNADS.—The character of the Mænads was long a subject upon which the most mistaken ideas prevailed. The accounts of them given by poets, mythographers, and historians were all mingled together, and were, moreover, mixed up indiscriminately with the representations of the cult of Dionysus in art, while, again, these artistic products were not submitted to any process of critical analysis. Thus arose the conception of a wildly fantastic religious service celebrated by delirious women in nearly all parts of Greece and Asia Minor. The first to reduce the literary and artistic data to order, and to give a clear impression of the development and character of the Dionysus-cult, was A. Rapp, in his 'Die Mänade im griechischen Kultus, in der Kunst und Poesie' (*Rhein. Mus.* xxvii. [1872] 1–22, 562–611; cf. Roscher, ii. 2243–2283). Then at length the powerful movement introduced into Greece by the new deity, and the influence of that movement upon the spiritual life of the people, were exhaustively delineated by E. Rohde (*Psyche*^{4}, Tübingen, 1907, ii. 5 ff.). The researches of the folklorists among other peoples have also brought to light interesting parallels to the ancient Dionysian cult and customs; but great caution must be exercised with regard to the ideas of 'vegetation deities,' 'spirits of fertility,' etc., to which the modern tendency to trace analogies everywhere has given rise (cf., *e.g.*, O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, Munich, 1906, p. 905 f.).

Dionysus, the lord of the Mænads, of the 'Bacchæ,' so named after him, was, as is now universally recognized, and as was already known to Aristarchus, not originally a Greek deity, but was derived from Thrace (cf. Herod. v. 7, and the notes of W. W. How and J. Wells, London, 1912), where he was worshipped under the name of Sabos or Sabazios (schol. Aristoph. *Vespæ*, 9 ff.). It is true that Sabazios is also spoken of as a Phrygian deity (reff. in Rohde, ii. 7, note 3), but, as the Thracians and the Phrygians were, in the judgment of the ancients, closely related peoples, we need not be surprised that the worship of the Phrygian national goddess Cybele should show so many points of contact with the forms of the Thracian cult of Dionysus. The latter was a non-Greek cult which was celebrated upon the mountain heights of Thrace in the winter of every alternate year (and in Greece, therefore, subsequently called the *τριετηρίς*). At these celebrations women danced in wild frenzy amid the glare of torches, whirling dizzily to the clangour of rude music—the clashing of bronze vessels, the hollow roll of large drums (cf. CYBELE), the shrill whistling of flutes—and with loud shouts of *εὖ οἶ* (which afterwards became *euhoe*, *evoe*, and finally *evoē*). These raving creatures (*μαινάδες*; used generically as early as Hom. *Il.* xxii. 460), with their dishevelled hair streaming in the wind, were clothed in long flowing *βασσάραι* (whence they were also called Βασσαρίδες), over which they wore the *νεβρίς* (cf. Æsch. frag. 64, and the pictorial representations), and in their hands they carried serpents (animals sacred to Sabazios [Theophr. *Char.* xxx. 4; cf. the *πομπή* of Ptolemy II. in Athenæus, 198 C, etc.]), daggers, or thyrsi. In their religious frenzy they threw themselves upon the sacrificial animals, tearing them in pieces with their teeth (Eur. *Bacch.* 736 ff., etc.; but cf. the singular explanation of the practice in Gruppe, p. 731 f.). In these riotous scenes the fumes of wine played no part; the women used no strong drink to stimulate their frenzy, but, on the contrary, were able to work themselves into such a condition of over-excitement as would bring about the ecstatic state. Their delirium was regarded as a means of compelling their god to appear (Eur. *Bacch.* 141 ff., 306 f.; Paus. VI. xxvi. 1: *καὶ τὸν θεόν σφισιν ἐπιφοιτᾶν ἐς τῶν Θυίων τὴν ἑορτὴν λέγουσιν*). A notable analogy to these practices is found in the leaping of the Perchtas in the Tyrol; here, on Shrove Tuesday (cf. art. CARNIVAL, vol. iii. p. 225 ff., esp. p. 228^a), the Perchtas (so named, like the Bacchæ, after the deity whom they thus honour) work themselves into a frenzy. Their raving is carried to such a pitch that at length they think that they actually see Percht herself in their midst, and it is even said that she has sometimes mangled her worshippers (F. A. Voigt, in Roscher, i. 1041 f.).

This tumultuous cult, whose votaries were also called Κλώδωνες and Μιμαλλόνες, maintained itself till later times; even Queen Olympias, the mother of Alexander the Great, was devoted to the wild practices of the Thracian religion, and her tame snakes, which would suddenly wriggle out from amongst the ivy or from the sacred winnowing-fans, not seldom startled the court of Philip (Plut. *Alex.* 2). In that form, however, the cult certainly met with opposition as it spread through Greece. What mythology tells us, now of Lycurgus and the struggle which he made against Dionysus and his τιθῆναι (so Hom. *Il.* vi. 132 ff.; concrete details regarding the τιθῆναι are lacking), as of Pentheus, and now of the Minyads and the Prœtids, shows at least that at some time the Bacchus cult had once or oftener encountered enemies in various districts to which it spread. Its complete triumph throughout almost the whole of Greece is, of course, a commonplace of history. The new religion, with its outlandish features, came to be so thoroughly naturalized that its alien origin was almost forgotten: Herodotus speaks (iv. 79) of the Bacchic frenzy as a peculiarly Hellenic characteristic in contrast to the practices of other lands; the Spartan Mænads, the δύσμαιναι, raved upon the heights of Taygetus (reff., *e.g.*, in Rohde, ii. 45, note 2); and Galen (*de Antid.* 8, vol. xiv. 45 [Kühn]) could speak of snake-rending as still practised at the Bacchic festivals.

But the educative power of Delphi was now at work, and Apollo exercised his softening influence upon the raging Bacchus. It was with very different rites that the women performed their worship of Bacchus on Mt. Parnassus. Here, every two years, about the time of the shortest day, the Thyiads 'awaked' Λικνίτης, the god who lies in the sacred winnowing-fan (Plut. *de Is. et Osir.* xxxv.); here (Rapp, *Rhein. Mus.* xxvii. 5) a caste of priestesses was employed, who attended to the rites of this winter festival on Parnassus. With such rites, too, the Attic Thyiads celebrated at similar intervals the orgies of the god at Delphi. Thus the celebration had now to do not with Dionysus only, but with Apollo as well (Paus. x. xxxii. 7). Of this cult, whose Bacchic ecstasy had been refined by Apollonian moderation, we find a picture in the celebrated chorus of the *Antigone* of Sophocles (1126 ff.), which tells indeed of the torch-swinging θυῖαι and of their dancing by night upon Parnassus, but does not speak of the mad fury of the Thracian observance—the reason being that in the precincts of Delphi this element no longer had a place. Then Euripides, who, in contemplating the unrestrained frenzy imported from the North, broadened and enriched that poetic sense which understands all, produced a permanent memorial of the thrillingly graceful activities of the Mænads. In his *Bacchæ* the actual and the poetic run naturally into each other. Here the enthusiastic troops of women, crowned with wreaths of ivy and smilax, garbed in the many-coloured νεβρίς, and holding the thyrsus in their hands, plunge madly through the mountains, and fall to the ground in the fullness of their rapture; while, again, they rush to the slaughter of the goats, the ground flows with milk and wine, and the stroke of the thyrsus upon the rock causes a spring to break forth; ferocious animals are on a friendly footing with the Mænads, who offer the breast to fawns and young wolves, while ill-disposed men flee before the hurtling thyrsus (*Bacch.*, *passim*).

Investigators have had great difficulties also with the portrayal of the Bacchus cult in art. In this field, too, it was necessary to disengage the mythological aspects from the presentation of the real. As a whole, it is only the general impression to be found here that corresponds to the literary account. On the artistic side it is pre-eminently the Attic vases that merit consideration. On the earlier specimens of these we see the orgiastic dancing of women to the cadence of flutes; later additions are the swinging of torches, the beating of drums, and the head thrown back upon the shoulders. According to the more recent explanation, the celebration thus represented is the Lenæa, the festival of the raving women (λῆναι), which had been brought from Bœotia (on all this cf. A. Frickenhaus, *Lenäenvasen* [*Programm zum Winckelmannsfeste der archäolog. Gesellsch.* lxxii.], Berlin, 1912). With these designs are mingled others showing a distinct background of mythology, and here we also find names of the Mænads, such as Μαι[νάς], Θηρώ, etc. (cf. C. Fränkel, *Satyr- und Bakchennamen auf Vasenbildern*, Halle, 1912). Then later art brought the depictment of that furious, almost hysterical, ecstasy to its most vigorous expression, and even extended it, most unnaturally, to the uncouth satyrs; this intense expression of feeling is seen in its finest form in the Mænads of Scopas (M. Treu, in *Mélanges Perrot*, Paris, 1902, p. 317 ff.). Nearly everywhere in art, however, the representation of the Mænads is an expression of early religious emotion, and the vase-paintings designedly set forth the strict reserve of the Bacchæ in contrast to the loose merry-making of the satyrs. The introduction of the Bacchic procession, with its troops of men and women rolling wantonly along, and the transformation of the primitive festival, attended by females only, into a turbulent orgy were the work of the superficial art of the Hellenistic age.

LITERATURE.—This has been sufficiently indicated in the article.

J. GEFFCKEN.

MAGADHA.—Magadha, an ancient kingdom in India, was the scene of the greater part of Buddha's preaching and the last stronghold of his faith in India. It was equivalent to the modern districts of Patna, Gayā, and Shāhābād in S. Bihār. The name Bihār itself, which is now that of a vast district, is evidence of the predominance of Buddhism in these lands, for it was originally the name of a town with a celebrated Buddhist monastery (Skr. *vihāra*). Buddha was not born in Magadha, but in the country to the north of it, at the grove of Lumbinī (*q.v.*), near Kapilavastu (*q.v.*), the Śākya capital in the Nepālese Tarāi. Magadha was the home and the nucleus of two of the greatest Indian empires, the Maurya and the Gupta. It is celebrated in Sanskrit literature as one of the richest, most fertile, and best irrigated districts in India. As the home of Buddhism and Jainism, it is full of archæological remains of the greatest religious interest.

Its earliest capital was a very ancient hill fortress named Girivraja (Pāli Giribbaja), built, according to tradition, by an architect named Mahāgovinda; its place was taken in the 6th cent. B.C. by the better known Rājagṛha (Pāli Rājagaha), built at the foot of hills on which Girivraja stood; Rājagṛha is the modern Rājgēr, which, however, stands about a mile to the south. Its walls still exist, and are probably the oldest stone buildings in India. Rājagṛha had reached its zenith about Buddha's time, soon after which it began to decline with the growth of Pāṭaliputra (the modern Patna). The modern town of Gayā, although now a place of pilgrimage for Hindus, has no ancient religious associations; 7 miles to the south, however, are the remains of Bodh (Buddh) Gayā (see GAYĀ, vol. vi. p. 181 ff.), one of the most interesting sites in India, where Gautama Śākyamuni finally attained enlightenment (*bodhi*). To the south of Gayā is the hill of Dhongra, the Prāgbodhi (Po-lo-ki-pu-ti) of Hiuen Tsiang, with a cave in which Buddha once rested. Punāwān, 14 miles east of Gayā, is rich in Buddhist sculptures; to the south of it is Hasrā hill, which has been identified with the Kukkuṭapādagiri of the Chinese pilgrims.

A. Cunningham, however, recognizes the latter in Kurkihār, which lies some miles to the north. Gunerī, Dharawat, and Kavadal are all rich in Buddhist remains, the last-named with a colossal stone image of Buddha. Jetian, or Jakhtiban, is the Yaṣṭivana ('bamboo-forest') of Buddha's wanderings; near it at Tapoban are the hot springs, visited by Hiuen Tsiang, at which Buddha bathed. In this neighbourhood the Chinese pilgrim visited a cave with a stone which had been used by Indra and Brahmā for pounding sandalwood to anoint Buddha's body. In the side of Baibhār hill, near Rājgēr, was the Sattapaṇṇi cave in which the first Buddhist synod met in 543 B.C.; according to Cunningham,[1] this cave is the modern Son Bhāndār cave on the southern side of the hill. On the adjacent hill of Ratnāgiri is the *pipal*-tree cave of Fa-Hian in which Buddha used to meditate after his meals. On the top of this hill there still is a small Jain temple; Ratnāgiri is the Pandao of the Pāli chroniclers and the Ṛṣigiri of the *Mahābhārata*. The extensive ruins at the modern Baragaon are the ancient Nālandā (*q.v.*), the greatest centre of Buddhist learning in ancient India. Near Giriak on the Panchāna river a bathing festival is held annually to commemorate Kṛṣṇa's crossing of the river here on his way to challenge Jarāsandha. Sasaran, Monghyr, and Shergarh are rich in relics of Muhammadan architecture. At Sītāmarhi is a cave with which a legend of Sītā is associated. The annual bathing festival of Sonpur, held in November at the junction of the Gandak and the Ganges, is one of the oldest and most popular in India; it was here that Viṣṇu rescued the elephant from the crocodile, and here Rāma built a temple. At Afsar there is a fine sculpture of the *varāha* (boar) *avatār* of Viṣṇu.

MAGAS.—See SAURAS AND MAGAS.

MAGH.—Magh, or, popularly, Mugh, Mugg, is the designation of a group of Indo-Chinese tribes, numbering 128,545 at the Census of 1911, and practically all confined to Bengal. The derivation of the name is uncertain. A. P. Phayre (*Hist. of Burma*, London, 1884, p. 47; cf. H. Yule and A. C. Burnell, *Hobson-Jobson*², do. 1903, p. 594) connects it with Magadha, the ancient name of modern Bihār, while L. Vivien de St. Martin (J. W. McCrindle, *Ancient India as described by Megasthenes and Arrian*, Calcutta, 1877, p. 133, note), identified the Magh with the Maccocalingæ of Pliny (*HN* VI. xxi. 8).

> 'All Maghs are Buddhists of the Southern school, and regard the Northern Buddhists of Tibet as wholly unorthodox. The wilder sections of the Thongchas, however, retain some vestiges of an earlier animistic faith, which bids them sacrifice cattle, goats, and swine, and make offerings of rice, fruits, and flowers to the spirits of hill and river. Among the Maramagris, on the other hand, the tendency is to follow after modern Hinduism, particularly in its Tantric developments, and to add the gross worship of Siva and Durga to the simple observances prescribed by their own communion. It thus comes to pass that while the Buddhist *Phungyis* or *Rdolis* are the recognized priests of all the tribes, considerable respect is shown to Brahmans, who are frequently employed to determine auspicious days for particular actions, and to assist in the worship of the Hindu gods. Among the Thongchas old women often devote themselves to the service of religion, and although not charged with special ceremonial functions, are regarded as in some sense priestesses, and are called by the distinctive name *lerdama*' (H. H. Risley, *TC*, Calcutta, 1891, ii. 33).

The people thus described are the Khyoungtha of the hill tracts of Chittagong, who, as T. H. Lewin states (*Hill Tracts of Chittagong*, Calcutta, 1869, p. 37, *Wild Races of S.-E. India*, London, 1870, p. 95), are known to the Bengalis of the plains as 'Hill Mugh,' and are to be carefully distinguished from the true Maghs of the Chittagong District, otherwise called Rājbansī, who are the offspring of Bengali women by Burmans, when the latter possessed Chittagong. They supply the famous Magh cooks, well known in Calcutta and other parts of Bengal. The true Khyoungtha are Buddhists and believe in the doctrine of metempsychosis or transmigration of souls; but their Buddhist worship is of a simple character—the presence of a priest is not indispensable; prayers are made and offerings of flowers, food, etc., are placed before the shrine of Gautama by the people themselves. Many villages have no priest, except wandering friars, who are not so much ministers of religion as recipients of alms. Each village has a temple (*khiong*), a bamboo structure built under the shade of some trees, inside which, on a small raised platform of bamboos, stands an image of Gautama, made either of gilded wood or of alabaster, the figure being in a sitting posture, with a pagoda-shaped headdress indicative of superior power. Before it the village girls lay offerings of flowers and rice every morning, and, at the same time, bring the daily food of any priest or wayfarer who may be resting there. By the side of the image hangs a small stand of bells, which each villager, after removing his turban and bowing to the semblance of the Teacher, rings to announce his presence. Each one prays for himself, except that now and again a father may be seen leading his young son by the hand and teaching him how to pray. Each year, before the commencement of the burning of the jungle for the purpose of sowing their crops, the boys are clothed in yellow robes of the priesthood, have their heads shaved, and go through a rite before a priest which seems to be an assumption on their part of religious responsibilities. Women do not participate in this rite; but it is common for a man to perform it two or three times during his life. If a relative is sick, or he himself has escaped any danger, he performs the ceremony as a supplication or as an acknowledgment of the mercies which he has received.

LITERATURE.—The authorities are quoted in the article.

W. CROOKE.

MAGI.—I. The name (Gr. Μάγος, Lat. *Magus*, from Old Pers. *Magu*) is familiar to us from the classical writers, and from two appearances in the NT. It meets us first on the Behistān Inscription of Darius, where the king describes (*Bh.* [Pers. text] i. 35 ff.) the usurpation of 'Gaumata the Magus' (*Gaumāta tya Maguš*) and his own successful plot against him, by which he restored the Achæmenian dynasty to its ancient throne. There is nothing in the inscription to show what *Magu* meant, and we must fall back on our Greek sources, Herodotus first, and the rest *longo intervallo.* In Herod. i. 101 we are told that Ἀριζαντοί, Μάγοι, and four others were Μήδων γένεα. The six names were explained as Aryan caste-titles by J. Oppert long ago (*Le Peuple et la langue des Mèdes*, Paris, 1879, p. 7), and again, on different lines, by A. J. Carnoy (*Muséon*, new ser., ix. [1908] 121 ff.); the tolerable certainty that five are Aryan makes a strong presumption that Μάγος must be interpreted from the same language group.

The etymology, however, must be left undecided. Putting aside some attempts of Semitists to claim it, we have at least two plausible accounts from the Indo-European side. Carnoy (*loc. cit.*) compares μηχανή and Μαχάων with the meaning 'helper, healer,' while Moulton (*The Thinker*, ii. [1892] 491; see his *Early Zoroastrianism*, pp. 428–430) connects Gothic *magus*, O. Ir. *mug*—a connexion which Carnoy accepts, but in a different sense. The Gothic word translates τέκνον once, and παῖς (='servant') elsewhere. The latter meaning is that of the Irish word; we may probably compare the development of our 'maid' and local uses of 'boy.' That 'boy' is the primitive meaning is confirmed by the Later Avestan *maγava*, 'unmarried.' The significant fact that *moγu* (=O. Pers. *magu*) occurs only once in the Avesta, and that in a prose passage (*Ys.* lxv. 7) obviously late, speaks for the meaning 'servant'; the Magi were thus the leading tribe of the aboriginal population, enslaved or reduced to political subjection by the invading Aryans. But the whole history of the word is open to great uncertainty. The authority of T. Nöldeke and C. Bezold (*ap.* C. Bartholomae, *Altiran. Wörterbuch*, Strassburg, 1904, p. 1111) may be referred to against the Semitic claim.

---

[1] *Ancient Geography of India*, p. 463.

2. While the Magi were thus a distinct caste of Medians, and apparently the recognized leaders of the subject population in the time of Aryan (Persian) dominion, there is no reason for doubt that their ascendancy was essentially religious, like that of the Brāhmans in India. Darius writes of his repairing temples which the Magus had destroyed (*Bh.* [Pers. text] i. 63–66), and so far the inscription favours the existence of a marked difference of religion—of course, its scanty reference does not definitely prove anything one way or another. But the testimony of Herodotus and all later classical writers is so unanimous and precise that we need no other. It would appear that, having failed in their bold bid for political supremacy, as leaders of the people against Aryan invaders, they began to build up power upon their popular vogue as shamans. It was easy to insinuate themselves into the open place of priest in the unreformed Iranian nature-worship, as described most accurately by Herodotus (i. 131 ff.); they had only to emphasize certain clear points of resemblance between their own religion and that of the Aryans, veneration of the sun and of fire being the chief. There is one important detail of ritual in which we can with high probability trace an appearance of Magianism separate from Aryan connexions at a very early date. Ezk $8^{16f.}$ describes, as the greatest of three 'abominations' that had brought Jahweh's wrath on Jerusalem, the sun-worship of men in eastward position, who 'put the branch to the nose.' To hold a bough before the face in solar cultus is a natural action; its special interest for us lies in its coincidence with the Parsi use of the *barsom* (*q.v.*), a bunch of tamarisk twigs held by the priest before his face in worship. The name, and the peculiar use of the verb 'spread' to describe the preparation of the instrument, alike take us to something quite different—the Aryan carpet of stalks of tender grass (Herod. i. 132) on which the offering was laid (Skr. *barhiṣ*, Av. *baresman*). We may infer that the Magi adapted the Aryan use to their own by prescribing that a bunch of the sacred stalks should be picked up from the ground and held reverentially before the face.

3. This notice enables us to trace the Magi in a separate activity as far back as 591 B.C., when they seem to have secured proselytes in Judæa. This is quite in keeping with what we know of them. Their contemporary appearance in Babylon is probably attested by Jer $39^{3.13}$, where 'the Rab-Mag' appears among Nebuchadrezzar's officers (for alternative views of Rab-Mag see the *Oxford Lexicon* and *EBi*, *s.v.*). H. Zimmern and H. Winckler (*KAT*^{3}, 416) explain the Rab-Mag's name, Nergal-sharezer, as 'Nergal, protect the king'; and in their account of Nergal they expressly compare Ahriman, who in the Later Avesta has features which could be very easily connected with Babylon. The head of a caste of exorcists, who by their charms can keep the Satan from harming the king, is wholly in place at court. We compare at once the apotropæic functions of the Magi in Plutarch, *de Is. et Osir.* 46. We may add to this small but important peculiarity several other traits by which the Magi may be distinguished from the Persians in religion, whether in the earlier or the later stages of what we now call Parsiism. First come two conspicuous features recognized from the first by Greek writers as Magian and not Persian: (1) their exposure of the bodies of the dead to birds and carrion dogs was distinguished by Herodotus (i. 140) from the Persian custom of burial after encasing in wax. It has pronounced aboriginal affinities, and was neither Semitic nor (almost certainly) Aryan. Coupled with this was (2) their insistence on next-of-kin marriage, which they belauded extravagantly for its accumulations of merit. It was never accepted by the Persians, and never found its way into the Avesta (see on this Moulton, p. 205 f.), first appearing in the Pahlavi writings of the Sasanian age as a precept of developed Parsiism. But modern Parsiism repudiates it with the utmost emphasis, and its scholars attempt the heroic but impossible task of denying that their predecessors meant anything of the kind (see art. MARRIAGE [Iranian], § 2). (3) The very name of *magic* attests the strength of their association, in the mind of antiquity, with an accomplishment altogether ignored in the Avesta, and never countenanced in Parsiism. Equally ignored is (4) *oneiromancy*. The Magi were renowned for their skill in divining by dreams; but the very word for dream occurs only once in the Later Avesta (*Yt.* xiii. 104), and there is no hint that dreams were ever studied. Closely linked with this is (5) *astrology*, with which the Magi were traditionally credited. But the Avesta, while it has plenty of star-lore, and some mythology, has never a hint of ideas belonging to astrological conceptions. A curious point under this head is the inconsistent views of the planets held in the later Parsi Scriptures (the Avesta has nothing one way or the other). On one side there is the official view that planets were malign; on the other we find them named by the names of the good *yazatas*, including Ormazd himself. These names are simply equivalents for the Babylonian terms, like those which we ourselves have taken over through the later Greeks and the Romans, so that the date is post-Avestan. But it seems probable that the Magi put the planets into the creation of Ahriman because of their irregular motion, while the Parsis generally believed in their beneficence. There is the same kind of discrepancy in (6) the views of *mountains*, which in Aryan and Semitic mythology alike were venerated as divine, but by the Magi were treated as blots on the symmetry of creation, to be smoothed out when the Regeneration came. It will be seen that most of these peculiar traits, by which we may distinguish the Magi from the people whose religion they adopted and adapted, are incompatible with either Aryan or Semitic affiliation, or at least do not suggest the one or the other. It seems a fair inference that they were aboriginal Medians, who, like the Elamites, belonged to neither of the two great races which divided Nearer Asia between them. To what stock they belonged we may not be able to say. L. H. Gray (*ExpT* xxv. [1914] 257) points out that there were Magas in India, about whom we hear in the *Bhaviṣya Purāṇa* and the *Bṛhatsaṁhitā*; he thinks that these were probably Magians, accepting the general view of them which has been outlined above, and he believes them to be immigrants to India from Persia.[1]

It must be premised that the foregoing view of the ethnography of the Magi and their religious origins is to some extent new, and has not yet had the benefit of full discussion. The extent of approval expressed by L. C. Casartelli (*Manchester Guardian*, Dec. 23, 1913) and L. H. Gray (*loc. cit.*) encourages the writer to epitomize here the thesis set forth in his *Early Zoroastrianism*, chs. vi. and vii. (cf. also K. Geldner, in *ThLZ* xxxix. [1914] 290).

4. Pursuing this thesis further, we are led to credit the Magi with all that is fairly called 'dualistic' in Parsiism. There is nothing really

---

[1] It may be noted that a Skr. *Maga* cannot be directly equated with Iranian *Magu*; but *Magu* may be borrowed as a foreign word with altered declension (the form *Magu* also occurs in the *Bhav. Pur.*). This would imply an Iranian origin, which suits our theory. See, on the Magas, art. SAURAS AND MAGAS.

dualistic in Zarathushtra's *Gāthās*. The very name of Ahriman (*angra mainyu*, 'enemy spirit'; see art. AHRIMAN) occurs only once there (*Ys.* xlv. 2), as a casual epithet and not a fixed title. The good and evil spirits make their choice in the beginning, but there is never any real question as to the issue of the strife between them; one whose perpetual counsel is 'Resist the devil and he will flee' can never be called a dualist. But the Magi, on Plutarch's express testimony, offered sacrifices to Ahriman.[1] The practice is entirely absent from the Avesta—a fact that does not discredit Plutarch, but only shows the survival of distinct usages among the Magi, whose genius is well suited by the mechanical division of the world into creations of Ormazd and creations of Ahriman. This is practically absent from the *Gāthās*, and even from the *Yashts*, where a pure Iranian nature-worship shows small sign of influence from Zarathushtra on the one hand or the Magi on the other. The prose Avesta (excluding the early *Gāthā haptanghaitī*)—which by the loss of metre and the presence of much dubious grammar proclaims itself composed in a virtually dead language—is full of this dualism. Even words have to be distributed between the two camps; different terms are used for the head, hand, voice, etc., of an Ormazd-worshipper and those of an Ahrimanian. Every *yazata* has a demoniacal opponent; but we note that the balancing is imperfectly completed, and that the fiends are often of manifestly late origin and vague functions, so that we should suppose the work of correlation to have been rather half-heartedly undertaken as a concession to theory. The type of dualism implied suggests affinity with that which apparently called forth the declaration of Is 45^7. The presence of such a system in Babylonia during the Exile suits our view of the Magi as shamans exercising influence far beyond their own land of Media; and the presumption adds something to the case for recognizing the Rab-Mag as an ἀρχίμαγος. We may observe that, if Jahwism emphatically denied this dualistic assigning of darkness to an evil demiurge, Zarathushtra himself was no less clear in his claim that Mazda made the night as well as the day (*Ys.* xliv. 5).

5. We are reduced mainly to conjecture when we ask what was the Magian eschatology. That death must be abolished if Ormazd is at last to conquer Ahriman—*pouru-mahrka*, 'many-slaying,' according to his standing Avestan epithet—seems a natural inference from their first principles. We know, further, that they pictured a regenerate world in which such unsymmetrical features as mountains would disappear, and the earth would become a 'slopeless plain.' But how far they pressed their form of the doctrine of immortality we have no means of knowing. Our early Greek witness, Theopompus, according to an important statement of Diogenes,[2] declared that the Magi taught the future resurrection of men to a deathless existence. This excellent 4th cent. authority may, of course, be describing only the doctrine of Persian religion in his own time, when the Magi were its long-established priests. But the extract apparently connects this immortality with a doctrine that looks rather characteristic of the Magi themselves. The *locus classicus* in Plutarch, already quoted, is ordinarily taken as silent as to any doctrine of a resurrection among the Magi. But E. Böklen (*Die Verwandtschaft der jüdisch-christl. mit der pars. Eschatologie*, Göttingen, 1902, p. 102 ff.) argues that in Plutarch's quotation from Theopompus[1] we should translate 'Hades is to be deserted,' which agrees with the other accounts of the testimony of Theopompus. The absence of any doctrine of immortality in Tobit can hardly be regarded (as in Moulton, p. 416) as a contributory argument. For, whether the book is rightly or wrongly held (as by Moulton, ch. vii. and p. 332 ff., and D. C. Simpson in the Oxford Apocrypha) as containing a Median folk-story re-written by a Jew, we must admit that the adapter was not likely to include that element unless he agreed with it, which, if the date was early, he would not do. It is clear that, if Zarathushtra's eschatology came before Jews during the Exile only in an adaptation determined by Magian ideas, it was very little likely to attract the thinkers of Israel. The common belief that the rise of the doctrine of immortality in post-Exilic Judaism owed some real stimulus to Persian influence becomes less and less probable as the history of early Zoroastrianism is investigated more thoroughly.

6. Such, then, in outline were the Magi as a sacred tribe, so far as our information allows us to isolate them for separate portraiture. Most of what we hear of them naturally belongs rather to the religious system upon which they fastened so tenaciously. As early as the travels of Herodotus, they had compensated for their failure to regain political ascendancy by making themselves indispensable to the ritual of Persian religion. It involved, as we have seen, considerable suppression of beliefs and usages traditional among themselves. These they continued to practise in their own community, with or without attempts at propaganda. They could easily use general similarities between their religion and that of the native Iranians so as to prove to the latter their fitness to serve their altars; and the people to whom they ministered, including a large proportion of their own kin, would be slower to realize how much change the proselytes were bringing to the religion which they so zealously adopted.

7. Later developments of Magianism belong to the history of Zoroastrianism as established under the Sasanian dynasty. It only remains here to add a few words about the Magi as they figure in the Nativity story of our First Gospel. To discuss the historic credibility of that story, or the various theories that have been devised to explain the star, must be left to the Dictionaries of the Bible. Here it suffices to connect the foremost traits of the Magi, as described above, with points in the story of Mt 2. That these Μάγοι ἀπὸ ἀνατολῶν answer to the picture as experts in dream-interpretation and in star-lore is clear. It is noteworthy, therefore, that Mt 2, so far as its testimony goes, isolates the Magi from Persian religion, which, as we saw, has practically no room for either (see art. FRAVASHI, *ad fin.*). This constitutes within its limits a rather striking witness, when we remember how little we are able to discover about the Magi as apart from the religion with which even four centuries earlier they were almost completely identified. Naturally we must not be tempted to make too much of evidence so limited in its range.

LITERATURE.—Greek and Latin *loci classici* are collected in A. Rapp's two papers, *ZDMG* xix. [1865] 1–89 and xx. [1866] 49–140. Those which affect Zoroaster are conveniently printed together in A. V. W. Jackson, *Zoroaster, the Prophet of Ancient Iran*, New York, 1899. The account here given depends largely on the writer's full discussion of the whole subject in *Early Zoroastrianism* (*HL*), London, 1913.

JAMES HOPE MOULTON.

MAGIC (Introductory).—**1. History of the term and problem of its definition.**—In any general treatment of the subject of magic the problem of its definition must occupy the chief place, seeing that it constitutes a veritable storm-centre in the anthropological literature of the present day. As so often happens when a word belonging to the common language, and used in vague and conflicting ways, is taken over by science that it may correspond to some precise concept, theorists interested in different and more or less incompatible concepts claim exclusive rights over the same technical term; so that, if they are at all equally matched, the term becomes for the time being ambiguous, *i.e.*, it answers to more concepts than one. Something of this kind has occurred in regard to the word 'magic.' It may be instructive, then, to begin with a glance at its meaning as a popular expression. It is, of course, the lineal descendant of the Gr. *μαγεία* and the Lat. *magia*, which in their strictest sense refer simply to the religion, learning, and occult practices of the Persian Magi, or priests of the sect of Zoroaster, in the form in which they became known to the West (see art. MAGI). Such matters, however, being both foreign and ill-understood, would naturally be more or less suspect. Hence the word tends from the first to carry with it the unfavourable associations summed up in the notion of witchcraft (see, for instance, Hesychius, *s.v.* *γόης*, which he identifies with *μάγος*, and Pliny, *HN* xxx. 11; and for further references cf. H. Hubert, in Daremberg-Saglio, *s.v.* 'Magia'). These associations the equivalent words in the various languages of modern Europe have never lost. Bacon's attempt to rehabilitate *magia* as natural science in its operative aspect (*de Augmentis scientiarum*, iii. *ad fin.*) proved quite abortive. Thus it comes about that the modern anthropologist in attributing 'magic' to a given people can hardly do so without at the same time implying that it is something inferior and bad—something that, however prevalent it may be, belongs to the lower levels or even to the pathology of mind and society. A survey of representative views on the subject will bring out the fact that, in this respect at least, most, if not all, theories tend to be at one.

2. Representative views.—As far back as 1870 E. B. Tylor laid it down that the 'confusion of objective with subjective connexion, . . . so uniform in principle, though so various in details, . . . may be applied to explain one branch after another of the arts of the sorcerer and diviner, till it almost seems as though we were coming near the end of his list, and might set down practices not based on this mental process, as exceptions to a general rule' (*Researches into the Early Hist. of Mankind*, p. 129). He adds that the same state of mind will account for tabus, many of the food-prejudices of the savage, for instance, depending on the belief that the qualities of the eaten pass into the eater (*ib.* p. 133). Such an attitude of mind he characterizes as one of 'gross superstition and delusion' (*ib.* p. 119), even while allowing that at a stage of development when human life 'was more like a long dream' such a system of error was perfectly 'intelligible' (*ib.* 139 f.). He pursues the same line of explanation in his later work, *Primitive Culture*, where magic is described as 'occult science,' *i.e.* a 'pseudo-science' (3rd ed., i. 112, 119). 'The principal key to the understanding of occult science is to consider it as based on the association of ideas, a faculty which lies at the very foundation of human reason, but in no small degree of human unreason also' (i. 115 f.). He adds a disquisition on the futility of magic arts, in which he maintains that 'in the whole monstrous farrago' there is practically no truth or value whatever (i. 133). Meanwhile, he holds that the laws of mind are as unchanging as the laws of chemical combination, so that 'the thing that has been will be' (i. 159). The 'symbolic magic' of the savage and modern spiritualism are alike hurtful superstitions born of fallacies to which the human mind is naturally prone (see ch. iv., *passim*, esp. *ad fin.*).

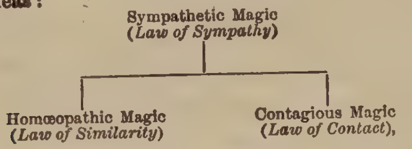
J. G. Frazer (*The Golden Bough*) maintains a position which in most respects is identical with that of Tylor. In the first edition (1890) he credits primitive man with two views of the world that exist side by side, the one view being that it is worked by personal beings acting on impulses and motives like his own, the other view amounting in germ to the conception of nature as a series of events occurring in an invariable order without the intervention of personal agency. The latter is the view involved in sympathetic magic (GB^1 i. 9), though the savage acts on it, not only in magic art, but in much of the business of daily life (*ib.* 31). In the second edition (1900) Frazer lays far more stress on the 'fundamental distinction and even opposition of principle between magic and religion,' being influenced especially by the theories of H. Oldenberg (*Die Religion des Veda*, Berlin, 1894), F. B. Jevons (*Introduction to the History of Religion*, London, 1896), and A. C. Lyall (*Asiatic Studies*, 1st ser., London, 1899). More than that, he is now disposed to affirm that, 'in the evolution of thought, magic, as representing a lower intellectual stratum, has probably everywhere preceded religion' (GB^2 i. p. xvi). He still represents magic as 'next of kin to science,' since the two have in common the 'general assumption of a succession of events determined by law.' Magic is nevertheless only 'the bastard sister of science.'

'All magic is necessarily false and barren; for were it ever to become true and fruitful, it would no longer be magic but science.'

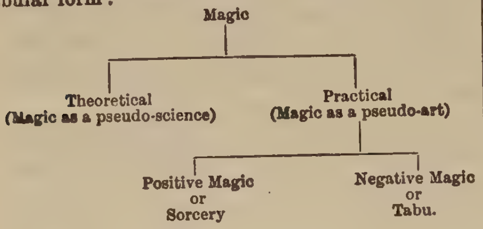
All cases of sympathetic magic resolve themselves on analysis into mistaken applications of the laws of the association of ideas by similarity and contiguity.

'Legitimately applied' these same principles 'yield science; illegitimately applied they yield magic' (*ib.* p. 62).

Religion, on the other hand, 'is opposed in principle both to magic and to science,' since its fundamental assumption is that the course of nature and of human life is controlled by personal beings superior to man. Towards such beings conciliation must be employed, whereas to exert mechanical control is the object of magic and science, though the former often essays to control spirits, treating them, however, exactly as if they were inanimate agents (*ib.* p. 63 f.). Finally, the human race are assumed to have passed through an 'intellectual phase,' in which they 'attempted to force the great powers of nature to do their pleasure,' and had not yet thought of courting their favour by offerings and prayer. Such an 'age of magic' finally gave place to an 'age of religion' only because mankind at length were led by experience to a 'tardy recognition of the inherent falsehood and barrenness of magic,' whereupon the more thoughtful part of them cast about for a truer theory of nature (*ib.* pp. 73, 75). In the third edition (1911) these main theses are retained, but the following scheme of the principal branches of magic (taken over from *Lectures on the Early History of the Kingship*, ch. ii.) is added, in accordance with the view that magic is simply misapplied association of ideas:



while 'the whole erroneous system, both theoretical and practical,' which answers to the name of magic is classified under aspects according to the following tabular form:



(See *GB*³, pt. i., *The Magic Art*, i. 54 and 118.)

The view that tabu is a negative magic did not appear in earlier editions of *The Golden Bough*. Frazer holds that, if not the whole doctrine of tabu, at all events a large part of it, would seem to be but a special application of sympathetic magic, with its two great laws of similarity and contact (*ib.* i. 111 n.).

E. S. Hartland (*Ritual and Belief*, London, 1914) enters on a full discussion of 'The Relations of Religion and Magic' (p. 26 ff.). He insists at the outset that they spring from a common root.

> 'I venture to suggest that in man's emotional response to his environment, in his interpretation in the terms of personality of the objects which encountered his attention, and in their investiture by him with potentiality, atmosphere, *orenda*, *mana*—call it by what name you will—we have the common root of magic and religion' (p. 66).

Correspondingly, magician and priest are differentiated from a common type, namely, the medicine-man.

> 'Roughly and provisionally it may be said that the professional magician is he who in the course of the evolution of society, by birth, by purchase, or by study and practice in the conventional methods, has acquired the most powerful *orenda*. Similarly, the professional priest is he who in these ways, or by prayer and fasting, has obtained the favour of the imaginary personages believed to influence or control the affairs of men—who has, in a word, possessed himself of their *orenda*. The union of these two professions in one person is not adventitious; it is probably fundamental' (p. 95 f.).

Hartland, while thus differing from Frazer on the question of origin, is disposed in other respects to follow the latter's method of delimiting magic and religion.

> Magic 'conveys the notion of power, by whatsoever means acquired, wielded by the magician as his own, and not as that of a higher being whose coöperation is only obtained by supplication and self-abasement' (p. 86).

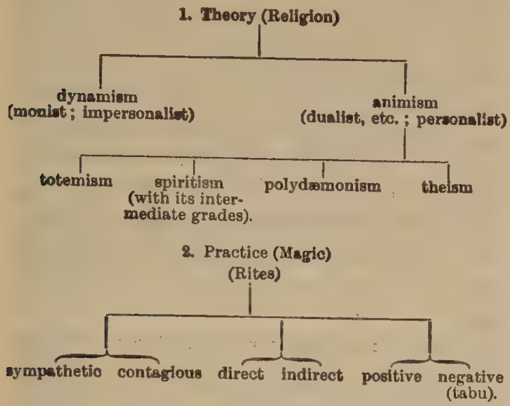
On his view prayers and sacrifices are magical processes just in so far as a constraining power is attributed to them; and he asks, 'Have analogous beliefs in the magical powers of a rite even yet disappeared from Christianity?' (p. 87).

> Religion, on the other hand, is 'confined to cultual systems, whose objects, so far as they are personal, are endowed with free will, are to be approached with true worship, and may or may not grant the prayers of their suppliants. . . . Where the object is impersonal, or is but vaguely personal, it is none the less treated with reverence and submission, as something transcending man; it is the object of an emotional attitude, actively directed towards it. The object thus, even where it is not personal, tends to become so' (p. 88).

A. Lehmann of Copenhagen (*Aberglaube und Zauberei von den ältesten Zeiten an bis in die Gegenwart*, Stuttgart, 1898) defines superstition (*Aberglaube*) as any belief which either fails to obtain authorization from a given religion or stands in contradiction with the scientific conception of nature prevailing at a given time. Correspondingly, magic or sorcery (*Magie oder Zauberei*) is any practice which is engendered by superstition, or is explained in terms of superstitious notions (p. 6 f.). By insisting on the essential relativity of these two ideas he claims to have avoided many difficulties that puzzled former inquirers. For instance, if it be asked how magic is to be distinguished from miracle, the reply is that it is all a question of standpoint, Aaron performing miracles while his Egyptian rivals are mere magicians (p. 9). For the rest, he finds two more or less independent theories to be equally at the back of magical practice, namely, the spiritist, which relies on the intermediation of personal agents, and the occultist, which calls into play mysterious powers of nature (p. 314).

H. Hubert and M. Mauss ('Esquisse d'une théorie générale de la magie,' in *ASoc* vii. [1904]) start from the conception of rites. Rites are traditional acts that are efficacious in a non-mechanical way, thus involving the notion of *mana* (*q.v.*), or wonder-working power (p. 14; cf. p. 138). Such a notion underlies the idea of the sacred as implied in a religious rite like sacrifice. A magical rite, though non-religious, involves ideas of the same order (p. 2 f.). The differentia of magical rites consists in the fact that they do not form part of an organized cult, and therefore tend to be regarded by the society concerned as illicit (p. 19). Thus religion and magic tend to stand to one another as two poles representing severally the social and the anti-social ways of trafficking with the miraculous. Finally, magic, as being always the outcast of society, becomes charged with all the effects of decomposition and rejection, and so is gradually differentiated from religion more and more. This very ingenious and weighty study of magic, to which a short sketch cannot pretend to do justice, is made, it must be remembered, from a strictly sociological standpoint, and throughout regards magic and religion not as phases of mind, but as social institutions, having as such a reality of their own determinable in terms of form and function.

Arnold van Gennep (*Les Rites de passage*, Paris, 1909) treats the magico-religious as an indivisible whole, distinguishing only between the theoretical and the practical activities which it comprises, and assigning the term 'religion' to the former and 'magic' to the latter. It is essential, in his view, to insist on the indissolubility of the relation between the theoretical and the practical sides, since the theory divorced from the practice passes into metaphysic, while the practice founded on another theory becomes science. For the rest, the mysterious forces which are the objects of magico-religious theory may be conceived equally well under an impersonal or a personal form; and, correspondingly, magico-religious practice, whether it issue in positive acts or in abstentions—viz. in the observance of tabus—may seek to deal with things either directly or indirectly through personal agents having power over the things, while the mechanism of association by similarity and contact is involved in both cases alike. The theory is stated (p. 18) in tabular form as follows:



Wilhelm Wundt (*Völkerpsychologie*, vol. ii. pts. ii. and iii., Leipzig, 1907–09) makes myth or belief the ultimate source of cult or ritual, since the latter is but the former put into practice. There is but one mythical idea at the back of all rites, namely, the idea of soul; and from it are generated in succession three forms of cult, magic, fetishism, and totemism, which by reaction cause the idea of soul to develop correspondingly. To deal only with the first of these, magic in its primary form consists in the supposed direct action of soul on soul, as when the evil eye is feared, while the secondary form consists in supposed action from a distance, when the soul-influence makes itself felt indirectly by means of a symbol (ii. 46 f.). Thus Wundt is entirely opposed to the Frazerian theory that magic implies a theory of natural causation on the part of the savage. On his view, while ordinary events are accepted as a matter of course, extraordinary events, demanding as they do a theory that will account for them, are at first ascribed to the soul-power or will of a man, and later (when the stage of magic is transcended) to that of a magnified man, or god, similar soul-power or will being ascribed to inanimate objects and to animals at the intermediate stages of fetishism and totemism.

Here perforce must end the survey of representative views, those selected for examination at least exemplifying the wide diversity of the notions which it is sought for purposes of science to impose on a highly plastic, since popular, term. Now the purely verbal side of the question need not be a source of trouble. If the things are envisaged distinctly, the words may be trusted to look after themselves. Thus in the present case there are evidently different concepts answering to separate aspects of human life; and it will be sufficient for the present purpose if these aspects are discriminated, so that terminology may be given the chance of adjusting itself to the facts.

3. Magic as a general name for rudimentary cult.—On any theory of the evolution of religion which represents it as a single movement falling into distinguishable stages, there will always be a first stage of minimum development immediately preceded by a stage of what Bacon would call *absentia in proximo*—a 'pre-religious' stage, as it might be termed. Now, since the word 'magic' tends to bear an unfavourable sense, nothing is more natural than to dub magical whatever fails to come up to the evolutionary standard which religion is more or less arbitrarily taken to embody. It hardly matters whether, after the manner of Frazer, an age of magic is held to have preceded the age of religion, or whether, in the style of Wundt, magic is identified with the lowest form of religion. In either case magic answers to something to which is assigned an unfavourable, because inferior, place in the evolutionary scale as compared with religion at its most characteristic. Anthropological science, however, is becoming increasingly chary of constructing any such scale on lines so simple and so drastic. Human evolution is a tissue of many interlacing strands; and, again, the savage of to-day is no older or earlier than the civilized man, so that typological and historical primitiveness cannot be identified offhand. At most, then, it is with the help of psychological and sociological considerations of a general type that a primordial stage of mind and society can be theoretically posited, out of which determinate religion may be shown to have emerged by some sort of subsequent process. Such general considerations suggest that, just as Jourdain talked prose before he realized the fact, so the primeval savage acted before he thought about his action. Correspondingly, therefore, in the sphere of nascent religion there must have been a stage of cult or ritual (if so it may be termed), the product of sheer unreflective habit, which preceded the growth of ideas concerning the how and why of what was being done. Certain recurrent situations in the social life—and, as for the individual life, it is wholly subordinate to the social so long as mere gregariousness prevails—induce states of emotional intensity. The emotions must find a vent somehow. This they do either through activities directed to practical ends, such as hunting, fighting, and love-making; or else through secondary activities such as are not immediately practical in their object but serve simply as outlets of superfluous energy, such as the dances that simply play at hunting, fighting, or love-making. In either case habit entwines with the activities in question all sorts of more or less functionless accidents; and the presence of these unaccountable details helps to make the whole performance seem mysterious to the performers and still more so to the civilized onlooker. When the activity is of the directly practical kind, say, hunting, whereas the tracking, the killing of the game, and so on, explain themselves, the accompanying observances enjoined by custom which do not explain themselves so readily—for instance, wearing such and such a garb, uttering certain words, and the like—may well seem to call for justification even to the unthinking savage, who will at least translate his sense of the value of custom into the vague doctrine that there is 'power' in these things, that they 'work.' When, on the other hand, the activities belong to those of the secondary type which are not immediately practical, constituting 'protreptic' rites, as they might be termed, which, while affording emotional relief, act likewise on the whole as preparations for the business of life—very much as play does, in the case of the young—then accretions in the way of accidental features due to custom are likely to be more pronounced, inasmuch as there is no discipline of hard fact to impose bounds on the action. Meanwhile, in proportion as these secondary activities conform to the same stimuli as the primary activities of which they are the by-product, as, for instance, when the hunting interest overflows into a pantomimic rehearsal of the chase, they will wear an imitative appearance, though in reality being 'repercussions' rather than imitations. When, however, an *ex post facto* justification of them becomes necessary, it is quite natural that the doctrine that they have 'power' should implicate the belief that their seemingly imitative character has something to do with their efficacy. It is putting the cart before the horse to say, as Frazer seems to do, that the belief that 'like produces like,' or what not, generates symbolic ritual. It is, on the contrary, symbolic ritual—*i.e.* a ritual that involves a more or less realistic reproduction of some practical activity—that generates the doctrine of 'sympathetic' causation in one or another of its forms. As a matter of fact, the so-called symbolic rites usually include all manner of details the mimetic bearing of which is at least not obvious; and the generalization that an 'age of magic' indulges in rites which are symbolic and sympathetic through and through is reached by picking out the abstract element of imitativeness which runs through primitive cult (and to no small extent through the more 'advanced' types of cult as well), and ignoring everything that is like nothing but itself, yet forms just as persistent a part of the approved ritual. If, then, we are going to use the word 'magic' loosely as a name for rudimentary or unreflective cult in general, let us at least identify the magical quality, not with the imitativeness, which is a secondary feature, but with the customariness, which is the real source of the value attaching to these non-utilitarian accompaniments of the more exciting moments of the practical life—these 'superstitious' practices, as the civilized onlooker ranks them. For the rest, in so far as these relatively unideated discharges of the social energy need any supporting doctrine, they would seem to find it, not in any philosophy about like producing like, and so on—ideas that appear quite late in the history of thought—but in vague notions of the *mana* type (see MANA). In other words, the savage comforts himself with no theory of *how* these ritual practices work, but is content to feel and know *that* they work—that, despite all appearances to the contrary (since their non-utilitarian character may be supposed to become gradually manifest), they have power and efficacy in them or behind them. It is just this faith in their efficacy that distinguishes nascently religious practices from such as are merely æsthetic. The former are so closely related to the practical activities that a sense of their contributory value runs through them, and they thus suggest and foreshadow practice in all sorts of ways that make for hope, courage, and confidence, whereas æsthetic enjoyment, though possessing a recreative function, does not thus point beyond itself. It remains only to ask whether 'magic' is a suitable word for the designation of the most rudimentary type of cult. On the whole, it would seem a pity for the evolutionist to apply a term redolent of disparagement to what on his view is a genuine phase of the serious life as lived under certain conditions of culture. It is far less question-begging to predicate religion throughout (unless, indeed, one is prepared to follow van Gennep, and predicate magic throughout as well as a general name for the practical side of religion—which is surely an abuse of language). The science of comparative religion, if it is to do its work properly, must impartially embrace the cults of all mankind in its survey.

An observation may be added for the benefit of the field-worker, who, as a rule, has to take over his classificatory apparatus ready-made from the hands of the theorist. If such an one has learnt to identify magic with the sympathetic principle or with those early forms of cult in which this principle appears to predominate, he will be inclined to label his collections of specific ceremonies 'hunting magic,' 'productive magic' (a term often used to describe rites of the *intichiuma* type, which bear on the increase of food-animals and plants), 'agricultural magic,' and so on. But it is just as easy to speak of hunting and agricultural 'rites' or 'ritual'; and it is much more likely to lead to an unprejudiced description of all the relevant facts, whether they be of the sympathetic order or not. So, again, tabus are better treated as a part of ritual, namely, as observances of negative prescriptions, which will invariably be found to form one context with sundry other positive prescriptions; to make them a part of magic is neither necessary nor even natural according to the ordinary usage of speech. It may even be said to be now a recognized working principle that the first-hand observer should class all magico-religious phenomena under one general heading, and leave the theorists to determine how far, and along what lines, the differentiation of the magical and religious elements involved in the complex needs to be pushed (see *Notes and Queries on Anthropology*⁴, issued by the Royal Anthrop. Institute, London, 1912, section on 'The Study of Magico-Religious Facts,' p. 251 f.).

4. Magic as a name for the black art and allied developments.—The view which has just been discussed and deprecated, that identifies magic with rudimentary cult as a whole, may be said to draw a horizontal line between magic and the later and more evolved products of the same tendencies which rudimentary cult embodies. The other view, which will now be examined, differs altogether from the former in that it draws a perpendicular line between magic and certain contemporaneous but rival growths which may be broadly classed under the two heads of religion and science. This point comes out very clearly in Lehmann's definition, which correlates magic with superstition as practice with theory, and in turn makes superstition co-extensive with such ideas as stand to the accepted religious and scientific beliefs of a given time in a relation of more or less direct conflict and contradiction.

(*a*) *Magic as the rival of religion.*—Starting once more from the fact that the word 'magic' tends to stand for something bad, we realize at once that it is possible to treat magic as a general name for all the bad kinds of trafficking with the occult and supra-sensible in vogue in a given society, while, conversely, religion may be taken to comprehend all the good kinds of such trafficking. Obviously the power of bringing wonders to pass is a two-edged sword, since surprising things may happen for weal and for woe, while, again, immoral as well as moral persons may seek benefit from miracle. It is, indeed, eminently characteristic of ideas of the *mana* type that they are, from a moral point of view, ambiguous and two-sided, covering all manifestations of the efficacy of rites, whether they be beneficent or maleficent in their intention (see MANA). Now it is easy to see how rites of an ill-intentioned kind will come to be practised and will have efficacy imputed to them. Hate, greed, and the other types of anti-social attitude being more or less endemic at all levels of society, they are bound to find expression in habitual activities that assume the character of mystic rites in proportion as they abound in accretions and in secondary activities of the expletive order, such as cursing in set phrases or destroying an absent enemy in pantomime. Moreover, the very fear which hate and malice awake in the breasts of those against whom they are directed is enough to create an atmosphere in which the natural seeds of black magic cannot but germinate freely. The almost universal dread of the evil eye illustrates very well how the responsibility for the existence of a belief in sorcery often rests with the credulous victim just as much as, or more than, with the alleged aggressor. Anthropological literature is full of striking examples of the tendency which W. E. Roth (*North Queensland Ethnography*, Bulletin no. 5, Brisbane, 1903, p. 28) calls *thanatomania*, namely, the suggestibility leading sooner or later to death on the part of one who satisfies himself that he is doomed. Roth has had personal experience as a medical man of five or six such cases among the Queensland natives. Thus it comes about that, by an extension of the same line of thought, 'evil magic' becomes the stock explanation offered for any form of accident or mysterious disease.

> 'An individual becomes incapacitated through some chronic and painful illness which does not answer to the various aboriginal methods of treatment or materia medica: the illness weighs upon his mind, and after a time he becomes more and more confirmed in his conviction that someone has been "pointing" the *munguni* (death-bone) at him—*i.e.* that a "bone," pebble, flint, etc., has been put inside him and his blood removed' (W. E. Roth, *Ethnological Studies among the North-West-Central Queensland Aborigines*, Brisbane, 1897, p. 154).

Indeed, it has often been observed that the savage scarcely recognizes the fact of 'natural' death, so ready is he to impute the event to the sinister arts of some particular individual or at least to the machinations of persons unknown (cf. art. LIFE AND DEATH [Primitive], § 7). From these vaguer attributions of ill-will to one's neighbours it is but a step to the conception of an evil magic independent of the will and intention of any person at all. Various more or less impersonal forms of evil—such as the *arungquiltha* of the Arunta (Spencer-Gillen^{a}, London, 1899, p. 548 n.), the *otgon* of the Hurons (J. N. B. Hewitt, *Am. Anthropologist*, new ser., iv. [1902] 37 n.), or the *badi* of the Malays (W. W. Skeat, *Malay Magic*, London, 1900, p. 94)—are regarded as malignant and destructive agencies in their own right, very much as one thinks of the plague or the influenza. In short, there is always more or less of black magic 'in the air' for the panic-ridden savage. For this reason, and seeing also how much the healer of diseases and, again, the witch-finder do to foster the evil reputation of the magician by their highly-coloured accounts of the dreadful arts which it is their professional privilege to be able to counteract, one might almost be tempted to declare that the sorcerer is a mere bogey, the creation of abject fear wedded to ignorance and credulity. But this would be to go too far. There seems good evidence that in Australia men and even women, despite the fact that black magic practised within the group is normally held to be punishable by death, wreak their vengeance in this way on their private enemies. Roth's own black servant, a mere layman, actually dared to point the bone at a native doctor, the latter dying about a fortnight later (*N. Queensland Ethnography*, Bull. no. 5, p. 30). At most, then, it may be surmised that for every case of genuine guilt there are far more false accusations; and, in short, generally, in every witch-haunted society, whether it be native Australia or 17th cent. England, that the proofs of witchcraft mainly rest on an argument from effect to cause.

As for love-magic, it may not seem at first sight to have the anti-social character of the magic of hate; but, if closely observed, it will be found on the whole to minister to hardly less disreputable purposes. Thus among the Arunta of Central Australia such magic is chiefly resorted to in order to bring about a runaway match. It is true that, according to native ideas, it is merely a case of one tribal husband trying to entice the woman away from another tribal husband, so that, as Spencer and Gillen say, 'it is a breach of manners but not of custom' (^{a}, p. 544). Even so, however, it would seem to be extremely liable to lead to a general fight within the group, or between one local group and another, so that its anti-social tendency is bound in the long run to become tolerably manifest.

So much for what are perhaps the clearest instances of types of ritual acts generated by passions and desires which society is bound to try to suppress in the interest of its own self-preservation. Such rites can be placed in a more or less determinate class by themselves, whereas over against this class can be set in contrast another class of rites, entirely similar as regards the general nature of their mechanism, but embodying motives of a kind held to be socially salutary. Broadly speaking, all public rites have this common quality of being licit and reputable, since the fact that they are the recognized custom of the community is taken as a sufficient guarantee that they exist for the furtherance of the common weal. Thus the totemic ceremonies of the Central Australians, the object of which is the increase of the food-animals and plants, occupy exactly the same place in the life of the people as is filled by the rites of the Church in a Christian country. Hence E. Durkheim (*Les Formes élémentaires de la vie religieuse*, Paris, 1912) takes the totemic system of Australia as the typical instance of an elementary religion, whereas Frazer, adopting what has been termed the horizontal line of division between magic and religion, would assign these totemic rites wholesale to the age of magic. Indeed, no better instance could be cited to illustrate the incompatibility between the horizontal and the perpendicular methods of viewing magic and religion in their relation to each other. While, then, for the simpler societies at all events, public rites always rank as good and licit, does it follow that private rites as such will tend to be regarded as bad and illicit? According to Robertson Smith (*The Religion of the Semites*^{2}, London, 1894, p. 263 f.), it well-nigh amounts to this:

> 'It was the community, and not the individual, that was sure of the permanent and unfailing help of its deity. It was a national not a personal providence that was taught by ancient religion. So much was this the case that in purely personal concerns the ancients were very apt to turn, not to the recognised religion of the family or of the state, but to magical superstitions. . . . Not only did these magical superstitions lie outside religion, but in all well-ordered states they were regarded as illicit. A man had no right to enter into private relations with supernatural powers that might help him at the expense of the community to which he belonged. In his relations to the unseen he was bound always to think and act with and for the community, and not for himself alone.'

Granting, however, that in the small undifferentiated society private enterprise is suspect, we must recognize that, as the division of labour develops and the individual asserts himself more and more, the law is increasingly ready to sanction, or at least condone, the use of ritual forms for securing personal ends, such as the protection of property by tabu-marks having the force of conditional curses (see P. Huvelin, 'Magie et droit individuel,' in *ASoc* x. [1907] 1 f.; and cf. M. Mauss and M. H. Beuchat, *ib.* ix. [1906] 117, on the magico-religious significance of the Eskimo property-marks). For the rest, there will always be in every society a number of ceremonial practices to which a certain amount of magico-religious value attaches that fall most naturally under the category of folk-lore, having no place in the official cult, yet being too insignificant to call for much notice favourable or unfavourable, and, on the whole, tending to be despised rather than condemned. In short, for certain purposes of science it is best to treat all magico-religious rites as generically akin, even while making due allowance for their tendency to group themselves round the opposite pole of beneficence and maleficence, of social service and individual greed or spite. More especially is this so when the interest passes from intent to content, from motive to mechanism. Social and anti-social rites are hardly distinguishable in respect of their external forms at the stage of the most rudimentary culture. Thus the agents bear the closest resemblance to each other, the sorcerer and priest often meeting in the person of the medicine-man. The rites are of the same general pattern, whether they be manual or oral. Lastly, the ideas that are bound up with the rites conform to a common type, now to that of *mana* and now to that of spirit (cf. Huvelin, *op. cit.* p. 2). After all, it is no wonder that differentiation should hardly have begun, seeing that, so long as society is represented by an aggregate of small groups living in a state of perpetual discord, what would be evil if practised on a friend becomes good the moment it is directed against the people just across the way. Or, again, society may halt as it were between two ethical opinions, with the result that ritual practices of contradictory intent may obtain something like equal toleration ; the moral status of love-magic was especially ambiguous, so that, for instance, among the Kurnai tribe of Victoria, where marriage by elopement verges on the position of a recognized institution, 'while there were medicine-men who assisted those who wished to elope, there were other medicine-men who aided the pursuing kindred to discover them' (A. W. Howitt, *The Native Tribes of S.E. Australia*, London, 1904, p. 277). Once more the medicine-man in his capacity of tribal head-man may use his supernatural power to punish offenders against the laws of the group, such as the novice who behaves improperly at the initiation ceremonies, or the man who attacks another by means of evil magic ; but he will likewise in his private capacity use his power against his enemies, and will even bring to bear on them the power of Daramulun, the great anthropomorphic god of the mysteries, the very embodiment of all that is most religious in the eyes of the tribe (Howitt, pp. 543, 382). Clearly, then, it is not to the simpler and more undifferentiated societies that we must look for an accurate evaluation of the purposes embodied in rites, leading sooner or later to their organization in rival systems that henceforth to some extent develop independently. Organization and system, however, are terms that perhaps are hardly applicable even to the later developments of black magic. It is religion that has all the organization to itself, because public approval affords it every chance of free expansion. Magic, on the other hand, as the enemy of organized cult and, indeed, of the social organization as a whole, must lurk in dark places, and grows not by internal systematization, but merely as does a rubbish-heap, by the casual accumulation of degraded and disintegrated rites of all kinds. At most it may affect a certain definiteness of form by imitating religious ritual in a spirit of blasphemous parody, as in the case of the 'black mass.' On the whole, however, it is utterly deficient on the side of theory, and consists simply in a congeries of practices which by perversion and distortion have lost most of the meaning that they once had. Only in this sense, then, do they rest on the principle of compulsion as opposed to conciliation, that, being mere rites, lacking the support of any consistent scheme of thought, they have to depend for their validity on the bare fact that they appear to work. Religion, on the other hand, though never wholly escaping the tendency to impute value and efficacy to its ritual as such, is free to develop an ethical conception of the godhead in which the action of mere power is gradually converted into that of a power that makes for righteousness, and is therefore to be moved and conciliated not by rites but by righteous conduct.

(*b*) *Magic as the rival of science.*—The view advanced by Frazer to the effect that the fundamental conception of magic is identical with that of modern science (GB^3, pt. i., *The Magic Art*, i. 220) will hardly bear close inspection. The magician surely does not postulate 'that the same causes will always produce the same effects.' On the contrary, his art is based on the supposed possibility of miracle—on what might be termed super-causation as contrasted with normal causation. In other words, he seeks to help out ordinary action by means of an increment of power borrowed from a supra-sensible source. This is what Tylor means by characterizing magic as 'occult science.' It makes a fatal difference if, after the manner of Frazer, this qualification be omitted. Magic thus stands in far closer affinity with religion than with science, inasmuch as religion and magic equally consist in dealings with the supra-sensible and differ not as regards the means employed but simply as regards the ends pursued, since the one tries to bring blessings to pass by means of miracle, and the other to bring curses. On the other hand, at no known stage of his evolution does the existence of man consist in one continuous round of mystic practices. It is mainly at the crisis, periodic or occasional, in the social and individual life that the need to draw on unseen sources of support is felt. In the intervals the workaday world of actions, guided by the routine of sense-perception, stands in the foreground of attention ; and this is the world in which science in the sense of natural science has always been at home. Chipping a flint so as to produce a cutting edge is nascent science, whereas bringing up a quartz-crystal mysteriously from one's inside is a magico-religious proceeding belonging to quite another order of experience. A considerable part at any rate of modern science has originated in technical processes of a directly utilitarian and 'lay' character. Thus European geometry would seem to be the outcome of the art of the 'cord-fasteners' who measured out the land in Egypt after each inundation of the Nile (cf. J. Burnet, *Early Greek Philosophy*^{2}, London, 1908, p. 24). It cannot be denied, however, that, so long as their occult character be recognized, certain developments of the magico-religious way of thinking may be held to correspond to sciences or pseudo-sciences, inasmuch as they severally represent a body of organized lore intended on the whole for the furtherance of secular and purely technical ends. Of these the most characteristic types are faith-healing and divination (*qq.v.*). Faith-healing is in its most typical form a direct counterblast to sorcery, which is in essence a faith-hurting. White magic and black magic determine to a large extent each other's form, since the natural procedure of the healer is first to establish by his diagnosis what exactly the wicked magician has done, and then by dramatic reversal of the action to undo it. Indeed, as has already been suggested, witchcraft is in no small part a pure invention on the part of leechcraft. To bring about a faith-cure it is essential to show that what is wrong is something that will answer to the proposed method of putting it right ; and what more plain than that medicine-man may checkmate medicine-man, diamond cut diamond ? Meanwhile, the occult science of the faith-healer is not the only form of medical science known to the savage. On the contrary, it may be more or less sharply distinguished from the ordinary folk-medicine, towards which it stands in a certain attitude of rivalry.

Thus Roth, who, as a medical man, went very carefully into the various methods of dealing with disease that prevailed among the aborigines of North Queensland, shows that 'no "doctors" attend specially on the sick, the charge of all such being left to individual caprice, *e.g.*, a woman looks after her husband, a mother after her child. Nor do they specially prescribe, the knowledge—where known to all—of the therapeutical value of any plant, of massage, etc., being common to the tribe' (*N. Queensland Ethn.*, Bull. 5, p. 29). It is only when the ordinary treatment fails that the aid of the medicine-man is called in (*ib.*).

Among the specifics in common use among the natives observed by him, Roth enumerates more than forty different plants, for some of which at least genuine remedial properties can be claimed. Again, ligatures, bleeding, massage, poultices and fomentations, dressings for cuts, the use of splints for fractures, and so on, are 'lay' methods of treatment which rest on a basis of what we too would be ready to recognize as 'science,' *i.e.* a more or less organized common sense. At the same time, the lay mind is likewise addicted to what the modern doctors would regard as pure superstition, such as reliance on charms, amulets, the sucking-string, etc. But at any rate the atmosphere of mystery with which the professional faith-healer surrounds the exercise of his craft is absent from these applications of communal lore to the ills of life. Further, the professional enters into competition with the layman in order to demonstrate how superior his wonder-working is to the humdrum procedure of the ordinary folk-medicine.

Thus Roth specially notes that 'among the Boulia blacks, there are indications of a desire on the part of the medicine-men to claim a share in the cure, with a corresponding reward.' The common cure for snake-bite being a vapour-bath, which apparently answers very well, the medicine-man undertakes to help it out by operating on the snake. 'The doctor himself goes to the place where the accident happened, is shown where the snake lies hid, digs it out, and lets it glide away a few feet before commencing to pelt it with stones. During this process the snake gradually diminishes in size, and gradually becomes harmless, when it is carried back to camp, where the medicine-man, turning its skin half-way inside out while still alive, throws it into water, and so makes an end of it. It is needless to say that no layman is allowed to witness any part of this procedure' (*ib.* p. 42).

It only remains to add, in fairness to the medicine-man, that a reputation for magic in the sense of a more or less bad and anti-social kind of wonder-working is thrust upon him by the very fact that he is a professional and hence has the public against him, according to the principle that whatever is private in rude society is suspect. As Huvelin points out, so long as society remains undifferentiated, all custom rests on the common belief and wears a religious character, so that every manifestation of individuality is destitute of sanction, when it does not actually amount to a crime. Hence, when social organization begins to come into existence through the division of labour, individual activity is obliged to disguise itself under a cloak of religious forms, which gives the professional an ambiguous character, not only in the eyes of others, but even in his own eyes, since others suspect, while he himself is obscurely conscious, that powers and practices which originally came into being for the public service are being exploited for private ends (Huvelin, p. 46). Whether it be the professional doctor or the professional smith, his right to be a specialist has been purchased at the cost of seeming, and being, something of a humbug.

Passing to the subject of divination, we have an even clearer case of a pseudo-science, since, whereas faith-healing has been to a certain extent purged of its supernaturalism and incorporated into modern medicine, divination has no part or lot in the science of to-day, unless we detect its aftermath in the accepted postulate that the goal of science is prediction. On the other hand, divination has in certain of its developments all the appearance of science so far as concerns the organization of its principles and the directly practical character of its aims. Thus Babylonian divination, the literature of which is particularly rich, reveals an amazing wealth of lore involving the most elaborate classifications of omens resting on a wide basis of genuine observation. It is also to be noticed that here the practice of the art depending on this body of would-be knowledge was thoroughly respectable, being, in fact, a branch or department of the official religion (see DIVINATION [Assyro-Babylonian]). It is not, in fact, until it migrates into Europe that Babylonian astrology is differentiated from astronomy, and the opposition between the two becomes apparent. Again, at a lower stage of social evolution divination can fill the place of science in so far as it calls out the reasoning powers of the mind and supplies some sort of intellectual gymnastic. Thus H. A. Junod, a missionary, who gives an admirable account of the use of the divinatory bones among the Thonga of S. Africa, spent many hours with his native teachers trying to acquire the principles of this system of theirs which they call 'The Word,' and vaunt to be superior to the missionary's Bible:

'So I had an opportunity of reaching the depths of the Bantu mind, that mind which has perhaps invented nothing more elaborate and more magical than the divinatory system. Of course no sensible person would for a moment believe in the objective value of these practices. Astralogomancy has no more real worth than Cheiromancy, Necromancy, and all the other "mancies." But I am obliged to confess that the Thonga system is far more clever than any other which I have met with, and that it admirably answers to the wants of the Natives, as it comprehends all the elements of their life, photographs them, so to speak, in such a way that indications and directions can be obtained for all possible cases' (*The Life of a South African Tribe*, Neuchâtel, 1913, ii. 494).

It remains to show how science in the modern sense has managed to shake itself free of its rivals, the pseudo-sciences. As far as relates to what has been called 'the European epoch of the human mind,' the mother of science is undoubtedly ancient Greece. There the human spirit shook itself free of the domination of the magico-religious, thanks to its interest in the things of this world.

'Between Homer and Herodotus, Greek Reason has come into the world. . . . Man has become the measure of all things; and things are worth observing and recording . . . according as they do, or do not, amplify human knowledge already acquired, or prompt or guide human attempts to classify and interpret them. In this high meaning of the word all Greek records are utilitarian, relative to an end in view: and this end is ever anthropocentric, it is nothing less, but it is also nothing more, than the Good Life, the Wellbeing of Mankind' (J. L. Myres, in *Anthropology and the Classics*, ed. Marett, Oxford, 1908, p. 123).

There is no violent breaking with the old-world rituals and the associated beliefs; but colonization, trade, and the progress of the industrial arts beget a secular frame of mind which dismisses theological prejudices in so far as they conflict with technical improvements.

'All ailments are from God,' writes Hippocrates, 'no one of them being more divine than another, or more human either, but all alike from God. But each of such things has a process of growth, and nothing comes into being without a process of growth.' Wherefore he turns without more ado to the study of these physical causes (cf. Myres, *loc. cit.* p. 140).

Meanwhile, in philosophy, which at first understands by 'nature' something eminently supernatural in its potency for making wonders happen, there gradually develops a scientific tradition by the side of a mystic tradition, the former of which affirms the reality of the many things of the sense-world as against the reality of the one transcendental world-soul conceived by the latter (cf. F. M. Cornford, *From Religion to Philosophy*, London, 1912, p. 144 f.). The former view culminates in the atomism of Democritus, which has prevailed in the sphere of physical science until recent times. Now this whole scientific movement is opposed in spirit to magic and religion alike. It contradicts the whole tenor of the magico-religious type of procedure whether by manual or by oral rites, and hence cannot be identified or equated, after the fashion of Frazer, with magic regarded as equivalent to the earliest phase of cult in general. Nor, again, has it any real affinity with black magic or any parallel development, save in so far as all technical processes undertaken by experts are at first more or less suspect as private exploitations, as has already been explained. Natural science by association with the productive arts has taken into its hands the entire control of the mechanical and material sphere of human life, and within this sphere will brook no rival. In the moral sphere, on the other hand, it shows no signs of making headway against the claim of religion to be the supreme authority. Meanwhile, neither science nor religion can afford to tolerate the anti-social and immoral person, the man who tries to make a living out of the credulity and idle fears of weak humanity. In practice, however, both find it hard to distinguish between the delinquent and the innovator, so that the line between evil magic and charlatanry, on the one hand, and mere heterodoxy, on the other, tends to be even now of a somewhat fluctuating kind. As for black magic, it has almost disappeared from view in civilized society. As the folklorist knows, however, a permanent possibility of demoralizing superstition lurks in human nature, and only education in regard to both physical facts and moral truths can keep the monster down.

LITERATURE.—The subject has a vast literature, more especially seeing that, according to one definition of the term, magic covers all the ruder forms of cult. The following works are in various ways authoritative: E. B. Tylor, *Researches into the Early History of Mankind*^{2}, London, 1870, ch. vi., *PC*^{3}, do. 1891, ch. iv., art. 'Magic,' in *EBr*^{9}; J. G. Frazer, *GB*^{3}, pt. i., *The Magic Art*, do. 1911 (see also earlier edd.), *Lectures on the Early History of the Kingship*, do. 1905; A. C. Lyall, *Asiatic Studies*, 1st ser., do. 1899, p. 99 ff.; F. B. Jevons, *Introduction to the History of Religion*, do. 1896, 'The Definition of Magic,' *Sociological Review*, i. [1908] 105 ff.; *Trans. of 3rd Internat. Cong. of Religions*, i. [Oxford, 1908] 71 f., *Introduction to the Study of Comparative Rel.*, New York, 1908, p. 70 f.; R. R. Marett, *The Threshold of Religion*^{2}, London, 1914, essay ii.; L. T. Hobhouse, *Morals in Evolution*, do. 1906, ^{2}1914, ii.; A. Lang, *Magic and Religion*, do. 1901; A. C. Haddon, *Magic and Fetishism*, do. 1906; W. E. Roth, *North Queensland Ethnography*, Bull. no. 5, 'Superstition, Magic, and Medicine,' Brisbane, 1903; W. R. Halliday, 'The Force of Initiative in Magical Conflict,' in *FL* xxi. [1910] 147ff.; E. S. Hartland, *Ritual and Belief*, London, 1914; W. W. Skeat, *Malay Magic*, do. 1900; I. King, *The Development of Religion*, do. 1910; E. S. Ames, *The Psychology of Religious Experience*, do. 1910; J. H. Leuba, *A Psychological Study of Religion*, New York, 1912; H. Hubert and M. Mauss, 'Esquisse d'une théorie générale de la magie,' *ASoc* vii. [1904], *Mélanges d'histoire des religions*, Paris, 1909; P. Huvelin, 'Magie et droit individuel,' *ASoc* x. [1907]; H. Hubert, art. 'Magia,' in Daremberg-Saglio, vi.; A. van Gennep, *Les Rites de passage*, Paris, 1909, p. 17 f.; K. T. Preuss, 'Der Ursprung der Religion und Kunst,' in *Globus*, lxxxvi. [1904]; H. Oldenberg, *Die Religion des Veda*, Berlin, 1894; W. Wundt, *Völkerpsychologie*, vol. ii. pt. ii., Leipzig, 1907; J. Ennemoser, *Geschichte der Magie*, Munich, 1844; A. Lehmann, *Aberglaube und Zauberei*, Stuttgart, 1908.

R. R. MARETT.

MAGIC (Arabian and Muslim).—The word used in Arabic for this notion is *sihr*, connected with the verb meaning 'to produce illusion' on the eyes (*Qur'ān*, vii. 113); it seems, therefore, to be in origin the causative of the verb *ḥāra*, 'to be bewildered,' and is explained by the verb 'to frighten' (*istarhaba*), whence the whole phrase resembles *μαγεύων καὶ ἐξιστάνων* in Ac 8^9. It is probable that the Hebrew *shaḥar*, used twice by Isaiah for 'conjure away,' is identical, and the Armenian *skhroumn*, 'marvel,' may be borrowed from this word. The passage in the Qur'ān which contains most information on the subject is ii. 96, where it is stated that the *siḥr* was revealed to the two angels in Babel, Hārūt and Mārūt, who taught it to mankind, without concealing the fact that they were tempting them; the *siḥr* showed how to separate a man from his wife, *i.e.* was the contrary of a love-philtre. Isaiah (47^{11}) connects the *shaḥar* with Babylon, which, according to classical writers also, was the headquarters of magic:

> 'Tunc Babylon Persea licet, secretaque Memphis
> Omne vetustorum solvat penetrale Magorum'
> (Lucan, *Pharsalia*, vi. 449 f.).

Hārūt and Mārūt seem from their names to be Aramaic personifications of mischief and rebellion, with which their recorded operation corresponds.

In the Qur'ān, as might be expected, it is not clear whether the results of *siḥr* are always subjective only or may be objective; and some commentators think both possible. When, therefore, a miracle is branded as *siḥr*, it may be regarded either as an optical illusion or as an illicit process due to the employment of demons; it is true that Solomon employed them (according to the Qur'ān), but this may have been a prophetic privilege. And a theological difficulty arises from the statement that *siḥr* was revealed to two angels, as what is revealed ought not to be evil. The orthodox view is that magic can be objective; but some Mu'tazilite doctors and some members of the Shāfi'ite and Ḥanifite schools took the other view; and even those who believed that it was objective thought that it could affect accidents only, and could not transmute substances.

The practice was forbidden, and, indeed, under penalty of death; Mālik held that one convicted of sorcery should not even be given the option of repentance, whereas Shāfi'ī confined the death-sentence to the case where examination of the accused proved him to be guilty of unbelief (Qasṭallānī, *Commentary on the Mawāhib Laduniyyah*, Cairo, 1278, vii. 116). Acquisition of the theory was, however, permissible, and, according to some, a duty incumbent on certain members of the community, as protection against those who practised the art.

The recognition by Islām of the existence of *jinn* furnished a basis for the belief in magic, to which, however, the attitude of the educated and of serious writers is about the same in most countries; it is not ordinarily recognized as an agent in the course of events, yet may well be admitted into tales of wonder and delight, whereas the superstitious may resort to it for a variety of needs.

It figures on one occasion in the biography of the Prophet, when an illness was brought upon him by a Jew named Labīd ben al-A'sam; according to one account, the latter obtained possession of some hair left on the Prophet's comb, which he hid with some other objects in a well; according to others, the object hidden was a string with a number of knots upon it. The latter version is doubtless suggested by the penultimate *sūra* of the Qur'ān, which is a spell against eclipses and women who breathe or spit on knots. The practices against which these spells are directed are similar to, if not identical with, those which are enumerated by classical writers (*e.g.*, Lucan, vi. 460 ff.). Others, of which the *Arabian Nights* offers ample illustration, also have analogies in the literature of classical antiquity; the transformation of men into animals by a witch's potion is found as early as the *Odyssey*. In Arabic there is a special word for this process, *maskh*.

Ḥājī Khalīfah (*Lexicon bibliograph. et encyclopæd.*, ed. G. Flügel, London, 1835–58, iii. 584) classifies the various magical methods as follows:

> The Indian consists in purification of the soul; the Nabatæan in the employment of spells at suitable times; the Greek in compelling the service of the spirits of the spheres and the stars; that of the Hebrews, Copts, and Arabs in mentioning names of unknown meaning—this method being a variety of that by incantation, those who employ it professing thereby to press into their service the angels who have power over the *jinn*. This last expression recalls Lucan's
>
> 'habent haec carmina certum
> Imperiosa deum, qui mundum cogere, quicquid
> Cogitur ipse potest' (vi. 497 ff.).

The classification cannot be maintained, though it is possible that the tendency in the case of the different nations corresponded roughly with the methods assigned; thus doubtless the theory that ascetic practice won command over the gods was carried to greater lengths by the Indians than elsewhere, whereas the theory of mysterious words may be particularly Jewish, and the Hermetic magic specially astrological; ordinarily, however, all these ideas are confused or combined.

The difference emphasized by Lucan between authorized and unauthorized occultism ('si quid tacitum, sed fas erat' and 'detestanda deis saevorum arcana magorum') was fully recognized in the Islāmic State, which had its official astrologers while it condemned the black art. Since, however, what was required from the former was prediction of the future, the distinction could not be maintained with the desirable clearness.

Ṭabarī records (*History*, ed. M. J. de Goeje, Leyden, 1879–1901, iii. 1463) how the highly respected astrologer, 'Alī ben Yaḥyā, in the year 247, was reading out to the khalīf a book of predictions (*malāḥim*), when he came across the statement that the tenth khalīf would be slain in his own reception-room; he had to alter the text in consequence. Much the same is recorded by him in the case of an unauthorized lad, who possessed 'the Book of the Empire' (*Kitāb al-daulah*), where there was a prophecy that the khalīf Mahdī would last ten years. Since such a prophecy would mean certain death to any one who was discovered to be in possession of it, the word 'forty' was substituted for 'ten' in the book, and with such skill that no one could detect the interpolation (iii. 497). In the year 284 (Ṭabarī, iii. 2179) an unknown person haunted the palace of the khalīf Mu'taḍid, who summoned 'the lunatics and the conjurers' to detect him; the conjurers were to get control of the demon in possession of one of the lunatics, who would then give the necessary information. The behaviour of the lunatics, however, so much alarmed the khalīf that he dismissed them all with gratuities before anything could be done.

Similarly, there is a distinction between the normal or legitimate spell and that which would be condemned by the orthodox, though here, too, clearness is wanting. The child's amulet called *tamīmah* is regarded as normal. About the magical employment of Qur'ānic verses there seem to be differences of opinion. The historian Sakhāwī (*Tibr Masbūk*, Cairo, 1896, p. 218) records a controversy about the *ḥafīẓatRamaḍān*, certain verses which, if written on the last Friday in Ramaḍān, will secure the house which contains them from burning and the ship whereon they are inscribed from being wrecked; the historian's teacher wished for government interference with their inscription, but the practice was too widely spread to admit of this. In the *Maqāmahs* of Ḥarīrī the impostor succeeds with the spells which he composes; in one case the magic lies in the eloquence of the composition, whereas in the other (for facilitating childbirth) the work is really done by a drug with which he happens to be acquainted.

In the *Arabian Nights* the magician is frequently a Moor (*Maghribī*), and the association of magic with those regions is not extinct; the most elaborate treatise which we possess on Islāmic magic is E. Doutté's *Magie et religion dans l'Afrique du Nord* (Algiers, 1909). Women and negroes also play a considerable rôle. In the tradition the art has a tendency to be connected with Israelites, as we have seen in the case of the Prophet.

According to Mas'ūdī (*Murūj al-dhahab*, ed. and tr. B. de Meynard and P. de Courteille, Paris, 1861–77, iv. 266), one of the complaints against Uthmān, the third khalīf, was that he had shown insufficient firmness in dealing with the case of a Jew, named Batrunī, who had performed some marvellous exploits in the mosque of Kūfa; 'he caused a mighty king mounted on a horse to ride in the court, he then turned himself into a camel, then produced a phantom ass, which passed through him, then he beheaded a man, and by another stroke with his sword put him together again'; a pious spectator beheaded the Jew, who probably was a conjurer, and performed some feats which the narrators have exaggerated.

Written spells which are brought to Europe from Islāmic countries are often in Hebrew or contain Hebrew words.

The limits which separate the practices condemned by the Prophet from those which he approved are again very narrow; thus in the authoritative collection of traditions by Muslim (Cairo, 1290, ii. 180–183) evidence is adduced to show that Muhammad sanctioned the employment of spells or magical prayers for treatment of the evil eye, snake-poison, and disease generally; the expert who employed the Qur'ānic texts for this purpose might even charge a fee, out of which the Prophet would accept a royalty. The word *ruqyah* is employed for charms of this kind, and in the case of snakes it would seem, from a story told by Jāḥiẓ (*Zoology*, Cairo, 1906, iv. 134), that their effectiveness depended on the loudness of the charmer's voice.

The name for collections of oracles is, as has been seen, *Malāḥim*, and this word is applied to those prophetical works wherein the future is regularly read (*e.g.*, the Book of Daniel), as well as to less authoritative books. Others were of the sort known as *Consulting-books, i.e.* tables whence the future could be divined by certain modes of combining the words, letters, or figures which make them up. It is likely that the primitive practices which constitute the magicians' chief stock-in-trade, and are common to many countries, are handed on by oral tradition, and to be learned only from the persons who perform them or from travellers who have made careful observations (*e.g.*, E. W. Lane, *Manners and Customs of the Modern Egyptians*, London, 1895).

LITERATURE.—The authorities are quoted in the article. Cf., further, DIVINATION (Muslim), CHARMS AND AMULETS (Muhammadan).

D. S. MARGOLIOUTH.

MAGIC (Babylonian).—For the purpose of this article we may regard the term 'magic' as connoting practices which have their origin in the belief that man is able by their exercise to control the unseen powers and force them to act in accordance with his own will. Without attempting to discuss the vexed question of the relationship of magic to religion (see 'Introductory' section above), we may say that this generally accepted use of the term has great advantages for the classification of material. And it corresponds, moreover, to a distinct contrast in attitude towards the supernatural. Magic may be said to be present wherever power over the unseen is believed to be inherent in the ritual, whereas, according to the religious concept, the seat of power is regarded as resting outside the sphere of man's deliberate control. When the term is used in this sense, it must be admitted that a great body of the religious beliefs and practices of the Babylonians and Assyrians should be more accurately described as falling under the category of magic.

It is true that, when reading some of the Babylonian religious compositions, one is struck by the resemblance which many of the phrases bear to ethical passages in the Hebrew Psalms and prophetical writings. Quoted apart from their context, such passages suggest an extraordinarily high standard of morality and great depth of feeling. But it is dangerous to judge any literature merely by extracts or anthologies; and, when studied in their own surroundings, they are at once seen to have a background that is largely magical rather than moral. To take a single example, the Babylonian penitential psalms and many of the prayers to the gods show that the Babylonians had a very keen sense of sin. The contrition and misery of the penitent are expressed with great beauty of metaphor; but it is essential to examine the precise meaning of the words employed, and not to read extraneous associations into them. In this connexion it is important to realize that the moral character of sin which we find emphasized in the Hebrew prophets is quite foreign to the Babylonian conception. In almost the whole of their religious literature the expressions 'sin,' 'sickness,' and 'possession by evil spirits' are employed as pure synonyms; they denote merely an evil state of the body. In fact, all sickness and disease were believed to be due to the attacks of evil spirits, under whose power or influence the sufferer had fallen, whether by his own act or through the machinations of a hostile sorcerer or sorceress. Such spirits and powers of evil were legion, and were ever on the look-out to inflict bodily harm on men. They might be ghosts of the dead, or gruesome spirits half-human and half-demon, or, lastly, fiends and devils of a nature corresponding to, but lower than, that of the gods.

The sole object of the magical texts was to enable the priests to control and exorcize these demons, or to break in some way the malign influence which they exerted upon their victim. And, in order to be successful, it was of the utmost importance that the spirit or evil influence which affected the sick man should be mentioned by name. To this end the magician repeated long lists of ghosts and devils, any one of which might be the cause of the sickness. Thanks to this practice, we know a great deal about the Babylonian demons and their characteristics. In order to illustrate the manner of their attack, and how dissociated this was from any moral offence on their victim's part, it will suffice to refer briefly to one class of spirits, the ghosts of the dead. These spirits were the ghosts of dead people which, for some reason or other, could not find rest, but wandered as spectres over the earth. After death the spirits of men and women who died in the ordinary course of nature and were buried were believed to enter the under world, where they eked out a miserable existence with the help of offerings and libations paid to them by their descendants and relatives upon earth. But, if the offerings were not made, or if the corpse was left unburied, the spirit might wander unsatisfied. Other ghosts were the spirits of those who died violent or unnatural deaths, or who departed this life before completing certain natural functions—such as the ghosts of women who died in childbed. As a rule, such spirits haunted ruins or desolate places, and, if a man wandered there, they might seize on him and plague him. A spirit of this sort could also fasten himself on any one who had been in any way connected with him in this life, by the sharing of food with him or by the mere act of eating, drinking, or dressing in his company. From these instances it will be seen that a man was liable, through no fault of his own, to supernatural attack, and precisely similar results were believed to follow both ceremonial and moral offences. To touch the chair or bed of a person already affected by such evil influence or ban was, according to the texts, quite as dangerous as committing a moral offence, such as theft, adultery, or murder, and the resulting condition of sickness or misfortune was the same.

In order to escape the ban and cure his sickness or misfortune, the sufferer had recourse to the magician, who, by his knowledge of magical words, prayers, and ritual, could invoke the help of the great gods, and so gain control over the demon itself, or, in cases induced by human intervention, over the hostile sorcerer or sorceress who had cast the spell. In a large class of texts prepared for the use of the magician their purely magical character is sufficiently apparent from their contents. In others, where the contents refer more to the condition of the sufferer than to the possible causes of his misfortune or the means to relieve it, the essentially magical character of the compositions may sometimes be detected in notes or 'rubrics' which give directions for their due recital and for the performance of accompanying rites and ceremonies. For the rites prescribed often have an intimate connexion with the subject-matter of the prayer or incantation. Sometimes the offerings and the accompanying rites have, to our eyes, only a vague relationship to the character of the god or goddess addressed. But in other compositions the media employed for the magic are specifically named in the recitative, or liturgical, portion of the text. In fact, a study of the rubrics makes it clear that many present a certain general resemblance in giving directions for the recital of the main text over something which is mentioned in the accompanying formulæ. The relationship between text and ritual may be illustrated by the following group of rubrics from the Eighth Tablet of the *Maḳlû* series, col. iii. lines 8–22, which give directions for the due recital of incantations on the Sixth Tablet of the series and the performance of accompanying rites.

'(*a*) The incantation (beginning): "Thou art good, who in a pure place art born!" over a good offering shalt thou recite, and upon the fumigation-bowl, which is at the head of the bed, shalt thou place it.

(*b*) The incantation (beginning): "Come my sorceress or my enchantress!" over a *nulukhkha*-plant shalt thou recite, and upon the fumigation-bowl, which is at the head of the bed, shalt thou place it; (and) with an upper-garment shalt thou envelop the bed.

(*c*) The incantation (beginning): "Come my sorcerer or my enchantress!" over twelve pieces of *sha'irru*-wood shalt thou recite, and upon the fumigation-bowl, which is at the head of the bed, shalt thou place them.

(*d*) The incantation (beginning): "Come my sorceress, my witch, whose paths are over all the world!" over two caged locusts shalt thou recite, and to the right of the door and to the left of the door of the enchanted man shalt thou set them.

(*e*) The incantation (beginning): "Come my sorceress, my witch!" over a stone from the mountain shalt thou recite, and in the court (of the house) shalt thou lay it.

(*f*) The objects for ceremonial burning (*ḳutari*), which belong to the incantation (beginning): "Ellil my head," all that are described as potent against bans, shalt thou heap together and make to go up in smoke. The incantation (beginning): "Ellil my head," shalt thou recite.'

The connexion between these rites and the corresponding sections of the liturgical, or recitative, portions of the composition is clear. For example, the incantation referred to in section (*b*) corresponds to *Maḳlû* vi. 102–109, which twice refers to the *nulukhkha*-plant (cf. 108 f.); that in (*c*) corresponds to *Maḳlû* vi. 110–117, and the *sha'irru*-wood is referred to in line 115 of the text, which should read: 'At the head of my bed will I place twelve pieces of *sha'irru*-wood'; that in (*d*) is *Maḳlû* vi. 118–126, and the two locusts are symbolical of the two 'gods of the watch' who will slay the sorceress (cf. 123 ff.).

This rite of the locusts, which may be regarded as typical of a great body of Babylonian ritual, will be seen, when examined, to be an obvious example of sympathetic magic. The locusts were set, one on each side of the sick man's door, to represent Lugal-girra and Meslamtaea, who, as 'gods of the watch,' would be ready to pounce upon the sorceress and slay her. The magic would work and the gods would act at the second recital of the incantation.

In many of the rites and ceremonies the use of fire was essential, and it would seem that, after the recital of the correct formulæ, the destruction of the objects collected by the magician for that purpose synchronized with the destruction or removal of the evil influence under which the patient suffered. The rites sometimes required substances of some value or rarity, such as fragments of gold or precious stones; and it is probable that, except for powerful or wealthy clients, the magician would make the same fragments do again and again. But the objects used by the magician also included plants, pieces of wood, various sorts of seeds, vegetables, dates, palm-spathes, sheep-skin, wool, etc.—all perishable substances which could easily be consumed. And in their case the sympathetic connexion between the destruction of the ban and that of the object is obvious. That this is the correct explanation of this whole class of ritual is clear from a singularly instructive sub-section, in which the employment of images is prescribed in place of unfashioned natural objects or substances. The images were to be fashioned in human form, to represent the hostile sorcerer or sorceress, and the destruction of these by fire, to the recital of the correct formulæ, was obviously believed to synchronize with the destruction of the hostile person whose figure had been imitated. These images could be made of wax, honey, bitumen, sesame-seed, and the like—all perishable and common substances. When metal was employed, we may assume that the mere passing through the fire was sufficient for the purposes of the magic. Evidence of the great part played by fire in Babylonian magic may be seen in the titles of the two chief magical works, *Shurpu* and *Maḳlû*, both of which signify 'burning,' and in the great number of prayers and incantations addressed to the fire-god.

In one particularly interesting class of magical rites the relationship which was constituted by the magician between the hostile influence and the object destroyed may be clearly traced. Here the magician is engaged in exorcizing a demon from his patient, and, having gained control by the necessary formulæ, he transfers him to some object which may be destroyed or rendered harmless. In one such case the medium is a pot of water, which is then broken and the water spilt; in another a clay image is fastened to the patient's body and afterwards removed; or the body of a pig might be spread upon the sick man, and afterwards thrown out of the house. In these cases we have a physical transference of the hostile power from the sick man to the object employed. In other rites, such as the knotting of cords, the weaving and unweaving of coloured threads, and the like, it is not clear how far the physical action was believed to exercise a direct influence. It is possible that we should explain such rites on the principle of imitation, which is the basis of sympathetic magic.

But it must be confessed that with regard to a considerable section of the ritual we are still not in a position to follow the underlying trains of thought. The large class of so-called medical prescriptions were, no doubt, essentially magical, and, although in some instances the substances prescribed may have actually had curative effects, the associations which led to their employment by the Babylonians are still obscure.

Most of our knowledge of Babylonian magic is derived from purely textual sources, for we have recovered but few amulets, in which we may be said to deal with magic in a concrete form. It is true that we possess a few plague-tablets, inscribed with a text relating to the plague-god, and intended to be hung up in houses to keep off the plague; we have also recovered the figures and heads of demons, sometimes inscribed with incantations; and these, too, were doubtless employed in propitiation or defence. But the only magical apparatus, in the strict sense of the term, that has come down to us may be seen in certain rectangular plaques of cast metal, moulded on the face with the figure of a sick man lying on a couch, attended by the magicians or exorcizers, and surrounded by various hostile demons and protecting spirits or their emblems, which are arranged in horizontal registers. On the back is the large figure of a demon in relief, with his head usually protruding above the top of the plaque. From the subject of the reliefs it is clear that the plaques are to be classified under the general heading of sympathetic magic, but the precise manner in which they were employed by the magician in cases of sickness is not certain. Another class of objects, consisting of little clay figures of deities or birds, which were buried below the pavement in the main doorways of a temple or a palace, may be treated as magical in their supposed effects, but they fall rather under the special heading of foundation-deposits. It may be added that the magical beliefs and practices of the Babylonians survived their racial disappearance, and, largely through Jewish, Syriac, and Mandaic channels, contributed in no small degree to the great and composite body of mediæval magic.

LITERATURE.—General treatises on Babylonian magic will be found in M. Jastrow, *Die Religion Babyloniens und Assyriens*, ii., Giessen, 1910; A. H. Sayce, *The Religions of Ancient Egypt and Babylonia* (Gifford Lectures), Edinburgh, 1902; C. Fossey, *La Magie assyrienne*, Paris, 1902; R. C. Thompson, *Semitic Magic*, London, 1908; R. W. Rogers, *The Religion of Babylonia and Assyria*, New York and London, 1908; and J. Morgenstern, *The Doctrine of Sin in the Babylonian Religion* (=*MVG* x. 3 [1905]). For edd., with trr., of the principal magical works see K. L. Tallqvist, *Die assyrische Beschwörungsserie Maqlû*, Leipzig, 1894; H. Zimmern, *Die Beschwörungstafeln Šurpu*, do. 1896, and *Ritualtafeln für den Wahrsager, Beschwörer, und Sänger*, do. 1901; L. W. King, *Babylonian Magic and Sorcery*, London, 1896; Thompson, *The Devils and Evil Spirits of Babylonia*, do. 1903–04; and S. Langdon, *Sumerian and Babylonian Psalms*, Paris, 1909. Full references to other published texts (up to 1910) are given in Jastrow, *op. cit.*; and for subsequent references, the bibliographies in *ZA*, *AJSL*, or the Babylonian sections of the *Orient. Bibliographie* may be consulted. For the plague-tablet amulets see King, in *ZA* xi. [1896] 50 ff.; and for the magical plaques for the cure of the sick see K. Frank, *Babylonische Beschwörungsreliefs*, Leipzig, 1908. For the latest discussion of the survival of Babylonian magical practices, cf. J. A. Montgomery, *Aramaic Incantation Texts from Nippur*, Philadelphia, 1913, p. 106 ff.

L. W. KING.

MAGIC (Buddhist).—If we rightly understand the real character of Buddhism, what Buddhism ought to be according to its cardinal tenets, there is no possible connexion between Buddhism and magic. The only aim of the Buddhist monk is '*nirvāṇa* to be attained in this life,' *i.e.* absolute freedom from passion in order to reach freedom from rebirth, *i.e.* eternal, blissful *nirvāṇa*. All the machinery of intellectual and moral life is organized with a view to this. Buddhism does not deny that there are good (*kuśala*) acts that ripen into happiness in a future life (*svarga*, 'paradise'),[1] but monks consider them not only as of no avail for, but even as obstacles to, *nirvāṇa*. Ascetic and religious acts (*śīlavrata*, *tapas*, *pūjā*) have no place in the training for *nirvāṇa*, and it is a very grave and delusive heresy to lay stress upon them. *A fortiori*, in contrast with Vedism and Brāhmanism, Buddhism ignores all the magical theories connected with sacrifice, worship, or asceticism as a means of salvation. As far as every-day or trivial magic is concerned, its efficiency is acknowledged, but Buddhists are strictly forbidden to practise it; all kinds of magical arts and performances—even of a benevolent nature—are regarded as pernicious.[2]

But 'historic Buddhism' is not, in every respect, what Buddhism ought to be. Buddhists are Hindus, 'regular' Hindus; and no large religious body has ever been found that was always scrupulously faithful to the true spirit of its creed, the more so as the Buddhist creed implies a superhuman disinterestedness and a non-Oriental disregard for any kind of superstition.

1. **Ṛddhi.**—There is a large category of 'superhuman' activities, which to some extent would be understood by Europeans as magical, and which are 'very good Buddhism.' We mean *ṛddhi* (Pāli *iddhi*)—in the words of Rhys Davids, 'mystic wonder,' 'wondrous gift,' 'magic power,' a mastery (*prabhāva*), which is only the exercise of a power acquired by pious works, by penance, and also by 'formulæ,' and especially by contemplation.

There is nothing 'preternatural' in the *ṛddhi*, and the natural character of the 'miracles' performed by *ṛddhi* is clearly shown in the following passage of the *Milinda-pañha*: '"There are persons who can go with this four-element-made body to

---

[1] These are 'mundane' (*laukika*) good acts, in contrast with 'supramundane' (*lokottara*), those which lead to *nirvāṇa*, *i.e.* the volitions concerned with 'trances' (*dhyāna*) and other 'concentrations' (*samādhi*).

[2] On the position of the Buddha with regard to magic see T. W. Rhys Davids, *Dialogues of the Buddha*, i. (*SBB* ii., London, 1899) 273.

Uttara-kuru [see art. Blest, Abode of the (Buddhist)], or to the Brahma world . . ." "But how can they?" "Do you admit having ever jumped three or six feet of ground?" "Yes, I do; I can jump twelve feet." "But how?" "I cause this idea to arise: 'There will I alight!' With the genesis of this idea, my body becomes buoyant to me." "Just so does a monk, who has *iddhi* and mastery over his thought, travel through the air."'[1]

The man whose thought is concentrated has indeed a great power over his body; but this power is not different, in nature, from the power of an ordinary man.

Birds are, by nature, endowed with magic power, as is proved by the fact that they go through the air. Their *ṛddhi* is 'born from the ripening of acts,' *i.e.*, the special character of some of their acts in a former birth endows them with this special 'superhuman' faculty. Gods are, of course, magicians; they go through the air, they create at their will palaces and pleasures (*bhoga*). Sovereign kings or world-emperors (*chakravartin* [*q.v.*]), too, are magicians by nature. Ordinary men obtain momentary magic power by many devices, and are 'superhuman' at some time and for some object.[2]

As a matter of fact, Buddha was looked upon by his followers—as he was by the unbelievers—as a great magician; and it is recognized by all Buddhists that magic power is one of the natural possessions of the saints, since they are holy men, just like the *yogīs* of old and the modern *faqīrs*. Magic power ranks therefore with the divine eye, the divine ear, the knowledge of the thought of others, the knowledge of former births, the knowledge of the disappearing of passions, *i.e.* with the most desirable gifts of saintship. And it is no mean eulogy of Maudgalyāyana that he is styled 'the best of the Buddha's disciples with regard to magic.'

It is evident that the admission of the reality of *ṛddhi* is beset with many dangers. Buddhists were, accordingly, strictly forbidden to boast of possessing superhuman faculties; that was one of the gravest sins.

There is nothing specially Buddhist in the manifestations of *ṛddhi*. Buddha's disciples win success in the phantasmagorial shows which have long been familiar to Hindu romancers and dreamers:

> 'Being one, he becomes many, or having become many, becomes one again; he becomes invisible or visible; he goes, feeling no obstruction, to the other side of a wall or rampart or hill, as if through air; he penetrates up and down through solid ground, as if through air; he walks on water . . .; he travels cross-legged in the sky; even the sun and the moon, so mighty though they be, does he touch and feel with his hand; he reaches in the body even up to the heaven of Brahmā. . . .'[3]

Stories of miraculous exhibitions intended to convert the incredulous are frequent. Buddha and his disciples willingly condescend to give 'signs.'

> When the Tibetan writer Tāranātha narrates the mediæval miraculous tournaments between the Buddhist and Brāhmanist scholars, which often conclude with the Buddhist victory and the conversion of kings, he only testifies the continuance of an old tradition. But—and this restriction is of paramount import—even when narrating miracles, the old texts add that miracles, by themselves, prove nothing; the unbelievers, conquered by the more powerful magic of Buddha, used to say: 'Gautama'—the 'mundane' name of the Buddha, and the one used by unbelievers—'Gautama is the magician (*māyāvin*); every thousandth year there appears in the world a great magician who eats or enjoys the world' (*Abhidharmakośa*); or, in the words of the *Kevaddhasutta*: 'Well, Sir! there is a certain charm called the gandhāra-charm. It is by the efficacy thereof that he performs all this.'[4]

There is in the *Bodhisattvabhūmi*, a text-book of the Vijñānavādins (by Asaṅga, 4th–5th cent. A.D.?), a complete survey of the magical power of the *bodhisattvas*. It is said to be twofold: *pāriṇāmikī ṛddhi*, power of transformation, when a *bodhisattva* modifies the nature of an existing thing; and *nairmāṇikī*, power of creation, when he creates some thing or some person. The 'created persons' (*nirmita*, *nirmitaka*) are frequently mentioned in the Mahāyāna works; but they are not unknown in the Hīnayāna, both Pāli and Sanskrit. Elaborate theories on the *nirmitakas* are to be found in the *Abhidharma* treatises of the Sarvāstivādins (*Lokaprajñāpti*, 1st cent. A.D.), which embody the views of the Sanskrit Hīnayāna; and in the *Abhidharmakośa* (ch. vi.), where the creative power of Buddha and of the gods (*nirmāṇarati*, etc.) is discussed.[1]

2. Paritta.—Another very orthodox form of magic is *parittā*, or *rakkhā*, 'guard,' 'safeguard.' It plays an important part in Siṁhalese Buddhism under the name of *pirit* (Spence Hardy, *Eastern Monachism*, London, 1850, p. 240, *Manual of Budhism*², do. 1880, p. 47; D. J. Gogerly, *Ceylon Buddhism*, ed. A. S. Bishop, Colombo, 1908, pp. 327–393). Good examples are found in Pāli literature.

Taking refuge in the three 'jewels' (*ratna*, *ratana*), Buddha, the *Dharma*, and the *Saṅgha*, forms a charm called '*sutta* of the jewels,' which is very efficacious against illness:

> 'Whatever spirits have come together here, either belonging to the earth or living in the air, let all spirits be happy, and then listen attentively to what is said. Therefore, O spirits, do ye all pay attention, show kindness to the human race who both day and night bring their offerings; therefore protect them strenuously. Whatever wealth there be here or in the other world, or whatever excellent jewel in the heavens, it is certainly not equal to Tathāgata. . . . By this truth may there be salvation.' In the same way: 'Nothing is equal to the *Dharma*, to the *Saṅgha*!'[2]

So also, in the Peacock *Jātaka*, sun-worship ('the only king, the one who beholds, the light of the world') is connected with that of the Buddhas:

> 'I worship thee, golden and luminous being! May I spend this day under thy care! Homage to the omniscient sages! May they protect me! Homage to the Buddhas and to the illumination, to the delivered and to the deliverance! . . .'

When Śākyamuni was a large golden peacock, he recited this half-solar, half-Buddhist prayer morning and evening, and consequently avoided all dangers. And, as the peacock is the born enemy of serpents, the '*sutta* (or 'charm') of the peacock' is used as a preventive and as a cure for serpent-bites.[3]

In these examples the magical character is not very prominent: there is nothing pagan in the formulæ, which are, above all, acts of Buddhist faith; there is nothing mechanical, nothing really magical, in the efficacy ascribed to the *pirit*. The non-Buddhist gods are clearly subordinated to the Buddha: it is almost a dogma that the Buddha converted gods and demons;[4] and it is quite reasonable to believe that they will grant their favour to the disciples of Buddha. It is believed also that benevolence (*maitrī*) possesses a power in itself (*maitrībala*), which is capable of protecting the benevolent person against all the attacks of the wicked; in order to avoid serpent-bites, it is not a bad plan to sleep on a raised bed, but the right method is to declare to all the tribes of serpents that they are being enveloped in a universal sentiment of benevolence.[5] This magic of benevolence is the most noteworthy invention of Buddhism in connexion with the subject which we are discussing.

[3] *Morajātaka*, *Jātaka* ed. V. Fausböll, London, 1877–97, ii. 33.

[4] It is a dogma for the Sarvāstivādins (see A. Csoma and L. Feer, 'Analyse du Kandjour,' *AMG* ii. [1881] 167). The Pāli sources admit that there are still wicked gods (*Digha*, xxxii.).

[5] See *Chullavagga*, vi. 2. 2, and v. 6. 1 (*SBE* xx. [1885] 168 f., 75 f.).

3. **Hindu influences.**—All practices tainted with magic or superstition, from the most trivial to the most serious, are strictly forbidden: astrology, divination, charms, incantations—in a word, all that any one may accomplish with the help of certain secret recipes and a technical method. Holy men, in ancient as in modern India, priests or sorcerers, had only too much opportunity for making huge profits by giving horoscopes and practising white or black magic. The Buddha—the first Order—was anxious that the monks should be sheltered from this temptation, and drew up a long list of 'wrong means of livelihood,' of low arts, that were strictly prohibited. The Brāhmans also made an effort to distinguish themselves from sorcerers.

Among these 'low arts' we may mention specially:

> 'Arranging a lucky day for marriages; using charms to make people lucky or unlucky, to procure abortion, to bring on dumbness, deafness, to keep a man's jaw fixed; obtaining oracular answers by means of the magic mirror, or through a girl possessed; bringing forth flames from one's mouth; causing virility; making a man impotent; invoking Sirī (Śrī), the goddess of luck; worship of sun,' etc.[1]

Whatever precautions the Order took to avoid all paganism and superstition, there is, nevertheless, a Buddhist magic. It was impossible to guard against Hindu infiltrations. At no time could people have been completely ignorant of the sun or the inferior deities; a day came when the infiltrations became 'streams,' when paganism—gods, rites, theurgies—under a thin Buddhist veneer, took its place in sacred literature. Of course, we find popular magic always condemned in principle (love-rites, elixir of life, etc.). What is more serious, official worship and mysticism are permeated with Hindu elements, heavily laden with magic; this is, properly speaking, what is called Tantrism (*q.v.*).

Among the earliest of these infiltrations we may mention: (1) in some very orthodox books of the Mahāyāna, the great value attached to the sacred texts, to the *sūtras*, the mere reading of which effaces sin; (2) the great value attached to sacred names (*e.g.*, the name of Amitābha): devotion turns to superstition pure and simple; (3) the name replaced or strengthened by mystic formulæ (see AVALOKITEŚVARA), represented, when carried to an extreme, by the Tibetan 'prayer-wheel'; it has been noticed that, in the *Lotus of the True Law* (*q.v.*), in which there is no mention of a female deity, the formulas are made from feminine vocatives: these invocations or litanies are undoubtedly borrowed from rituals; (4) the coming of a day when the rituals received the consecration of literature, and were put at the service of the great work of identifying the faithful with the Buddhas (Tantrism).

L. DE LA VALLÉE POUSSIN.

MAGIC (Celtic).—1. Wielders of magic.—Magical rites resembling those used by other races abound in Celtic paganism. They were performed by the gods, the Tuatha Dé Danann being later regarded as supernal wizards, by kings (a reminiscence, perhaps, of the origin of the kingship in the magic-wielding class), and by all members of society, but, above all, by the druids as the official magical class. There is evidence that they had ousted women as the earlier magic-wielding persons. The rites of agriculture and the possession of much primitive lore having been first of all in the hands of women, and these rites being largely magical, they were *par excellence* magicians. With the gradual encroachment of man on woman's domain, with the growing supremacy of gods over goddesses, men became also greater magicians. But women still professed magic, and their claims were never forgotten. The so-called 'druidesses' of the later empire, the priestesses of Sena, and the virgin guardians of Brigit's fire were magic-wielders. The 'spells of women' were feared even by St. Patrick, as they had been in earlier times by Connla's father,[1] and in the Irish texts women as magicians, performing all magical rites ascribed to druids, are much in evidence. But their magic was, so to speak, non-official; hence, when the druids were overthrown, they still retained their powers, and much mediæval witchcraft is directly connected with them. Women, as the earliest, remained also the latest, magicians, though in time they were proscribed and persecuted. On the other hand, many of the druidic magical rites were later ascribed to the *filid*, or poets, and also to Christian saints. Whatever view may be taken of the origin of the druids, it is certain that the Celts believed firmly in magic, and did not require to learn the superstition in any of its branches from the races which they conquered.

For the druids as magicians in Gaul and Ireland see DRUIDS, § 7. Their prominence is seen in the fact that in later Celtic literature 'druid' is the equivalent of *magus*, 'magician,' as in the lives of Celtic saints *magi* = 'druids,' while in saga and folk-tale 'druidism' = magic.

2. **Elemental magic.**—The druids, who claimed to have created the elements, claimed also to rule them. They could cover the dry land with the sea to destroy their victims;[2] they produced enchanted mists in which to hide people or places; they changed day into night, or caused blinding snow-storms. These feats are ascribed to them even in the lives of early Celtic saints.[3] They caused showers of fire to fall upon enemies during battle.[4] In other cases they dried up all the rivers and wells in an enemy's country by means of spells, though the druids of the latter caused water to flow again by shooting an arrow into the ground.[5] They even claimed to remove mountains and dash them against an opposing host.[6] Druids accompanied the warring hosts of Erin, and these marvels usually occurred on such occasions, the rival magicians striving to outdo each other. These and other powers—*e.g.*, rain-making—were later claimed by wizards (*tempestarii*) and witches in Christian times over the Celtic area. Rain-making was usually associated with a sacred well, whither the people went in procession, probably with an image of a divinity, which was sprinkled with the water; in some instances it was sufficient to beat the water with branches, sprinkle it on stones, or throw it in the air. In certain cases the Church took over this rite by making it a part of an elaborate ritual, including a procession with an image of a saint, the priest officiating and saying prayers.[7] But in pagan times the presence of a druid was probably essential. The control of the elements by *tempestarii*, which was denounced by the Church, was directly borrowed from druidic magic. Until comparatively recent times the

priest in rural French parishes was believed capable of causing rain in time of drought, or of averting tempests.[1]

3. Magic affecting human beings.—The druids could make themselves or others invisible, and this was also done by Celtic saints.[2] A spell used for this purpose, or by which the person using it appeared in another form to his enemy and so escaped, as well as the effect produced, was called *fœth fiada* ('the wild beast's cry'). By it he and his followers appeared as deer to their foes.[3] The power of such an incantation is still spoken of in remote parts of the W. Highlands.[4] Still more common was the power of shape-shifting, which was also ascribed to women. The evidence of Irish texts shows that the druid could take any shape, or invest others with it, while the same power is also ascribed to divinities.

The children of Ler became swans through the arts of their step-mother, the daughter of the god Bodb Derg, while Oisin's mother became a fawn through the power of the druid Fear Doirche (P. W. Joyce, *Old Celtic Romances*^{2}, London, 1894, p. 1 ff.; P. Kennedy, *Legendary Fictions of the Irish Celts*, do. 1866, p. 235). The priestesses of Sena could take any shape (Pomp. Mela, iii. 6), and many tales of goddesses or women assuming the shape of birds are found in the sagas. In some instances the belief is evidently connected with totemism, explaining a tabu upon eating certain animals by saying that they were human beings transformed.

'Riming' people to death—a practice used by the *filid* as well as by the druids—was connected with the power of the spoken word, though it may also be connected with the actual power of violent emotion to affect the body. It was usually the result of a satire spoken in verse to the victim; black, red, and white blotches arose on the face, and were followed, sooner or later, by decay or death. The satire was probably a magical spell, and the fear of such a spell brought about the result automatically. Coirpre pronounced the first satire in Ireland upon Bres, king of the Fomorians, and many other instances occur in the texts.[5] To the power of the satire was attributed a quelling force over nature itself.[6] A magical sleep was also produced in different ways. Sometimes it was done by music, which produced first laughter, then tears, then sleep. These three results are uniformly ascribed to music in Irish saga; they were brought about by Dagda's harp, as well as by the songs of the *filid*.[7] All this probably reflects the power of music upon primitive minds, especially since it is so frequently connected with religious or magical dances and orgiastic rites, in which the motion and the music produce delirium, then exhaustion. But it may also suggest the soothing power of music. Similar magical sleep was caused by the music of divine visitants (see BLEST, ABODE OF THE [Celtic], §§ 2, 6). In other cases sleep was produced by a 'drink of oblivion,' probably some narcotic made from herbs;[8] but sometimes the effect was curious, as when Cúchulainn, by the drink given him by the druids, was made to forget his fairy mistress, and his wife to forget her jealousy.[9] Another 'druidic sleep,' in which the victim is made to forget or is rendered motionless, and occasionally in that state is caused to tell secrets, is of frequent occurrence, and is suggestive of hypnotism, the powers of which are well known to savage medicine-men, and may quite well have been employed by the druids.[10] The power of 'glamour' produced by magicians, by which stones or trees seemed to be armed men and were attacked by the victim, is also strongly suggestive of hypnotic influence. It may, however, be merely the record of actual hallucinatory cases, since the 'glamour' in which the modern Celt believes is little else than hallucination. The druid could also turn a man into a lunatic by throwing a wisp of straw at his face after saying a spell over it.[1] Even more primitive was the method of killing a person by throwing a spear into his shadow,[2] or of making an image of him and sticking pins into it or placing it in running water, so that he might suffer or waste away. This image is the *corp creadh*, still known and used in remote Celtic regions.

4. The Airbe Druad, or 'Druid's hedge,' was an invisible magic barrier made by the magician round an army, probably by circumambulating it sunwise and singing spells. Its effect was that the ranks could not be broken, but, if any one was bold enough to break through, its power was gone, though the act usually cost the trespasser his life.[3]

5. Magical rites connected with stones and trees.—The cult of stones and the belief that sepulchral stones were the abode of the ghosts of the dead probably gave rise to many magical rites, the origin of which must be sought in remote times. Many of these are still practised, and the method used throws light upon the earlier pagan customs. These are of a magico-erotic nature, and, like similar rites among savages, are founded on the belief that the ghost can cause fruitfulness, or perhaps may incarnate himself in the barren woman who performs the rite. The woman sits on the stone, or slides down it, or thrusts her head or body through a hole in one of the stones of a dolmen. Pregnant women do the same to ensure an easy delivery, or unmarried girls to procure a husband.[4] Similar practices are used in connexion with boulders or stones which are not sepulchral, and probably these were anterior to the use of megalithic monuments. In these cases the rocks were believed to be the abode of spirits, or perhaps manifestations of the power of the Earth divinity, who gave vitality or fruitfulness to those performing the rites. A small offering was usually left on the stone.[5] Such practices may already have been used by the Celts, though they necessarily adapted them to existing stones and monuments in the lands conquered by them. Other practices were the passing of sick persons three times through a holed dolmen or a weather-worn hole in a rock, to obtain strength and healing.[6] In other cases a slit was made in an oak or ash sapling, through which the patient was passed, and the slit was then carefully closed and bound. The underlying idea is complex. The spirit of tree or stone was expected to cause healing, or there was a transference of the disease to either, or perhaps there was some idea of a new birth with renewed strength to the re-born.[7]

Certain magical stones had the power of producing rain or wind when turned with appropriate rites, or in other cases the water in which stones of a fetish kind had been dipped procured healing when it was drunk—a method used by St. Columba.[8] Other magical rites with stones were used in cursing an enemy.

6. Celtic saints and magic.—Much of the magic of the druids was popularly ascribed to the saints who combated them—with this difference, that their power was held to come from God. In the *Lives* of Celtic saints we find them opposing druids with their own weapons—neutralizing their magic, controlling the elements, producing rain, rendering themselves invisible, producing marvellous supplies of food, and causing transformation or confusion through their curses. The popular belief in magic could not be eradicated, and they who now filled the place of the ancient priesthood were freely dowered by the people and by their biographers with the ancient powers.

J. A. MACCULLOCH.

MAGIC (Chinese).—Magic in all its forms is a subject which has always fascinated the Chinese mind. The literature which deals with the theory and practice of magic is enormous; and, if much of this literature is wearisome to the modern reader on account of the childish credulity of its authors and the extravagance of their speculations, it is nevertheless worthy of more patient scrutiny and analysis than it has yet received from anthropologists and students of folklore, or even from serious students of Chinese life and character. In this article we cannot do more than touch the fringe of a subject which derives much of its interest from the fact that a belief in magic is still a living force in the China of to-day.

There are many early references to a class of sorcerers or witches known as *wu*. This name is often applied to male as well as female witches, though the more correct designation of the former is *chi*. The term *chi* is rarely found outside the old books, but the term *wu* (usually in some such combination as *wu-p'o*, which means 'witch-wife') has persisted throughout the ages, and is still in common use. In pre-Confucian days the *wu* held a recognized position in the social organization of the country. They were entrusted even in the courts of kings with certain quasi-sacerdotal functions, and in public ceremonials they had stated duties to perform in connexion with divination and exorcism. Judging from the somewhat meagre accounts which we possess, we may suspect that the rites observed by the *wu* were in many respects identical with those practised to this day by the shamans of Central Asia and Siberia (see BURIATS, SHAMANISM). Their methods included mimetic dancing, drum-beating, chanting of mystic formulæ, and trance-mediumship, and their efforts were directed towards the foretelling of the future, the conjuration of spirits, and (in general) the invocation of good influences and the expulsion of evil. In the course of ages their position gradually deteriorated. This was largely the result of the rise of Confucian culture, which always aimed at reducing every non-Confucian ideal and practice to a position of inferiority; but it was also due to the fact that many of the magical notions and methods of the *wu* fraternity were taken up and systematized by the Taoists. This is one of the reasons why the popular Taoism of modern times concerns itself with magic and sorcery to an extent which seems quite unwarranted by early Taoist philosophy, and why the illiterate village witches and fortune-tellers of the present day usually profess to act in co-operation with one or more of the innumerable Taoist deities, in spite of the fact that they are the sole surviving representatives of the ancient *wu*, whose name they still bear.

There is reason to believe, however, that besides the officially-recognized *wu* there were always numerous 'free-lance' witches who carried on a lucrative business among the superstitious multitudes, and whose connexion with the State-cult or predominant religion of the time was little more than nominal. It was probably sorcerers of this type that were aimed at in certain anti-witchcraft regulations (reminding us of Plato's *Laws*, xi. 933) which we find in the *Li Ki*—the canonical 'Book of Rites.'

'Those who gave false reports about spirits, about seasons and days, about consultings of the tortoise-shell and stalks, so as to perplex the multitudes: these were put to death' (*SBE* xxvii. 237 f.). It may be added that the same fate befell inventors of 'wonderful contrivances and extraordinary implements,' because such things raised 'doubts among the multitude' (*ib.*).

But it seems that even the official *wu* were not always free from peril, for the very fact that they were supposed to have a mysterious controlling power over the forces of nature rendered them liable to terrible punishment if those forces seemed to be showing hostility to mankind.

In the year 683 B.C., *e.g.*, there was a disastrous drought, and a certain reigning duke expressed his intention of dealing with the situation by burning two persons—an emaciated or deformed man and a witch. Evidently this was a familiar practice in such emergencies, and the reason why special mention was made of it in this particular case was that, owing to the remonstrances of the duke's minister—who seems to have been far in advance of his time in his attitude towards popular superstitions—the barbarous custom was not carried out.[1] From a similar story which refers to the reign of Duke Mu (409–377 B.C.) it appears that the practice had been modified to the extent that the witch and deformed man were no longer burned alive, but were merely exposed to the scorching heat of the sun.[2]

One explanation of these customs is that by burning a deformed or emaciated man, or by exposing him to the sun, the pity of the heavenly powers would be aroused and rain would be sent to alleviate the wretched man's sufferings; and that the same happy result would follow the burning or exposure of a witch, because a witch was a person who was able to compel spirits to descend to earth. A sounder explanation is based on the belief in the supposed interaction of the principles of *yang* and *yin*—the male and female, or active and passive, forces, which by their alternating pulsations or activities give rise to all natural phenomena. In time of drought the *yang* principle shows excessive activity and disturbs the harmony of nature's processes; steps must be taken, therefore, to redress the balance of forces. The intricacies of the *yin-yang* theory are necessarily bewildering to a Western reader until he has acquired some knowledge of the principles of *feng-shui* (*q.v.*); but it is this pseudo-philosophy—belief in which is slowly decaying in China, but is still far from extinct—that supplies some of the most important hypotheses on which the edifice of Chinese magic has been erected.

No doubt it was only in extremely serious cases of drought that the witches were tortured or put to death. The regular method of obtaining their assistance in rain-making was to send them out, under the guidance of their official leader, the *ssŭ-wu*, to perform a ritual dance.[3] The dancing of the witches formed part of the ordinary ritual observed on the occasion of the official rain-sacrifices; and, if we may judge from similar practices in other parts of the world, the dancing partook of the nature of mimetic magic.[4] It was accompanied by music; and, if there is any truth in such ancient legends as that of King Mu (whose reign ended in 947 B.C.), we may suspect that music preceded dancing as a means of producing rain. We are told that the method adopted by that monarch for putting an end to an excessive drought was to play magic music on his flute.

---

[1] See *Tso Chuan*, in Legge's *Chinese Classics*, vol. v. pt. i. p. 179 f.

[2] See *SBE* xxvii. 201. It has been suspected by commentators that the two stories refer to the same historical incident.

[3] *Chou Li* (Biot's tr., ii. 102).

[4] The ceremonial dancing of ancient China was not always magical. There were six dances officially recognized under the Chou dynasty, of which only one (the *huang*) had anything to do with rain-making. Ceremonial dancing is not yet extinct in China, for it still forms part of the ritual proceedings at the Confucian sacrifices. For an interesting account of the ancient Chinese dances see H. A. Giles, *Adversaria Sinica*, Shanghai 1906, p. 119 f.

Many of the observances still carried out at the popular festivals in China are undoubtedly of a magical character, and are intended to regulate the rainfall, to expel disease and misfortune, to ensure good harvests, and to attract good luck. Communal magic of this kind is sometimes official in character, as in the case of the spring-welcoming ceremonies presided over by the local district-magistrates; but for the most part the rites are conducted by the villagers themselves, under the guidance of their own clan-committees (*hui-shou*), or headmen. Ceremonies which at one time were doubtless carried out with punctilious care and with something like religious awe have in many cases become mere village games and pastimes of which the original significance has been partially or wholly lost. Such are the lantern-dances and stilt-walking of the children of N. China at the full moon of the first month of the year. Few of those who take part in such merry-makings understand that by the skilful manipulation of their paper lanterns they are supposed to be helping and encouraging the moon to go successfully through her phases; that in getting up before dawn on a certain day and cooking a dumpling which 'rises' they are assisting nature to stimulate the dormant activities of animals and vegetation; and that in walking on stilts over ground destined to produce a crop of grain they are helping the wheat and millet to grow to their full height. It is perhaps a significant fact (when we remember the important part played by women in fertility-magic in other parts of the world) that many of the men and boys who take part in these festival-ceremonies are clothed for the occasion in women's garments.

Magical notions are also traceable in numerous simple acts which practically every family performs with a view to the well-being of its own members. Such are the hanging of certain plants above the doorway on certain days, the entwining of red threads in the queues of children to protect them from the demons of disease, and the affixing of pieces of scarlet cloth to the scrub-oak bushes to ensure the protection of the shrubs and the silkworms against hurtful insects and noxious influences. At the New Year it is customary to cover the outsides of doors and windows with paper scrolls containing sage mottoes, quotations from classical and other literature, and words expressive of virtuous aims or suggestive of material prosperity. These scrolls may fairly be regarded as magic charms which will not only prevent evil from entering the house, but will attract the influences which make for good fortune and happiness. Many of the usages connected with death and burial, the ceremonial summoning of ancestral spirits, and the tabuing of personal names are also essentially magical, though their intimate connexion with religious beliefs and observances makes it difficult to decide where magic ends and religion begins.

In China, as elsewhere, magic arts are practised for private and personal as well as for public and family purposes, and many persons who know of no normal method whereby they may bring about the fulfilment of their desires are glad to seek the aid of magicians and witches. The witches of China have had many illustrious clients. One of them was the T'ang emperor Hsüan Tsung, who ordered certain Taoist necromancers to summon before him the shade of his dead consort, the beautiful Yang Kuei-fei. Very similar stories are told of the emperor Wu of the Han dynasty and the emperor Hsiao-Wu of the earlier Sung dynasty. As for the self-styled 'First Emperor,' who reigned in the 3rd cent. B.C., the assistance of witches and necromancers in his case was unnecessary, for he—like the king Solomon of Muhammadan legend—was himself a king of magicians.[1] Returning to more recent times, we find that the great empress-dowager, who died in 1908, put implicit faith for a time in the magical attainments of the 'Boxers'; and, though the 'Sacred Edict' of the emperor K'ang-hsi bids men abjure all kinds of heterodox teachings and practices, among which the arts of magic are included, and though in quite recent years proclamations have been issued warning the people not to allow themselves to be deluded by witches and soothsayers, it is beyond question that a belief in the reality of magic is by no means confined to the ignorant peasantry.

The official attitude towards 'black magic' (to use the convenient Western term) is clearly demonstrated in the anti-witchcraft clauses of the Penal Code of the late Manchu dynasty. The punishments inflicted on persons convicted of this crime were extremely severe, though it is only fair to add (in the words of a scholarly student of the subject) that 'the pages of Chinese history have never been stained by such a mad epidemic of witch-killing as disgraced Europe and America in the seventeenth century.'[2]

As recently as the summer of 1914 an alleged case of 'black magic' occurred in the territory of Wei-hai-wei, at present administered by Great Britain.

> The inhabitants of a certain village approached one of the British Courts with a petition in which they complained that a fellow-villager had been practising magic with disastrous results to their little community. It was stated that he had quarrelled with the village headman, and had foretold the headman's death. 'And sure enough,' they said, 'the headman died, though there was nothing whatever the matter with him.' Two or three other enemies of the accused subsequently died in the same mysterious way; and, to crown all, a villager, on going to the shrine of the guardian-spirit of the village, discovered there a slip of paper on which were written, in the accused's handwriting, the names of various people with whom he was known to be on bad terms. This discovery created a panic among the villagers, who took it for granted that the list comprised the names of all those unfortunate persons whom the wizard had condemned to a speedy death. They therefore seized him and brought him before the writer of this article, who in his magisterial capacity had to perform the somewhat delicate task of differentiating between real and imaginary wrongs and grievances.

From the point of view of the student of magic, the special interest of this particular case centres in the unexpected part played by the tutelary deity of the village. Here, it would appear, we have an instructive example of the intermingling of religion and magic, and the junction seems to have been brought about in this way. One of the principal functions of the *t'u-ti*, or village deity, is to receive the spirits of the newly dead and to act as their spiritual friend and guardian.[3] Each village has its own little shrine dedicated to the local deity, and this shrine usually stands by the roadside a short distance outside the village. When a villager dies, the members of his family go in procession to the *t'u-ti* shrine to make a formal announcement of the death, in order that the deity may make arrangements for the proper reception of the dead man's spirit. Now, at first sight, there seems to be no obvious reason why an expert in black magic who wishes to bring about the death of his enemies should expect the *t'u-ti*—who is regarded as friendly to men and interested in their welfare—to give him help and countenance in carrying out his nefarious designs against their lives. What, then, is the magician's object in placing a list of the names of his intended victims on the little stone altar of the village *t'u-ti*? The theory seems to be that, when the *t'u-ti* perceives the list of names, he will assume that the persons bearing those names are already dead, and will make preparations in the under world for the reception of their souls. These preparations will act with a powerful attractive force upon the souls concerned, and will create in them an irresistible inclination to sever their connexion with their respective bodies. The non-arrival in the under world of the spirits of persons whose death had already been announced in a formal manner would cause bewilderment to the well-meaning *t'u-ti*, and might perhaps arouse his wrath; and, as it is strongly advisable, in the interests of the community in general, to 'save the face' of the *t'u-ti* and maintain friendly relations with him, the only reasonable course for the spirits in question to adopt is to bow to the inevitable and acquiesce in the premature loss of their physical bodies.

---

[1] For some of the stories of his magical exploits, which included the transfixing of the sun with a needle in order that uninterrupted daylight might be secured for the building of the Great Wall, see R. F. Johnston, *Lion and Dragon in Northern China*, London, 1910, p. 20 f.

[2] E. T. Williams, in a paper on 'Witchcraft in the Chinese Penal Code,' *JRAS* (North China Branch) xxxviii. [1907] 95.

[3] For a full discussion of the *t'u-ti* and his functions see Johnston, p. 371 f.

Magical and semi-religious theories of this kind are hardly likely to find Western parallels; but many of the ordinary magical practices of the Chinese are strikingly similar to some of those forms of sympathetic and mimetic magic with which we are familiar in Europe.

The great artist Ku K'ai-chih (4th cent. of our era), one of whose paintings is among the most treasured artistic possessions of the British Museum, was himself a graduate in magic. When spurned by the girl whom he loved, he drew her portrait, and in the place where the heart should be he stuck a thorn. Thereupon the girl, who knew nothing of the portrait and the thorn, began to suffer pain in the region of the heart, and next time her lover paid his addresses to her she did not scorn him. The artist then withdrew the thorn from the portrait, and, though the pain in the damsel's heart promptly disappeared, her love for him remained.

That many of the poets and artists of China have been credited with a knowledge of magic is no matter for surprise when we know how frequently their passionate love of wild nature brought them into contact with the Buddhist and Taoist saints and hermits, whose favourite dwelling-places have always been the caves and forests and ravines of the mysterious mountains. These mountain-dwelling ascetics have been for ages regarded as the discoverers and guardians of occult secrets of various kinds, and, though their disciples and biographers endowed them with faculties which they never possessed and which the best of them never pretended to possess, it is highly probable that there were some who, in the course of their own heart-searchings and their solitary communings with nature, not only made valuable discoveries as to the properties of plants and herbs, but were also successful pioneers in various untrodden fields of psychology and mysticism. To some extent, at least, the popular belief in their supernormal capacities and attainments was justified.

When Buddhism first came to China, and for some centuries afterwards, the relations between Buddhists and Taoists were often strained to breaking point. The victories of the Buddhists—if we may credit the Buddhist historians and biographers—were often brought about by miraculous occurrences which non-Buddhists would perhaps describe as magic if not as mere conjuring tricks. It is difficult, perhaps, in some cases, to draw a distinction between miracles and magic. A miracle, as E. S. Hartland remarks, is 'legitimate magic,' while magic is 'a forbidden miracle.'[1] However this may be, many of the marvellous doings attributed to Buddhist monks and hermits bear a close resemblance to those recorded of Christian saints. But we know from the earliest Buddhist scriptures that the brethren were not encouraged to perform miracles, and it was certainly not by the help of miracles or of magic that the Buddhists achieved their most substantial successes in China. The Taoists, however, did not scruple to ally themselves with various forms of magic and sorcery, and it is their fatal readiness to meet the popular demand for signs and wonders that is largely answerable for their present degeneration (see TAOISM).

If we had space to deal with matters of detail, it would be necessary to describe the various magical uses made of plants and animals and also of manufactured articles such as metal mirrors and weapons. An authority has stated (see *EBr*^{11} xviii. 577) that magic mirrors are mentioned in Chinese literature of the 9th cent.; but they are mentioned and their uses fully described much earlier than that. The curious book known as *Pao P'o-tzŭ*, which was written by the famous wizard Ko Hung in the 4th cent. of our era, contains full accounts of how to detect the presence of evil spirits and other dangerous beings by the use of magic mirrors. The belief once prevalent in the British Isles that a witch could turn herself into a hare is paralleled by the Far Eastern belief (still extremely common in China) that demon-witches can assume the form of foxes and other beasts.[2] A book could be filled with the magical notions and theories which in China are based on the habits and peculiarities of animals. Even insects are not exempt from the necessity of making a contribution to the treasury of magical lore. There is in China a destructive little insect known to Europeans as the silver-fish (*Lepisma saccharina*), which is a most unwelcome visitor to libraries. It is believed that, if one of these insects gets into a Taoist classic and eats the two characters *shên-hsien* ('spiritual-immortal'), its silvery body will become five-coloured. If the coloured insect be subsequently caught and eaten, the man who eats it will have the happiness of attaining the goal of Taoist ambition—he will overcome death and develop into a spiritual being. As to trees, plants, and herbs, large numbers are believed to possess some magical property or to be adaptable to magical uses. The cypress, pine, and similar trees are supposed to be conducive to immortality, and, when we learn that a noted hermit was in the habit of sleeping on a bed of pine-needles, we may be sure that this was not done merely as a means of mortifying the flesh.[3] The willow is much used as a rain-charm. In times of drought in Shansi and neighbouring provinces adults and children may be seen going about with willow-wreaths on their heads. The peach-tree is famous for its magical properties, and for this reason peach-twigs and peach-blossom are frequently mentioned in Chinese fairy-lore. The use of peachwood for the exorcism of evil spirits is very ancient, for the brandishing of peach-wands was part of the recognized procedure of the professional *wu* at royal courts under the Chou kings and probably at a much earlier date.

That large and important subdivision of Chinese magic which concerns itself with charms and amulets and divination is dealt with elsewhere (see Literature below). Here it must suffice to mention that the principal purveyor of charms is the 'Celestial Master'—usually described by Europeans as 'the Taoist pope'—who lives among the Dragon-Tiger Mountains in the province of Kiangsi. The practice of divination is also largely in the hands of Taoist specialists and *wu-p'o*; but Confucianism has always had under its patronage the complex systems of divination which are based on that abstruse classic the *I King*, or 'Book of Changes' (*SBE* xvi.). There is a grass known as *shih-ts'ao* which grows on the grave of Confucius and is carefully gathered and put up into packets. The stiff dried stalks of this plant are believed to retain some of the *ling*, or spiritual efficacy, which lies latent in the sacred soil, and they are or were highly valued for divining purposes. During recent years a very interesting discovery of 'oracle bones' and tortoise-shell fragments was made in the province of Honan. They are believed (mainly on the evidence of the archaic script) to belong to the 12th cent. B.C., though certain authorities assign some of them to a somewhat later period. An inspection of these fragments throws a most welcome light on the classical and post-classical references to the ancient methods of 'fortune-telling.'[1]

---

[1] *Ritual and Belief*, London, 1914, p. 81.

[2] For a full discussion of all forms of zoanthropy see de Groot, *Religious System of China*, iv. 156 f.; see also art. LYCANTHROPY.

[3] See Johnston, *Buddhist China*, London, 1913, p. 245, and *Lion and Dragon in Northern China*, pp. 262 f., 375–384.

Divination by the tortoise-shell and by the dried stalks of certain plants 'were the methods by which the ancient sage kings made the people believe in seasons and days, revere spiritual beings, stand in awe of their laws and orders; the methods (also) by which they made them determine their perplexities and settle their misgivings' (*Li Ki*, I. i. 5. 27 [*SBE* xxvii. 94]).

The forms of magic which are or were popularly supposed to be associated with astrology and palmistry, and with automatic writing, telepathy, clairvoyance, and 'possession' by gods or demons, are all familiar to the people of China; and there is good reason to believe that any society for 'psychic research' which showed itself enterprising enough to conduct some patient investigations on Chinese soil would be rewarded by interesting and perhaps valuable results.

LITERATURE.—The subject of magic and allied topics is exhaustively dealt with in J. J. M. de Groot, *The Religious System of China*, Leyden, 1892 ff., esp. vols. v. and vi. E. Biot's Fr. tr. of the *Chou Li* (*Le Tcheou-Li*, Paris, 1851) should be consulted for information regarding the official standing and functions of the *wu* (see esp. ii. 76–104). There are many references to sorcery and magic—some of them shrewdly critical—in Wang Ch'ung, *Lun Hêng*, an Eng. tr. of which (by A. Forke) has appeared in two parts (pt. i., London, 1907; pt. ii., Berlin, 1911). In J. Legge, *Chinese Classics*, Hongkong, 1861–72, and *SBE* xvi. [1882], xxvii. [1885], xxviii. [1885], xxxix. [1891], and xl. [1891], English readers will find all the references to magic which occur in the canonical literature mentioned in the above article. Students of the subject will also do well to consult H. Doré, *Recherches sur les superstitions en Chine*, Shanghai, 1911 (*Variétés sinologiques*, no. 32), and L. Wieger, *Folklore chinois moderne*, Paris, 1909. From a more popular point of view the subject of Chinese magic has been dealt with in N. B. Dennys, *Folklore of China*, London, 1876, and F. H. Balfour, *Leaves from my Chinese Scrapbook*, do. 1887. Interesting sidelights on popular notions of magic can be gathered from the collection of stories known as the *Liao Chai*, tr. H. A. Giles, under the title of *Strange Stories from a Chinese Studio*, London, 1880, new ed., Shanghai, 1908. The Chinese literature dealing with the subject from every conceivable point of view is voluminous, and hitherto only fragments of it have been translated. Good Chinese bibliographies will be found in the works of de Groot, Doré, and Wieger referred to.

R. F. JOHNSTON.

MAGIC (Egyptian).

1. The Egyptian view of magic.—If the Egyptians had been more self-analytic than they actually were, they might, from their own point of view, have described all their actions as either ordinary or magical. By ordinary actions would have been understood all those simple ways of coping with inanimate things and living beings which were suggested by habit, mother wit, or acquired skill. But, when inanimate matter proved recalcitrant, and living creatures were unmoved by requests, prayers, commands, promises, or threats, there still remained, in their opinion, a method of achieving their ends by means of an art that they called *ḥīke'* (Coptic ϨⲒⲔ). There is direct traditional authority for translating this very ancient term by the English word 'magic' (*μαγεύων*, *μαγίαι*, Ac $8^{9.11}$), and the examination of the hieroglyphic and hieratic examples of its use proves it to correspond fairly well to what we understand by 'magical power.' Wherever mysterious, miraculous knowledge was required to effect a purpose, that was *ḥīke'*; *ḥīke'* was something different from the techniques and practices of everyday life, since it postulated special powers in its user, and always made a greater or less demand upon faith.

2. Magic and religion.—For our traditional Western thought magic and religion are always more or less consciously contrasted with one another, whence students have often unwarrantably assumed that the two are radically heterogeneous, and that they represent successive strata in the mental development of mankind. Some investigators argue that magic is the earlier and ruder product (*e.g.*, Frazer), while others (*e.g.*, Erman) hold it to be a debased corruption of the nobler phenomenon of religion. So far as Egypt is concerned, there cannot be the slightest doubt that *ḥīke'* was part and parcel of the same *Weltanschauung* as created the religion which it deeply interpenetrated. Before defining 'magic' and 'religion' for Egyptological purposes—and we must insist on our right to frame our own definitions within the limits prescribed by the current, untechnical meaning of these terms—it will be profitable to make a rapid survey of the facts to be distributed between the two provinces.

It is with active relations that we are here concerned, and with doctrines only in so far as they are involved in the same. There are three classes of being that are affected, namely the living, the dead, and the gods. Perhaps the most remarkable characteristic of the Egyptians' view of the universe is the thoroughgoing and impartial logic with which they drew the consequences of their belief that the gods and the dead were beings of like nature with themselves, subject to human appetites and needs, and amenable to the same methods of persuasion or compulsion. Hence the principal duty of the priests was to keep those whom they served provided with food and drink, and to maintain their houses in good order; the analogy with the domestic services demanded by the living was fully conscious, for the priests of the gods and the dead were called 'the servants of the god' (*ḥm-ntr*) and 'the servants of the departed spirit' (*ḥm-k'*) respectively, even as the temple was called 'the house of the god' (*ḥ'-t ntr*) and the tomb (or an essential portion of it) 'the house of the departed spirit' (*ḥ'-t k'*). Again, the Egyptians could seek help of their gods and dead in the same naive and unsophisticated way as one man sought help of another—*e.g.*, by prayer, by questioning (asking for an oracle), and by writing letters (for letters to the dead, see art. LIFE AND DEATH [Egyptian], § 9). But in their own everyday life, as seen above (§ 1), the Egyptians resorted, when all else failed, to mysterious, uncanny arts (*ḥīke'*) to achieve various difficult aims; the method employed was not simply coercion, but coercion of an abnormal and special kind. It would have been strange if the practice of *ḥīke'* had been restricted to the narrow circle of the living, when the living shared with the gods and the dead all their other modes of intercourse. In point of fact, it was *ḥīke'* more than anything else that welded together the seen and the unseen worlds. The self-protective rites of the living, as we shall have abundant occasion to see, are full of trafficking with the gods and the dead. But the gods and the dead themselves had a use for the miraculous power called *ḥīke'*; Thōth and Isis were famous adepts of the art (below, § 10), and in a demotic story the dead priest Neneferkaptah deeply resents the attempt to rob him of a book of incantations that had been buried with him in his tomb (F. Ll. Griffith, *Stories of the High Priests of Memphis*, Oxford, 1900, p. 80 f.). Nothing could better prove the wide range of *ḥīke'* than to observe its transference from secular to funerary or divine employments and *vice versa*. In the *Pyramid Texts* and the *Book of the Dead*, compilations intended to ensure the well-being of the departed, one may often come across spells that must originally have been composed for earthly use—spells directed against the bites of snakes (e.g., *Die altägyp. Pyramidentexte*, ed. K. Sethe, Leipzig, 1908, §§ 246, 247) or of crocodiles (e.g., *Book of the Dead*, tr. E. A. W. Budge, London, 1908, chs. xxxi., xxxii.), for example; even erotic charms may be found inscribed on coffins (cf. H. Schack-Schackenburg

---

[1] See, *e.g.*, various passages in the *I King*, *Shu King*, *Li Ki*, and *Chou Li*. A recent account of the new discovery is to be found in *JRAS* (North China Branch) xlv. [1914] 65 f.

Zweiwegebuch, Leipzig, 1903, pl. 16. 11–13). Conversely, the *Book of Overthrowing Apophis* (Budge, *Egyptian Hieratic Papyri*, London, 1910) was a liturgy intended for daily recitation in the temple of Amen-rēʿ at Thebes, Apophis being the mythical snake that was supposed to be the eternal foe of the sun-god Rēʿ; the rubrics of this book nevertheless declare that it will prove of the greatest advantage to the private individual who recites it in the presence of the god. It may be added that the word *ḥīke'* is quite common in all parts of the *Book of the Dead*, as well as in such temple rituals as the *Book of Overthrowing Apophis* just mentioned.

It may therefore be taken as proved that *ḥīke'* was as intimately associated with the presumed existence of the gods and the dead as it was with the real existence of the living. But, further than this, a greater or less element of *ḥīke'* may have been inherent in all the dealings between men on the one side and the gods and the dead on the other. The two last classes of being were, after all, creatures of a world apart, elusive in their nature and hard to reach by ordinary, matter-of-fact means. The very idea of their existence puts a strain upon the imagination, and for this reason set forms of words, indicative of an effort to break down mystical barriers, had to accompany even such simple deeds of homage as the presentation of food-offerings. In other terms, the gods and the dead could hardly be approached save by the medium of what is known as 'ritual,' and the attribute which distinguishes ritual from ordinary performances may have been just that attribute which the Egyptians called *ḥīke'*. The point is not susceptible of absolute proof, for it was naturally only in the more extreme cases, where the sense of mystery and miracle-working had to be emphasized, that the term *ḥīke'* was actually applied; but the view that *ḥīke'* underlies all ritual is favoured by the close resemblance between the divine and funerary rites, on the one hand, and the rites performed for human benefit (self-protective and similar rites), on the other. The formulæ of the *Book of the Dead* differ neither in form nor in substance from the incantations which the Egyptians used to heal their own maladies; and the same general similarity also runs through the daily liturgies of the temples and the tombs (see A. Moret, *Le Rituel du culte divin journalier en Egypte*, Paris, 1902).

From the Egyptian point of view we may say that there was no such thing as 'religion'; there was only *ḥīke'*, the nearest English equivalent of which is 'magical power.' The universe being populated by three homogeneous groups of beings—the gods, the dead, and living human persons—their actions, whether within a single group or as between one group and another, were either ordinary or uncanny (*ḥīke'*). But the gods and the dead were somewhat uncanny themselves, so that all dealings with them or performed by them were more or less *ḥīke'*. It was only when men treated them ordinarily, and as man to man, that this quality of *ḥīke'* was reduced to a minimum, as in the case of spontaneous prayer and the letters to the dead—in fact, just in those rare instances where the solemn phraseology of ritual was avoided.

3. Magic defined for Egyptological purposes as privata religio.—We shall hardly be able to avoid rendering *ḥīke'* in English by the words 'magic' or 'magical power'; but, if the Egyptian conception of *ḥīke'* be taken as the criterion of what is magical and what is not, we shall have little or no use for the word 'religion,' and a multitude of facts which the common parlance would more naturally describe as 'religious' will fall under the head of 'magic.' It is advisable, therefore, in defining 'magic' for Egyptological purposes, to strike a compromise between the Egyptian connotation of *ḥīke'* and the English connotation of 'magic.' Taking our cue from the former, we shall restrict the sense of 'magic' to those actions which clearly have the implications of mystery and the miraculous; at the same time we shall attempt to maintain the distinction between magic and religion, or, rather, between magic and other kinds of religious acts. It is fully in accordance with the practice of Egyptologists, instinctively adopted but inconsistently carried out, to contrast 'magic' with the 'cult of the dead' and the 'cult of the gods,' as referring exclusively to those rites which deliberately and in the first instance aimed at the advantage of living human beings, the cults of the dead and of the gods being in this division implicitly classed together as 'religion.' Magical actions may therefore, for our purposes, be defined as those actions which men performed for their own benefit or for the benefit of other living men, and which demanded certain miraculous powers for their performance. Warning must be given against two misconceptions: in the first place, it must be clearly understood that the gods and the dead may, as indeed they usually do, enter into the *dramatis personæ* of the magical rite; the principle of division is not *de quibus* but *cui bono*; in the second place, magic as thus defined did not differ essentially in its mechanism from the cults of the dead and of the gods, nor was it necessarily regarded with feelings of moral reprobation.

For a similar definition see A. H. Gardiner, 'Notes on Egyptian Magic,' in *Trans. Third Internat. Congr. Hist. Rel.*, Oxford, 1908, i. 208–210. Erman (*Ägyptische Religion*², Berlin, 1909), though forming a very different estimate of magic from that here adopted, accepts the same tripartite division of the active aspect of religion into *Götterkultus*, *Totenkultus*, and *Zauberei*. Magic as thus defined has a whole native literature of its own: various hieratic papyri in Leyden, Turin, London, Berlin, Cairo, Rome, Vienna, and elsewhere, mostly dating from the New Kingdom; several similar papyri of the Middle Kingdom, in the Ramesseum find of 1896, still unpublished and in the writer's hands; numerous ostraca in various collections. Besides these must be named the medico-magical papyri (see art. DISEASE AND MEDICINE [Egyptian]), and the so-called *Cippi of Horus*, of which the type is the *Metternich Stele* (ed. W. Golenischeff, Leipzig, 1877).

The abstract concept of *ḥīke'* is once or twice found deified, apparently in something like the restricted meaning assigned to 'magic' in this section. Two physicians of the Old Kingdom bear, besides the honorific title 'priest of Horus in Hundred-town,' also that of 'priest of Ḥīke'' (A. Mariette, *Les Mastabas de l'ancien empire*, Paris, 1889, p. 96; R. Lepsius, *Denkmäler*, Berlin, 1849–58, ii. 91a).

The deified concept of Ḥīke' is figured in the form of a man in some sculptures of the Vth dyn. (L. Borchardt, *Das Grabdenkmal des Königs Sahure'*, Leipzig, 1913, ii. pl. 20), and is of occasional occurrence also in the texts (*ib.* p. 99). A funerary incantation whereby it was sought to confer upon the deceased the powers of Ḥīke' himself has recently come to light (P. Lacau, *Textes religieux*, Paris, 1910, no. lxxviii.); here Ḥīke' is described as a creation of the sun-god in primordial times, when as yet nothing else existed.

4. The purposes of magic.—In theory the domain of magic was as wide as men's desires themselves, magical art supplying all those things that were not procurable by simpler means. Our existing materials, which illustrate only a limited number of purposes, are probably very one-sided. The Egyptians believed, or feigned to believe, that their wizards could work all kinds of wonders; in a late tale a charm is made to bring the viceroy of Ethiopia up to Egypt, to the place where Pharaoh dwells, where he is to be beaten with five hundred blows of the stick, and returned to the land of Ethiopia again, 'all in six hours thither' (Griffith, *Stories of the High Priests*, p. 59). It is said to have been related at the court of Cheops how one magician fashioned a crocodile of wax that devoured an adulterer, how another parted the waters of a lake into which a jewel had accidentally fallen, and how a third cut off a goose's head and replaced it in a twinkling (Erman, *Die Märchen des Papyrus Westcar*, Berlin, 1891, i. 8 f.). The magical contest of Moses with Jannes and Jambres (Ex 7^{8-13}, 2 Ti 3^8) is thus quite Egyptian in spirit. Passing from such fabulous reports to practical magic, we may classify the attested uses under a comparatively small number of heads:

i. *DEFENSIVE.*—How important this class was may be judged from the fact that in a general panegyric of God as creator He is said to have 'made magical spells for men for defence against things that happened' (*Pap. Petersburg 1116 A* [ed. Golenischeff, Petrograd, 1913], line 136 f.).

(1) *Prophylactic.*—To avert death, W. Pleyte and F. Rossi, *Papyrus de Turin*, Leyden, 1869–76, pl. 120 f.; W. M. F. Petrie, *Gizeh and Rifeh*, London, 1907, pl. 27 c; against scorpions, *Pap. Turin*, 134; *Pap. Leyden 349*: against lions, hyænas, and 'all long-tailed animals that eat flesh and drink blood,' *Le Papyrus magique Harris* (ed. F. J. Chabas, Châlon-sur-Saône, 1861; also Budge, *Egyptian Hieratic Papyri*), verso B; against crocodiles and other dangers of the river, such as drowning, *ib.* recto; against snakes, L. Stern, *Papyrus Ebers*, Leipzig. 1875, pl. 97. 17.

(2) *Preventive.*—'To prevent a woman from conceiving,' *Ramesseum medical*, unpublished; 'to prevent rats from devouring the grain in a barn,' *Ebers*, 98. 6.

(3) *Counter-charms.*—'To lay a spell (*ḫ;ʿ s;*) on him whom one fears,' *Louvre, Hier. Ostr.* 694, no. 1; 'to banish magic from the body' (prescription of drugs), *Ebers*, 34. 2, 7, 10; against a complaint named 'the artifice of spells,' *Ebers*, 88. 18. A book containing 'formulæ for repelling the evil eye' (ⲉⲓⲉⲣ-ⲃⲱⲛ; cf. also *Pap. Anast.* iii. 5. 4) was preserved in the Library of Edfu (*ZÄ* ix. [1871] 44).

(4) *Curative.*—Spell to cure scorpion-stings, *Pap. Turin*, 31+77; headache, *Pap. Leyden 348*, verso 2. 9; burns, *Ebers*, 69. 3, 6; *Pap. Leyden 348*, recto 3. 1; to ease pain, *Ebers*, 30. 6. For the relations of magic and medicine see below, § 8.

(5) *Psychological.*—'A book for repelling fear which comes to befall a man by night or day, from front or behind,' *Pap. Leyden 348*, recto 2. 1.

ii. *PRODUCTIVE.*—(1) *Obstetric.*—To facilitate birth, Erman, *Zaubersprüche für Mutter und Kind*, Berlin, 1901, pl. 5. 8, 6. 8; *Pap. Leyden 348*, recto 12. 6; 'to bring milk to a woman who is nursing a child' (prescription only), *Ebers*, 97. 10; 'to keep a child warm,' *Zaubersprüche*, verso 2. 2.

(2) *Weather-charms.*—'Thou shalt perform these ceremonies when a storm rages in the east of heaven, or when Rēʿ sets in the West, to prevent storm-clouds in the east of heaven. . . . Thou shalt perform these ceremonies many times against bad weather, that the sun may shine, and Apophis be overthrown in truth' (*Book of Overthrowing Apophis*, 23. 14 f.).

(3) *Love-charms.*—A spell to secure sexual enjoyment, secondarily used for funerary purposes, has been alluded to in § 2. Erotic charms must have been frequent, but those that are known are of late date; in demotic, see F. Ll. Griffith and H. Thompson, *Demotic Magical Papyrus*, London, 1904, p. 14; in Greek, C. Wessely, *Griechische Zauberpapyrus*, Vienna, 1888, lines 296 f. and 1877 f.

(4) *General.*—'He who recites this book is blessed every day; he hungers not, thirsts not, lacks not clothes, and is not melancholy. He does not enter into the law-court, nor does judgment go forth against him. But if he enters the law-court, he goes forth vindicated, praise being given to him like a god. Nor does his popularity depart from him' (*Pap. Leyden 347*, 12. 10–12).

iii. *PROGNOSTIC.*—Many cases that fall under this head are on the border-line between magic and the techniques of ordinary life.

(1) *Obstetric.*—To know whether a child will live, *Ebers*, 97. 13; to know whether a woman will give birth, W. Wreszinski, *Medizinischer Papyrus des Berliner Museums*, Leipzig, 1909, verso 1. 3, 7, 9, etc.

(2) *Divination.*—A number of magical modes of divination are detailed in the *Demotic Magical Papyrus*, ed. Griffith-Thompson (see p. 14), but these instances do not seem to be of ancient origin. Oracle-seeking does not come under the head of magic, as here defined.

(3) *Soothsaying.*—In the tale of Unamūn (*RTAP* xxi. [1899] 81) there is related a case of a young man being 'seized by the god' and giving a solemn warning while in this condition.

(4) *Prophecy* may perhaps be brought within the sphere of magic, as it postulates supernatural power in its human mouthpiece, and usually involves the welfare of human beings. There is only one very ancient book of predictive prophecies, in a Petrograd papyrus (see A. H. Gardiner, *Journal of Egyptian Archæology*, i. [1914] 100 f.).

There seems to be no Pharaonic evidence for horoscopes, ordeals, and other forms of prognostic magic.

iv. *MALEVOLENT.*—See next section. Cursing and oaths (conditional self-curses) are magical in quality, but cannot be dealt with in this article.

5. Magic and law.—The Egyptians themselves seem to have made no distinction between 'black magic' and 'white magic,' but, when magical arts were used for wicked purposes and to injure others, they naturally came within the category of legal offences.

Thus papyri of the XIXth dyn. (*Les Papyrus Lee et Rollin*, published by T. Devéria, *Œuvres et fragments* [*Bibliothèque égyptologique*, v.], Paris, 1897, ii. 97 ff.) record the case of two harem-conspirators, one of whom 'made magical writings to lead astray and work mischief, and made certain gods of wax and certain medicines to weaken the limbs of men,' while the other procured 'writings for giving himself fearfulness and majesty,' and made 'men of wax and writings in order that they might be introduced into the harem . . . so as to lead astray the one faction and so as to bewitch the rest.' Both these criminals were condemned to death.

6. The magical rite.—A characteristic example of a magical spell, translated *in extenso* from the original, will give a truer impression of the methods of Egyptian magic than any amount of mere description.

'Flow out, thou poison, come forth upon the ground. Horus conjures thee, he cuts thee off, he spits thee out, and thou risest not up but fallest down. Thou art weak and not strong, a coward and dost not fight, blind and dost not see. Thou liftest not thy face. Thou art turned back and findest not thy way. Thou mournest and dost not rejoice. Thou creepest away and dost not appear. So speaketh Horus, efficacious of magic! The poison which was rejoicing, the hearts of multitudes grieve for it; Horus has slain it by his magic. He who mourned is in joy. Stand up, thou who wast prostrate, Horus has restored thee to life. He who came as one carried is gone forth of himself; Horus has overcome his bites. All men, when they behold Rēʿ, praise the son of Osiris. Turn back, thou snake, conjured is thy poison which was in any limb of N the son of M. Behold, the magic of Horus is powerful against thee. Flow out, thou poison, come forth upon the ground.

To be recited over a hawk with the two feathers on its head, being made of isy-wood and painted. Open its mouth and offer to it bread and beer and incense. Place it on the face of one suffering from the bite of any snake and recite from beginning to end. It will repel the poison. A successful specific' (*Pap. Turin*, 131. 1–8 = *Metternich Stele*, 3–8).

7. Analysis of the magical rite.—Except in certain border-line cases (prognostics, medical treatment, etc.), the magical rite is always twofold and comprises (1) an oral rite, consisting of certain words to be recited, and (2) a manual rite, consisting of certain actions to be performed. These two portions must be discussed in detail.

(1) *The oral rite.*—The task that lay before the magician usually involved a struggle with some difficulty, which might consequently be regarded as a hostile and aggressive force. This force is not always completely personified, but more often than not it is treated personally, being commanded, persuaded, cajoled, warned, threatened, or cursed, just like a human being.

A leading idea in defensive magic, which embraces no small part of our material, is that of 'possession.' The possible antagonists are often enumerated in a long rigmarole—*e.g.*, 'the assaults of a god, the assaults of a goddess, the assaults of a male pain, the assaults of a female pain, the assaults of a dead man, or the assaults of a dead woman,' etc. (*Ebers*, 30. 13); 'enemy male or female, dead man male or female, adversary male or female' (*Pap. Turin*, 122. 5). Any god could doubtless attack human beings, but savage or malicious deities, like Seth, the murderer of Osiris, or Sakhmet, the 'lady of pestilence' (*nb·t ʿidw*), were doubtless most to be feared. The dead were specially to be feared; nor was it only those dead who were unhappy or unburied that might torment the living, for the magician sometimes warns them that their tombs are endangered (*Zaubersprüche*, recto 8. 7–9; *Pap. Turin*, 124. 12–13). The possessing spirit was particularly likely to be of foreign origin, a negress or an Asiatic woman (*Zaubersprüche*, recto 2. 7–8); and it was wont to come secretly, 'arriving in darkness, gliding in, its nose backwards and its face turned' (*ib.* 1. 9 f.). Its mode of taking possession is, as a rule, vague; the 'demon' (*i;ḫ*, Boheiric ⲓϧ) doubtless often dwelt 'with' or in the afflicted one (*Bekhten Stele*, 11. 19 = Budge, *Egyptian Reading Book*, London, 1888, p. 27 f.), but sometimes it merely injected some kind of poison, such as its semen, urine, or the like (*Pap. Leyden 348*, verso 6. 6 f.; cf. especially the word '*ō'e*' in *Ebers*, 24. 14, 34. 10, etc.). Or else, again, the hostile power might attack with arrows (*Pap. Leyden 346*, 1. 5). The evil influences were most easily ejected through the excretions of the body, such as the sweat or urine (*Zaubersprüche*, recto 2. 8–10); or they might come out in the form of winds (*Pap. Leyden 348*, verso 12. 9). All the members of the body were subject to attacks of the kind, whence their frequent enumeration in magical texts (see below); here they are not seldom called upon to 'open their mouths and vomit forth what is in them' (*Pap. Leyden 345*, recto G 2. 2. 14–3. 1).

The malignant force was sometimes merely informed of its defeat:

'Thou flyest before the sorcerer, before the servant of Horus, as soon as he mentions the name of Horus, or the name of Seth, the lord of heaven. He raiseth his scimitar, and smiteth thy forearm and thy throat. Thou fallest upon the ground on which thy loin-cloth is spread, and there thou gropest in quest of thy heart. So dost thou die, and the report goes forth to the house of Rēʿ that Horus has conquered the disease' (*Pap. Leyden 345*, recto G 3. 12–4. 1).

Sometimes the magician frustrates the aims of the enemy by a simple veto:

'Dost thou come to kiss this child? I suffer thee not to kiss it' (*Zaubersprüche*, recto 2. 1).

Elsewhere, as in the example quoted in § 6, the poison is bidden to flow forth upon the earth. Warnings frequently supplemented and reinforced such commands, as:

'Fall not upon his tongue; it is a serpent at the mouth of its hole' (*Zaubersprüche*, recto 3. 11, in the midst of a long series of similar phrases).

Commands and warnings failing in their effect, a more persuasive means is tried:

'Come, lay thee down, departing to the place where thy

> beauteous women are, on whose hair is myrrh, and fresh incense on their shoulders' (*Zaubersprüche*, recto 3. 5–6).

Or else the demon is made to understand that in delaying to obey the magician he holds the whole order of nature in suspense:

> 'Rē' waits for thee in order to shine, and Atum to set, that thou mayest quit the arm of N son of M. The chief of the Westerners waits for thee in order to enter in triumphant, that thou mayest quit the arm of N son of M' (*Pap. Leyden 345*, verso G 4. 2–4).

In the last resort curses are employed:

> 'Every god curses thee, every goddess curses thee. . . . The [great] Ennead curses thee, the little Ennead curses thee' (*Pap. Leyden 343*, verso 1. 1–3).

It often happens, indeed almost in every spell, that gods are summoned to the sorcerer's aid. They are invoked with salutations and praise:

> 'Hail to thee, Horus, thou that art in the town of Hundreds, thou sharp-horned one, who shootest at the mark. . . . I come to thee, I praise thy beauty; destroy thou the evil that is in my limbs' (*Pap. Leyden 347*, 8. 10–13).

A trait characteristic of Egyptian magic, noted already by Iamblichus (ed. G. Parthey, Berlin, 1857, p. 245), is the threatening tone often adopted towards the gods; examples are very common:[1]

> 'On the night that the wife of Horus (Selkis, the scorpion goddess) shall bite thee, I suffer not the Nile to beat upon its bank, I suffer not the sun to shine upon the earth, I suffer not the seed to grow, I suffer not cakes to be made, I suffer not jugs of beer to be brewed for the 365 gods, who are hungry by both day and night—on that night of the burial of Osiris' (*Pap. Turin*, 137. 1–4).

The most daring menace of all is the following:

> 'I will throw fire into Busiris and burn up Osiris' (*Pap. Turin*, 135. 10; cf. *Ebers*, 30. 8).

On such occasions the magician is apt to disclaim his responsibility:

> 'It is not I who say it, it is not I who repeat it; it is Isis who says it, it is Isis who repeats it' (*Pap. Leyden 348*, recto 11. 7; *Pap. Turin*, 136. 8–9; *Pap. mag. Harris*, 9. 11).

Elsewhere the gods are referred to in the third person, and the more numerous they are, the more efficacious the rite is likely to be. Thus, when the limbs of the body are enumerated,[2] it often happens that each separate limb is identified with, or said to belong to, some special deity; and the list ends with the words,

> 'There is no limb of his without a god' (*Pap. Leyden 348*, verso 6. 2).

Origen (*c. Celsum*, viii. 58) asserts that the Egyptians divided the human body into thirty-six parts, and placed each one of them under the charge of a god; 'and so,' he says, 'invoking these, they heal the diseases of the limbs.' The divine names mentioned by Origen are those of the gods of the decans, or ten-day periods.

The magician often speaks of himself in the first person, but sometimes identifies himself with a particular god whose assistance he desires—*e.g.*,

> 'I am Rē' in this his mysterious name "He-who-was-in-the-Nun," shooting his arrows against his foes' (*Pap. Leyden 347*, 4. 11 f.)—

or else with some god who, like the person for whom the rite is performed, had once been menaced by some imminent danger:

> 'Avaunt thou, for I am Horus; retire thou, for I am the son of Osiris. The magic of my mother (Isis) is the protection of my limbs' (*Hearst medical Papyrus*, 11. 4 f.)

At other times he merely claims to be 'the servant of Horus' (*Pap. Leyden 345*, verso F 1; *Pap. Turin*, 134. 1.).

Often a mythical precedent was alluded to or narrated at length, and the mere mention of a parallel case seems to have been considered a useful expedient for ensuring the success of the rite. Thus the magician declares:

> 'I will banish all bad and evil things which come to fall upon N the son of M, even as Rē' saved himself from his enemies, even as Khnum saved himself from Sobk, even as Horus saved himself from Seth, and even as Thōth saved himself from Be'bō'' (*Pap. Turin*, 118. 9–10).

More often the point of the narrative is merely implied; in the following short incantation against burns even the names of the interlocutors, namely a messenger and Isis, are omitted:

> '"Thy son Horus has been burnt in the desert." "Is water there?" "There is no water there." "There is water in my mouth, and a Nile between my legs; I am come to quench the fire"' (*Ebers*, 69. 3–4; see H. Schäfer, in *ZÄ* xxxvi. [1898] 129–131).

Many valuable fragments of myths have been preserved to us by this means.

Especially frequent are tales that turn upon the revelation of the true name of a god; a well-known instance is the story of how Isis devised a stratagem by which the sun-god Rē should be compelled to divulge his name; this she brought about by causing him to receive a snake-bite which none could cure save herself (*Pap. Turin*, 131–133). Less well known is the narrative of the attempts made by Seth to provoke Horus into betraying his real name, which would have given the mischievous god power over his nephew; Horus, however, invents various absurd names, and so manages to elude his wicked uncle (*Pap. Turin*, 134 f.).

The importance of *names* in Egyptian magic was very considerable; the knowledge of names gave control, whether for good or for evil. It was not a rare proverb that 'a man lives who is conjured by his name' (*Pap. Turin*, 133. 6, 11, 134. 7, 9, etc.). Thus to be familiar with the names of the epagomenal days (*Pap. Leyden 346*, 2. 6) was a safe method of protecting oneself against their perils. This is a topic that might be greatly elaborated (see art. NAMES [Egyptian]).

Closely akin to the question of the importance of names is that of the importance of *language*. Certain formulæ were supposed to possess particular efficacy, such as the words 'Protection behind, a protection that comes, a protection!' (*Zaubersprüche*, recto 9. 2). The magical potency of anything depends in a large degree on its mysteriousness, and it is therefore but little wonder that cabbalistic gibberish (*Pap. mag. Harris*, verso C) and foreign spells were held in high esteem (*Der Londoner medizinische Papyrus*, ed. W. Wreszinski, Leipzig, 1912, nos. 27, 28, 32, the last being in the Kefti language).

The significance attached to names and language is an aspect of the doctrine of *sympathy*, by far the most fertile conception of all those underlying the magical rite. This doctrine holds that things that have once been associated in any way remain henceforth connected and almost interchangeable for practical purposes; its chief varieties are (1) the principle of *contagion*, which affirms that things that belong together or have once been in contact continue to influence one another even when separated; and (2) the principle of *homœopathy*, according to which like has special power to affect like. These and other forms of sympathetic magic not so easily classified are of constant recurrence in the Egyptian magical books, both in the oral and in the manual rites; the recital of mythical precedents also clearly comes under this head. The very idea of the oral rite is an instance of homœopathic magic, for language may be said to imitate and image the things which it expresses, and in so far verbal references to a desired effect may have been considered instrumental in producing it.

Sympathetic magic takes curious forms at times; one or two instances may be singled out. In connexion with the importance of language reference may be made to the significance of puns. A magician says:

> 'I make a charm for him against thee of 'afai-plant, which does injury, of onions, which destroy thee, and of honey, which is sweet to men and sour to the dead' (*Zaubersprüche*, recto 2. 4).

The virtues here ascribed to the '*afai*-plant and to honey are of obscure origin, but the destructive property of onions is clearly due to the fact that the Egyptian word for onions was *ḥădg* (the vowel is merely guessed), while 'to destroy' was *ḥōdg*. In order to tell whether a new-born infant would live or not, its first articulate cries were to be noted:

---

[1] For similar examples from the funerary books see H. Grapow, *ZÄ* xlix. [1911] 48–54.

[2] See Erman's remarks, *Zaubersprüche*, p. 23.

> 'If it says *ny*, that means it will live; if it says *mbi*, that means it will die' (*Ebers*, 97. 13);

the sound *mbi* resembles the emphatic Egyptian expression for 'no' (see *ZÄ* xliv. [1907] 132).

A widely different example of the supposed influence of like upon like is illustrated by the following words, addressed to a demon that is causing sickness:

> 'Thy head has no power over his head, thy arms have no power over his arms, thy legs have no power over his legs' (A. H. Gardiner, J. G. Milne, and H. Thompson, *Theban Ostraca*, London, 1913, p. 14 f.).

A conditional curse that runs upon similar lines may also be quoted:

> 'He who is deaf to this decree, may Osiris pursue him, may Isis pursue his wife, and Horus pursue his children' (H. Sottas, *Préservation de la propriété funéraire*, Paris, 1913, p. 128).

The mystical potency attaching to certain *numbers* doubtless originated in associations of thought that to us are obscure. The number seven, in Egyptian magic, was regarded as particularly efficacious. Thus we find references to the seven Hathors (*Pap. med. Berlin*, 21. 8; *Pap. Turin*, 137. 12; cf. *αἱ ἑπτὰ Τύχαι τοῦ οὐρανοῦ* [A. Dieterich, *Eine Mithrasliturgie*², Leipzig, 1910, p. 71]):

> 'The seven daughters of Rēʿ,' who 'stand and weep and make seven knots in their seven tunics' (*Pap. Turin*, 135. 12 f.);

and, similarly, we read of

> 'the seven hawks who are in front of the barque of Rēʿ' (*ib.* 136. 3).

Oral rites have occasionally to be recited seven times (*ib.* 138. 9, 10), but the more usual number is four (*Pap. Leyden 348*, verso 3. 3, 5, 4. 10, etc.; *Pap. mag. Harris*, 7. 4), a number doubtless associated with the 'four pillars of heaven' (*οἱ τέσσαρες στυλίσκοι* [Dieterich, p. 71]), or, as we should say, the four cardinal points.

A characteristic feature of the oral rite is its complexity. This is shown in various ways, and not least in the love manifested for enumerations. Reference has been made to the long lists of parts of the body, and to the formulæ naming all the possible enemies from whom attacks are to be feared. Similarly, lists are found of the various ways in which a man might meet his death (*Pap. Turin*, 120-121; Petrie, *Gizeh and Rifeh*, pl. 27 c), and of the various excretions through which the demon might transmit his baneful influence (*Pap. Leyden 348*, verso 6. 6 f.). This *quasi*-legal tautology is to be explained partly by the desire to cover all eventualities, and partly by the necessity of compelling respect for the learning and skill of the magician.

(2) *The manual rite.*—(*a*) *Active elements.*—The employment of *images* played an important part in the manual side of magic. Sometimes it is the hostile power to be destroyed that is thus counterfeited and done to death; so, in the *Book of Overthrowing Apophis*, the words of the oral rite are

> 'to be recited over an Apophis made of wax or drawn on a new sheet of papyrus and thrown into the fire' (26. 20; cf. 22. 6).

More often the object imitated represented a means of effecting the purpose of the rite.

> Thus in a spell to assist child-birth there was made 'a dwarf of clay to be placed on the forehead of the woman who is giving birth' (*Pap. Leyden 348*, recto 12. 6).

Miniature hands, seals, and crocodiles were powerful to ward off evil, doubtless by slaying it, sealing it up, or devouring it (*Zaubersprüche*, verso 2. 4; cf. *ZÄ* xxxix. [1901] 87). A great number of the *amulets* found in such abundance in Egyptian tombs were of a magical nature, all, indeed, except those whose purpose was exclusively funerary. Like the images mentioned above, amulets can, if explicable at all, always be interpreted by the principle of sympathetic magic in one or other of its various forms (see Petrie, *Amulets*, London, 1914).

The materials of which such images and amulets should be made are nearly always specified, and it is evident that this was considered a matter of vital importance. Here we meet with a new aspect of sympathetic magic, namely the doctrine of *properties*; every plant, stone, metal, and colour possessed its own peculiar virtue, which prompted its use in the diverse cases. Wax and clay were very commonly employed, and perhaps not only because they were easy of manipulation; their plasticity may have been thought symbolic of a wide adaptability. Aetiological myths assign a divine origin to various substances; thus the bees that supply the wax are said to have sprung from tears shed by Rēʿ (*Pap. Salt 825*, 2. 5–6, [unpublished]), and the cedar-tree emanated from the sweat of Osiris (*ZÄ* xlvii. [1910] 71).

Images were not immediately potent of themselves, but had to be charged with magical power in one way or another. The oral rite is usually recited over them (*dd mdw ḥr*, *passim*), and this transitory and intangible kind of contact seems to have ensured their continuous efficacy.

> In a fabulous story the magician Hor, the son of Pa-neshe, made a litter with four bearers and 'pronounced writing upon them, gave them breath of respiration, and made them live' (Griffith, *Stories of the High Priests*, p. 59).

Elsewhere the ceremony of 'opening the mouth,' familiar from the funerary ritual, was performed over the magical figure (*Pap. Turin*, 131. 7), and offerings and incense were presented to it in token of its now animate condition (*ib.*; *Pap. Leyden 346*, 2. 3). Drawings upon papyrus or rag were treated in exactly the same way, and seem to have been equally effective (*Pap. Leyden 346*, *ib.*; *Pap. Turin*, 31 + 77. 3); or the figures of the gods whose help was invoked could be sketched on the patient's hand, and licked off by some one (*Pap. Turin*, *ib.*). At times the mediating image could be dispensed with; the magician pronounced his spell, and then spat on the diseased limb (*Ebers*, 30. 17).

Magically charged amulets, images, or beads were often attached to the person whom they were designed to protect or heal; some kind of contact was a prime necessity of Egyptian magic; *e.g.*, we read of spells that were fastened to the left foot (*Pap. Leyden 348*, verso 4. 3); but the neck was naturally the spot where most charms were worn (*Zaubersprüche*, recto 1. 3, 8. 3, and *passim*). The string or strip of rag employed for this purpose was usually tied into magical knots (*q.v.*), seven being the favourite number. Such knotted strings have often been found and are to be seen in many collections (Erman, *Zaubersprüche*, p. 31). In other lands than Egypt the idea of the magical knot is frequently to 'bind' the hostile force; but, though references to binding demons can be found in Egyptian magical texts (*Pap. mag. Harris*, verso A 6), it is not in connexion with knots. One view that seems to have been taken of knots is that they were obstacles, as, *e.g.*, in the following words put into the mouth of a magician:

> 'If the poison pass these seven knots, which Horus has made on his body, I will not allow the sun to shine,' etc. (*Pap Turin*, 135. 8).

Particularly interesting is a spell where twelve gods were invoked.

> These were drawn 'on a rag of fine linen to be tied into twelve knots. Offer to them bread, beer, and burnt incense. To be placed on the neck of a man' (*Pap. Leyden 346*, 2. 3).

Here evidently each knot was put under the guardianship of a special deity, and thus formed a divinely protected barrier between the malign influence and its possible victim.

Imitative or significant actions were frequently performed with the apparatus of the magical rite; we have seen how a waxen image of Apophis was thrown into the fire and so destroyed, and similar cases could be multiplied.

At this point may be mentioned the composite stelæ known as *Cippi of Horus*; these are of comparatively late date (Saite period and after), and are covered with magical texts of the kind described above, and with sculptured figures, chief among which is the figure of Horus with his feet on two crocodiles. Such stelæ seem to have been placed in buildings for their protection, and especially to rid them of snakes and scorpions (see Golenischeff, *Metternichstcle*; G. Daressy, *Textes et dessins magiques*, Cairo, 1903).

(*b*) *Negative or precautionary elements.*—Magical rites could not be performed at any time and under any conditions, but strict rules and restrictions had to be observed. Of these some, like the injunction to the magician to stand 'with his face to the East' (*Pap. Leyden 347*, 12. 10), are of so many different types that they elude classification. *Times and seasons*, like everything else in ancient Egypt, had their own specific properties; some days were lucky and others unlucky, in part at least through mythological associations (for such calendars on papyrus see art. CALENDAR [Egyptian], § 2). Such considerations had to be taken into special account where magical rites were concerned, and perhaps more attention was paid to the question of time than is indicated in the brief instructions usually given as to the performance of the manual rites.

Of one spell we learn that it had to be recited 'at eventide, when the sun is setting' (*Zaubersprüche*, verso 3. 7); in another case seven knots have to be tied, 'one in the morning, and another in the evening, until seven knots are complete' (*Zaubersprüche*, verso 3. 3).

Magical rites were also in demand for safeguarding men against dangerous periods of the year. As in ancient Mexico (*GB*³, pt. iv., *Osiris, Attis, and Adonis*², London, 1914, ii. 28, n. 3), the intercalary days, in Egypt known as the five epagomenal days, were fraught with exceptional risks, against which enchantments were employed (*Pap. Leyden 346*); the user of these had to refrain from all work during the period in question (*ib.* 3. 4).

Purity was requisite in him who would be benefited by magic (*Book of Overthrowing Apophis*, 24. 19, etc.), just as ch. lxiv. of the *Book of the Dead* was ordained to be recited by 'one pure and clean, not having eaten venison or fish, and not having been near women.' In another place the user of a spell is charged to purify himself for nine days, and his servants are to do the same (E. Naville, 'Destruction des hommes,' line 79, in *TSBA* iv. [1876] 16).

Secrecy was essential in dealing with magic. In reference to a spell written on a strip of fine linen the warning is given that 'it is not to be looked at' (*Pap. Leyden 348*, recto 2. 7); of another it is said that it must not be used for any one except him for whom it was prescribed (*ib.* verso 8. 6). For similar instructions in the *Book of the Dead* see J. Baillet, *Idées morales dans l'Egypte antique*, Blois, 1912, pp. 72–75.

8. Magic and medicine.—Magical spells are often recommended on account of their proven efficacy; 'a true remedy on many occasions' is a formula extremely frequent in the magical papyri (*e.g.*, *Pap. Leyden 347*, 13. 2–3). This appeal to experience indicates a desire to justify magic as a science, and hints at the possibility of a real science arising out of it. There cannot be the slightest doubt that Egyptian medicine is the direct offspring of Egyptian magic, and that it never became really emancipated from its parent.[1] The medical books are seldom free from incantations, and the magical papyri are leavened with medical prescriptions (e.g., *Zaubersprüche*, recto 7. 2). In the selection of drugs the doctrine of properties undoubtedly played a great part, though the defectiveness of our evidence and the fact that medicine was in process of becoming an empirical science tend to conceal this from our observation. It is no argument against the thesis here supported that many of the herbs and drugs prescribed were actually, and were known to be, wholesome. In the first place, magic itself is not necessarily irrational in its methods, and, in the second place, even the utility of many wholesome things like onions was based upon essentially magical conceptions (see above, § 7 (1)). The exotic and abhorrent nature of many drugs cannot conceivably be explained except as due to superstitious reasons; how else could one account for the use of 'the bones of an oxyrhynchus-fish' (*Ebers*, 6. 3), or 'the urine of a male ass that has begotten another' (Griffith, *Petrie Papyri*, London, 1898, pl. 5, l. 18)? It is significant that the latter medicament occurs in a treatise on midwifery and kindred topics. One can often make a shrewd guess at the meaning of a prescription. To cure a complaint called 'the working of charms' (*ḥmt-s'*) the following is prescribed:

'A large beetle (*ḫprr*), whose head and wings have been cut off. To be burnt and put into fat, and then applied' (*Ebers*, 88. 13).

The point of this must surely be that, the word for beetle being derived from the verb *khōper* (*ḫpr*), 'to become,' a mutilated beetle would symbolize the frustrated achievement of a purpose; the purpose here to be frustrated was 'the working of charms.'

It must not be imagined that there was no distinction between a medical prescription and a magical rite. The former consisted mainly, if not wholly, of what may be considered as a specialized development of the manual rite, namely, the enumeration of drugs and directions for their use. The diagnosis, which is ushered in by the words 'so shalt thou say' (*dd-ḫrk*), and which sometimes precedes the list of drugs, may owe its origin to the oral rite of magic—just as the magician sometimes declares that he knows the name of the enemy. A difference is made in the medical papyri between an 'incantation' (*shīnet*) and a 'remedy' (*pakhret*); the latter is, in the main, an enumeration of drugs. In the same way the physician (*sunu*) was not quite the same thing as the magician; the physician might be a layman, while the magician was a priest (below, § 9).

That even in the 'remedy' (*pakhret*) magical ideas were latent may be proved by some additional evidence. The following is explicit enough:

'*Formula for drinking a remedy*: Welcome, remedy, welcome, which destroyest the trouble in this my heart and in these my limbs. The magic (*ḥike'*) of Horus is victorious in the remedy' (*pakhret*) (*Ebers*, 2. 1–2).

We also find formulæ to be recited in applying remedies generally (*Ebers*, 1. 1–11), in using the medicine-measures (*Pap. med. Hearst*, 13. 14), in using animal fat (*ib.* 14. 4), and so forth. These formulæ seem intended to supply the place of the incantations of which most medical prescriptions have purged themselves; their reintroduction was a reactionary step.

Where, then, does medicine begin and magic end? There is no definite boundary-line. Medicine may be said to begin when incantations are no longer used. At that point medicine becomes a technique, though using means which it does not understand, and which, if it pauses to give explanations, it explains by superstitious reasons. So far as medicine was practised without a sense of mystery and without making appeals to faith, it was a technique of ordinary life like any other; but, wherever there was consciousness of its exceptional, occult nature, it might be said to lapse back into the domain of magic. Egyptian medicine was at its best in diagnosis and in its physiological speculations; the *materia medica*, on the other hand, remained permanently under the influence of magical conceptions.

---

[1] The writer thus agrees with the views of E. Thrämer (in art. HEALTH AND GODS OF HEALING [Greek]) against F. von Oefele and H. Schneider.

9. The magician.—A Greek alchemistic treatise quoted by Maspero (*PSBA* xiii. [1891] 502) exactly defines the difference between the physician (*sunu*) and the practitioner of magic. The former exercises his craft *ἀπὸ βιβλίου . . . μηχανικῶς*, 'mechanically and by book,' while the latter is a 'priest' (*ἱερεύς*), 'acting through his own religious feeling' (*διὰ τῆς ἰδίας δεισιδαιμονίας ποιῶν*). There appears to be no common word for 'magician' (*s;w*, 'charmer,' *e.g.*, in *Ebers*, 99. 3, is very rare), and magicians certainly formed no caste of their own. It is in accordance with the homogeneity of religion and magic emphasized above (§ 2) that the priests should have been the chief repositaries of magical knowledge, and particularly those priests whose function it was to be versed in the sacred writings. The subjects of many of the books kept in the library of the temple of Edfu cannot be described otherwise than as magical (see H. Brugsch, *Aegyptologie*, Leipzig, 1889–90, p. 156; cf. Clem. Alex. *Strom.* vi. 268). The 'lector-priest' (*chrai-ḥab*) is specially named as empowered to perform cures (*Pap. med. Berlin*, 8. 10), as having discovered incantations (*Pap. med. London*, 8. 12), and as being endowed with the gift of prophecy (*Pap. Petersburg 1116 B*, recto 9); and the wonder-workers at the court of Cheops in the tale were all 'chief lectors' (see Erman, *Märchen des Papyrus Westcar*, i. 21). A passage in the *Ebers Papyrus* (99. 2) singles out the 'priests of Sakhmet' (*w'ēb Sakhmet*) for special mention as skilled members of the magico-medical profession; this is because Sakhmet was a baleful goddess who manifested her wrath in inflicting disease; her priests were likely to know best how to cope with her. Priests, doctors, and sacred scribes alike received the final touches to their education at colleges called 'the house of life' (*per-'onkh*); of these we know but little.

A 'chief physician' of the time of Darius describes how he was summoned by Pharaoh to restore the *per-'onkh* (in Sais) 'because His Majesty knew the value of this (*i.e.* the medical) art' (*ZÄ* xxxvii. [1899] 74). There was a *per-'onkh* at Abydos, apparently attached to the temple (*Louvre A 93*=*ZÄ* xxxii. [1894] 119). The word *ἱερογραμματεῖς* in the bilingual decrees is rendered in the demotic as 'scribes of the house of life' (see Griffith, *Rylands Papyri*, Manchester, 1909, p. 81, n. 13, *Stories of the High Priests*, p. 19). Magic could be learnt at the *per-'onkh* (*ib.*; *Pap. mag. Harris*, 6. 10).

On the whole, we receive the impression that less importance was attached in Egypt than in other lands to the personality of the magician; his powers might in some cases be due to special gifts, but, broadly speaking, the belief in magic was a tribute to knowledge, and not to the supernatural powers of certain men. The instructions appended to magical incantations usually presuppose that private individuals could use them for their own profit if only they observed the right precautions. Thus the magician's presence was not essential, and his authority lay solely in the fact that he was the possessor of magical knowledge; the epithet 'knower of things' (*rakh ikhet*) was commonly applied to him (*Bekhten Stele*, 11; *Ebers*, 1. 9). This point is well brought out in a passage describing the all-wisdom of the Pharaoh Amōsis:

> 'An unique king, whom Sothis taught, praised of the goddess of writing; the reverence of Thōth is beside him, and he gives to him knowledge of things, so that he guides scribes according to the true rule. He is one great of *ḥīke*'' (Sethe, *Urkunden*, iv. [Leipzig, 1906] 19 f.).

10. Celebrities in magic.—Egyptian-wise, we will begin with the gods. Thōth was the most powerful of all magicians; in the end this qualification of his gave rise to the fame of Hermes Trismegistos (*q.v.*; see Griffith, *Stories of the High Priests*, p. 58). The skill of Thōth as a magician is associated with his reputation as the inventor of hieroglyphs and the sciences of astronomy and mathematics; in the myth of Osiris he played the part of 'physician of the eye of Horus' (*Pap. med. Hearst*, 14. 6). Isis enjoyed great fame as a sorceress, mainly on account of the charms which she devised to protect her infant son Horus (*Pap. Turin*, 31+77. 6; *Ebers*, 1. 12 and *passim*). Horus himself was not devoid of magical ability, though it was mainly in his skill in warding off attacks that this was displayed; the Horus of Letopolis is described as the 'chief physician in the house of Rē'' (*Pap. Turin*, 124. 5). The eye of the sun-god, which was subsequently called the eye of Horus and identified with the Uræus-snake on the forehead of Rē' and of the Pharaohs, the earthly representatives of Rē', finally becoming synonymous with the crown of Lower Egypt, was a mighty goddess, Uto or Buto by name; she is often referred to as Wĕret-ḥīke', 'she who is great of magic' (Sethe, *Untersuchungen zur Gesch. und Altertumskunde Ægyptens*, v. [Leipzig, 1912] 128).

According to Manetho, King Athothis of the Ist dyn. practised medicine and composed anatomical books. Under King Zoser of the IIIrd dyn. lived the wise Imhotep, whose skill as a doctor led to his identification by the Greeks with Asclepius; like Amenhotpe, son of Hepu, a famous man of the reign of Amenophis III. (XVIIIth dyn.), Imhotep was in late times worshipped as a god (see art. HEROES AND HERO-GODS [Egyptian], II. 2). The prince Hardedef, a son of Cheops, was similarly noted for his deep learning and wise utterances; he was the reputed discoverer of various books of *ḥīke'* incorporated in the *Book of the Dead* (see Erman, *Märchen des Papyrus Westcar*, i. 18). Another royal prince, who was high priest of Ptah, became the hero of many tales in which he appears as a great magician; this was Khamwēse, one of the innumerable progeny of Ramesses II. (see Griffith, *Stories of the High Priests*, p. 2 f.). In the later Greek and patristic literature reference is made to various Egyptian magicians of note, Sochos, Psenosiris, and, above all, Nectanebo, the last native Pharaoh, who plays an important part in the legend of Alexander the Great.

11. The nature of Egyptian magic.—The magical rite, as described in § 7, was by no means wholly irrational in its methods; indeed, granting its premisses, namely the existence of gods and demons, the theory of possession, the principles of sympathy, and the doctrine of properties, its manner of setting to work was perfectly logical and businesslike. Here, at first sight, we are face to face with a paradox; the essence of *ḥīke'* we stated to reside in its opposition to the mechanism of ordinary action (§ 1), yet now the methods of magic are declared to be simple and straightforward. The fact is that no explanation of the magical rite is afforded by the consideration of its parts either severally or collectively; its explanation can be sought only in the concept of *ḥīke'*, which is a thing apart from, and, as it were, superimposed upon, the methods and premisses of the magical rite, a sort of pervading vital principle making this what it is.[1] Without the concept of *ḥīke'* the magical rite would doubtless have seemed to the Egyptians no more than what to us it appears to be, a puerile, though not wholly meaningless, combination of words and pantomime. There was perhaps once a period when even the most gifted were utterly ignorant of the limitations of their own power and that of the world outside; they saw forces which they treated personally in all kinds of external phenomena, and the law of sympathy seemed to them very good logic indeed. In this hypothetical period magic and science were undifferentiated. Later on, a distinction became gradually discernible between the simple techniques of ordinary life and the less successful or, at least, less trustworthy means by which men sought to achieve more difficult aims, and the notion of *ḥike'*, or magical power, was precipitated. *Ḥike'* gathered round itself just those less matter-of-fact preconceptions which were found unserviceable in ordinary life, and these became its methods. Now, the simple techniques are always able to detect, amid the complex environment in which acts are necessarily performed, the actual determining factor in their results; not so *ḥike'*, which is therefore apt to regard the whole complex environment as essential to the achievement of its purposes. This is the reason for the meticulous attention that *ḥike'* pays to detail, the set form of words to be recited, the restrictions as to time and place, the purity of the officiant, etc. The more restricted the domain of *ḥike'* became and the less successful it was, the greater the necessity which it felt of insisting on its own inherent efficaciousness, and of diverting attention from its methods; hence its love of secrecy, and its use of mystic, incomprehensible jargon to enhance the impression of the wisdom lying behind it. In this context mention must be made of two more ways in which it was sought to obtain credit for *ḥike'*, namely the appeal to antiquity and the appeal to authority.

---

[1] For the proof of this assertion see H. Hubert and M. Mauss, 'Esquisse d'une théorie générale de la magie,' in *ASoc* vii. [1902–03], esp. pp. 97–108.

> Such and such a rite was 'found at nightfall in the forecourt of the temple of Coptos as a secret of this goddess (Isis) by a lector of that fane; the earth was in darkness, but the moon shone upon this book, illuminating it on every side. It was brought as a wonder to King Cheops' (*Pap. med. London*, 8. 11–13).

The papyrus from which this quotation comes was written in the time of Amenophis III., more than a thousand years after the reign of Cheops. A mythical origin is assigned to other spells.

> One was said to have been 'invented by Geb on his own behalf' (*Pap. med. Hearst*, 5. 11); while others were devised by Nut or Isis on behalf of Rē' (*ib.* 5. 13, 15).

A more reputable way of appraising the value of a magical rite was by appealing to the test of experience; it is often claimed for a particular spell that it has been successful on many occasions (see above, § 8). Where the claim has proved justifiable, or where it has seemed sufficiently so for the rite to pass into general use, the more mysterious elements rapidly disappear, and the rite becomes an ordinary technique; so in the case of medicine and, it may be here added, of legal oaths.[1] Nothing can better illuminate the nature of *ḥike'* than the alterations which it undergoes in the course of its transformation into some ordinary technique.

LITERATURE.—This has been indicated in the body of the article. Of general treatises may be named E. A. W. Budge, *Egyptian Magic*^{2}, London, 1901; A. Erman, *Ägyptische Religion*^{2}, Berlin, 1909, ch. vii.; A. Moret, *La Magie dans l'Egypte ancienne* (*Bibliothèque de vulgarisation du Musée Guimet*, xx.), Paris, 1907; A. Wiedemann, *Magie und Zauberei im alten Ägypten* (*Der alte Orient*, vol. vi., pt. iv.), Leipzig, 1905.

ALAN H. GARDINER.

MAGIC (Greek and Roman).—I. *INTRODUCTORY.*—It is practically impossible to extract anything from the great mass of magic theory and practice as certainly the particular contribution of any given people. There is no system of human thought which, in its unchanging essential principles, is more primitive and, for that very reason, more cosmopolitan, more literally devoid of distinguishable national traits, than magic. Anything which might be considered indigenous is usually secondary as well as comparatively unimportant, and, in any case, can rarely be identified with certainty. This is especially true of the two great nations of classical antiquity. Here, as elsewhere, magic was believed and practised by the common man, and even the literary record of magic theory and practice begins with Homer and continues with increasing volume and particularity until the latest times. But, rich as they are, the records of classical magic are too incomplete and the possibility of filling the lacunæ is too remote to warrant us in hoping that a search for the indigenous would meet with any success. We shall therefore omit all reference to this aspect of our subject. For this reason, too, as well as on account of the intimate cultural relations between Greece and Rome, it seems best to deal with the two nations as one.

1. Magic and religion.—From more than one point of view the civilization of classical antiquity is still quite justified in challenging comparison with that of any other period in history. No civilization has shown such remarkable ability to observe, reflect, organize, and create in so many great departments of human thought and action. And yet among all the higher civilizations of the world there is none in which magic—of all things the most relentlessly and essentially primitive—had such an abiding influence, none in which men had such a perennial interest in the subject, none in which the progress of magic from the lore of the farmer to the lucubrations of the philosopher is more clearly marked and more profusely illustrated.

The paradox, however, is only apparent. Owing to its exaggerated conservatism, the religion of both nations always remained amazingly primitive, so primitive that it was always impossible to distinguish it from magic on the basis of any essential details of ceremonial or of the generalizations from which they were derived. Even the doctrine of incantation, with all the conclusions for which it is ultimately responsible, was never distinctive of the one as opposed to the other. It is obvious, therefore, that the Greeks and Romans were always in the position of their primitive ancestors—they were utterly unable to differentiate clearly between magic and their religion on the basis of this or of any other criterion which, when seriously applied, would have left their religion unimpaired, and at the same time would have transformed their once redoubtable magic into an interesting but harmless fossil. Their only course was to cling to the ancient distinction of official recognition.

> According to this distinction, 'religion is prescribed, official, an organized cult. Magic is prohibited, secret; at most it is permitted, without being prescribed' (N. W. Thomas, *EBr*^{11} xvii. 305, summarizing H. Hubert).

Magic cannot be distinguished from religion by the doctrine of sympathy, or by any supposed necessary sequence of cause and effect, or even by its maleficent character. Religion, then, is the orthodox, magic is heterodox, it being understood, of course, that for the Greeks and Romans the criterion of orthodoxy was the official recognition of their own State. The god must be officially recognized by the State, and his ceremonial must be the one prescribed by the official experts of the State. Other gods, and therefore their ceremonials, are heterodox. Even orthodox gods must be approached only by prescribed ceremonials.

This Græco-Roman retention of the primitive distinction between magic and religion is our only guide in establishing meaning and coherence in the bewildering array of phenomena with which we have to deal. For instance, it will be seen at once that the only effect of this criterion, so far as magic itself is concerned, is, so to speak, to define its social position. It does not necessarily destroy or even impair the belief in the reality and power of magic as such; on the contrary, from the very nature of the distinction, it takes them both for granted. Hence the persistence of magic in a civilization otherwise so advanced as was that of classical antiquity.

---

[1] Legal oaths are, of course, a fairly effectual way of guaranteeing truthfulness; but less because the implied curse is feared than because perjury is a criminal offence.

We must assume this test of orthodoxy, *e.g.*, in the case of Cato's cure for a sprained hip (*de Agr.* 160). By any other test it is patently magic; but Cato did not consider it magic, or he would not have recommended it. It was orthodox, *i.e.*, it was Roman, it had an immemorial tradition in the Roman countryside; at the most, it had become secularized. By the same test the old Roman ritual for calling out and appropriating the gods of a conquered city (Macrob. III. ix. 7) is religion, and the operation known as 'calling down the moon' is magic. Again, the same criterion is responsible for the well-known method of raising the heterodox to the orthodox by official recognition. This device of naturalizing foreign cults and thereby embracing within the sphere of their influence heaven and hell as well as humanity, is several times illustrated in the religious history of the Romans.[1]

All foreign religions, therefore, were classified as magic. The foreign cult, as such, was occasionally despised, but quite as often it was thought to be full of terrible possibilities in the way of mysterious knowledge. This was especially the case if its possessors were an older nation or a nation far away in space or time. Despite their native good sense, the Greeks were much impressed by the pretentious wisdom of the East, as after them were the Romans by the complicated mummeries of the Etruscans. Nations living far away, particularly those who live at or near the place where the sun rises from the under world in the morning or goes down into it at night, are notable for their knowledge of magic. Under such circumstances as these whole nations may be endowed by nature with magic power, especially for some given thing. Remoteness in time is, if anything, a more powerful factor than remoteness in space. When a faith has been superseded, it thereby becomes magic. In Italy the term *la vecchia religione* is known to be used as a synonym for 'magic.' So the elder and alien race is apt to be looked upon, especially by those who superseded it in the same country, as a race of formidable magicians—so formidable, in fact, and, by reason of their antiquity, so much nearer the days of the gods, that they themselves are sometimes believed to have been of supernatural origin. But they are still heterodox, they belong to the old order of things, they are more or less allied to the Lords of Misrule.

One of the most characteristic features of magic is a direct result of this persistent association of the heterodox and the foreign. From the very first, there is no magician like the one from foreign parts (Theocr. ii. 162 and often), no magic like the imported brand. Helen's nepenthe (Hom. *Od.* iv. 219), as the poet is careful to tell us, was 'Egyptian'; the very word 'magic' suggests the influence of Persia; and to the end of the Empire the native practitioner had no vogue as compared with that of his rival who was, or pretended to be, from Egypt, Chaldæa, Colchis, India, or any other place but Rome.

It is true, of course, that 'magic is prohibited, secret; at the most, not prescribed.' But, so far as classical antiquity is concerned, these distinctions seem to be secondary and derivative. Magic was prohibited because it was heterodox. The Romans, in particular, disliked secret rites of any sort, above all, foreign rites with *mysteria*, like those Greek cults so much affected by the Greeks themselves. If the Greeks objected to the secrecy of magic, it could only have been because magic itself was heterodox. So far, then, as secrecy was felt to characterize magic as opposed to religion, the ultimate source of the distinction in Greece as well as in Rome was the criterion of orthodoxy. To the same criterion is due the fact that, as a rule, men turned to magic for the things which they could not or would not ask of religion. Nor, of course, was magic necessarily maleficent; on the contrary, it might be distinctly otherwise. So long as orthodoxy was the test, magic was magic whether it happened to be white or black—and this, of course, explains why the Roman law never made any attempt to distinguish between the two.

2. Magic and legislation.—The general reputation of magic at all times was due to the same criterion; it was always illicit, it was always distrusted, it always had a bad name. And when the law stepped in—as it did at an early date in both Greece and Rome—the orthodox and the legal, the heterodox and the illegal, became synonymous terms. Magic was then criminal, and punished accordingly. The history of magic before the law began at an early period, but, so far, at least, as Greece is concerned, our records are too incomplete to give a very satisfactory idea of the question. In Greece, however, as in Rome, it concerned itself most seriously with the matter of strange religions—a burning question as soon as communication with the outside world became more intimate and extensive; still more in Rome when, owing to rapid expansion after the Second Punic War, alien beliefs and rituals came pouring in from every side. From the Decemviri to Theodosius and beyond, the Roman laws against magic were affirmed and reaffirmed, the domain of magic was at once particularized and extended, new laws were frequently passed, and the jurisprudence of the subject grew steadily in volume and importance. And, so far as the legal aspect of magic is concerned, it may be emphasized anew that, whether in Greece or in Rome, the ultimate foundation and guide of procedure was always the old criterion of orthodoxy. It is clear, for instance, that the characteristic tendency of the law to extend its scope was both suggested and guided by this criterion. It was particularly useful whenever the law felt obliged to take cognizance of some system of activity more or less mental that was 'good in parts'— such, *e.g.*, as divination (*q.v.*), which stands on the border line between magic and religion, or alchemy (*q.v.*), which hovers in like manner between magic and science, or, again, certain types of mysticism (*q.v.*), which were more or less an amalgam of magic and logical thinking. In every case what was to be considered legal and what illegal was determined by official recognition. Above all, the inclusion of foreign rites and religions within the legal concept of magic was an obvious and entirely logical deduction from the test of orthodoxy. Not only so, but by the same test it was equally obvious that precisely those foreign rites were the most serious question in magic. How, *e.g.*, shall we define the legal status of the native religions of the provinces? The final solution was again entirely logical. The Emperor was the civil and religious representative of the State. He was therefore entitled to investigate them and to make such use of them as seemed proper. But this privilege was his alone, and only by virtue of his office. In the hands of private individuals it was considered dangerous, and no doubt it was largely for this reason that magic was so rigorously proscribed and its illegality so sedulously kept alive.[1]

---

[1] E. Schmidt, 'Kultübertragungen,' in *RVV* viii. 2 [1909].

The recorded history of Roman legislation on the subject of foreign rites begins with the *cause célèbre* of its type, the *Senatus consultum de Bacchanalibus* in 186 B.C. (Livy, xxxix. 8–19),[2] in connexion with which it was ordered that all books of divination and magic should be destroyed. The history of Roman legislation on the subject of magic, whether directed against specific practices or against the art as a whole, begins with the Decemviri (*Leges XII. Tab.* viii. 8*a*).[3] Notable in later days was the *Lex Cornelia de Sicariis et Veneficis* in 82 B.C.[4] Dio Cassius (xlix. 43) tells us that in 32 B.C. the triumvirs, Octavius, Antony, and Lepidus, banished the magicians and *astrologi*, and refers (lii. 36) to a speech by Mæcenas against foreign religions and secret societies for purposes of magic. In A.D. 16 Tiberius banished the magicians and *mathematici*, and in the same reign L. Pituanius was thrown from the Tarpeian Rock and P. Marcius was executed 'more prisco' outside the Porta Esquilina (Tac. *Ann.* ii. 32), and Mamercus Scaurus committed suicide to escape a suit for magic (*ib.* vi. 29). Under Nero, Servilia, the young daughter of Soranus, was accused of selling part of her dowry to procure the means to save her father's life by magic rites (*ib.* xvi. 31). The prescriptions of Tiberius were renewed by Claudius (*ib.* xii. 52) and Vitellius (Suet. *Vitell.* 14), and the end of official paganism was marked by the laws of Diocletian against the *malefici*, *Manichæi*, and *mathematici* (*Coll.* xv. iii. 1 [Huschke]). Sometimes the law prescribed special and severe punishments, and how far the law itself had extended by the 3rd cent. A.D. may be seen from the *Sententiæ* of Iulius Paullus[5] on the *Lex Cornelia de Sicariis*:

'Qui abortionis aut amatorium poculum dant, etsi id dolo non faciant, tamen mali exempli res est, humiliores in metallum, honestiores in insulam amissa parte bonorum relegantur; quod si ex hoc mulier aut homo perierit, summo supplicio adficiuntur. Qui sacra impia nocturnave ut quem obcantarent, defigerent, obligarent, fecerint faciendave curaverint, aut cruci suffiguntur aut bestiis obiiciuntur. Qui hominem immolaverint exve eius sanguine litaverint, fanum templumve polluerint bestiis obiiciuntur, vel si honestiores sint capite puniuntur. Magicæ artis conscios summo supplicio adfici placuit, id est, bestiis obiici aut cruci suffigi. Ipsi autem magi vivi exuruntur. Libros magicæ artis apud se neminem habere licet; et penes quoscumque reperti sint, bonis ademptis ambustis his publice honestiores in insulam deportantur, humiliores capite puniuntur. Non tantum huius artis professio, sed etiam scientia prohibita est.' See also the *Cod. Theodos.* ix. 16, xvi. 10; *Cod. Iustin.* ix. 18.

Doubtless the object of the law was or, at least, ought to have been merely to punish the abuse of magic (Plato, *Legg.* 933 D), but it went much further than that. All the old laws were revived and reinforced by new legislation as soon as, under Constantine, Christianity succeeded paganism as the official religion of the Empire. Of course, the moment the change was effected Christianity became the plaintiff and paganism the defendant in the ancient process of Religion *v.* Magic. It was Christianity now that was responsible for the welfare of the State in this world. But, among other things, Christianity differed essentially from paganism in the fact that it had also a keen interest in the welfare of every member of the State in the world to come. Between the two, the new representative of orthodoxy—in the hands of those who do not understand or appreciate its message and meaning, the most intolerant of all religions—thought fit to proceed against its predecessor with a zeal worthy of a better cause and a rigour that amounted to persecution.[1]

The practice of the courts naturally went hand in hand with the law and was regulated by it. The charge of magic in one form or another was always a cause of action. It was perhaps most common in cases in which our plea is 'undue influence.' In Greek testamentary law, *e.g.*, this plea was specified either as *ὑπὸ φαρμάκων* or as *γυναικὶ πειθόμενος* (*i.e.*, 'drugs,' in the ancient sense of the word, or 'persuaded by one's wife').

The best known case of this kind is the one brought against Apuleius, the famous rhetor and author of the 2nd cent. A.D., by the relatives of the impressionable old widow, Pudentilla, whom he had just married. The charge was that he had won her affections by magic, and specified practices were alleged.[2] The legal basis of the action was perhaps ultimately the *Lex Cornelia de Sicariis et Veneficis* passed by Sulla in 82 B.C. The defendant conducted his own case and won it by a speech, the *de Magia*, which still survives and is a valuable contribution to our knowledge of magic in that period. It must be said, however, that for the most part the great rhetor does not touch upon the real point at issue.

Considering the comparative frequency of such litigation in everyday life, we can understand with what interest the Athenian audience listened to the famous scene in the *Andromache* of Euripides in which she is charged by Hermione, the wife of Neoptolemus, with winning his affections by the use of philtres. Her dignified and stinging reply,

'Not of my philtres thy lord hateth thee,
But that thy nature is no mate for his.
That is the love-charm: woman, 'tis not beauty
That witcheth bridegrooms, nay, but nobleness'
(205 ff.; tr. A. S. Way, *Tragedies*, London, 1894–98),

is doubtless the poet's own protest against the folly of such a charge. But, if one may judge from cases still occasionally reported in the daily press, it is a charge which, old as it is, will never cease to be preferred in one form or another.

3. Derivation and definition.—All the words for 'magic' in Greek and Latin record some real or supposed fact in the history of the subject or else indicate that some particular manifestation of it was sufficiently prominent to stand for the whole.

The ordinary Greek words for 'magic' are *μαγεία*, *γοητεία*, and *φαρμακεία*. The last two are old and popular. The *γοήτης*, according to the derivation offered by the Greeks themselves —*ἀπὸ τῶν γοῶν καὶ τῶν θρήνων τῶν ἐν τοῖς τάφοις γινομένων*— was specifically a necromancer in the original sense of that word, *i.e.*, like the Witch of Endor, he called up the dead (*νεκυομαντεία*)—a thing which in all ages has been one of the most important specialties of the magic art. It is true that the derivation just quoted is on the face of it equally descriptive of professional mourners, and, as Hubert observes,[3] the two occupations are not incompatible. The *γοήτης* may very well have been both. But, as we shall see below, the old etymologist is not thinking of mourners; he is giving a very good description of a special and particular type of magic with which he himself was doubtless quite familiar. The *γοήτης* was, no doubt, much feared by the population in general, but he was also more or less a roadside charlatan, and in other respects the associations with a person of his type were such that of the three ordinary names of 'magic,' *γοητεία* appears always to have been the most distinctly pejorative. The prominence of *φαρμακεία* in this connexion is due to the primitive idea that the action of any drug (*φάρμακον*)—using that word in its most extended application—is due to magic power. In its original sense *φαρμακεία* means the science which deals with the magic properties of plants and simples. Hence the *φαρμακός*—in all countries the primitive ancestor of the doctor, the apothecary, and the toxicologist (amateur or professional)—was the magician whose specialty was this particular branch of the subject, and the *φάρμακον*, *i.e.* the 'drug' which he prepared, was a magic charm. As such, the efficacy of the *φάρμακον* is enhanced, if not actually conditioned, by the incantation which generally is associated with some stage of its history. In most cases, too, it must be discovered, prepared, or given under certain conditions or in a certain way. Of course, its effect may be helpful or harmful according to the intentions of the giver. Hence the secondary use of the word in the sense of either a 'poison' or a 'remedy.' Homer himself generally distinguishes by the use of an adjective (*Od.* iv. 230). The origin and use of *μαγεία* (Lat. *magia*), from which, through the substantivized adjective (*τέχνη μαγική*, *ars magica*), our own word is derived, are an excellent illustration of the Greek and Roman attitude towards an alien faith to which allusion has already been made. In its original and restricted sense μαγεία meant nothing more than the religion of the Persian Magi (so, *e.g.*, Plato, *Alcib. I.* 122 A). It is well known that this faith, which was imported to Greece by the Magi (*q.v.*), takes rank as one of the great religions of the world. But it was imported, and had no official standing; even though impressive, it was unauthorized. Between these two facts μαγεία became a general term for 'magic' as early, at least, as the 4th cent. B.C., as we see from Theophrastus, *Hist. Plant.* ix. 17, and, perhaps, Aristotle, frag. 36[1] (though this is only an indirect quotation by Diog. Laert. *procem.* vi. 8), and thereafter retained no apparent traces of its specific and pretentious origin. Μαγεία is perhaps the most colourless of the three words; γοητεία, except when it returns to its original and distinctive use, is a pejorative term for magic in general; φαρμακεία, when used generically, is possibly fuller than the others of vague and dreadful associations; but otherwise there seems to have been no great difference between them in current speech. Hesychius, *e.g.*, defines γοητεία by μαγεία, and for Porphyrius the general term for 'magic' is γοητεία (pejorative) and whatever may be detached from it is religion. The Mystics (*e.g.*, Porphyr. *de Abstinentia*, ii. 40) differentiated theoretically the use of these words; they distinguish between good magic and bad magic, and enter into all sorts of subtle speculations regarding the hierarchy of demons through whose aid the good or the bad magic, as the case may be, is able to accomplish its purpose. The Alexandrian school of philosophers undertook to draw a distinction between γοητεία and the particularly pretentious *theurgia* of later days. But Augustine (*de Civ. Dei*, x. 9) is too much of a practical, clear-headed Roman not to see the essential weakness of the entire theory. The worship of God, he says, is a matter of 'simplici fide atque fiducia pietatis, non incantationibus et carminibus nefariæ curiositatis arte compositis, quam vel magian vel detestabiliori nomine goetian vel honorabiliori theurgian vocant, qui quasi conantur ista decernere et illicitis artibus deditos alios damnabiles, quos et maleficos vulgus appellat (hos enim ad goetian pertinere dicunt), alios autem laudabiles videri volunt, quibus theurgian deputant; cum sint utrique ritibus fallacibus dæmonum obstricti sub nominibus angelorum.' In other words, Christianity is orthodox; therefore all else is heterodox, *i.e.* magic. And, whatever we call it, however we disguise it, magic is—magic. This, of course, is nothing more or less than our familiar old criterion of orthodoxy, unimpaired and unaltered by the fact that Christianity instead of paganism happens to be the official and legal standard of comparison. For the Romans themselves—at least, after the 1st cent. A.D.—the difference between the *maleficus*, the *veneficus*, the *saga*, and the *magus* was only difference of degree.[2]

[3] In Daremberg-Saglio, *s.v.* 'Magia,' p. 1499.

Pliny's opinion (*HN* xxx. 2) is that magic began with medicine, and that the chief causes of further growth were the admixture of religion and astrology (*ars mathematica*)—all with intent to deceive. In the same way magic is extended to alchemy and divination (Tert. *de Idol.* 9, *de Cultu Fem.* 1 f., etc.). Hubert rightly observes[3] that, in spite of the fact that the Chaldæi and the plain magicians are in the same class, a sharp distinction should be made between astrology and magic. The business of astrology is to foretell the very things which it is the business of magic to prevent or, at least, to modify. If, therefore, magic enters into astrology, it is for that purpose (*Pap. Paris*, 2891, 2901, 2910). Hubert does acknowledge, however, that the astrologer's ceremonial in consulting the stars derives no small part of its efficacy from the fact that it has so much in common with the incantations of magic. We might, perhaps, add that the whole 'science' of astrology is based upon a type of reasoning so primitive, so nearly akin to that upon which magic itself is based, that one might be excused for failing to see sometimes where magic begins and astrology ends. There was at least one large and especially popular class of astrologers about whom there could be no doubt: the so-called Ἰατρομαθηματικοί, or astrological quacks, whose entire practice was founded on speculations regarding the mystic properties and powers of mere numbers. The Roman legislators were quite justified in believing that, if there was any distinction between this theory and the theory of magic incantation, it was a distinction without a difference.

It is also quite true, as Hubert insists, that alchemy should be reckoned *per se* as a science. We might add, however, that alchemy never had a chance to be reckoned *per se*. Not until it assumed the *alias* of chemistry was it able to escape from its old associations with magic (see ALCHEMY).

It has already been noted that divination, even by the old criterion of official sanction, occupies a more or less indeterminate position between magic and religion. Indeed, μαντεία and magic are so thoroughly commingled that even in antique parlance the one is often merely a synonym for the other.[1] In others a fairly sharp distinction is supplied by official sanction. *Nekyomantia*, for instance, was religious if used in a family cult, *i.e.*, it was presumed that a man has the right to call up his own ancestors if he pleases. By a somewhat similar presumption it was also sanctioned in the cult of the heroes.[2] Under any other circumstances it is not only magic, but one of the most formidable and characteristic operations of magic. The same distinction holds good in another very important and extensive branch of divination, one in which every one was interested and which all the schools of philosophy, especially the Stoics, investigated and discussed at great length—the source, valuation, and interpretation of dreams (ὀνειροκρισία; see DREAMS AND SLEEP, vol. v. p. 30 f., and cf. Artemidorus, *Onirocritica*, a curious treatise of the 2nd cent. A.D. which still survives). The method officially sanctioned for securing true and prophetic dreams (ὀνειροπομπία, ὀνειραιτησία) was *incubatio*, but the magic papyri (esp. the *Pap. Lugd. Batav.*, Leyden, 1843–85, v., vi.) are full of ὀνειραιτητικά, formulæ and charms for obtaining such dreams. Hubert would also include within the sphere of magic such practices as divination *per sortes* with verses of Homer, Vergil, or the Scriptures, φαρμακομαντεία (Athen. vi. 80 [261 F]) and, in general, any ceremonial for purposes of divination which implies the use of magic rites in our sense of the word. By that criterion, of course, we should agree with Hubert that divination in private cults was strongly tinged with magic. The same was true even of official divination, although this was when the oracles were revived in the 2nd cent. and was for historical reasons. In all these cases, however, magic was distinguished from religion by the usual criterion of official sanction.

II. *MYTHOLOGICAL PERIOD.*—Until the age of Pericles the history of our subject is largely confined to what Hubert calls the 'mythology' of magic. This is partly due to the fact that our record is so fragmentary and that what survives belongs to types less likely to be concerned with such a subject. But it is fairly certain that not far from the time of Pericles magic itself rapidly assumed greater importance in the everyday life of the nation. By that time the average man's faith in the old gods was rapidly diminishing; and among the factors contributing to the growth and spread of magic and kindred ideas in any people the decay of orthodox belief is by no means the last to be considered.

1. **The magicians.**—Among mythical magicians, the Telchines (or Telchinæ), the Dactyli, the Curetes—and in connexion with the Curetes the Corybantes (see KOURETES AND KORYBANTES)—hold a position which amply illustrates the fundamental ideas about magic already mentioned. The first three were reckoned the primitive pre-Hellenic inhabitants of Greek lands—the Telchines, of Rhodes (Strabo, p. 472; Diod. Sic. v. 55, though here, as with the others, there is a tendency to confusion in names and places of origin); the Dactyli, of Cretan or Phrygian Ida (Strabo, p. 355; Apoll. Rhod. i. 1129); and the

Curetes, of Acarnania.[1] As such, they were all regarded as servants of the gods and, indeed, as themselves more or less divine; and, in some cases, they actually had a cult.[2] Even the Telchines, a synonym of spitefulness in the folklore of Greece, were in their time founders of cults (Diod. Sic. v. 55; cf. Paus. IX. xix. 5). But they all belong to the old order, they are all heterodox, they are all classed as γόητες (Nonn. xiv. 36 f.; Strabo, p. 601).[3] Indeed, the Telchines are inimical to the gods and spiteful towards men. They use the water of the Styx in their charms (Nonnus, *Dionys.* xiv. 36); they are malignant sorcerers, who wither the plants, ruin the crops, and make barren the domestic animals.

Most notable is the position of these clans in the history of the arts. As the Cyclopes were the servants of Hephæstus, so these semi-divine corporations of smiths were the first workers in iron and copper, gold and silver; in fact, they were the inventors of metallurgy. Hence the Telchines in particular are aptly compared by W. Pape[4] to the *Kobolde* of Germanic mythology. These clans of demoniac master magicians know all the secrets of nature. The Dactyli were masters of music and of the healing art. They taught Orpheus (Diod. Sic. v. 64) and, long afterwards, Pythagoras. Paionius, Iasius, Akesidas, the three great physicians of the epic, are all Dactyli. Later, they were regarded as inventors of the famous *Ephesia Grammata* (Clem. Alex. *Strom.* i. 15 [*PG* viii. 781]). The Centaurs Chiron and Nessus are also masters of the healing art. The gift of prophecy, though naturally common to all by reason of their magic powers, is especially associated with the Curetes. Among all nations the most notable symptom of the power to prophesy is an ecstatic state of mind. The assumed origin and pattern of the Corybantic worship, the best known and most widely spread cult of this nature among the Greeks and Romans, was the wild noise and clatter of the armed dance of the Curetes around the baby Zeus—really a primitive spell, an ἀποτροπαῖον, to keep the child from harm (see KOURETES AND KORYBANTES).

The great individual magicians of Greek mythology are Prometheus (Apoll. Rhod. iii. 845; Val. Flac. vii. 356), Agamedes,[5] Melampus (Apollod. II. ii. 2), Œnone (*ib.* III. xii. 6), Pasiphae (*ib.* III. xv. 1), Agamede or Perimede (Roscher, *s.vv.*; Theocr. ii. 16 and schol.), Circe (Roscher, ii. 1193), and Medea (*ib. s.v.*). The special, though not the exclusive, interest of all is φαρμακεία. Prometheus, the wise and kindly Titan, belongs to the old régime. Melampus comes from Thessaly, the distant land of magicians. All the rest (except Œnone, and even she is a water-nymph) are in some way connected with the sun or—which amounts to the same thing—with the sea or the moon. Agamedes is the grandson of Poseidon. The rest are descendants of Helios. Agamede is also the beloved of Poseidon. The greatest of all are Circe and Medea—both of the seed of Helios and Poseidon, both from Colchis, the distant land where the sun-god himself rises at dawn from the ocean stream.

Circe.—In the Homeric account—the most marvellously correct and sympathetic portrayal in all literature of her curious, abnormal, not quite human type—Circe dwells far away in the mystic and trackless seas. Cruel, but no more consciously cruel than the child who separates some luckless fly from its wings, this φαρμακίς, whose special power is metamorphosis, amuses herself with enticing such wandering mariners as come within her reach to drink magic potions which straightway turn them into swine. Like any other queen of the mermaids, Circe is unmoral rather than immoral. Nothing could be more in harmony with her type than her first meeting with Odysseus and their subsequent life together, or than the fact that, in the long run and all things considered, the Wanderer never had a more disinterested friend among women.

Medea.—Medea is a relative of Circe and, like Circe, was sometimes worshipped as a goddess (Hes. *Theog.* 956 ff.; Alcman, cited by Athenag. *Legat. pro Christ.* 14); in fact, the Romans identified her with Angitia and the Bona Dea (Macrob. I. xii.; Serv. on *Æn.* vii. 750). Of all mythical magicians she is most distinctly the sorceress, and her powers as such are the most varied and terrible. As Hubert says,[1] she is evidently the most highly developed personality in a group of homonyms. It was therefore the constant tendency of tradition to make her the originator of rites and charms which previously had no definite pedigree at all or were attributed to some more obscure rival. At all events, in song and story, in the long annals of magic itself, there never has been a sorceress to compare with Medea. Medea, the beautiful and awful Colchian, as awful as her mistress the goddess of the crossways, Medea παμφάρμακος, daughter of Æetes and granddaughter of the sun-god, is still the arch-enchantress of all the Occident. She is first and foremost a φαρμακίς. It is therefore particularly, though not exclusively, from her knowledge of φάρμακα that her power is derived. Her box of magic simples is often mentioned (Apoll. Rhod. iii. 802, iv. 25), and in art she is often represented as holding it in her hand. Her charms are innumerable.[2] She can restore youth, bestow invulnerability, lull the dragon of the golden fleece to slumber, quiet the storms, make the rivers pause in their courses, call down the moon from heaven, etc. Indeed, Apollonius's description (iv. 1665–72) of her procedure when, from the deck of the Argo, she cast the evil eye on the giant Talus far away on the cliffs of Crete and brought him down to his death is enough to chill one's blood. But Medea is also beneficent, and K. Seeliger (in Roscher) even suggests that this was really her primitive character. She heals the wounds of the Argonauts, cures Heracles of his madness, frees the Corinthians from a famine, and is even a prophetess.

Even in the fancy of the unlettered her memory never fades. On the contrary, the popular tradition of her continued to grow in its own way (Tib. I. ii. 51, note, ed. K. F. Smith, New York, 1913). Special feats of magic were supposed to have been her invention (*e.g.*, Paus. II. xii. 1), and, as the line just cited from Tibullus suggests, we may be sure that the *libri*

> 'carminum valentium
> Refixa coelo devocare sidera'

of Canidia to which Horace refers (*Epod.* xvii. 4) contained more than one charm claimed to be Medea's own. So, too, the magic plants and simples for which Thessaly was so famous were supposed to have sprung up in the first place from the box of charms lost by Medea as she was passing over that land with her winged dragons (schol. Aristoph. *Nubes*, 749; Aristides, i. p. 76 [Dindorf]). Her fame in the written word is unique. We are obliged to agree that she never lived among men; she was merely a child of popular fancy and the foster-child of a long line of literary artists few of whom were men of transcendent genius; and yet she emerges as perhaps the most wonderful woman in all classical antiquity. Poets, historians, orators, philosophers, even unimpressionable grammarians and commentators—few fail to mention her. Ovid never escaped from her spell. From Homer to the last feeble echoes of rhetoric, and again in the renaissance of the modern world, hers is a dominant personality, and the story of her love and her lover, her betrayal and her terrible revenge, has never grown old or lost its interest and charm.

[2] Roscher, ii. 2483, for list and references.

As we might guess, Medea is the typical Græco-Roman enchantress. Her connexion with Hecate, her methods of discovering, securing, preparing, and administering her φάρμακα, and the large preponderance of φαρμακεία itself in her theory and practice of magic are all typical of every other enchantress both in literature and in life from Homer to the end of the classical world.

2. Their methods.—Φάρμακα are either to be swallowed or to be applied outwardly as salves or plasters. The distinction is medical, but it is also Homeric, and applies equally well to magic at any time. Circe uses a salve to restore her victims to human shape (*Od.* x. 391 f.); Medea uses another to render Jason invulnerable (Apoll. Rhod. iii. 1041 ff.), and still another—in the form of an aspersion—to put the dragon to sleep (*ib.* iv. 156); in the old Lesbian folk-tale Aphrodite gave Phaon a box of salve which, when applied as directed, gave him youth and surpassing beauty (Ælian, *Var. Hist.* xii. 18; Serv. on *Æn.* iii. 279; Palæphat. 49; Lucian, *Dial. Mort.* ix. 2; Roscher, *s.v.* 'Phaon'). The shirt of Nessus and the robe of Creusa belong to the same type. Pamphila (Apul. *Met.* iii. 21) went so far as to have a box filled with little caskets, each containing a special salve for a given metamorphosis.

Quite as ancient and characteristic is the φάρμακον taken as a drink. So Helen, herself a sorceress, administered her Egyptian nepenthe (*Od.* iv. 220–232); so Circe effected all her transformations (*ib.* x. 237); so Medea performed some of her feats. And here, again, the method is typical of later times. One branch of it—the use of φίλτρα or *pocula amatoria*, *i.e.* drinks to inspire love—is perhaps the commonest and most characteristic feature of all ancient magic. It is to be noted here that in Circe's case the process is not completed until she touches the victim with her ῥάβδος, or magic wand. In art Medea is frequently represented with a wand; with a wand Athene makes Odysseus look young again (*Od.* xvi. 172); so Hermes overpowers our senses (*Il.* xxiv. 343; *Od.* v. 47); and, as every one knows, to this day no magician's outfit, even if he is nothing more than an ordinary sleight-of-hand performer, is complete without this ancient and dramatic accessory. The use of the wand seems to be an application of the doctrine of sympathy. It facilitates the transfer of the magician's power to the object upon which he wishes to exert it. But in all cases the wand is a help rather than an actual necessity. Except, perhaps, in the case of the gods just mentioned, who, as such, are too powerful to need it, the really essential thing is the φάρμακον, and, as we have seen, the Græco-Roman theory of magic presupposes that Circe had already prepared her φάρμακα to the accompaniment of the proper charm, and that Helen's nepenthe had been similarly treated either by herself or by the specialists from whom she had procured it.

The same rules hold good for φαρμακεία in the art of healing. The sons of Autolycus bind up the wound of Odysseus, and stop the flow of blood with an ἐπαοιδῇ (*Od.* xix. 457); the divine physician, Asclepius, follows the same methods (Pind. *Pyth.* iii. 52; cf. iv. 217; schol. *Isthm.* vi. 53; cf. Soph. *Œd. Col.* 1194 [Jebb]), and at all times the use of incantation with a remedy was so characteristic that one of our richest sources for the study of φαρμακεία as magic is the works of the physicians from Hippocrates to Marcellus. Not that men like Hippocrates and Galen were much impressed by the magic of medicine; but their patients were, and any good doctor learns that his most powerful allies are the patient's own determination to recover and his belief that he is going to succeed. In popular medicine, of course, the survival of magic is much more marked. Here, too, the practice of pre-Periclean times is typical. The case of Iphiclus (Apollod. I. ix. 12; Roscher, ii. 306) is an excellent example.

For ten years Iphiclus could have no children. At last he consulted Melampus the seer. Melampus, whose specialty, like that of Mopsus the Argonaut (Apoll. Rhod. iii. 916 ff.), was the language of birds, consulted the vulture. The vulture said that ten years before, while castrating rams, Iphiclus had threatened his father Phylacus with the knife. It was then discovered that the knife had at that time, and presumably by Phylacus himself, been struck into the tree with which the life and well-being of Iphiclus were bound up,[1] and that it had stuck there ever since. The knife was removed, the rust scraped off and prepared as a φάρμακον, and, when Iphiclus had taken it as prescribed, he immediately recovered his powers. Similarly, the wound of Telephus could be cured only by the rust on the spear of Achilles by which the wound had originally been inflicted. The principle is, of course, frequently illustrated in the later history of Græco-Roman magic, and still survives in our own homely saying that 'the hair of the dog cures his bite.'

Other branches of magic referred to in this period are equally typical. According to Homer (*Od.* x. 516 ff.), Odysseus learned from Circe how to call up the dead, and the ceremonial of *nekyomantia*, as the poet pictures it, always remained practically the same. Indeed the antics of Empedocles, as described by Diog. Laert. (viii. 59, 62 ff.), show clearly that the type of the γοήτης became finally fixed at a very early period. Again, the bag of winds given by Æolus to Odysseus (*Od.* x. 16 ff.) repeats the symbolism of wind and weather magic in all times and countries.[2] The same is true of the primitive rustic magic attributed to the Telchines. Finally, the love-charm known as 'drawing down the moon' was certainly familiar long before the time of Sophron, who, according to Suidas, was a contemporary of Xerxes. Presumably this charm was from the first looked upon as the special property of the Thessalian witches. At all events, the idea was firmly fixed in the time of Aristophanes (*Nubes*, 749) and was never afterwards forgotten.

III. *FOREIGN INFLUENCES.*—We have seen that, in conformity with the law of distance in time or space or both, the early Greeks attributed special magic powers to their alien predecessors, the Telchines, Dactyli, and Curetes—apparently, too, the Pelasgi—and that unusual activity and ability in magic were attributed to what at the time were felt to be such distant countries as Colchis, Egypt, Thessaly, and even the Islands. As time went on and the horizon of the known world became correspondingly wider, such local centres became *pari passu* more and more distant, and the strange tribes of the African deserts, the mysterious nations of the Far East, and the still more mysterious peoples of the Far North took their turn as redoubtable magicians.

But the primacy always remained with Thessaly. In the time of Aristophanes as in the time of Apuleius, Thessaly was *par excellence* the realm of magic and magicians. The literature is full of it, and evidently the literature was in this respect a faithful reflexion of average opinion in the world at large. Numberless passages might be cited to show that in the Athens of Pericles, as long afterwards in the Rome of Augustus, the average professional enchantress found it 'good business' to advertise herself as a 'genuine Thessalian.'

Orphism.—Thrace too, though Pliny (*HN* xxx.

[2] *GB*^{3}, pt. i., *The Magic Art*, London, 1911, i. 819 ff.

1 f.) denies it, was another famous locality for magic. But Thracian magic, as Hubert warns us,[1] was really another name for Orphic magic. Now Orphism itself was not essentially magic; on the contrary, it was not only a religious movement but a religious movement of the most momentous importance in the spiritual development of classical antiquity and ultimately of the entire Western world (see ORPHISM). But it was heterodox and, therefore, 'magic.' This seems to be the first great and definite example within historical times of the impingement of a strange religion on Greek orthodoxy. Aristophanes and his fellow poets make all manner of fun of the Orphics, and such a passage as Euripides, *Cyclops*, 639 ff. (cf. Plato, *Rep.* 364 E), shows that Orpheus, like Musæus, had already become an inventor of magic, a sort of protomagician and doctor.[2] Finally, Orpheus the magician, as he appeared to the popular mind of the 5th cent. B.C., became a character of great importance in the mystic magic of later days,[3] the rites of the Orphics were associated with those of the Chaldæi, the Ophitæ claimed Orpheus as their founder, and he was even made one of the founders of astrology and alchemy. Indeed, as Hubert says,[4] it is often difficult to distinguish between Orphic texts and magic texts. Further confusion was caused by the lustral ceremonies peculiar to Orphism, and to the association of Orpheus with the cult of Selene and Hecate. So far as the average man was concerned, the distinction between the ἀγύρται and the μάντεις and the unattached priests of Orphism (Plato, *Rep.* 364 B; Theophr. *Char.* xxx. [xvi.])[5] was practically negligible. The standing charge against them was their emphasis on *mysteria*. But Orphism itself suffered from the fact that, being a strange religion, it was at once classed as mere magic. As such, it had no standing and inevitably began to deteriorate. It justified more and more its new name of ordinary magic, and its adherents assumed more and more the habits and point of view of ordinary magicians. On the other hand, ordinary magic was enriched and enlarged, as usual, by contact with new principles and methods of procedure. Here, of course, we have one important reason for the incomparable wealth and variety of Græco-Roman magic.

The Magi.—But of all these foreign influences on native magic the religion of the Persians, *i.e.* of the Magi, was perhaps the most important. At any rate, in the ordinary opinion of later times it was the type of all such influence in general. An almost immediate result, *e.g.*, of absorption by its native rival was the designation of the new combination as μαγεία. As we have seen, this was not later than the middle of the 4th cent. B.C.; we are therefore safe in assuming that by that time the Greeks had already drawn the inevitable corollary, afterwards generally accepted, that the original fountain-head of the new combination was Zoroaster, the Persian. The intrusion of Zoroaster upon magic is characteristically reflected in the later history of the subject. Thus, as it was popularly believed in the ancient world that great scholars and sages—especially if, like Pythagoras, Epimenides, Democritus, and even Plato, they had also travelled in foreign parts and had been vouchsafed the ineffable mysteries of the Oriental religions—were thereby mighty magicians, if not actually the first to reveal their wondrous art to the world at large (Val. Max. VIII. vii. 7, ext. 2; Solinus, 3; *HN* xxx. 3 f., xxiv. 156 ff., xxv. 13 ff.; Plut. *Sympos.* viii. 8; Aul. Gell. x. 12; Apul. *de Mag.* 27, 31; Diog. Laert. ix. 7; Lucian, *Necyomantia*, 6; Apoll. Tyan. *Ep.* xvi), we now hear that Pythagoras was a pupil of Zoroaster; indeed, we are told still later that he was also a pupil of Zaratas the Chaldæan (Lobeck, *Aglaophamus*, p. 471). Democritus broke into the tomb of Dardanus in order to secure the wondrous MSS buried with the defunct; and others say that, after being initiated by the Persian Osthanes, he became one of the fountain-heads of the tradition of alchemy.

Of these Persian sages associated with the tradition of Græco-Roman magic the most famous was Osthanes (*HN* xxx. 8, etc.). His special prominence was partly due to the belief that he had committed to writing all the voluminous and unutterably precious but, until his time, entirely oral tradition of ancient magic (*ib.*). The first book on medical magic was attributed to him (*ib.* xxviii. 6), and also certain apocryphal books on alchemy.[1] Of all the authors on magic he is the most frequently referred to, and his name may be found cited as an important authority in 'dream-books' still for sale.

As we shall see, all this foreign influence on magic was much discussed by the philosophers (Diog. Laert. *proœm.* 1). One of the most notable contributions must have been the so-called Μαγικός, usually attributed to Aristotle (*Frag. Aristot.*, ed. Rose, frag. 32 ff.). Suidas (*s.v.* 'Antisthenes') does well to doubt Aristotelian authorship, for the symptomatically childish statements referred to it are eminently uncharacteristic of that residuary legatee of Hellenic thought, the hard-headed and highly intellectual Stagyrite.

IV. *ITALIC MAGIC.*—The traditional history of Italic magic is not so well attested, but the assumption that, generally speaking, it was quite the same as that of Greece is fully supported by such testimony as survives. The first Roman reference to magic is the law of the Twelve Tables ('QVI FRVGES EXCANTASSIT. . . . NEVE ALIENAM SEGETEM PELLEXERIS)[2] which forbids the transference—by magic—of the crops growing in other people's fields to your own. This primitive and universal explanation of the reason why the wheat-ears in your neighbour's field are full of grain and yours are not never died out among the Romans. It is illustrated by Pliny's typical anecdote of one Furius Chresimus (*HN* xviii. 41), and as late as the 6th cent. A.D. we are told by Agobardus of Lyons, *de Grandine et Tonitruis*, 2 (*PL* civ. 148), that in his time the belief was current that the witches had formed a sort of trust and were transporting all the crops in air-ships to a land with the significant name of 'Magonia.'

A certain amount of magic of this primitive type is preserved by the Elder Cato (*de Agr.* 70 f., 73, 96, 102, 127, 156–160) and Varro (*de Re Rust.* I. ii. 27) and is more or less discernible in later authors (*e.g.*, *HN* xi. 5, xxviii. 4; Sen. *Quæst. Nat.* iv. 7; Serv. on *Ecl.* viii. 99; Aug. *de Civ. Dei*, viii. 10; Pallad. i. 35). It will be observed that the only difference here between magic and religion is that religion is officially sanctioned, while magic is not. The effect of the law of the Twelve Tables is simply to establish this distinction from the legal point of view.

Divination, as usual, occupies a more or less indefinite position between religion and magic. Hence *nekyomantia* was practised to a certain extent by private individuals, and Cicero's accusation of Vatinius (*in Vatin.* vi. 14) is not so extraordinary as it sounds.

The usual term for a magician is *maleficus*, but the word does not occur in the law until Diocletian.[1] *Veneficium* is the generic name for any magic ceremony, whether legal or illegal, and *veneficus* or *venefica* as the epithet of a magician is used in the same way. The *magus* in Cicero's time was still more or less associated with his Persian origin, but with the first year of Tiberius[2] he comes under the ban of the law, and after Trajan's time the word was applied to any one who practised illegal magic (*Cod. Theodos.* ix. 16. 4; *Cod. Iustin.* ix. 18. 7). *Saga*, 'wise woman,' is probably one of the oldest words for a 'witch' in the language, and the fact that it also means a 'bawd' is a sufficient indication of the *saga's* social position as well as of her specific functions as a magician. She is one of the standard characters of the Roman elegy. *Striges* (*strigæ*, Petron. 63; Ital. *streghe*), lit. 'screech owls,' was a name for witches which records the popular Roman explanation of vampires.

As the Greeks looked upon Thessaly, so the old Romans appear to have looked upon Etruria, as a land of magic and magicians. Among other accomplishments, the Etrurians knew how to call up the dead, bring on rain, and discover hidden springs (Wissowa, in Pauly-Wissowa, *s.v.* 'Aquilex'). So, too, such ancient and mysterious peoples as the Sabines, Marsi, and Pæligni were particularly famous for certain magic powers (Verg. *Æn.* vii. 758; Hor. *Epod.* v. 76, xvii. 29, 60, *Sat* I. ix. 29 f.; *HN* xxi. 78; Ovid, *Fasti*, vi. 141 f.). The Romans saved the Etruscan *haruspicina* at an early date by naturalizing it. Cato (*de Agr.* v. 4) classes it with the rituals of the *augures*, *harioli*, and *Chaldæi* as a matter which any solid farmer would do well to avoid; but, although he himself was doubtless unaware of it, his own charm for a sprained hip has a suspiciously foreign sound. Even then Roman magic had been exposed for some time to the influx of foreign religions which set in soon after the Second Punic War; the overpowering influence of Hellenism began still earlier; and, as we have seen, Greek magic itself had been thoroughly commingled and overlaid with foreign elements. Finally, our principal Roman source for the details of magic practice is the poets—and the poets confine themselves for the most part to the Greek tradition. The result is that after Cato's time we are dealing not so much with Greek magic or Roman magic as with the magic of the Græco-Roman Empire.

Before referring to the ancient literature connected with this subject—originally enormous and still formidable—it should be observed that no small amount of magic of a certain type had already passed into the category of what Hubert aptly calls 'magie éternelle,'[3] *i.e.* magic too old to have a definite origin, and so common that the fact that it was ever magic at all has long since been forgotten—in short, magic that has been secularized and is reckoned merely so much scientific knowledge already acquired. This explains why Pliny, a hard-headed Roman who had no use whatever for what he would define as magic, is for us a principal source for those magic formulæ and incantations which long usage had made a part of medicine and the various sciences with which he deals. And to a greater or less extent similar material may be found in any other ancient authority who deals with the same matters. One of the most important themes of Græco-Roman science was the tradition of the given subject. Perhaps this explains the curious fact that in the course of time the very word φυσικός itself acquired the secondary meaning of 'magic.'

For these as well as for other reasons already given, few sources are so valuable to the student of Græco-Roman magic as the ancient treatises concerned with medicine, especially if, like Pliny, the author is an inveterate collector of useful information, or if, like the *de Medicamentis* of Marcellus, the book is intended for home use. One of the most notable and characteristic developments of antiquity, especially during and after the Alexandrian age, was the extent to which every conceivable subject of a scientific or *quasi*-scientific nature was treated as literature, particularly as a theme for verse. In such cases whatever magic there was in the subject was rarely forgotten. Valuable sources for the magic of medicine, therefore, are the *Theriaca* and *Alexipharmaca* of Nicander (even more famous were the lost poems on the same subject by Æmilius Macer) and the long passage on snakes in Lucan, ix. 607–937, which doubtless owed much to Macer. Particularly valuable, too, are those writers who deal with some homelier branch of medicine, such as the art of the veterinary—like Palladius and the authors of *Hippiatrica* and the *Mulomedicina*. Especially notable among physicians are Ætius of Amida, Theophanes Nonnus, and Alexander of Tralles, but, above all, Cyranides and Dioscurides. Scribonius Largus and Serenus Sammonicus also might be considered. In short, any ancient doctor, however wise or learned, is likely to contribute something to medical magic.

The writers on agriculture and kindred themes (*e.g.*, Cato, Varro, Columella, the author of the *Geoponica*, Gargilius Martialis), the writers on botany, beginning with Theophrastus (*Historia Plantarum*), the naturalists, and the writers of φυσικά, like Neptunalius, are valuable. The same is true of antiquarians like Gellius and Macrobius, of the Paradoxographi, of the Agrimensores, and of the Parœmiographi. In short, omitting for the present that large and important class of writers who deal with the subject merely as a literary asset, any ancient author, no matter what his theme may be, is likely to contribute something to our knowledge of contemporary magic.

It is the philosophers, however, especially the philosophers of a certain type, who are most intimately associated with the most remarkable phase in the history of our subject. We have already seen at how early a date the spiritual life of antiquity began to feel the impact of foreign ideas and systems. The Orphics, the Magi, the worship of Mithra, the Assyrians, the Babylonians, the Phœnicians, the Egyptians, the Hebrews—these are merely the most important. And the process was facilitated to an indefinite extent by the conquests of Alexander, as it was again later by the extension of Roman power to whatever seemed worth while in the way of territory. Laws were passed and, as we have seen, were severely enforced. But they appear to have been practically powerless. The classical world was a babel of creeds, and in the time of Augustus the great capital was alive with a dozen different kinds of magicians, from the lowly *saga* to the impressive *Chaldæus*. As yet the average man of birth and education was not, as one might say, dangerously affected by these different varieties of heterodoxy; but already powerful disintegrating influences had long been at work. As early as three hundred years before Augustus, the great tide of mysticism and related ideas was already rising. Orphism was prominent in it. But Orphism (and, for that matter, any other specific creed that one might name) was perhaps quite as much a symptom as a cause. Spiritual unrest was world-wide. Men needed new wine, and the old bottles could not contain it. The craving which for generations had been more or less vague grew in volume and intensity, and finally reached its acme not far from the beginning of the 2nd cent. of our era. There were creeds then—like those of Isis and Mithra—that would seem to have just missed becoming great religions of the future. There were men, too, in that period—*e.g.*, Apollonius of Tyana and the Peregrinus of Lucian—who were philosophers of the contemporary type, and posed as the more or less inspired founders of creeds—all charlatans, of course, but not entirely so; and it is not altogether inconceivable that the names of some of these men might have gone ringing through the ages instead of being merely an object of occasional scholastic contemplation.

[2] *Ib.* p. 640, n. 7.

[3] *Op. cit.* p. 1501.

Mysticism.—The unusual prominence of magic in this period is symptomatic and due to a number of causes. There was, of course, the ignorant lower class, who always believe in magic. But there was also a higher class, fairly well educated—heavily recruited in a period like this—who had lost their faith in orthodoxy, but who lacked the character to seek the truth elsewhere and the continuity of purpose to attain it. They preferred to give themselves up to whatever promised the incredible—in a way sufficiently dramatic and interesting to gratify the taste for novelty. Under such circumstances there is always another class ready to cater to this form of intellectual and spiritual dissipation. Both these classes—the willing deceivers and the willingly deceived—are pictured to the life in Lucian's admirable skit, the *Philopseudes*, *i.e.* 'Liars for the love of it.' A few, of course, ridiculed the whole matter; the most notable example is Lucian himself, who has been well named 'the Voltaire of antiquity.' Others undertook to demolish magic by argument; chief among these were the Sceptics, the Cynics, and the Epicureans, *i.e.* those who did not believe in orthodoxy, and therefore, by our familiar criterion, were not logically driven to accept the reality of heterodoxy. Finally, however, there were also others—especially the Gnostics and the Alexandrian school of philosophy—who, after honest and conscientious investigation, became responsible for the most remarkable development of magic in Græco-Roman times. This is the magic of mysticism in its various forms. Among the most important authorities for this aspect of the Alexandrian school are Porphyrius (*de Abstinentia* and *de Mysteriis*) and Proclus (*de Sacrificio et Magia*). The theory, as Hubert observes,[1] is one in which the philosophical and the religious elements are still imperfectly differentiated. It is a synthesis of all the known methods of acting on the powers of the supernatural world. It is halfway between religion and ordinary magic, and capable of moving in either direction. The philosophers, of course, emphasized the religious character of the combination, but, as Augustine (*loc. cit.*) saw, and as Porphyrius himself acknowledged (quoted by Eus. *Præp. Evang.* v. 10), they could make no satisfactory distinction between *goetia*, *magia*, and *theurgia*. Their principal criterion was the character and intentions of the individual performing the given ceremony—a criterion hard to apply and of no real value in itself. Their *theurgia* became dissociated from religion; its position in society, like that of the *theurgia* of the old Egyptians, was not such as to give it the character of a religion; in fact, even without it the Alexandrian philosophy had all the outward appearance of magic. The attack on Apuleius was supported more by the various initiations of which he was so proud and the sanctity of the traditions which he invoked than by any specific acts of magic with which he was charged. *Theurgia* did afterwards enter religion, but it entered by the Gnostics, not by the philosophers—and this only in so far as the Gnostics who transformed it into a cult were recognized as a religious organization. So, too, the cult of Mithra gave a religious character to theories and ceremonials that in Pliny's time (*HN* xxx. 17 f.) were described as magic. On the other hand, it was always difficult to distinguish between the Ophitæ and the regular associations of magicians.[2]

Theurgical philosophy was violently attacked by the Sceptics, Epicureans, and Cynics (Philostr. *Apoll. Tyan.* vii. 39). Among the most important works were the *Κατὰ Μάγων* of the Epicurean Celsus (probably the adversary of Origen, and the one to whom Lucian dedicated his *Pseudomantis*), and the *Γοήτων Φωρά* of the Cynic Œnomaus. The *Πρὸς Μαθηματικούς* of Sextus Empiricus still survives, and it is unusually dreary reading. Like Lucian (*e.g.*, in his *Alexander seu Pseudomantis*, *Demonax*, *Philopseudes*, etc.), they attacked not only magic, but everything marvellous in either religion or mythology. Lucian feels that the wandering priests of the Syrian goddess are no better than any other magicians. All magic is a mere pretence, all magicians are hypocrites, rascals, and charlatans, whose object is to play on the credulity of the average man.

The Christians.—The attitude of the Christians, as we have seen, was different. According to Origen, Celsus had no right to deny the reality of magic; Augustine was quite certain that the rites used for summoning demons were efficacious (*de Civ. Dei*, xxi. 6); and, indeed, the Church Fathers in general are far from denying the existence and power of magic (Epiph. *Hær.* xxxiv. 1; Tert. *Apol.* 35, *de Anima*, 57; Eus. *Præp. Evang.* v. 14), especially in those early days when it seemed necessary to make the sharpest possible distinction between the Christians and the Gnostics. All heretics in general and Gnostics in particular were magicians and their faith was magic (Iren. *Hær.* i. 13 ff.; Justin Martyr, *Apol.* i. 26). Paganism in any form was magic. For the Alexandrian *theurgi* the difference between gods and demons was merely a difference in degree; for the Christians there was an absolute opposition between the two: God was good, all the demons were evil; the pagan gods were all demons, therefore all the pagan gods were evil. Any and all marvels which did not happen to be orthodox were the work of the demons.

It will be seen that this is really the familiar old distinction between the orthodox and the heterodox, with a much greater emphasis on the secondary conclusion, also ancient, that the one was good and the other evil, *per se*. And the same old distinction carried with it the same old assumption that the one was just as real as the other. The Christians never seem to have realized any more than did their pagan forefathers that the difference between their gods and other people's gods might conceivably be the difference between gods who are and gods who never were. The only way to deal with the pagan gods was to classify them as evil demons (Tatian, *Orat.* viii.). They were just as real as ever; the marvels and prodigies attributed to them were just as real and just as readily believed as ever; it was merely insisted that the same had been wrought with intent to deceive. The 'idols' still nodded and gave signs from time to time, just as they had always done; but that was a *magica operatio* wrought by the demons of the old religion (Iren. *Hær.* v. 28. 2; Eus. *HE* ix. 3). The persistence of this old prodigy of nodding, etc., is an interesting proof that the Christians still clung to the old pagan idea, more or less generally entertained by the less educated class, that the gods actually inhabited their statues. Many a priceless example of ancient art has been destroyed for this reason, and the idea still survives in the famous mediæval story of the 'Ring of Venus.'

Of particular interest to the student of magic of this strange period are such surviving treatises as the *Poimandres* of Hermes Trismegistus, *Asclepius sive Dialogus Hermetis Trismegisti*, the *Hieroglyphica* of Horapollon, and the astrological works of Nechepso and Petosiris.[1] The literature of the magic oracles belongs to astrology as well as to magic. Another important source is the *Tabellæ Devotionis*, so many of which have come to light in recent years.[2]

---

[1] *Op. cit.* p. 1501.

[2] Dieterich, p. 149.

The magic papyri.—But most important of all are the magic papyri which continue to turn up from time to time in Egypt. Hubert[3] gives the list of those published down to 1904; for later finds and their discussion, the reader is referred to Von Christ (*op. cit.*), L. Mitteis and U. Wilcken, *Papyruskunde* (Leipzig, 1912), the *Archiv für Papyrusforschung*, and the occasional reports in Bursian's *Jahresbericht des klassischen Altertums.*

The magic papyri belong for the most part to the period between A.D. 300 and 500. Their discovery is peculiarly fortunate in view of the fact that they belong to a type which came under the ban of the law, and which some of the later emperors, notably Diocletian, made sedulous efforts to destroy. They are not original and independent works, but merely handbooks of magic, and, as might be expected, the editorial tradition is very poor. There are often different versions of the same thing; sometimes the hymn or formula in one version will be considerably abbreviated as compared with the same hymn or formula in another version; again, certain habitual formulæ are often merely indicated. It is therefore extremely difficult to reconstruct any complete and trustworthy text of this type.

The authorities habitually quoted and the sources, so far as we can trace them, seem in some respects to bear out Pliny's statements in his account (*HN* xxx. 1 ff.) of the growth and development of magic. Pliny distinguishes three principal sources of ancient magic: (1) the Persian school, founded by Zoroaster; his 2,000,000 verses on this important subject (note the childish exaggeration characteristic of this sphere) were revealed and explained to the Greeks by Osthanes. Pythagoras, Empedocles, and Democritus belonged to this school, and also certain ancient Medes, Babylonians, and Assyrians. Democritus explained the magic books of Dardanus, which he had found in his tomb; they were written in Phœnician. (2) The second is the Jewish school, descended from Moses, Iamnes, and Iotapes (*Pap. Mag.* p. 755; Apul. *de Mag.* 9; Ex 7^{10-12}), and (3) the third is a Cypriote school.

It will be observed that Pliny makes no reference to the Egyptian school, which was particularly important and which, of course, is often mentioned in the papyri themselves. One of the most important authorities in magic alchemy is Maria, the Jewess, but the papyri also refer to real philosophers like Thales, Anaxagoras, Heraclitus, and Diogenes. The genuine magicians, *i.e.* the contemporary or recent authorities, are generally referred to under such names as Zosimus, Synesius, Olympiodorus, Pelagius, and Iamblichus. Now and then we find such curious and characteristic documents as a letter of the magician Nephotes to Psammetichus, a charm of Solomon, or a letter of Pitys, the Thessalian, to Osthanes. This gives some idea of the attitude of the Alexandrian magicians towards the tradition which they followed.

It is no longer possible to trace the Persian, druidical, and Brāhmanical elements in this strange compound. Assyro-Chaldæan influence must have been strong, but it appears to have been indirect. Jewish influence, on the contrary, was both strong and direct, the magic papyri being strongly affected by Judaism. Jewish magicians were in evidence, and they doubtless encouraged the impression that they were the only depositories of the genuine tradition of real magic. But, as Hubert remarks,[1] they brought no organized system to bear upon the Græco-Roman type, but merely introduced certain powerful elements of magic. Especially important here was the Bible, which was presented in Egyptian by way of the Hermetic tradition, after being translated from Greek, and furnished part of the more or less peculiar mythology of magic at this time. Their god, as we should expect, is frequently mentioned in incantations, especially the different forms of his name (Aoth, Abaoth, Arbathiao, Abriao, Adonai, etc.). Especially frequent, too, are the names of Moses, Abraham, Jacob, Solomon, and the various archangels. F. G. Kenyon[2] has explained 'Abraxas' as a corruption of the Hebrew benediction *hab-bᵉrākhāh dābhᵉrāh*, 'pronounce the blessing,' which still survives in the magic of modern times as the familiar 'abracadabra.' Hebrew words more or less corrupted are frequent in the papyri, and Christian influence is also evident; it followed in the wake of Judaism, and, though naturally not so strong, is of the same general type.

But one of the most remarkable contributions of all is that of Egypt, as we might expect of a country so ancient, so full of pretentious wisdom, with a language so utterly strange, and an alphabet which to the ordinary outsider seemed so hopelessly complicated and mysterious. The last two qualifications alone — both sovereign for charms — are enough to establish the reputation of any country as a land of magic and magicians. It may be observed, however, that, unlike the Jews, the Egyptians contributed a complete, organized system of magic to the combination. The fact that, as we learn from the *Book of the Dead*,[3] a magician could be prosecuted shows that the old Egyptians had long since separated magic from religion by the familiar criterion of official recognition. So far as the Greeks and Romans are concerned, the great name here is Hermes Trismegistus. He is not only the principal vehicle and interpreter of Egyptian magic, but, as we have seen, the Hermetic tradition is quite as powerful in the articulate presentation of the Hebrew contributions.

All these foreign influences on the theory and practice of Græco-Roman magic of this later period are more or less clearly traceable in the magic papyri. But it is to be observed that they are never clearly differentiated. Isis, *e.g.*, reveals the wonderful art of magic to Horus. This is all well enough; Horus was one of the family. But Isis learned all her magic from one of the Hebrew archangels. It is equally surprising to see Sabaoth approached with Greek rites. Often special efficacy is gained by issuing a sort of general call to all the pantheon or—which, thanks to the doctrine of sympathy, amounts to the same thing—by adding to one god the names of the most revered gods in a number of nationalities. Magic naturally turns to the foreign religions. It also believes that the plural is more redoubtable than the singular. Hence the more or less chaotic pantheon of magic, especially in its more advanced stages, the symptomatic tendency to multiplication and mixture for purposes of power, which reflects to a certain extent the fact that magic is an outlaw, that it is not subject to official control, and that it has no assured position in the body politic.

V. *THEORY OF MAGIC.*—The procedures of magic, especially of magic so highly developed as was that of Greece and Rome, are, at first sight, bewilderingly complex. But the main ideas, the essential principles from which they all derive and upon which they are all founded, are simple, universal, and eternal. The fundamental purpose of magic is to compel by supernatural means; the primary object and supposed result of every charm is some form of constraint. Possession or obsession (κάτοχος) is a constraint, any form of metamorphosis (such, *e.g.*, as lycanthropy) is a constraint, *fascinatio* in all its numerous forms is a constraint. The ancients habitually associate the processes of magic with the ideas of binding, tying up, nailing down, and their opposites. A magic act is a κατάδεσμος, a κατάδεσις, a *defixio*, a *devinctio*; the removal of its effect is an ἀνάλυσις, a *solutio*, and the corresponding verbs are, *e.g.*, καταδέω, *defigo*, λύω, *solvo*. The language of charms and the details of ritual are largely suggested and guided by some form of this fundamental idea. One sees it most clearly in such symbolic acts as the tying of knots, the driving of nails, and the binding of images.

> 'The object of every magic act is to put beings or things into or take them out of a state in which certain movements, certain changes, certain phenomena must infallibly ensue. A character or condition is either produced or suppressed, a spell is either imposed or removed.'[1]

I. The doctrine of sympathy.—One of the great fundamental principles of magic art is the doctrine of sympathy; but, while the doctrine of sympathy explains much, it should not be forced to explain all. This would be expecting too much of such a phenomenon as magic, in spite of the fact that its deductions are, in their way, so amazingly logical. It is also true that magic is supposed to work in two different ways; it either reaches its object independently and directly and acts at once, as it were, automatically, or—and this was the prevailing theory of the Greeks and Romans—it reaches its object indirectly through the agency of some intervening power to whom its behests are addressed and by whom they are executed. The distinction is important and enlightening; but here, again, we must not apply it too rigidly. There are cases in which the characteristic features of both methods are more or less traceable. We must not expect too much of the magician; he is not always a clear thinker, and he has an inveterate habit of calling all known powers to his aid, whether they happen to be logically related or not.

The doctrine of sympathy is most clearly seen in the direct method. The simplest and most common form among the Greeks and Romans is that in which the magic power possessed or acquired by a given thing works upon the desired object by contact. The virtue of the amulet (see CHARMS AND AMULETS) is shared by the person who wears it, the virtue of philtres and φάρμακα of any kind is appropriated by those who take them as directed. It may be observed, however, that even here, so far as the Greeks and Romans were concerned, the supernatural power had already intervened in the preparation of the given article; and the magician's characteristic method of pluralizing for power is naively illustrated by the rule that in preparing a φάρμακον one should combine ingredients which individually are capable of producing the desired effect. The reasoning is evident. The large use of magic of this type, *i.e.* φαρμακεία, helps to explain the magician's particular interest in the properties of plants and simples. For a similar reason the alchemist is particularly interested in the properties of stones and gems; some of them are sovereign for certain diseases, if ground up and taken inwardly with the appropriate ceremonial. Primitive medicine is a fearsome adventure for the patient. In rare cases the *mana* inheres in the object as such, but this is generally a secondary conclusion. As a rule, the *mana* is acquired, or merely accidental. Some objects are only conductors of *mana*—which explains why they can be used for apparently contradictory purposes. Other staple ingredients in a large number of charms—such as honey, flour, rain-water, etc.—have lost their original significance. Objects are selected according to the usual rules—some real or fancied resemblance, especially the association with some god, etc. A certain thing, *e.g.*, is yellow, therefore it is good for jaundice. Such odd names for plants as 'Jove's Beard' or 'Venus' Ears' record associations with gods, and were doubtless originally secret. The place from which an object comes is often a decisive factor: articles found in the public baths were magic. The Christians considered certain filthy animals magic because they were associated with the devil. Certain names of plants and minerals are magic because they correspond to the planets.[1] Sometimes the decision is made from etymology, true or false; the *reseda* owes its power to its name only (*HN* xxvii. 131). The virtue of lead for certain purposes is due to the fact that it is heavy or cold or indestructible, etc.

One of the most important applications of the doctrine of sympathy is the use of symbolism.[2] As we have already seen, symbolism is even more characteristic of magic than it is of religion. Hubert[3] defines two methods. In the one, which is particularly dramatic, the person or thing upon which we wish our magic to act is represented by a substitute. The most notable example of this class is the use of clay and waxen puppets. The second consists in prefiguring the desired action and result (Tib. I. vi. 53 f.; Soph. *Aias*, 1175)—

> *e.g.*, apply a stone to a wart (contact and sympathy), throw the stone away (symbolism), and the wart goes with it. Or, if you have a pain in the stomach, apply the stomach of a frog to the part affected, and your pain becomes his pain, etc. (*HN* xxii. 149; Marcellus, xxvii. 123).

The same idea of contact and sympathy creates the familiar rule of magic homœopathy, that the cause of a given thing is also its remedy.

But, so far as magic is concerned, perhaps the most momentous deduction from the doctrine of sympathy is the rule that the part may stand for the whole, that the two are inseparably connected; the part is able to draw the whole to itself, if aided by magic. What Vergil called the *exuviæ* of Æneas had a special function and a special significance in the pretended *solutio amoris* of the unhappy Dido (*Æn.* iv. 494 ff.). Without assuming the active co-operation of this principle, we cannot appreciate the true inwardness of the most striking performances of magic in classical antiquity. If, for instance, a magician can secure bones of the dead, he has a special and powerful means of calling up the dead to whom those bones originally belonged (Tib. I. ii. 46)—which is one important reason why witches were so often accused of haunting the graveyards (Hor. *Sat.* i. 8; Lucan, vi. 530), and in primitive times the principal reason why the corpse was so carefully watched until it was safe in the grave (Petron. 63; Apul. *Met.* ii. 21). So, too, if we wish to reach the living, it is very important to possess a lock of their hair, the parings of their nails, a garment, or anything nearly or remotely associated with them. Nothing is more intimately and entirely part and parcel of a thing than its real name. 'Rome,' it is said (Tib. I. ii. 57 f., with the present writer's note; Macrob. III. ix. 2; *HN* xxviii. 18, iii. 65; Plut. *Quæst. Rom.* 61 [p. 279 A]; Serv. on *Æn.* i. 277; Solinus, 1; Lydus, *de Mens.* iv. 73), is only the *alias* of the great city with world dominion. The true name, *i.e.* the name which would have enabled her enemies to conjure against her with magic, was a religious secret. So the clay or waxen image may be comparatively harmless until it has been ceremonially named with the true name of the person whom it is meant to represent.[1]

Names are not the only words which are an integral part of the things which they represent. A similar relation exists between the verb, or the sentence, and the action described by it. Hence, of course, the theory of incantation as opposed to that of prayer in the modern sense. From this point of view the lines of Euripides (*Hippol.* 478 f.),

> *εἰσὶν δ' ἐπῳδαὶ καὶ λόγοι θελκτήριοι·*
> *φανήσεταί τι τῆσδε φάρμακον νόσου,*

echoed by Horace (*Epist.* I. i. 34 f.) in

> 'Sunt verba et voces quibus hunc lenire dolorem
> Possis et magnam morbi deponere partem,'

are true not only of magic theory in general, but of the Græco-Roman conception of magic in particular. Incantation is rarely, if ever, absent from some stage of the act. The influence of the indirect method is seen even more clearly in the fact that sympathy is often created by the incantation which accompanies the act (*e.g.*, *HN* xxvi. 93). In the exorcism of disease the incantation is often sufficient in itself. Again, a mere verbal comparison is sufficient, especially if accompanied by a gesture.

'Salvum sit quod tango!' ejaculates Trimalchio piously (Petron. 63), to avoid possible consequences when he touches his friend's arm to illustrate where and how the unfortunate character in his story was touched by the witch.

Given, therefore, the right words in the right order and pronounced in the right way, the desired result must ensue. But which words? Ancient formulæ connected with or naming the appropriate gods are, of course, valuable, but in many cases nothing can compare with ancient words in an utterly incomprehensible tongue. The most famous example in antiquity was the so-called *Ephesia Grammata* attributed to the Dactyli.[2]

But it is by no means necessary that an incantation should consist of what, even in the most general sense, could be termed articulate speech of any sort. Mere music, *e.g.*, as such is distinctly magic. The great musicians of mythology—Amphion, Orpheus, Väinämöinen, etc.—are always magicians. We no longer attribute the power of music to magic in the literal sense, but primitive man can hardly be blamed for doing so. The ancient doctors made a considerable use of music in their practice, and we ourselves have learned that it is sometimes distinctly beneficial in certain obstinate nervous disorders of long standing.

Here, however, our particular concern is with a class of sounds which are anything but musical, but which are mentioned again in the literature of the Empire as being especially powerful and efficacious in magic incantations. Lucan, vi. 686 ff., tells us that all the sounds of nature were imitated by such an expert as Erichtho, and does not fail to add his usual and characteristic catalogue. But Lucan is too anxious to tell us all he has read in his uncle's library to be of any great value in a matter like this. Whatever they afterwards may have become, we can be sure that these phenomena were simpler and more specific, that they were probably inspired by some aspect of the doctrine of sympathy, and used for a special purpose.

The Romans habitually describe them by *stridor* and *stridere*. The sounds to which these words are applied are many, and vary from the filing of a saw to the creaking of a door and the shrilling of a locust. But they are all alike in being inarticulate, high-pitched, and disagreeable. The obvious and instructive parallel is the primitive Greek *γοητεία*. The *γόητες* were specifically necromancers and, as we saw above (p. 271^{b}), they were supposed to have received their name from the most notable peculiarity of their magic, viz. 'from their wailing and crying among the tombs.' So, long afterwards, in Græco-Roman times the charms described by *stridor* and *stridere* are very characteristic of *nekyomantia.* If so, and we can hardly doubt it, the inarticulate magic charms connoted by these two words should be just those described as 'wailing and crying among the tombs,' and their purpose should be to call up the dead. Such being the case, the two most common and characteristic uses of *stridor* and *stridere* outside the sphere of magic itself are illuminating. (1) One of these is that squeaking and gibbering of the dead to which the ancients so often refer:

'Ecce inter tumulos atque ossa carentia bustis Umbrarum facies diro stridore minantur' (Petron. cxxii. 137); 'auribus incertum feralis strideat umbra' (Lucan, vi. 628; cf. Stat. *Theb.* vii. 770; Sil. Ital. xiii. 600; Claudian, *in Ruf.* i. 126; Ovid, *Fasti*, v. 458; Verg. *Æn.* vi. 492 f.; Hom. *Od.* xxiv. 5; and Hor. *Sat.* I. viii. 40 f.).

By the doctrine, therefore, of sympathy the *stridores* of the necromancers were an imitation of the wailing and crying of the dead, and owed their efficacy to that reason. (2) *Stridor* is regularly used to describe the hoot of the *strix*, or screech-owl—that long-drawn, shuddering scream that suggests nothing so much as the wail of the banshee, the moaning of souls that can find no rest, the ominous cry of the *βιαιοθάνατοι*, questing ghosts of those who died before their time (see HECATE'S SUPPERS). No wonder the *strix* is the most remarkable and ill-omened bird in classical folklore. Owls, disembodied spirits, or necromancers calling up those spirits—so far as the cry alone was concerned, how was one to be sure which was which? As a matter of fact, all three were more or less inextricably confused with each other, and there can be no doubt that the cry had much to do with the situation. The *strix* is associated with all sorts of witchcraft in antiquity, but especially and above all with vampirism in its various forms (see the present writer's note on Tib. I. v. 42). The classics are rich in examples of the type which happens to be more familiar to us, especially in the erotic sphere. The return of Protesilaus is a case in point (Roscher, *s.v.*), also the story of the Lamia (Philostr. *Apoll. Tyan.* iv. 25) immortalized by Keats, and the simple and touching tale told by Phlegon of Tralles (*Mirab.* 1) which is the prototype of Schiller's 'Braut von Korinth' and Gautier's 'Morte Amoureuse.'

But witches can turn owls whenever they like, and they do so regularly, when their object is some form of necromancy.

Ovid, *Amor.* I. viii. 13–18, speaking of Dipsas, the redoubtable saga with eyes of different colours ('pupula duplex'),[1] says:

> 'Hanc ego nocturnas versam volitare per umbras
> Suspicor et pluma corpus anile tegi;
> Suspicor, et famast; oculis quoque pupula duplex
> Fulminat et gemino lumen ab orbe micat;
> Evocat antiquis proavos atavosque sepulcris
> Et solidam longo carmine findit humum.'

But the ever present and most gruesome side of this idea, as of magic in general, is the sexual side. Most frequently the witch is like Pamphila in Apuleius (*Met.* iii. 21). She assumes the form of a *strix* to fly to her lover; she never comes to him as a human and normal woman. The fires of hell are in her eyes, the fires of hell are in her veins, the taste of blood and death is on her lips. She is the erotic vampire—the *succuba*, as she was called in the Middle Ages—who haunts her victim in his dreams and little by little draws to herself the very marrow in his bones. Hence it is that the Græco-Roman screech-owl, who, even at her best, as Pliny substantially says (*HN* x. 34), seems to make no effort to look or act like a well-meaning and self-respecting fowl of the air, belongs quite as much to the kingdom of dreams as to the kingdom of birds. How can one be sure in any given instance whether the *strix* is a real *strix* or a witch in the form of one (Ovid, *Fasti*, vi. 141)? Indeed, as early as Plautus (*Pseud.* 820; cf. Propert. IV. v. 17) *striges* already meant 'witches' as well as 'screech-owls,' and this designation of what is evidently the Roman parallel of the old Greek γοήτεις records a popular belief which showed no tendency to diminish in later days.

2. Sources of magic power. — Our surviving testimony is insufficient to give us a very clear idea how the powers of the classical magician were defined or from what sources they were supposed to be derived. For the Egyptians, as Hubert[1] remarks, the magician was like the priest in being closely associated, if not actually identified, with the god whose power he was utilizing,[2] and perhaps in the ultimate issue this is everywhere the explanation of his power. Particularly notable was the development of this principle among the Alexandrian *theurgi*. Here, of course, the characteristic Græco-Roman preference for the indirect method afforded a favourable soil, but, without doubt, the chief factor was the direct influence of the Egyptian theory just mentioned.

But, granted that he does identify himself with the god, how does he compass it? Is it a gift, or does he acquire it, and, if so, how? The *theurgi* emphasized the theory that it was acquired, and the methods recommended indicate in themselves the effort to raise magic to the level of a religio-philosophical system permeated with the ideas and ceremonials characteristic of mysticism. Asceticism was recommended, but, above all, the magician must be an adept. Such persons may have a revelation coming to them more or less directly by way of the fallen angels or the archangels (Tert. *de Idol.* 9 f., *Apol.* 35). Indeed, Maria the Jewess was instructed by God Himself.[3] Gods, kings, great philosophers, and sages of old loom large in this aspect of later magic. The 'Book of Moses'[4] gives us a good idea of the complicated ceremonial through which the candidate was supposed to pass in order to arrive at the perfection desired. There were purifications, sacrificial rites, invocations, and, to crown all, a revelation of the Κοσμοποιία (how the universe was made and the secrets thereof). This puts the adept in relation not with certain specific gods, as appears to have been the idea of the Egyptian prototype, but with the stars and planets, *i.e.* the universal powers. The magician, especially the magician-alchemist, derives his power from the acquaintance with the forces of nature. He has established *rapport* with the universe; and, as there is also *rapport* between all the parts of the universe, he has extended his power over the entire universe as a whole. This, of course, is the old doctrine of sympathy on a particularly grand and impressive scale. The result of the ceremony is that the magician, the *theurgus*, is himself no longer a man, but a god.[5]

This is a conception calculated to appeal to any man whose imagination is still in working order, but it does not emerge clearly in ordinary magic. It belongs rather to mystic magic, which was the special development of serious souls, some of them really great, who believed that this path would lead them to the undiscovered secrets of life, death, and immortality. To speak in terms of the average man and of the history of the art as a whole, the ideas which determined the powers of the magician were much the same as those which dictated the choice of a magic object or the construction of a charm, and which, in fact, are fundamental in the art of magic as a whole. Generally speaking, magic is a gift and, as such, it is often due to some accident of birth or to some special privilege. In some cases it is inalienable; again, it can be outgrown or easily lost. Children, *e.g.*, merely as such, sometimes possess it.[1] Virginity has always been considered an important condition of the power to prophesy (*Geopon.* XI. ii. 4; Plut. *de Defectu Orac.* 46).[2] The idea seems to be that the seeress is, as it were, married to the god and that infidelity to him is punished by loss of the power which he gave her. The entire world seems to be agreed that women, simply as women, are peculiarly gifted in this direction (Demosth. *c. Aristog.* i. 17; Aristoph. *Nubes*, 749; Lucian, *Dial. Deor.* xx. 10, *Dial. Meretric.* i. 2, iv. 4, *Bis Accus.* 21). We have already seen how important they are in the mythology of Greek magic, and this is true of all magic. They are less prominent in the magic of the mystics and their brethren, but this is itself symptomatic of the ideals and pretensions of the movement. In the genuine, traditional, immemorial magic of everyday life in Greece and Rome they never lost their importance. As a φαρμακίς, Medea was typical of her sex. The knowledge and practice of φαρμακεία as a branch of magic were always more or less confined to women.

The distant, the foreign, the strange, the unusual, even the horrible, are all important factors. 'Magic' is a primitive name for anything abnormal. Those who come from distant countries, especially if, like the Brāhmans (Philostr. *Apoll. Tyan.* iii.), they are also the priests of strange and remote religions, are magicians. Hence, on the principle of 'omne ignotum pro magnifico,' there are distant countries in which all the inhabitants are magicians or possess the evil eye or some such uncanny gift. Any person with the evil eye is a magician; so, too, the ventriloquist (schol. Aristoph. *Vespæ*, 1014; Plato, *Soph.* 252 C; Plut. *de Defectu Orac.* 9). Anything abnormal about one's birth or pedigree is likely to give one magic powers. Persons born with a caul have the gift of prophecy. The child of incest, especially of deliberate incest, is bound to be a magician. This was harped on continually in the witch trials of the Middle Ages, but it is also prominent in ancient tradition, especially in connexion with the Magi themselves (Catullus, xc.; Xanthus, frag. 28 [*FHG* i. 43]; Sotion, *ap.* Diog. Laert. *prooem.* 7; Strabo, p. 735). Sometimes whole peoples, clans, or families are supposed to be magicians (Herod. iv. 105);[3] some—*e.g.*, the Thibii (*HN* vii. 17)—owe it to the possession of the evil eye; others have some particular specialty.

The Ophiogenes, the Psylli, the Marsi, etc. (*ib.* xxviii. 30, vii. 13–15). can kill snakes simply by breathing on them, or can cure snake-bites merely by touching the wound with their hands. A certain family in Corinth could calm tempests (Hesych. and Suidas, *s.v.* ἀνεμοκοῖται), and so on. Many similar statements made by Alexandrian authors and others now lost are preserved by Pliny (*HN*, esp. bks. vii. and xxviii.).

In the majority of such cases the ability is more or less vaguely conceived of as inborn, in others it is a secret transmitted from generation to generation. But, whether inborn or imparted, magic is a secret. Indeed, initiates were sworn to secrecy in the later days among the mystics.

3. The powers invoked.—But the most characteristic feature of Greek and Roman magic is the universal prevalence of the indirect method and its influence on the development of the art. So far as Greece and Rome were concerned, the theory of demons—those spirits to whose action practically every phenomenon is due—was as characteristic of the world at large as it was of Plato and his followers (Plut. *de Defectu Orac.* 10). Diseases were caused by specific demons, panic was caused by Pan; such figures as the Erinyes, Nemesis, Pœna, Empusa, the Μοῖραι, Ἀνάγκαι, and Βασκοσύναι are not only popular but very old. There are even demons whose only function is to execute the commands of the magic tablets deposited in the baths, and there are others who are merely *ἀπόρροιαι*, or emanations. The efficacy, *e.g.*, of the *ἴυγξ* demands, as Hubert observes,[1] the creation of a demon or of a special god[2]—a curious but characteristic retention of the primitive view that nothing in this world can happen or be except by the individual exertion in every case of conscious, energizing will.

[3] Cf. Lobeck, p. 1196.

The magician may find it necessary or advisable to consider other spirits besides the specific agents of the phenomenon in question. He cannot be sure of success beforehand. He may make mistakes, and a mistake in a ceremonial is fatal. And, even if everything is correct, the ceremony may be entirely upset by something unexpected and unforeseen. In addition, therefore, to the specific energizing demon, he considers it prudent to summon to his aid such other powers as he can command. He calls on some appropriate god, *e.g.*, to send him the necessary energizing demon, or he summons the spirit to whom the efficacy of the rite itself is due; hence the theory of the 'familiar,' the magician's own 'demoniac factotum,' which assumed such importance in the Middle Ages.

The object, therefore, of magic was to act upon and use the supernatural powers either as energizing spirits or as auxiliaries. Some of these powers occur only in the tradition of magic itself, but the large majority are common to both magic and religion. Most important here are the demons. Plato himself (Suidas, *s.v.* *μαγεία*), as well as the average man, attributed to them the success of any magic rite.[3] The magic charms of the later period are full of invocations to demons—demons of all kinds and descriptions and exercising every imaginable function, but all of varying degrees of inferiority to the great gods. In fact, as time goes on, the realm of the supernatural assumes more and more the aspect of an Oriental despotism with a thoroughly organized bureaucratic government, all in the hands of demons. There are secretaries and under-secretaries, guards, doorkeepers, messengers—a regular hierarchy of demoniac officials, whose rank and functions are established and fixed with meticulous exactness. The only private citizens in this government are the ordinary human man and the occasional person with 'influence,' *i.e.* the magician; and it is curious to see how soon and easily the latter assumes the methods and attitude of the influential citizen who lives under a similar government in this world. If he wishes to reach the ear of the all-highest at the other end of the line, he addresses the demon of lowest rank, the message is transmitted through the appropriate channels, and in time he gets his answer. Indeed, as in all such governments, the first demoniac underling may be so nearly human and, therefore, so much in sympathy with the magician himself as to take a really personal and lively interest in furthering the matter in hand. All this question of rank and functions was carefully discussed by Proclus and Porphyrius (*de Mysteriis Ægyp.*), and, in fact, the prominence of it is particularly characteristic of their school and period. This school, it may be observed, made a distinction between good demons and bad demons, attributing the errors of *γοητεία* to the latter. The demons were identified with the Jewish angels in their function of divine messengers, and even the old pagan gods, reduced to the rank of demons, became messengers of the universal deity (Aug. *de Civ. Dei*, ix. 19), while the archangels, Michael, Gabriel, etc., take rank with the *archontes* of the Gnostics as tutelary gods of the planets (W. Anz, *TU* xv. [Leipzig, 1897] *passim*). With Christianity the old gods became demons, and all were considered evil. But magic, the conservative of conservatives, never gave them up, though all of them now without distinction were in the service of the devil.

One of the most important classes of demons connected with magic are the spirits of the dead, the *νεκυδαίμονες*, especially those who, like the *βιαιοθάνατοι*, died violent deaths or otherwise before their time, or never received proper burial, and therefore cannot rest in their graves.[1] The heroes, so to speak, have a somewhat higher social position, but they too are important in magic.[2]

A notable peculiarity of paganism as contrasted with its successor was the inability to make a sharp distinction between gods and demons. The obvious criterion would be power or disposition. Neither were trustworthy. Some demons were greater than some gods, and some gods were as unmistakably malignant as some demons were beneficent. The demons, therefore, were not the only powers to whom the magician addressed himself. The gods themselves practised magic (Apollod. I. ii. 1, III. vi. 8); indeed, Pindar says (*Pyth.* iv. 213 ff.) that it was Aphrodite herself who taught Jason how to 'draw down the moon'; and so the magician would naturally turn to them (Apul. *de Mag.* 31). The preference is, of course, for the *di inferi*—Hades, Demeter, Persephone, Baubo, the Praxidikai, the Erinyes, Gaia, Cybele, especially those who, like Hecate, Selene, and Hermes, habitually pass back and forth between the two worlds.

The greatest of all, the goddess *par excellence* of magic and magicians throughout antiquity, is Hecate-Selene,[3] the Dea Triformis of the crossways, and the queen of the ghosts, who sweeps through the night followed by her dreadful train of questing spirits. Her power is universal, but she is specially connected with the magic of love, metamorphosis, and *φάρμακα*. The most famous and dramatic incantations of antiquity are associated with her. The *lunulæ*, the *ἴυγξ*, the *selenitis*, the redoubtable *spuma lunaris*, and the *rhombus* are only a few magic objects and properties directly associated with her. The schol. on Apoll. Rhod. iii. 478 even informs us that Circe was her daughter. At all events, Medea was her priestess, Musæus was called her son, etc. Next to her, perhaps, especially in the magic papyri, comes Hermes Chthonius, often confused with Hermes Trismegistus (Diog. Laert. *proœm.* 7; Porphyr. *de Abstin.* ii. 16).[4]

But the Κύριοι Θεοί, the great gods, are also addressed, and not only the great gods of foreign races—which we should expect—but those of Greece and Rome. This habit, however, belongs more prominently to the babel of the later period. Here the habit of calling on a number of gods at once, or of reinforcing the name of some Greek god with the names of all the strange gods of foreign lands who are supposed to be identical with him, or of using Ἰάω as the name of the god of gods, or Ἰάω, in the feminine, to sum up, as it were, all the aspects of divinity, or of combining gods in the hermaphroditic form for the same purpose—all these are so many illustrations of the magician's inveterate habit of pluralizing for power. The result is, of course, that the divinities lose all personality and, as Hubert says, 'become mere factors of a divine total.'[5] Nothing was left but the name, and even this was more or less concealed or defaced in the magician's characteristic effort to get at the true name, the name of power for the now somewhat vague supernatural force which he wished to utilize. Having the name and also the image of the god, he could use the force for anything desired, it being understood, of course, that such accompanying ceremonials had been performed as were appropriate for realizing the mystic presence of the god.

4. Rites and ceremonies.—Thanks to this habit of pluralizing for power, of summoning from every direction all kinds of strange and, therefore, particularly irresponsible forces, a magic ceremony was even more complex than a religious ceremony. Especially notable in all ages is the number of conditions and precautions which have to be observed. This is characteristic of any cult in which the theory of incantation still survives. Under such circumstances the immediate conclusion always is that religion is a perilous pursuit. Any man who approaches gods with an invocation so worded and presented that it is a command which must be obeyed knows that he is handling an edged tool able to cut both ways. The gods resent the imperative, especially from an inferior, and will destroy him if they can. The Roman account of the death of old king Tullus shows how dangerous it was in their opinion—even in religion, much more in magic—for an amateur to start the complicated machinery of invocation. There was an old Greek saying that 'the witch who draws down the moon finally draws it down on herself.' The saying reflects the general idea, afterwards so strongly emphasized in the Middle Ages, that the magician, of all people, is foredoomed to something like the fate of Tullus Hostilius in the end. The Greek is also apt as a specific illustration. It was generally held that of all charms one of the most difficult and dangerous was 'drawing down the moon'—so dangerous, in fact, that the magician deemed it wise to arm himself in advance with a protective counter-charm against the very power whom he was about to invoke. The *Διαβολὴ πρὸς Σελήνην* preserved in the *Papyrus Paris*, line 3622 ff., is an interesting example of what was considered efficacious against the wrath and vengeance of *Πότνια Σελάνα*, 'Our Lady Moon'—a suggestive forerunner of the 'magic circle' of which we hear so much in the more pretentious magic of the Middle Ages.

The magician must also observe certain rules, likewise characteristic of religion, which, to a large extent, are suggested by the nature of the powers with whom he has to deal.[1] He, or the person in whose interest the charm is being performed, or both, must be in such a condition that contact with the spirits evoked shall be without danger. Regulations vary, but among the most common are *ἁγνεία*, 'purity,' ablutions at stated intervals, anointings with oil, avoidance of certain foods (esp. fish), fasting, temporary chastity[2] (cf. Tib. II. i. 11 f.; the regular *secubitus* so often referred to by the elegiac poets, etc.). More rigorous and more numerous are the conditions attending the performance of the rite itself, and most important is the observance of nudity or its ceremonial equivalent.[3] The costume must be flowing, *i.e.* without knots or fastenings of any kind, or it must be coarse, or of linen, and in the last case, either white or white with purple streamers (the ceremonial significance of colours has already been referred to).[4] Having gone through the preliminary purifications and donned the appropriate raiment, the operator must then consider the attitude to assume. This is vital. In most cases there are gestures which cannot be omitted.[1] Equally important is the magician's own state of mind. He must have faith, he must put all his soul into the accomplishment of the rite (Gargilius Martialis, 19).

The time at which the rite should be performed is also very important. This is largely determined by the habits and associations of the god to be addressed, and is an immediate deduction from the law of sympathy. For magic in general, but in particular for all magic connected with Selene-Hecate, sunset and the few minutes just before sunrise are very favourable; so, too, any phase of the moon, but, above all, the new and full moon. The stars and planets for the most part became important only after astrology gave greater precision to the sort of influence supposed to be exerted by each. As a matter of course, night is a better time than day.[2]

The place is quite as important as the time, and the choice of it is again a direct deduction from the law of sympathy, as regards either the god to be addressed or the person to be affected. Roads, streets, boundaries, and the threshold are all sacred in both magic and religion. The cross-roads suggest Hecate, the graveyard *nekyomantia*. Both are favourite spots so far as the magician is concerned.

Finally, as we have just seen, there are ceremonies which the operator does not venture to perform unless he is armed with some sort of protective charm against the god whom he is addressing, or against any one who might interrupt the ceremony, or against the effect of possible counter-charms.

The best and clearest description of the ceremony, properly speaking, is given by Hubert.[3] It involves the use of two kinds of rites. The purpose of the one is to accomplish the object itself of the ceremony by a logical application of the principles of magic action; the object of the other is to manufacture or, at least, to assure the presence of the actual magic power sufficient to work in the way prepared and thus to accomplish the purpose desired. In other words, to state it in terms of modern electrical science—the theory of which is curiously near to that of magic—he must construct the proper machinery and establish the proper connexions; then, before turning on the power, he must see to it that the power is really there.

The first class of rites, the machinery and connexions, calls for the use of a certain number of objects or parts which, in the end, generally come to be considered magic in themselves. One of the most common and dramatic is the magic wand, which is really a conductor of the magician's *mana*. The divining rod,[4] though used in a different way and for a different purpose, derived its efficacy from a similar conception. The Etruscans used it in searching for hidden springs (Daremberg-Saglio, *s.v.* 'Aquilex'), and, as the writer of this article can testify from personal observation, as late as twenty years ago a similar method for discovering the best place in which to dig a well was still used occasionally in the American countryside. In addition to the magic wand and the divining rod, we have the apparatus of *dactylomantia* (Amm. Marc. XXIX. i. 29 ff.), the lamps in *lychnomantia*, the basins of water in *lecanomantia*, keys in their symbolic use, cymbals, the various substances referred to above, threads of different colours, portions of the dead, the *ἴυγξ* (Pind. *Pyth.* iv. 213, and often), the famous *rhombus*, *turbo*, or *vertigo*, *i.e.* the 'witches' wheel,' the rotation of which, by imitation and sympathy, was sovereign to influence the will of the person whom one wished to gain, etc.

[4] The examples of its use in classical literature are collected by E. Norden, *Jahrb. für Phil.*, Suppl. Bd. xviii. [1894] 317 ff., 319 n.

All these end by being considered magic in themselves, but, in view of what has been said, it will be seen that this idea is secondary. Their real function and purpose was to facilitate or render possible the action of magic power and, at least originally, they were chosen from that point of view.

Sometimes the ceremonial proper needs the assistance of some rite whose object is to put the person interested in a state to receive the benefit of the action desired. A case in point is the ceremonial of *incubatio*.[1] The purpose of *incubatio* is to surround a person with the appropriate conditions to secure for him the true and prophetic dream which he desires. Conditions are, as often, dictated by the law of sympathy. And, except that the nature of dreams was never quite clear to the ancients—and perhaps will never be quite clear to any one—the nameless theorists and thinkers by whom these conditions were first discovered and formulated appear to have been quite familiar with the results of J. Börner's famous dissertation afterwards incorporated and extended in W. H. Roscher's *Ephialtes: eine pathologisch-mythologische Abhandlung über die Alpträume und Alpdämonen des klassischen Altertums*, Leipzig, 1901.[2] Börner showed that, among other things, in a healthy person nightmare is usually due to partial suffocation caused by burying one's head in the pillow, coverlet, etc., that the rapidity with which the nightmare, the *incubus*, appears to approach the dreamer is always measured by the rate of suffocation, but, above all, that the appearance of the *incubus* itself is to a surprising extent determined by the sleeper's surroundings, especially by the material and texture of his coverings. Such being the case, though L. Laistner[3] goes too far in his theory that the *Uralptraum*, the primeval nightmare, is the father of all mythology, we may at least suspect with Roscher that Pan's legs were the inevitable result of the style of bed-quilts used by his primeval worshippers (cf. Latinus's method of securing an interview with Faunus in Verg. *Æn.* vii. 81 ff.), and, for that matter, that the *incubi*, *succubæ*, *striges*, and all their monstrous brood must have entered this world in the first place by the Ivory Gate. If so, it is certain that some of our most cherished legends, our best and most thrilling stories, and our finest poetry are literally the stuff that dreams are made of.

But of all magic operations none is more common and characteristic, more dramatic and impressive, or a better illustration of the doctrine of sympathy than the casting of spells (cf. Heliodorus, xi. 14, and the examples noted below). The special feature of this operation is due to the theory that, if the person whom we wish to reach with our magic is absent or far away, his place may be filled by a puppet, or some symbolical substitute for him. If, then, the ceremonial is appropriate, whatever we do to the puppet will be exactly repeated, literally or symbolically, as desired, on the person whom the puppet represents. Consecration of the one is immediately followed by consecration of the other (Verg. *Ecl.* viii. 74 f.), binding of the one by the desired condition symbolized by it in the other, running needles into the heart of the one by some effect on the other symbolized by such a process—as, *e.g.*, wasting away to death with no apparent cause (Ovid, *Amor.* III. vii. 29 f., *Heroid.* vi. 21, and often). Sometimes one figure may stand for an indefinite number, as in the spells of Nectanebo (pseudo-Callisthenes, i. 1). One may cast a spell on spirits as well as mortals by this means (Eus. *Præp. Evang.* v. 12 ff.). Hence we have cases in which two puppets are used, one representing the person to be acted upon, the other the spirit by whom the action is to be performed (Hor. *Sat.* I. viii. 25 f.).[1] Occasionally even three figures appear to have been used (schol. Bern. on Verg. *Ecl.* viii. 75). Often they were hollow, and their power was enhanced by putting written incantations inside. As a rule, these puppets must be made of clay or wax, but occasionally other substances were just as rigorously prescribed. Eusebius (*loc. cit.*) speaks of such an image of Hecate made of pulverized lizards and the roots of rue. A sheet of metal or even of paper upon which the figure has been traced is often considered sufficient.[2] The value and philosophy of *exuviæ* have already been mentioned. But one may use such arbitrary substitutes as the body of a bird, a sprig of myrtle or of rue, etc.[3] Indeed, as we have already seen, the name is sufficient in itself. On the same principle, a written incantation placed in a tomb has the same effect as would a puppet[4] (Apul. *Met.* i. 10, *de. Mag.* 53).

The verbal portions of a magic rite are of the highest importance. In many cases they are the operator's instructions to the intervening demon in order that he may make no mistake as to the meaning and object of the symbolic rite. The puppet is inscribed with the name of the person whom it represents, and sometimes this is accompanied by a written statement of what is to happen to him. So, when one gathers a medicinal plant, one should be careful to utter the name of the patient who is to be benefited by it. Again, in constructing a *devotio*, one should specify in order each and every part in which it is desired that the proposed victim shall suffer.[5]

The indirect method is also directly responsible for the conclusion that incantations are a special help to the operator in the accomplishment of his second great task—the creation of magic power. Hence the use of the magic hymns and litanies, the object of which is to ensure the presence and active participation of the appropriate spirit, to indicate his duty, and, if necessary, to frighten him into doing it.[6]

We have seen how various objects, plants, simples, etc., originally selected as facilitating in some way magic *rapport*, finally came to be considered magic in themselves. Names and incantations underwent precisely the same secondary development. From being a means to an end they became magic *per se*. The further conclusion was then drawn that their power might be indefinitely increased by frequent repetition, by lengthening certain syllables to an extraordinary extent, by abstracting certain syllables and decorating them with affixes and suffixes, by rearranging them in different combinations, and especially by disposing them so as to form certain figures.[7] Examples still surviving are 'abracadabra,' and 'sator arepo tenet opera rotas' (see *Thesaurus Ling. Lat.*, *s.v.* 'Arepo'). The *Ephesia Grammata* belong to the same type (Porphyr. *de Myster.* vii. 4). Mystery and power were further enhanced by the use of magic alphabets, by certain sacred inks, and so on. Numbers pass through the same experience and acquire the same magic power *per se*—

e.g., there are seven planets. If, therefore, we wish to invoke them, there is nothing so compelling as the pronunciation of the seven vowels or a sevenfold repetition of a ceremony, gesture, or word (Eus. *Præp. Evang.* v. 14). Odd numbers have always been significant (Verg. *Ecl.* viii. 75, and often), three and multiples of three are sacred to Hecate, and certain special numbers like four, ninety-nine, etc., have a special importance.

In magic as in religion the object of sacrificial rites is to ensure the actual presence of the gods invoked. And here again the indirect method suggests that these rites are of material assistance to the operator in acquiring the desired power (Theocr. ii. 3, 10, 159). In the choice of what shall be sacrificed in any given instance the usage of magic as a rule does not differ materially from that of religion. This, of course, is quite natural. As a rule, the gods addressed are common to both and of equal importance in both; in fact, it is perhaps safe to guess that, so far as sacrifice is concerned, the usage of magic and religion is a common inheritance. For example, the notable preference of magic for black victims is not distinctive of magic. It simply means that, in accordance with the naive analogy set forth, for instance, in the old hexameter quoted by Eusebius (*Præp. Evang.* iv. 9)—

> *Φαιδρὰ μὲν οὐρανίοις, χθονίοις δ' ἐναλίγκια χροιῇ,*
> 'dark victims to the powers of darkness, light to the powers of light—

the gods to whom magic habitually addresses itself are the gods of the under world. So wine,[1] honey, milk, perfumes, meal (Theocr. ii. 18, 33), certain cakes dear to these same gods, a cock to Hermes, a white dove to Aphrodite, etc.—all common to both religion and magic—are frequently employed. The use of blood is defined by Hubert as a sacrificial rite; it is at any rate—as in Sallust's account of the oath administered by Catiline to his fellow-conspirators—a striking illustration of the law of sympathy (Lucan, vi. 544). The sacrifice of human beings, especially of little children, even of the unborn babe torn from its mother, is a standing charge against magic in all ages (Hor. *Epod.* v.; Philostr. *Apoll. Tyan.* viii. 5),[2] and, for that matter, against any heretical sect with secret rites. The Christians in their time were charged with such abnormalities as infant-sacrifice and promiscuous incest at their meetings—precisely the same charges which, a millennium later, they themselves preferred with wearisome regularity during their long persecution of witchcraft, especially in connexion with the 'witches' Sabbath.' In most cases the charge of human sacrifice is as conventional as it is untrue; but it would be unsafe to deny it *in toto*. We can hardly expect such an outlaw, such a striver for extraordinary effects, as magic to abstain altogether from what was quite regular in the religion of more than one savage race, and which—in accordance with the familiar theory that extraordinary occasions demand extraordinary sacrifices—has been known to occur more than once at some grave crisis in the religious life of nations which, comparatively speaking, occupied a much higher plane of civilization. Finally, it may be noted that, as was the case with the incantations, names of the gods, etc., mentioned above, the things sacrificed, whatever they were, soon passed into the secondary stage of being considered magic *per se*.

One important aspect of our ceremony—quite as important in religion as it was in magic—remains to be considered. As we have seen, the operator must be careful to follow certain prescribed rules in order to get into the necessary and intimate spiritual relation with the gods whom he is addressing, and, therefore, with the sacrifice which he is conducting. The relation is abnormal and distinctly perilous. To get out of it safely is, therefore, quite as important as to get into it safely; prescribed rules are as necessary for the one as for the other. The object of these rules is to end the ceremony, to limit the effects of it so far as the operator is concerned, to make it safe and possible for him to return to the conditions of everyday life. Above all, the remains of the sacrifice, unless he wishes to preserve them to produce some lasting effect (as, *e.g.*, in a *devotio*), must be disposed of ceremonially. One may deposit them at some prescribed spot sacred to the god to whom the sacrifice itself was offered. The *καθάρματα*, for instance, the ceremonial remains of the sacrifice to Hecate (see HECATE'S SUPPERS), were deposited at the cross-ways. The more usual method was to eliminate them ceremonially by burning them, burying them, or throwing them into running water or the sea (Verg. *Ecl.* viii. 102, with the notes of Conington and Forbiger). The Μαντεία Κρονική (*Pap. Paris.* 3095) shows that, at least in some cases, the ceremony closed with a prayer to the god in which he was invited kindly but firmly to go back to where he belonged:

> *Ἄπελθε, δέσποτα, κόσμου προπατήρ, καὶ χώρησον εἰς τοὺς ἰδίους τόπους, ἵνα συντηρηθῇ τὸ πᾶν. Ἵλεως ἡμῖν, κύριε.*

It will be seen, therefore, as Hubert observes,[1] that among the Greeks and Romans the standard ceremony of magic and the standard ceremony of religion, so far as their essential elements were concerned, were practically the same, even to the point of using the same names for these elements. Furthermore, with some comparatively slight exceptions, the gods of magic are equally important in religion, and, on the whole, they are treated with the same reverence. As we have seen, some of the abnormalities of magic are just as characteristic of religion, and they are generally due to the fact that, at the time when these abnormalities occur, both are specially concerned with the infernal gods. The worship of these gods, whether in religion or in magic, is visibly influenced by the universal idea that the under world is the reverse of ours. It is dark, silent, barren, loveless, childless, eventless, stationary—a complete contrast to the world above, a contrast regularly symbolized in rituals to the dead and their gods by such things as the use of the left hand instead of the right. It is, no doubt, this ancient idea of reversed conditions in Hades that suggested the most striking feature of the famous 'Black Mass' as practised by the early Christian magicians (Iren. *Hær.* I. xiii. 2). The normal 'White Mass' is addressed to heaven; if we reverse it, *i.e.* if we read it backwards, we address it to hell. But the Christian magician, in so far as he was a Christian, was bound to assume that his Black Mass was a wicked and impious rite. Hence the inevitable deduction was soon established that, the more wicked and impious magic could be, the greater and more terrible its power. For the magician of Græco-Roman paganism there seems to have been no such parodying of religious rites—above all, no such deliberate and malignant desecration of things considered divine as that of which we hear so much in mediæval magic and which appeared again in the modern cult of Satanism (*q.v.*), as described some years since by Jules Bois[2] and as utilized for purposes of fiction by J. K. Huysmans.[3]

Summary.—In so far as there was any real and essential difference between magic and religion in Græco-Roman paganism, the ultimate cause of it was largely, if not entirely, the steady maintenance of the ancient distinction of official recognition as defined and explained at the beginning of this article. It is the business of magic, as long as it remains magic, to speak only in the imperative. It must, therefore, retain and emphasize those primitive doctrines—notably the doctrine of sympathy in all its forms—which are supposed to enable it to use the imperative successfully in addressing the gods. It is also the business of magic, partly because it is an outlaw and bound to assert its importance in order to live, to promise extraordinary, if not impossible, things—among them, things which the social and legal restraints of religion would not allow it to promise. In the course of its long and exceptionally brilliant history classical magic promises practically everything from a cure for warts to a receipt for personal immortality—all tried and true. Magic, therefore, was obliged not only to retain but to develop in every possible way those primitive aids to its imperative. It pluralized for power. And religion had done the same. But magic was an outlaw, it had no position in society, it was free to range at will, to gather into one portentous plural strange and terrible gods from the four corners of the earth, to combine them with the native gods, to re-arrange, re-interpret, disguise, mutilate, etc., in the ways described. In the long run, as we have seen, the pantheon of Græco-Roman magic was a pandemonium, and confusion worse confounded, in which the only relating principle seems to be the fact that the doctrine of sympathy in all its forms has been pushed to its uttermost limits.

To the very end magic was obsessed by the old imperative and, therefore, by the time-honoured means for securing it. When it rose in the social scale, it merely learned to be pretentious. Even when it had been adopted, so to speak, by some distinguished family like the mystics, had changed its name, and had been carefully educated and refined, it was still haunted by the old ideas, and generally ended by infecting with them its benefactors and teachers.

The same may be said of the contemporary development of popular magic. Our great authority here is the magic papyri. They all come from Egypt and are much affected by local influences; but, among other things, they show that, under the circumstances, the old rule of official recognition was eminently wise. In the civilization of Greece and Rome magic was given a rare, a unique, opportunity to make the most of itself. But, whether it improved the opportunity or not, the final result, as we see it in the papyri, is a striking illustration of its besetting sins. If it had clung to the native gods, as religion was forced to do, it is conceivable that, even with the heavy handicap of the imperative and its attendant vices, magic might have risen to comparative respectability. But its weaknesses were encouraged rather than checked. By the 2nd cent. the number of strange religions available, not to mention the semi-detached religious theories, had increased to an indefinite extent. The result was that from being a thing which, at least, could appeal to the imagination and the æsthetic sense, it steadily degenerated into utter absurdity as pretentious and complicated as it was dreary and commonplace.

But, fortunately for us, Græco-Roman magic in its best days was the familiar possession of all classes in a highly intellectual and highly imaginative people. Men of Ovid's calibre and training may not have believed in it to any extent, but there never was a time when magic as such became unfamiliar to any one. Even the major operations of magic were always being performed somewhere, and, as we have seen, the charge of magic was always kept alive in the courts. Hermione was far from being the only jealous woman to soothe her wounded pride by accusing her successful rival of resorting to philtres. The charge was quite as characteristic of the Augustan age as it could ever have been of Homer's time (Tib. I. v. 41; Propert. IV. vii. 72). Nor was the charge by any means always unfounded. *Pocula amatoria* were a regular specialty of the *lena*, or go-between, and they actually were so frequently administered that the average man generally assumed that they were responsible for certain lingering diseases, especially certain mental or nervous abnormalities, for which he could see no apparent cause. Examples in point are the traditional account of the death of Lucretius and the contemporary explanation of the vagaries and perversions of Caligula's tempestuous brain (Jerome, *Chron. Euseb.*, 1924; Sueton. *Calig.* 50).

VI. *MAGIC IN LITERATURE.*—The more or less familiar presence of magic not only in folklore and legend, but also in ordinary everyday life, is reflected to an extraordinary extent in the written word. It is continually turning up in the arts, sciences, and professions, in law, religion, and philosophical discussion, in history, anecdote, and any other record of everyday life past or present. All this, however, is characteristic of any people among whom magic still survives as an active force, and it appeals for the most part only to such persons as the special investigator and the historian of manners and customs. But the most characteristic and interesting aspect of Græco-Roman magic is the deliberate exploitation of it in the interests of conscious literary art. One is inclined to assume, and perhaps justly, that this was particularly notable of such periods as the Hellenistic age, the time of Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was especially characteristic of poetry and of such types of prose as that of the highly rhetorical and semi-Romantic historians of the Alexandrian age, the Paradoxographers, the writers of *novelle* and tales of marvel, even the practice debates of the rhetorical schools, and, in later times, the throng of professional declaimers for whom those schools were ultimately responsible. But this aspect of classical magic is far from being a matter merely of period and department. On the contrary, nothing is more characteristic of it than the extent and variety, as well as the unbroken continuity, of its use in practically every department of artistic literature. No one could be more thoroughly alive to its æsthetic possibilities than was Homer himself, and he created a tradition of its literary use which not even the semi-Oriental and unutterably dreary fooleries of the papyri were able entirely to destroy.

In an article like this it is impossible as well as inadvisable to attempt a thoroughgoing investigation of the debt of creative literature to magic in antiquity. We must content ourselves with a passing reference to a few of those magic operations which are most frequently mentioned, and which by reason of their dramatic possibilities are best suited to the purposes of literary art.

One of the most notable of these is *nekyomantia*, calling up the dead to ask them questions. *Nekyomantia* is rarely absent from that catalogue of magic feats with which so many of the Roman poets seem impelled to supply us (Tib. I. ii. 42, and note). They also mention even more frequently three other feats which are particularly awesome, but for which the modern reader, at least, can see no adequate reason until it dawns upon him that they are merely a useful, though by no means necessary, preparation for *nekyomantia*. These are producing earthquakes, splitting the ground, and making the rivers either stand still or run backwards. The magician uses his earthquake to split the ground; the behaviour of the rivers is merely a consequence of the quake. He splits the ground so that the ghosts can hear his incantation (*i.e.* be reached and affected by it) and then can come straight up to him from Hades (Sen. *Œdip.* 571; Lucan, vi. 728). As we have seen, the literary use of *nekyomantia* begins with the famous passage of the *Odyssey* (xi. 24 ff.). The essential details of the ceremonial as Homer describes it were always the same not only in literary tradition but in actual life. Doubtless, Lucan felt that his own long and lurid description of Erichtho's special performance for the benefit of Sextus Pompeius before the battle of Thapsus (vi. 728 ff.) was the masterpiece of its kind. And so it is. It would be hard to find a more glaring illustration of what can happen to literature in an age when a furious lust for effect is not restrained by any principles of rhetorical self-control or common sense. *Nekyomantia* had a long and brilliant tradition in the drama. Examples still surviving are Æschylus, *Persæ* (the ghost of Darius), and Seneca, *Œdipus*, 560 ff. Indeed, ghosts were as common, it would appear, in the ancient as in the Elizabethan drama. Κλίμακες Χαρωνεῖοι, 'Charon's step-ladder,' was the popular name for the regular staircase by which the ghosts appeared on the stage as if from the world below. *Nekyomantia* was also quite as characteristic of comedy. In the later days of the Roman Republic Decimus Laberius wrote a mime entitled *Necyomantia*, and we know that this and similar themes were characteristic of the mime as developed by Philistion and his immediate successors during and after the Augustan age. Brilliant examples in the satirical sphere are Horace, *Sat.* I. viii., and Lucian's *Necyomantia*.

If we choose to emphasize the literary influence as such of the Homeric *Nekyia*, we can say that it is responsible for one of the most notable developments in classical literature. This is the theme of the Descent into Hades. The Homeric passage is directly responsible for the 6th book of the *Æneid* and its numerous echoes in epic and narrative poetry both ancient and modern. Nor was epic the only department to be affected. The theme was a favourite in the Old Comedy of Athens, although, as it happens, the *Frogs* of Aristophanes is the only example now surviving. The same is true of the satirists and popular philosophers of the Alexandrian and Hellenistic ages. It was characteristic of their didactic methods to appropriate for their own purposes the traditional forms and themes of literary art, and one of the most notable was the Κατάβασις εἰς Αἴδου, which practically became conventionalized as a *mise-en-scène* for the presentation of doctrines and opinions. Allied to it are such examples as Horace, *Sat.* II. v., Seneca, *Apocolocyntosis*, such works of Lucian as the *Dialogues of the Dead*, and Claudian's attacks on Eutropius. The *Epicharmus* of Ennius and probably certain of the lost satires of Lucilius and Varro were illustrations. The poet Sotades used it to a notable extent.

But, while *nekyomantia* is the most prominent and pervasive aspect of literary magic, the most famous and picturesque was the love-charm known as 'drawing down the moon.'[1] It is first mentioned in surviving literature by Aristophanes, *Nubes*, 750, again and again by later writers, and still survives, it is said, in modern Greece. It was the theme of no fewer than four masterpieces: a lost mime of Sophron in the time of Xerxes, the lost *Thettale* of Menander (*HN* xxx. 7), the second *Idyl* of Theocritus (founded on Sophron), and the eighth *Eclogue* of Vergil (founded on Theocritus). Certainly, too, Lucian, *Philopseudes*, 14 ff., is a masterpiece of its kind. The atmosphere reflects to the life that aspect of the 2nd cent. which suggests the modern *milieu* in which theosophy, spiritualism, and kindred ideas are wont to grow luxuriantly.

In this passage of Lucian we have the 'Professor's' story of how his disciple, Glaukias, was saved by the great 'Hyperborean' magician. It seems that Glaukias, a rich young orphan whose father had been dead about a year, fell fairly ill with love for the disdainful Chrysis—a genuine prototype of Jemmy Grove and cruel Barbara Allen. His condition became so serious that the 'Professor,' as he says, 'felt it his duty' to secure the services of the great Hyperborean. Four minæ had to be paid in advance—to supply the necessary sacrifices—and sixteen more if the operation was successful. By way of preliminary—which showed that the specialist was not only a great man but also a just and scrupulously conscientious man—he insisted on having an elaborate rite of *nekyomantia*, to call up the boy's late lamented father and ask his consent. The old gentleman was furious at first, but finally told them to proceed. A dramatic description of the ensuing ceremony follows—how the moon came down, how Hecate came up, how the ghosts flocked around, how, at the psychological moment, the distinguished operator 'told the sort of little figure of Cupid which he had fashioned out of clay to go and fetch Chrysis.' Away flew the tiny thing at once. A few minutes later there comes a knock on Glaukias's door, in rushes Chrysis, throws her arms around him, ὡς ἂν ἐμμανέστατα ἐρῶσα ('like a girl utterly crazy with love'), and there she stays till cockcrow! Then up rose the moon to heaven, down sank Hecate to Hades, and all the ghosts disappeared.

But the 'Professor's' listener is not duly impressed. Besides, he knows the girl. He doesn't see the use, he says, of calling on one Hyperborean magician, one goddess, and one clay ambassador to unite in overcoming the disdain of a girl who, as every one knows, is ready to follow a man to the North Pole and beyond for twenty drachmæ.

Such books as the *Metamorphoses* of Ovid and the lost poem of the same name by his predecessor, Nicander, show that change of form was quite as characteristic of classical mythology and folklore as of the *Thousand and One Nights*. Transformation was Circe's specialty, and the Homeric account of her methods (*Od.* x. 212 ff.) has always remained the most famous literary account of the performance. Apart from the Homeric passage, the most vivid and circumstantial accounts of transformation by magic are those in which Apuleius (*Met.* iii. 21 ff.) and Lucian (*Asinus* [the common source of both was the lost romance of Lucius of Patras]) tell how the witch, Pamphile, made an owl of herself, and how, immediately afterwards, Fotis, her maid, made an ass of Lucius. But, as a rule, magic as such is not prominent in metamorphosis as a literary theme. This is, of course, quite natural; for in this particular feat the dramatic point is the transformation scene, and all else is likely to be subordinated, even in those cases where the transformation is confessedly due to magic. Vergil's sorceress, *e.g.*, says that she has seen the werwolf transformation with her own eyes and that it was done by magic:

> 'Has herbas atque hæc Ponto mihi lecta venena
> Ipse dedit Moeris (nascuntur plurima Ponto);
> His ego sæpe lupum fieri et se condere silvis
> Moerim' (*Ecl.* viii. 95 ff.).

But in all the famous werwolf stories of antiquity,[1] as in most of the stories told by Ovid, the magic element is either absent, ignored, or referred to so slightly that it calls for no special notice here. Magic command of the wind and weather is often mentioned, and nothing in the way of magic was more common in everyday life, but the one famous passage is that in which Æolus gives the bag of winds to Odysseus (*Od.* x. 19 ff.). Also unique—and terrible—is the spell of the evil eye cast by Medea upon the giant Talus (Apoll. Rhod. iv. 1652 ff.). Ovid (*Met.* vii. 160 ff.) gives a full and dramatic description of her charm for renewing the youth of Jason's father, Æson. More famous was her pretence of doing the same favour for the aged Pelias at the instance of his daughters (Apollod. I. ix. 27; Hygin. *Fab.* 24; Macrob. v. xix. 9 f.). This was the theme of the lost 'Ριζοτόμοι of Sophocles. Indeed, the lost plays of the Greek tragic poets would have been a wonderful field for the study of the use of magic for literary purposes.[1]

[1] W. H. Roscher, *Selene und Verwandtes*, Leipzig, 1903, with a plate reproducing a vase-painting of the process; M. Sutphen, in *Studies in Honor of B. L. Gildersleeve*, p. 315.

[1] J. Heckenbach, *op. cit.* p. 86; Kirby Flower Smith, *JHC*, 1893, *Publicat. Modern Lang. Assoc. of Amer.*, 1894.

Creusa's robe was a famous theme. Euripides (*Medea*, 1156 ff.) merely described the awful effect of it upon the wearer; Seneca (*Medea*, 740 ff.), the preparation of it. Which is the more artistic and effective may easily be seen by comparison.

On the other hand, there are types of magic in which it is precisely the preliminaries, the things which witches do because they have something terrible in prospect, that are full of dramatic possibilities. This is especially true of *nekyomantia.* As we have seen, the necromancers are always eager to get mortal remains in order to be better able to call up their late owners. Striking examples are Trimalchio's story in Petron. 63, and the dramatic experience of Thelyphron as told by him after dinner in Apuleius, *Met.* ii. 21 ff. So, speaking in terms of magic theory, the dreadful scene of Horace, *Epod.* v., was only a means to an end; the object of the witches was to secure the strongest possible love-charm. The liver is the seat of desire (Hor. *Odes,* IV. i. 12); therefore the liver is sovereign in a charm to produce desire. Now, when a savage wants snake-poison for his arrows, he irritates the snake for some time before he kills it, so that it may secrete more poison and that the poison may be more virulent. So, here, the idea is that the more the liver feels desire, so much the more it actually accumulates desire, as it were, and stores it up within. If, therefore, we can secure a liver still containing a maximum of desire so accumulated, we have a charm of maximum power for arousing desire in others. Hence, in this scene, the poor child who has been kidnapped by the witches for that purpose, is buried to the neck and left to die of a prolonged agonizingly intense desire for food and drink, which is deliberately aggravated as much as possible by always keeping food and drink before his eyes. After the child was dead, his liver was removed, and, upon being prepared with the appropriate ceremonial, became a love-charm of superhuman power, a φίλτρον secured in a special way for a special purpose.

The gathering of herbs is another preliminary of φαρμακεία, which was fully appreciated for its dramatic possibilities. In literature the process is regularly associated with Medea (Apoll. Rhod. iii. 843 ff.; Valer. Flaccus, vii. 323 ff.; Ovid, *Met.* vii. 224 ff.; special emphasis was probably laid on this by Sophocles in his Ῥιζοτόμοι). She went out at night and by the light of the full moon cut her plants with a brazen sickle[2] held in her left hand and behind her back, *i.e.* ἀμεταστρεπτί (see HECATE'S SUPPERS).

So far as philtres are concerned, the most notable contribution to literature is what might be called the case of Beauty *v.* Magic in the court of Love.[3] Its first appearance is in the scene between Hermione and Andromache (Eur. *Androm.* 205 ff.), to which attention has already been called. The subsequent tradition of the question at issue is a striking and characteristic illustration of the methods and development of ancient literary art. The topic was announced from the stage, discussed in the boudoir, argued in the schools of philosophy, enlarged upon in the schools of rhetoric (Menander, frag. 646 K.; Afran. 378 R.; Lucret. iv. 1278 ff.; Tib. I. v. 43, viii. 23; Ovid, *Med. Fac.* 35 ff., *Ars Amandi*, i. 299 ff.). At some time in the unrecorded past it was given a new turn and made the basis of a properly illustrative and sprightly anecdote in which the appropriately magnanimous mother of a great conqueror—any great conqueror will do—was in the position of Hermione, but possessed the wisdom of Andromache. In Plutarch, *Conj. præc.* 23, the position is held by the mother of Alexander; the sands of Egypt have lately disclosed the fact that in Satyrus, *loc. cit.*, it was held by the mother of Darius. Others may yet appear.

But for any one who is at all interested in the development of magic for literary purposes the *Metamorphoses* of Apuleius is a veritable treasure-house. Those who have studied this unique book generally gain the impression that its author is a past master in the art of telling a tale of magic. Two examples may be given by way of illustration.

The first (*Met.* i. 11 ff.) is told by Aristomenes, and might be called 'The Witches' Revenge.' While travelling about Thessaly a short time previously, Aristomenes ran across one Socrates, an old friend whom he had not seen for several years. The man was a monument of rags, squalor, and wretchedness; he was also in a constant state of abject terror. He had drifted into a *liaison* with a famous but elderly witch named Meroe, and, in fact, had been living with her, more or less perforce, for a number of years. Now he was trying to run away. Aristomenes decided to help his friend to flee the country. He took a room at the inn, made him presentable with a bath and some clothes, the two ate a heavy dinner, accompanied by too much wine, and retired early so as to be off betimes in the morning. Aristomenes barred the doors, and for greater safety pushed up his trundle-bed against them. Socrates fell asleep at once and snored loudly, but Aristomenes lay awake for hours. At last, about the third watch, just as he had dropped off into a doze, there was a horrible noise, the doors flew open and, indeed, came to the floor with such a crash that the bed with Aristomenes still in it was turned upside down. Then in walked Meroe and her sister, Panthia, the one carrying a leathern bottle, the other a sponge and a naked sword, and gathered about Socrates, who was still plunged in his magic slumber. Aristomenes could see all this from beneath his trundle-bed and hoped he had escaped observation, but in vain. Meroe was anxious to kill him at once with the sword, but Panthia thought it better to tear him limb from limb. 'No,' said Meroe, changing her mind, 'let him live, so that, when the time comes, he may cover his friend with a little earth.' With that Socrates' head was drawn to one side, and Meroe drove the sword into his neck just behind the left collar-bone. Then she plunged her arm into the gaping wound, and plucked his heart out. Meanwhile she caught all the blood in her bottle so skilfully that not one betraying drop escaped. When this was done, Panthia pushed her sponge into the wound, with the words:

> 'Sponge, sponge, born o' the main,
> Haste ye, haste ye back again!
> When you reach the river-side,
> In the water slip and slide;
> Water, water, flowing fast,
> Bears you onward home at last.'

Then, after heaping nameless insults on Aristomenes, the two women left the room, the doors flew back in place, the bolts shot to (a regular occurrence in witchcraft; cf. Apoll. Rhod. iv. 41 ff.), and all was as before—all but the murdered friend. How was Aristomenes to explain that in the morning? He tried to escape, but the porter was obdurate and even suspicious. Then he went back in despair and attempted to hang himself from the window-frame. But the rope broke, and, what made it more horrible, he fell on the corpse—whereat the corpse leaped up in high dudgeon at being so rudely disturbed. After all, it had only been a dreadful nightmare, a warning against too much eating and drinking late in the day. Next morning the friends set out, and, when it was time, proceeded to take their breakfast beside a stream under the shade of a tree. Socrates was as pale as wax, but he ate heartily, and then, at the suggestion of Aristomenes, knelt down on the bank of the stream to drink. As he leaned over, his neck gaped open, and a sponge, followed by a few drops of blood, dropped out, fell into the water, and was swept away. In a moment he was dead. So then and there Aristomenes dug a shallow grave and 'covered his friend with a little earth.'

The second story (*Met.* ii. 32 ff.) is unique as a satirically exaggerated illustration of what can be accomplished by the doctrine of sympathy when it is really given a fair chance. During his stay at Hypata young Lucius, the protagonist of the book, was entertained by his father's old friend, Milo. The rest of the family consisted of Milo's wife, Pamphila, who was a redoubtable sorceress, and Fotis, a beautiful slave-girl, with whom Lucius immediately fell in love. One night he went out to a dinner-party, and by the time he started for home it was very late and very dark—and the wine had been very strong. Just as he reached the door, the dim shapes of two great burly figures jostled up against him on either side. Thinking they were thieves, he leaped back, whipped out his sword, and ran them both through. He was barely awake the next morning, with a vague but awful memory of what had happened, when all the magistrates appeared, full of fear and office, and arrested him for murder.

The trial scene, which begins at once, is a masterpiece. It all seemed like a nightmare to the prisoner at the bar, and his impressions are fully shared by the reader. What surprised him—and it surprises us too—was that the trial was held in the amphitheatre. Stranger yet, every seat was taken, and people had even climbed up on the pillars to get a better view. After the trial had gone on for hours, some one suggested that the prisoner must have had accomplices, and that he be put to the torture and made to name them. At this point the poor old mother of the two murdered ones came forward, and insisted that the unfeeling assassin be compelled to look upon his innocent victims. The corpses were brought in, lying side by side, and decently covered with a cloth. Lucius was forced, much against his will, to raise the cloth, and discovered not two stalwart men cold in death, but two wine-skins—horribly gashed by his ruthless falchion blade, but unmistakably wine-skins. A huge roar of laughter went up from the crowd. Mystified, but relieved, Lucius was escorted home in triumph. The day, he was told, was the regular festival of Risus, the goddess of laughter. His own contribution on this particular occasion had been so original and successful that the city had unanimously voted him a bronze equestrian statue. Lucius was still mystified and, indeed, somewhat resentful. As soon, however, as Fotis had the opportunity, she let him into the secret.

[2] *Ib.* p. 159.

[3] Kirby Flower Smith, 'Note on Satyros, Life of Euripides, Oxyr. Pap. 9, 157–8,' *AJPh* xxxiv. [1913] 62–73.

As Pamphila was passing the barber's shop the day before the 'murder,' she had caught sight of a blonde youth from Bœotia who was in the chair having his hair cut. She fell in love with him then and there, and went straight home and began preparing a charm to draw him to her. The necessary preliminary, of course, was the possession of something belonging to him. 'So,' as Fotis says in substance, 'I was sent out to steal a lock of his hair. But the barber caught me before I could get away, and our reputation in town is so bad that he made me give up the hair, which I had hidden in my dress. I was in despair. But on the way home I passed a shop in which a man was clipping the hair off some wine-skins. So, to save a beating, I picked up some of the yellowest locks I could find, and managed to palm them off on my mistress for the real thing. She took them, and began her charm about the time you started for the dinner-party. The charm worked only too well. The robbers whom you met and slew at our door were the original owners of those locks—two passionate wine-skins struggling madly to get at their love and melt at her feet. And so it comes that "non homicidam nunc, sed utricidam amplecterer" ("the lover now in my arms is after all not a homicide, but a jugicide").'

But nothing, perhaps, is a clearer proof of the prominence of magic in everyday life than the fact that, as H. Reich has abundantly shown,[1] the favourite and most characteristic habitat of magic as a literary asset is the most popular type of drama in the ancient world. This is the *mimus* (see DRAMA [Roman], vol. iv. p. 904). Transformations of men and animals were frequent; all kinds of charms were performed; the effects of all kinds of powerful magic were represented. Witches, warlocks, magicians, prophets, ghosts, demons, popular divinities, Empusa, Mormo, Incubo, Anna Perenna, Ephialtes, etc., were all favourite characters. The play went on in fairyland quite as often as on the Imperial streets or in the Imperial country-side. And sometimes, no doubt, it was hard to tell which was which. And yet the *mimus* was realistic—the very name insists upon it. But the investigation of Græco-Roman magic emphasizes the undoubted fact that, after all, the realism of antiquity was not, and never could be, our realism. The native gifts of imagination and fancy were too enduring, the native inheritance of mythology and folklore was too rich and interesting, to allow it. Magic was one of those vices of intellectual youth which the Græco-Roman world never quite outgrew. But intellectual youth also has its virtues; and these two great Aryan races of the Mediterranean basin, in some other respects as well, retained to the last their unique and priceless gift of never really growing old.

LITERATURE.—This is given for the most part in the text. The best and most complete discussion of the subject is given by H. Hubert, in Daremberg-Saglio, *s.v.* 'Magia.' L. F. A. Maury, *La Magie et l'astrologie dans l'antiquité et au moyen âge*, Paris, 1860, is still valuable as a general survey. R. Heim, 'Incantamenta magica Græca Latina,' *Jahrb. für class. Philol.*, Suppl. Band xix. [1893] pp. 463–576, collects and discusses the actual texts of surviving charms and incantations. Particularly valuable for special topics is the *Religionsgeschichtliche Versuche und Vorarbeitungen* (*RVV*), ed. R. Wünsch and L. Deubner, Giessen, now in its 15th volume.

MAGIC (Indian).—I. *HINDU*.—Indian magic is essentially the profession of certain castes, though magical rites may be practised by laymen and magical properties are attributed to countless objects. The caste which is peculiarly devoted to magic as a vocation is that of the Yogīs, which is primarily Hindu but has Muhammadan elements affiliated to it. The Yogī claims to hold the material world in fee by the magical powers which he has acquired through the performance of religious austerities, but this claim soon degenerates into superstition of the worst type, and the Yogī in reality is little better than a common swindler, posing as a *faqīr*. Thus, in the tale of the magic boat, the gift of it comes from a *sādhu*, or religious mendicant.[1] Brāhmans, however, possess much magical lore, though the practice of magic is not a Brāhmanical function and the sections which make a profession of it tend to form sub-castes. The Brāhmans are said to have secret books on the subject which contain over 50 *jotias*, or figures, consisting partly of numbers and partly of mystic symbols, cabalistic words, and geometrical figures not unknown to free-masonry; these are used for all kinds of purposes, including the causing of abortion, success in gambling, etc.,[2] as well as to ensure easy parturition.[3]

The Yogīs in particular claim power to transmute base metals into silver and gold—a claim which enables them (and those who personate them) to reap a great harvest from the credulous.

This power is said to have been discovered by the Yogī Dīna Nāth, who, passing one day by a money-changer's shop, saw a boy with a heap of copper coins before him and asked for some in alms. The boy replied that they belonged to his father, but offered him some of his own food. Touched by his generosity and honesty, the Yogī prayed to Viṣṇu for power to reward the boy, bade him collect all the copper coin he could find in his father's house, and then, melting it down, recited *mantras*, or charms, and sprinkled a magic powder over it, whereby it was changed into pure gold. This occurred in the time of Sulṭān Altamsh (A.D. 1210–36), who witnessed Dīna Nāth's performance of a similar feat, and in commemoration of it had gold *mohars* struck with Dīna Nāth's name on them as well as his own. These Dīna Nāthī *mohars* are said to be still found. The secret of the *mantras* and the powder has been handed down, but is known only to the initiated.

I. Occasions.—Magical rites are practised at weddings, during pregnancy, at birth to procure offspring and ensure its safety and to determine and predict its sex, and to resuscitate the dead.

(1) *Marriage.*—The magic practised at a wedding is often symbolical. For example, just as naked women plough the soil in times of scarcity to ensure a crop, so at weddings a Telugu bridegroom of the Balija caste performs a mimic ploughing ceremony, stirring up earth in a basket with a stick or miniature plough.[4] Similar rites are in vogue among the Palli,[5] Kamma,[6] Sambadavan,[7] and Tottiyan.[8] The Kamma bride carries seedlings in her lap, apparently to be planted by the groom. Among the Kāpu a milk-post of *Odina Wodier* is set up, and, if it takes root and flourishes, it is a happy omen.[9] An Unni bride plants a jasmine shoot, whose flowers she should present to the deity.[10] The parting of the bride's hair with a thorn is probably an imitation of the ploughing rite.[11]

The Indian conceptions that all life is one, and that life is something tangible or material, come out in several rites. Thus, at the beginning of a wedding, the Beḍar scatter rice and gram (*dhāl*) seed on some white-ant earth near five pots filled with water. By the time the wedding is concluded, these seeds have sprouted and are culled by the pair, taken to the village well, and cast into it—obviously to ensure their fertility.[1] An Idaiyan couple sow nine kinds of grain in seven trays,[2] and the Māla groom digs with his knife a few furrows, which his bride fills with grain and waters after he has covered it up.[3] Apparently the widespread custom of pounding grain at weddings has a similar origin. This is done by five women, *e.g.*, in Bombay.[4]

[3] *Ib.* § 1017.

[4] E. Thurston, *Castes and Tribes of Southern India*, Madras, 1909, i. 144. The full rite is of interest.

[5] *Ib.* vi. 20.

[6] *Ib.* iii. 103.

[7] *Ib.* vi. 355.

[8] *Ib.* vii. 193.

[9] *Ib.* iii. 235.

[10] *Ib.* vii. 226. The milk-post is sometimes made of twigs of other trees—*e.g.*, among the Agamuḍaiyan it is made of three kinds of tree, typifying Brahmā, Viṣṇu, and Śiva (*ib.* i. 14).

[11] *BG* xxiii. [1884] 45.

The grindstone is also used among the Bhondāri in Madras; the bridegroom stands on it, while women bring a mill-stone and powder three kinds of grain with it; then he sits on the dais, and a number of married women each touch seven times with a grinding-stone an areca nut placed on his head.[5] A Bedar couple are invited by the Brāhman priest to stand on a grinding-mill placed beneath the *pandal*.[6]

Among the Agamudaiyan a grinding-stone and a roller, representing the god Śiva and the goddess Śakti, are placed in the north-east corner at the actual wedding, and at their side pans containing nine kinds of seedlings are set. Seven pots are arranged in a row between the stone and a branched lamp, and married women bring water from seven streams and pour it into a pot in front of the lamp.[7] The grinding-stone is also used in Bombay.[8]

The future offspring of the union is symbolized among the Komaṭi by a doll which is rocked in a cradle, but both the prospective parents profess lack of leisure to look after it.[9] The Parivāram use a stone rolling-pin to represent the child, which the husband hands over to the wife, who accepts it as 'the milk is ready.'[10] The Konga Vellāla bridegroom takes some fruit and a pestle to a stone, which he worships. It is supposed to represent the Kongu king whose sanction to every marriage used to be necessary, and the pestle represents the villagers; but the fruit is not explained, and the myth is probably ætiological.[11] A newly-married Bedar or Boya couple sit on a pestle, and are anointed after rice has been showered over them.[12] In Bombay the rice-powder is used to personate the baby.[13]

Fertility can also be communicated to a bride by placing a child in her lap, and fruit is an effective substitute for one.[14] On the same principle women whose husbands are alive are admitted to take part in marriage rites,[15] more especially if they have sons living; whereas widows and those whose children have died should be excluded, at least from the more significant rites.[16] Similarly, widowers are excluded from certain functions.[17] Unmarried girls may, however, take the place of married women; *e.g.*, among the Badaga, married women or virgins, preferably the bridegroom's sisters, go to a stream in procession to bring water for cooking purposes in decorated new pots.[18]

Water as a source of fertility also plays a great part in wedding rites. Thus bathing is an essential part of the ritual for both parties at weddings, and visits to a well or stream are very common. The use of pots full of water is to be explained in the same way. Thus among the Alitkar of Bombay a couple already married bring pots from a potter's house to that of each party to the marriage, and after an elaborate rite the boy pours water from a jar. A jar also plays a prominent part in other rites, including a widow's re-marriage.[1]

Fish being an emblem of fertility, they are often caught by the bridal pair—*e.g.*, among the Gudigāra of Madras;[2] the Holeya let the fish go after kissing them.[3] But the Kṣatriya, in Madras, only pretend to catch them,[4] as do the Nambūtiri Brāhmans.[5]

The potter's wheel, symbolical of the creative power which fashions the earth as it fashions clay, is also in evidence at weddings. The clay is formed into a revolving lump, like a *liṅga*, and wheel and clay together bear a strong resemblance to the conjunction of *liṅga* and *yoni*.[6]

The Pole-star (Dhruva in northern India) is called Arundhatī in Madras, and, as the wife of the *ṛṣi* Vasiṣṭha, is pointed out to the bride as the model of conjugal fidelity.[7]

(2) *Birth.*—Magical rites to procure children are very usual. A typical rite, often resorted to by barren women, consists in burning down seven houses. In Madras a Koyī woman sometimes throws a cock down in front of the cloth on which portraits of ancestors are sewn, and makes obeisance to it,[8] and this cures her sterility. Bathing is also a cure for this misfortune, especially bathing over a corpse.

In the Andamans a pregnant woman sows seed.[9] Pregnancy, moreover, involves peculiar risks necessitating the protection of magic[10] and the avoidance of various acts, such as stepping over the heel-ropes of a horse,[11] which might apparently cause protracted labour, or crossing a running stream, which would result in miscarriage—a common belief in the Panjāb. In Travancore tamarind juice is dropped into a pregnant woman's mouth to cast out devils.[12]

When his wife's first pregnancy is announced, a Kota husband in Madras lets his hair grow long and leaves his finger nails uncut, and on the child's birth he is under pollution till he sees the next crescent moon.[13] A Mukkuvan husband also lets his hair grow until the third day after the birth. A coco-nut, betel leaves, and areca nuts are laid at the place where he sits to be shaved, and the coco-nut is smashed to pieces by one of his own sept.[14] A Nambūtiri Brāhman also remains unshorn while any of his wives are pregnant.[15]

Pre-natal divination to ascertain and magic to determine the child's sex are also common. Thus the Cheruman in Madras employ devil-drivers, who seat the woman in front of a tent-like structure with a coco-nut-palm flower in her lap. When cut open, the fruits predict the child's sex, the birth of twins, and the child's expectation of life or death. The goddess Kālī is supposed to be present in the tent, and prayer is offered to her to cast out the devil from the woman's body.[16]

Another rite which is believed to influence the child's sex is the so-called *sīmanta* of the Śūdras in Madras. In a first pregnancy, water or human milk is poured over the woman's back by her husband's sister.[17]

To ensure that the child shall be a male the *puṁsavana* is performed in the third month of pregnancy, the wife fasting that day until she is fed by her husband with a grain of corn and two beans symbolizing the male organ. Sometimes curd is poured over them before she swallows them, and she also pours juice of a grass into her right nostril.[18]

Quite distinct from this Brāhmanical rite is one observed in the seventh month in Travancore.

> The woman goes to the foot of a tamarind tree, where she receives a thread seven yards long. This she entwines round a tree, and, if it breaks, either she or her child will soon die. Next day the thread is unwound, and her husband gives her a handful of tamarind leaves. On re-entering the house, he also gives her tamarind juice to drink, pouring it through his hands into hers. The priestess employed in this rite then pours oil on her navel, and from the manner of its fall divines the child's sex. As she drinks the juice, the woman leans against a cutting from a mango, which is then planted; and, if it fails to strike root, the child is doomed to adversity.[1]

Among the polyandrous Kammālan the woman's brother gives her rice gruel mixed with juices of the tamarind, mango, and *Hibiscus.*[2]

In protracted labour the washings of a brick from the fort of Chākabu or Chakrabhyu Amīn near Pehoa are potent, or it suffices to draw a plan of the fort and drink the water into which the picture has been washed off.[3] The origin of this rite is obscure. The 'fort of Chākabu' is a game played by children: they make a maze on paper, and one child finds his way through it with a pencil. A dot within represents the treasure which it is supposed to contain. Vaiṣṇavas of the Vallabha *sampradāya*, or school, often make their *ārti* in this shape.[4]

Difficult labour is dealt with in parts of Madras by calling in a woman who has had an 'easy time'; she presents the patient with betel, etc., and, if that fails, a line of persons drawn up pass water from hand to hand until it reaches the woman who had the 'easy time,' and she gives some of it to the sufferer. Here the luck or quality of the one woman is transmitted to the other.

In one caste, the Mālas of the Telugu country, who are Pariahs, the placenta is put in a pot in which are *nīm* leaves and the whole is buried, lest a dog or other animal should carry it off, which would make the child a wanderer.[5]

(3) *Death.*—A magical rite of resuscitation is practised by the Dāsaris, a class of priests who minister to Śūdras, in Madras. If a Dāsari is offended, he will revenge himself by self-mutilation or even by cutting off his own head. News of this is miraculously carried to all his caste-fellows, and, when collected, they display their magical powers by frying fish which come to life again on being placed in water, by joining together limes cut in two, and, finally, by bringing the suicide to life again. The rite can fail only if the victim's wife is in pollution or when the rite is not carried out reverently.[6]

2. Agents.—First-born children have power to stop rain. Muslims say that they can do so by stripping naked and standing on their heads, heels in the air. In Calcutta they need only make a candle of cloth and burn it.[7] A first-born son leaning against anything will, it is believed in S. India, attract a thunder-bolt to it.[8] Girls born in the asterism of Mūla are believed in S. India to place their mother-in-law in a corner, *i.e.*, make her a widow, and so such a girl, if her mother is not already a widow, finds difficulty in securing a husband.[9]

Just as charms are made out of various natural substances, so such substances often possess magical powers. The acacia is inhabited by a *jinn*, but its wood is unlucky only if used to make or mend a bed; no one will be able to sleep on it. Here the spirit in the tree appears to endue it with magical properties; a man who conveys himself in servitude to the spirit of this tree will get all that he wants, but only at the risk of his life. For twenty-one days he must take a pot full of water daily to the jungle, and on his way back cast half of it upon a particular tree; on the twenty-first night he will be irresistibly drawn towards it; the devil will appear to him, and, if he escapes death, he will get all that he wants as the price of his bondage.[1] The tree called *barkhar* (*Celtis caucasia*) has magical properties; any one cutting it down or tampering with it loses all his hair and becomes very ill. It yields a milk which raises blisters, and even to sit in its shade, while it is exuding it, has that effect. Indeed it is dangerous to sit in its shade at any time. This belief is current in the Murree Hills, in the Panjāb, but in that very part the Gūjars use amulets of *batkar* (its usual Indian name) to ward off the evil eye (*naẓar*) from both men and cattle, and its fruit is also much relished.[2]

To cure scorpion bite the insect should at once be caught and burnt, and the smoke allowed to touch the bite.[3] To cure *saya*, or consumption, in a child (said to be due to enchantment caused by ashes taken from a burning place and thrown over or near the child) the parents should give away salt equal to the child's weight.[4] Toothache is cured by a magical rite which consists in spreading sand over a clean piece of board and writing on it the first six letters of the Arabic alphabet. The patient then holds his aching tooth between his thumb and index finger, and touches each letter in turn with a pointed instrument. When he reaches the sixth letter, if not before, he will be cured. At each he should be asked if he is cured, and, when he says that he is, he should be asked how long he wishes for relief. He should reply 'two years,' as that is the limit of the charm's efficacy.[5]

After a bad dream, a Gāro, in Assam, collects a reed-like grass and is beaten with it by a priest, who repeats certain exorcisms. Then they carry a cock to the nearest stream, kill it, and let its blood fall into a toy boat; the boat is launched, and as it starts the dreamer bathes in the water. The prayers, the chastisement, and the sacrifice appease the spirits, and the boat is allowed to carry off the ill-luck.[6]

On the first day of sowing sugar-cane, sweetened rice is brought to the field, and women smear the outside of the vessel with it, after which it is given to the labourers. Next morning a woman puts on a necklace and walks round the field, winding thread on a spindle. This custom is falling into disuse.[7]

Magic squares are in vogue among Hindus. Thus one which totals 90 lengthways cures quartan ague; one totalling 100 every way causes excess of milk in cows and women and of *ghī* in a churn; one totalling 130 every way will, if worn round one's neck or in one's *pagṛī* (turban), bring any person under one's power;[8] and one totalling 15 each way brings luck and is commonly found on shops. Squares totalling 55 and 20 each way should be placed under one's seat to ensure success at play.[9]

[9] *Ib.* § 537.

The power of magic is so great that by mere assertion of its potency a *bīr*, or demon, may be brought into subjection.

> Fast the whole of a ninth lunar day falling on a Friday, and in the evening eat sweet rice milk. At 8 p.m. don red clothes perfumed, and make a circle of red lead on the ground. Sit in its centre with four cardamons, some catechu, betel-nuts, and eight cloves. Light a lamp fed with clarified butter and say: 'Incantation can break down the stars' 5000 times—and a demon will be at your service.[1]

II. *ISLĀM*.—Muhammadans classify magic as high (*'ulwī*), divine (*raḥmānī*), low (*siflī*), and satanic (*shaiṭānī*). In divine magic perfection consists in knowledge of the greatest of God's names—the *ism-al-a'ẓam*, which is imparted only to the elect, and by which the dead can be raised. But God's other names, and those of Muhammad and of the good *jinn*, are also efficacious, and written charms are composed of them or of passages from the Qur'ān, as well as of mysterious combinations of numbers, diagrams, and figures. Satanic magic is condemned by all good Muslims. It depends on Satan's aid and that of the evil *jinn*, who ascend to the lowest heaven and hear the angels so that they can assist magicians. Enchantment (*al-siḥr*) is a branch of this magic; but, as it has been studied with good intent and with the aid of good *jinn*, there is a science of enchantment which may be regarded as lawful. Enchantment results in death, paralysis, affliction with irresistible passion, possession, or metamorphosis. Metamorphosis is effected by spells or invocations to the *jinn* accompanied by the sprinkling of dust or water on the object to be transformed. Against enchantment and other evils a talisman (*ṭilism*), *i.e.* mystical characters, astrological or otherwise magical, or a seal or image on which they are engraved, is effective. When rubbed, it calls up its servants.

Divination (*al-kihāna*), which is also practised by the aid of Shaiṭān, is obtained by magic, by invoked names, and by burning perfumes. Its forms are: *ḍarb al-mandal*, inscribing the enchanter's circle,[2] *ḍarb al-raml*, the moving of sand, *'ilm al-nujūm*, astrology,[3] and *al-zijr*, or augury from beast and bird.[4]

The Imām Zamānī rupee is said to be dedicated to that *imām*, and is worn by Muhammadans on the right arm when starting on a journey.[5]

The names of 'Alī and the *imāms* are used in magical squares according to the *abjad*, or letter-value system of computation. Notices of the custom are not uncommon in Indo-Persian histories as having been practised on the Mughal court-ladies.[6]

Islāmic medicine is acquainted with the olive of Bani-Isrā'īl, a stone found on the banks of the Indus. It is black with a little red and yellow, or olive-coloured with small white lines, and is used only for sprinkling over wounds and stings by Muslims. Hindus are said to worship it as a god, and to the Persians it is known as the *sang-i-Yāhū*, or 'stone of Jahweh,' or the *ḥajar al-Hunūd*, or 'stone of the Hindus,' in Arabia. Jasper (in Pers. *yashm*, Arab. *ḥajar al-bashaf*, or 'hard stone'), when olive, green-yellow, or opaque green, is used in charms; and, when white, in medicine. The hair of a child will never turn white if a piece of it be tied on his neck at birth. If a piece is tied on the right wrist, he will be immune to witchcraft and the evil eye. Tied to a woman's thigh, it ensures painless labour; and, if by the light of *lailat al-qādir* (the night when Muhammad spake with God) a man be sketched over it and the picture worn over the head, the wearer will be safe from wounds in battle.[1]

III. *MAGIC AND RELIGION*.—It has been held by many scholars that in ancient India the confusion of magic and religion was rife, just as it survived among other peoples that had risen to higher levels of culture. H. Oldenberg[2] regards the sacrificial ritual of the earliest known period as pervaded with primitive magic, and he tells us that the rites celebrated at marriage, initiation, and the anointment of a king are complete models of magic of every kind, and that the forms employed are of the highest antiquity. Sylvain Lévi[3] observes of the sacrifices prescribed in the *Brāhmaṇas* that they have all the characteristics of a magical operation, effective by its own energy, independent of the divinities, and capable of producing evil as well as good; it is only distinguishable from magic in that it is regular and obligatory, so that both matters are treated in the same works. Thus the *Sāmavidhāna Brāhmaṇa* is a hand-book of incantations and sorcery, as is the *Adbhuta Brāhmaṇa* portion of the *Ṣaḍviṁśa Brāhmaṇa*. M. Bloomfield[4] also holds that witchcraft became intimately blended with the holiest Vedic rites, the broad current of popular superstitions having penetrated into the higher religion of the Brāhman priests who were unable and possibly unwilling to cleanse it from the mass of folk-belief which surrounded it. W. Caland,[5] in his introduction to the *Kauśika Sūtra*, enlarges on the agreement between the magic ritual of the old Vedas and the shamanism of the so-called savage. Indeed, some authorities would derive Brāhman from *brahman*, 'a magic spell,' so that, if they are right, the Brāhman would seem to have been a magician before he was a priest.[6]

On the other hand, J. G. Frazer[7] also points out how in India, from the earliest times down to the present day, the real religion of the common folk appears always to have been a belief in a vast multitude of spirits of whom many, if not most, are mischievous and harmful. This belief subsists under the great religions, like Brāhmanism, Buddhism, and Islām, which may come and go; and in support of this thesis he cites Oldenberg for the Vedic and Monier Williams for the modern periods. It is to this deep-seated and universal belief in the existence of spirits, which fill all created matter—the sky, the earth, trees, beasts, the earthly waters and clouds—that many, if not all, magical practices are to be ascribed, at least in their inception. At every stage of a ritual sacrifice, *e.g.*, spirits have to be appeased, and the very stake to which a willing victim is tethered for the sacrifice must be cut, shaped, and erected with the most minute precautions against their sinister influences. Every point in sacrificial ritual is symbolical, but the guiding principle in it is not magical, but religious. By the part of the stake which is dug in the sacrificer gains the lower world of the fathers, by its middle part that of men, and by its top the world of the gods. But this winning of the three worlds is conditional on his success in averting the onslaughts of evil spirits. In the whole ritual of animal-sacrifice at the stake (*yūpa*), as prescribed by the *Śatapatha Brāhmaṇa*, there is no trace of magic or of magical practices.[1]

---

[1] *NINQ* v. § 214.

[2] *Mandal* is doubtless from the Gr. *μάνδαλον*, and not connected with Skr. *maṇḍala*, a circuit or group of villages. The *μάνδαλον* was a kind of drum used to conjure up demons; hence an enchanter's circle.

[3] It was taught by the two fallen angels Hārūt and Mārūt, who became enamoured of the songstress Zuhra, who ascended to the sky and mingled her splendour with the star Zuhra (Venus).

[4] H. Wilberforce Clarke, *Divān-i-Ḥāfiz*, Calcutta, 1891, ii. 616 f., citing the *Mishkāt-al-Maṣābīḥ*, ii. 394, 384, 385, 388, and *Mirāt al-zamān*, i. 1. For a charm to divine which of two rivals will prevail see the *Sirāj al-raml* by Maulavī Roshan 'Alī and the *Miṣdāq al-raml* by Muḥammad 'Aṭṭār Māl Lahorī, Lucknow, cited in *Divān-i-Ḥāfiz*, ii. 831. It consists in writing the two names in *abjad*, and dividing by nine. Then, if both the quotients be odd or even, the lesser in number will conquer; if both are equal, the lesser in age; and, if one be odd, the other even, the greater in number will prevail.

A question of minor interest is whether Indian magic was derived from or has influenced that of Arabia and the Nearer East. The Skr. word *śilpā*, 'black magic,' may be the original form of *siflī*, or, conversely, the Arab word *siflī* may have been Sanskritized as *śilpā*. A typical rite in *śilpā* illustrates the spiritual basis of belief in magic. When performed with the object of destroying an enemy, it is known as *chel*, or *ghāṭ*, in the United Provinces. A vessel is filled with iron nails, knives, etc., and sent by certain incantations through the air until it descends on the victim's head and kills him. But, if a river intervenes, a sacrifice to the spirit called *ghaṭbai* (lit. 'ferryman'), which is supposed to guard the river, must be made to induce him to let the vessel cross.[2] Thus black magic has to reckon with the spirits, however it works and whatever its origin.

LITERATURE.—i. The Hindu literature is vast, but mostly unpublished. It comprises many treatises on special topics—*e.g.*, the *Kashtauli* (?) *Sukdeoji*, a Gurmukhi MS, contains only magic squares for all kinds of ailments.[3] It commences with the Atharvaveda, upon which and other texts is based Alfred Hillebrandt, *Ritual-Litteratur: Vedische Opfer und Zauber* (=*GIAP* iii. 2), Strassburg, 1897.

ii. The Shī'a Muhammadans, who are prone to occultism, have six books on magic: the *Ja'afar Jāma*, *Safīnat al-nijāt*, *Tuḥfat al-'awām*, *Mahaj al-da'wāt*, *Mukārim al-ikhlāq*, and *Anwār i-Na'māniya*. The Sunnis also have books on magic: such are the *Mujarrabāt-i-Dīrbī* and the *Naqsh-i-Sulaimān*.[4]

H. A. ROSE.

MAGIC (Iranian).—**1. Religion and magic.**—Although religion and magic are two essentially different things, the interpenetration of the two is fairly common; but nowhere are they so intricately commingled as in Mazdeism.

First of all, a clear line of demarcation has to be traced between the real doctrine of Zoroaster, as it is expounded in the *Gāthās*, and the Later Avesta.

In the Gāthic hymns we find a religion of a highly moral character. It admits of no deity besides Ahura Mazda except personified moral entities, and it expressly undertakes a struggle against the lower beliefs and the magical practices of the people of the time. The cult of the *daēvas* in general and the nocturnal orgiastic sacrifices in which *haoma* (*q.v.*) was drunk by the worshippers were specially condemned.[5]

The Later Avesta also anathematizes the sorcerers (*yātu*) and witches (*pairika*), but many of the beliefs and practices which Zoroaster had associated with them have found their way back into religion. The whole subject is rendered all the more intricate by the fact that a coherent system has been formed from a combination of the superior elements of the Zoroastrian creed (sophisticated to a great extent by adaptation to a lower standard of religious thought) and the popular and inferior beliefs of the Iranian people, including much that is in origin magical. As is well known, this is the system called dualism (*q.v.*). It is based on the assumption that there are two cosmic elements, the one created by Ahura Mazda, the real god, and the other by his adversary, Angra Mainyu. Every creature of the wise lord is good, but all that has been created by his foe is evil. Each creator has thus communicated to his creatures his own specific nature and power. His creatures both share in their lord's natural and supernatural power and must assist him in the incessant struggle which is going on between the good and the evil spirit—a contest which will not be settled before the end of this world.

It follows that good creatures have a power over evil ones and evil over good. Of course, we may imagine that a good being, when he neutralizes the evil deeds of his opponent, acts, after all, as a depository of his creator's power; but in practice it is as though he had a real and effective power of his own against demons.

A good work is an act of war, capable of helping effectively towards the triumph of good over evil and having, therefore, an efficacy of its own to conjure and oppose the noxious activity of evil creatures such as evil spirits; and this is very much like the efficacy ascribed to magical rites. The only difference between such an activity and magic is that, with the latter, material interests are generally at stake, whereas, in the majority of Mazdean religious acts, the concern is mostly supra-terrestrial, being the religious purity of the faithful (*ašavan*) as a preparation for the future happiness of the blest. The contrary state, the impurity of the imps of the *druj* (*dregvants*), has to be destroyed.

2. Purification.—For the Zoroastrian the normal means of getting rid of an impurity acquired by sin is to outweigh it by merit[1]—a process which, of course, is far from being magical. Sin, however, being in Iranian eyes not only a breach of order which has to be repaired by repentance and good works, but a positive product of the evil spirits, of the evil creation, produces a substantial, though invisible, pollution—a moral disease like a bodily illness—and death likewise results from some mysterious contrivance of the originators of all evil. A material means of removing that pollution is therefore requisitioned, just as a remedy by its beneficial properties, as a piece of good creation, cures an ordinary disease. The power of purifying man from impurity belongs in the highest degree to water—an eminently good element of Mazda's creation. Besides water, other substances—e.g., *gaomaēza* (urine of cattle)—are supposed to have great power to purify. The rites of purification by means of these substances are strictly fixed, as in a magical proceeding: the priest has to sprinkle every part of the body in a definite order, beginning with the head, till the *druj* is expelled from the left toes, which are the last refuge of the evil spirit. Dogs have a specially powerful wholesome influence. More intricate ceremonies tending to the same result existed besides this relatively simple one—*e.g.*, the great purification of the nine nights (Pahl. *barašnūm nū šaba*) expounded in *Vend.* ix.; the ground is prepared, holes are dug, and furrows are drawn, according to a strict ritual; *gaomaēza* is put into the holes, the patient rubs the ground, and is sprinkled with water and perfumes by means of a spoon and a stick of a fixed size, etc. The proceeding cannot, however, be completely identified with magic, because, however material the concept of purity may have been in the thought of the Iranian people at that time, it was, after all, a duty not confined to human interests in this world, because the activity of the purifying substances and acts derives from an essentially beneficent power, whereas the counter-spells, although tending to neutralize noxious influences, are regarded as possessing a power of the same kind as the one which they oppose, and, lastly, because the rites, in spite of their magical tendencies, are devoid of all mystery. They are a public and accepted procedure, assumed—wrongly, of course—to date back to the Prophet's teaching, and forming part of the sacred struggle of good against evil. Man is supposed to make use of the weapons which Mazda has put into his hands for a contest in which he is serving the lord's interests. Nevertheless, it is clear that a real degeneration towards magic has taken place in these ceremonies, and also that many an ancient magical prescription for averting evils may have been introduced. This process is analogous to that which we observe in Mazdaism from Zoroaster to the Later Avesta period.

[1] Moulton, p. 144.

Moral beings, like the *amesha spentas* ([*q.v.*] justice, good spirit, piety, etc.), have been turned into—or, rather, identified with—the genii of fire, cattle, earth, etc., and Sraosha, 'obedience,' has become a good spirit protecting men during the night against demons and sorcerers, having the cock and the dog as his assistants in this task (*Bund.* xix. 33).[1]

3. Sacrifice.—Of sacrifice we may say much the same as of purifications. Neither to the Indians nor to the Iranians was the sacrifice properly a magical act. Oldenberg[2] is quite right when he says that sacrifice is in Vedic times a gift to the god, which, in the mind of the sacrificer, is to influence the intentions of the deity, not by way of compulsion, but by securing his powerful goodwill. This conception, however, was likely to degenerate, and did. Indra and Agni are sometimes described as being mastered by the sacrificer.

Agni, the fire, is regarded as a miniature of the sun, the great fire, and, by kindling fire, one gets the sun to rise. Indeed, the *Śatapatha Brāhmaṇa*[3] says that the sun would not rise if the fire-sacrifice did not take place. A similar process can be traced in Irān, where the sacrifice is given its place in the general cosmic conflict, so that it

> 'is more than an act of worship; it is an act of assistance to the gods. Gods, like men, need food and drink to be strong; like men, they need praise and encouragement to be of good cheer. When not strengthened by the sacrifice, they fly helpless before their foes.'[4]

Sacrifice has thus a value of its own independently of the will of the gods. It is an act of war, helping God in His struggle against the evil creation, so much so that gods also have to practise cult:

> 'Aūharmazd performed the spiritual Yazišn ceremony with the archangels (*ameshōspendān*) in the Rapītvīn Gāh, and in the Yazišn he supplied every means for overcoming the adversary.'[5]

The value of sacrifice in itself is also to be discerned in the fact that it produces merits independently of the piety and attention of the sacrificer. If he does not obtain them for himself, they are not lost, but are collected in a store (*ganj*) of merits.[6] The sacrifice of the *haoma* (=Ind. *soma*), although itself not really magical in principle, was specially prone to develop in that direction. The *haoma*=*soma*, in the thought of the proto-Aryans, was a plant wherein resided an extraordinary strength of life capable of giving immortality to the gods, who were supposed to live on it like the Homeric gods on ἀμβροσία, and of giving a superexaltation of life to man, in whom it caused intoxication. As was said above, the *haoma* orgiastic sacrifice had been banished from Gāthic religion in company with the magical procedure of the *daēva*-worshippers. In the post-Gāthic period we see it reappear, but it has been deprived of its savage character and turned into a mystical drink.[1] Not only was it supposed to confer a greater intensity of human life, but it was regarded as a highly beneficial spirit, imparting to man also the gift of spiritual life and a title to the supra-terrestrial reward.[2] It led to a division into two *haomas*.[3] The one, the actual plant, was the yellow *haoma*, the other, supra-terrestrial, called the white *haoma*, was identified with the tree *gaokerena* (Pahl. *gōkarṭ*) 'that stands in the middle of the sea *Vouru-Kaša* . . . that is called "the All-healer" and on which rest the seeds of all plants.'[4] It is by drinking the *gaokerena* that men on the day of the resurrection will become immortal. For that reason it was customary to put a drop of *haoma* on the lips of a dying Zoroastrian. *Haoma*, having been made the principle of all life and fecundity, was supposed to receive its healing power from Vohu Manah, and to be the son of Ahura Mazda. This mysterious power of the drink of life is an approach to magic, although it is extended to domains to which healing and vivifying power cannot normally attain—*e.g.*, the gift of swiftness to horses in races, of healthy children to pregnant women, and of bridegrooms to girls. Moreover, it is, in the traditions of the Indo-Iranians, closely connected with a mystical bird which took the *soma*=*haoma* from the place where it lay hidden and brought it to gods and men.[5] The Avesta speaks of the bird Saēna, which is the Sīmurgh of the Persians, who make him play the same part as the bird Vārengana in *Yt.* xiv. 35 f.—a part which is completely magical.[6]

> 'Get thee a feather of the wide-feathered bird Vārengana, Oh Spitama Zarathushtra. With that feather thou shalt rub thy body; with that feather thou shalt curse back thine enemy. He who hath a bone of the mighty bird or a feather of the mighty bird gaineth (divine) favour. No one, (however) magnificent, smiteth him or turneth him to flight; he first gaineth homage, he first (gaineth) glory; the feather of the bird of birds bestoweth help.'

Thus we have here to do with a real amulet.

4. Spells.—If the sacrifice is apt to degenerate into a magical rite, prayer may become a spell. The message of Zoroaster to man is a *manthra*, a noble word which properly means 'utterance,' 'word,' 'ordinance,' but has in the Later Avesta the meaning of 'spell' and, indeed, the sermons of the Prophet, instead of being a subject for meditation, are chanted in a dialect obsolete for ages, and have degenerated into mere spells, the exact pronunciation of their words achieving what their author sought by pure life and diligence in a noble calling.[7] The finest Mazdean prayers, such as the *Ahuna Vairya* ([*q.v.*] Pārsī, *honovar*)—a kind of profession of faith—have stiffened into a mechanical repetition of formulæ, and have acquired an infinite power of their own, so much so that they become a weapon for the Creator Himself. The *Bundahišn* (i. 21) narrates how Aūharmazd, having recited the *Ahunavar* and uttered its twenty-one words, confounded the evil spirit and secured the victory over him, in the first days of creation. The power of the same prayer and of some others is also expounded in *Vend.* xix. (cf. also *Yt.* xvii. 20). Recited as many times as is prescribed on every occasion, they help as a spell the purification of man, which is primarily attained by the marvellous power of the substances and ceremonies mentioned above.

No wonder, therefore, if the *manthra* is mentioned as a regular means of curing diseases. *Vend.* xx. distinguishes healing by plants, by the knife, and by the *manthra*, the last being the most powerful. A series of formulæ is to be found there for repelling both diseases and evil beings. The prayer contained in *Vend.* xx. 11 is supposed to be peculiarly powerful. It is directed to Airyaman, the healing god *par excellence*. *Vend.* xxi. 18–23 is also a spell against all kinds of diseases, consisting of some fragments of other parts of the *Vendīdād* and of some very well known prayers. These are the means that Airyaman has at his disposal for curing the 99,999 diseases created by Angra Mainyu for the bane of mankind (*Vend.* xxii.). Airyaman is an old Indo-Iranian god: in the Veda he is an *āditya* (Aryaman) who is generally found in company with Varuṇa and Mitra. He is a beneficent and helpful god, but in Persia he has been narrowed down to the character of a healing god. He survives in Parsiism as the *īzad* of heaven, but, in his quality of healing god, he is replaced by Farīdūn (=Thraētaona), who, having killed the dragon Azi Dahāka, is supposed to be a powerful enemy to the works of evil spirits. The Iranians knew, moreover, of a healing fruit, which, according to *Bund.* iii. 18, Ahura Mazda pounded up before his coming to the ox, 'so that its damage and discomfort from the calamity (*zaniŝn*) might be less.'[1] On the same footing as the *manthra* for healing diseases must, of course, be put the numerous incantations and mystical formulæ for removing the pollution inflicted upon anything which has come into contact with a corpse. *Vend.* viii. 14 ff., *e.g.*, explains that a road whereon the dead bodies of dogs or men have been carried cannot be traversed again by men or flocks, till the yellow dog with four eyes or the white dog with yellow ears has gone three times across it and an *ātharvan* has gone along it, saying aloud the fiend-smiting words of the *honovar*. *Vend* vii. 28 ff. contains the method of purifying wood which has been in contact with a corpse, and formulæ for all kinds of good elements infected by the same pollution (cf. *Vend.* x., xi., etc.). In such cases the *Gāthās* had become a mere spell (cf. *Vend.* x. 1 ff.). The reason of this custom with regard to corpses is originally a magical one, which has been fitted into the general Mazdean system. It is the old conviction of mankind that death, like illness, cannot occur without the maleficent intervention of some spirit, which has therefore to be averted. For a Mazdean to die was to pass into the power of the *druj* Nasu. Hence it was necessary to minimize the evil produced by this demon by protecting all good beings and substances from its power and freeing, as soon as possible, the beings or substances that had fallen into its hands. The intervention of maleficent beings and the utility of spells were felt in many other circumstances—*e.g.*, in the case of a woman on the eve of child-birth (*Vend.* xxi. 8, 12, 16), or when some accident occurred to cattle.[2]

5. Fire.—Among the elements which have to be kept carefully from any pollution, fire occupies a prominent position. It is well known that among the Parsis it enjoys a veneration which is not far from being superstitious. Here, the process is not a degenerative one, but rather the elevation of an elementary and, to a great extent, magical belief which is common to many nations, but which is specially Indo-Iranian (cf. art. FIRE, FIRE-GODS, § 6 f.). Fire is the great purifier, which illuminates the night, keeps off bitter cold and wild beasts, and, as such, is the great enemy of demons and the friend and ally of man. It repels diseases, and it plays an important part in the proceeding of Indian magic, as is expounded in the Atharvaveda[1]—a name which is taken from the *atharvans*, who were originally priests of fire. The Iranian myth of Ātar's victory over the serpent Azi Dahāka (*Yt.* xix. 45 ff.) belongs to the same order of thought. Indeed, fire, in the conception of the Persian *āthravan*, keeps closer to its original part, inasmuch as it does not become, as in India, the agent which conveys to the gods the substances of sacrifice. It remains the great averter of everything impure, and must on no account be put in contact with anything that is not pure, least of all with corpses or with anything coming from the body. It has become an earthly form of the eternal, infinite, godly light, the purest offspring of the good spirit, the purest part of his pure creation,[2] the weapon of Ahura (*Ys.* li. 9). It is the principle of all life, in men as well as in plants, the son of Ahura Mazda.[3] We can distinguish several forms of it, among which the *bahrām* fire is the most sacred. It is supposed to be an emanation on earth from the fire above and the most powerful protection of the land against foes and fiends.[4] It took its name from Verethraghna (Skr. *vṛtrahan*), in Indian myth the genius of victory and the slayer of the demon Vṛtra.

6. Influence of stars.—Astrology, as is well known, was the chief concern of the Magi, as the ancients describe them to us; but there is abundant evidence that this element of activity was not of Iranian origin. The proto-Aryan element of astrolatry was extremely small, in contrast with Babylonian religion.[5] We have, however, the cult of Tištrya, the star (Sirius) which was regarded as a good genius that brought rain after having slain the drought demon Apaoša (*Yt.* viii. 20 ff.). It is a very good genius which, at the dawn of creation and before man was created, destroyed the noxious creatures by an effusion of beneficent waters. It would be an exaggeration to treat as real magic such beliefs concerning the part of Tištrya as we find in the Avesta. There is reason to believe, however, that in some parts of Persia rain spells were in use. The *Great Bundahiŝn* says:

> 'The plague created against Saïstān is abundance of witchcraft; and that character appears from this, that all people from that place practise astrology: those wizards produce . . . snow, hail, spiders, and locusts.'[6]

On the other hand, it was a current belief among Iranians that planets had a malign influence; but this does not oblige us to admit that they had any belief in the influences of stars upon men's fate (cf. art. FATE [Iranian]).

7. Recent superstitions.—Among the superstitions prevalent among the Parsis and the Muhammadan Persians many customs, no doubt, go back to old Mazdean practices or, more probably, to popular beliefs which persisted beside the official creed.

The great power assigned, among the old Mazdeans, to plants in general, and in particular to some specially marvellous ones, as well as the extensive practice, among the Babylonian Magi,[7] of natural or magical treatment of diseases by herbs, probably explains the important part played by plants in the superstitious customs attached to the ancient Persian festivals as described by Persian writers[8]—*e.g.*, rubbing with olive oil on the day of Naūrūz as a riddance from sorrows during the new year, eating a pomegranate on the feast of Mihr (Mithra) to avert dangers, hitting an eating animal with an orange on the day of Ādar in November as a way of securing happiness, giving garlic to one's friends on the Gōś rūz (14th Dec.), and boiling herbs on the same day, in order to get rid of demons, fumigation with liquorice on the day of Dī-mihr rūz in order to avoid starvation or misery, eating apples and daffodils on the same day in order to secure success in one's enterprises, placing betel, walnuts, etc., on a pregnant woman's bosom, to make her fertile,[1] etc.

The power of fire against evil beings is illustrated by the lighting of a fire on the night of the Bahmān (Vohu Manah) festival (10th Jan.). This fire, on which perfumes were thrown, was lit under the image of the genius in order to repel wild beasts. During the whole night it was guarded by standing Persians.[2] Anquetil du Perron reports that on 15 Spendarmat the Parsis used to hold a spell, written on a sheet of paper, in the smoke of a fire, in which they had put pieces of horn from an animal killed on the festival of Mihr, cotton seed, resin, and garlic, in order to remove the *dēvs* (*daēva*) from their houses.[3] The magic for rain has survived in the custom of pouring out water on 30th Jan. in order to obtain rain during the year.[4]

In the last days of the Persian year the souls of the departed are said to come and pay a visit to their relatives, who prepare a sumptuous meal for them. The souls—or, rather, the *fravashis* (*q.v.*)—are supposed to gaze at the food and smell it.[5] This also, no doubt, is a survival of the beliefs concerning the *fravashis*.

The use of the Gāthic hymns and of the chief Zoroastrian prayers as spells against diseases or against the evil eye is current to this day among the representatives of the Mazdean faith.

> 'In order to avert the influence of the evil eye or to cure a child of some disease, a parent will occasionally hire the mobeds . . . to read from the Yasna, the Yashts, or the Khordah Avesta; and when women are childless, they will sometimes pay to have the Vendîdâd Sadah recited by the priests, in order that the curse of sterility may be removed.'[6]

J. J. Modi knows of charms for diseases of the eye[7] or for avoiding pollution from contact with all that comes from the human body—*e.g.*, hair or nails.[8] Amulets are also used for the same purpose.[9]

LITERATURE.—There is no special book on Iranian magic. The general bibliography on Mazdaism has to be consulted, especially the translation of the Avesta by J. Darmesteter (*AMG*, Paris, 1892–93); J. H. Moulton, *Early Zoroastrianism*, London, 1913. For spells and charms see literature at end of art. CHARMS AND AMULETS (Iranian). For Parsis cf. J. A. Decourdemanche, in *RTP* xxiii. [1908] 209 ff.; D. Menant, *Les Parsis*, Paris, 1898.

A. J. CARNOY.

MAGIC (Japanese).—Japanese magic is such a vast subject that, if we were to treat it systematically, with all its logical divisions and subdivisions, it would be almost impossible to give even a bare index to the volume that would have to be written to describe it. We shall, therefore, dismiss everything that springs from foreign influences, and even in Japanese magic proper we shall ignore the general classifications under which the innumerable details supplied by the rich literature of the country might be arranged. We shall confine our attention to emphasizing the essential point, viz. the existence of magic in the very heart of the national religion, in the most authentic documents of pure Shinto.

For this purpose we must apply chiefly to the ancient rituals (*norito*) collected in the *Engishiki* in the 10th cent., although several of these—and precisely those that contain most of the magical element—were certainly composed at a much earlier date, even before the most ancient mythico-historical works, the *Kojiki* and the *Nihongi*, which were written in the 8th century. By glancing over the most typical of these *norito*, and explaining them with the help of certain related passages in the *Kojiki* and the *Nihongi* or in other equally ancient sources, rather than by abstract classifications, we shall gain a vivid idea of what Japanese magic was in its most ancient and most original form.

The old rituals seem to have been not so much prayers as magical formulæ, solemn incantations, and we shall see that at the same time they were enveloped in powerful rites by which the magician priests of primitive Japan conquered their gods.

This magical spirit appears at the very beginning of the collection, in the 1st ritual, *Toshigohi no Matsuri*, which was said every year at seed-time to obtain a good harvest. The chief priest (*nakatomi*), who recited it in the name of the emperor, addressed the gods in these words:

> 'I believe in the presence of the sovereign gods of the Harvest. If the sovereign gods will bestow in many-bundled ears and in luxuriant ears the late-ripening harvest which they will bestow, the late-ripening harvest which will be produced by the dripping of foam from the arms and by drawing the mud together between the opposing thighs, then I will fulfil their praises by setting up the firstfruits in a thousand ears and many hundred ears, raising high the sake-jars, filling and ranging in rows the bellies of the sake-jars, in juice and in ear.'

Other offerings are then enumerated, among which we notice a white horse, a white pig, and a white cock. Now, a 9th cent. document, the *Kogoshūi*, gives the legendary origin of this detail: Mi-toshi no Kami, 'the god of the august harvest,' had cast his curse on the rice fields; but the diviners obtained from him, by the gift of these same white animals, the secret of a magical process which enabled them to save the imperilled crop. The ritual is, therefore, based on a history of magic. The main point to remember from this first text, however, is the conditional character of the offerings which are to obtain the desired result. The same precaution is found again, in the same words, towards the end of this document, where the officiant invokes the gods who preside over the departure of the waters on which irrigation depends. This ritual, therefore, is not so much a prayer as a contract, a matter-of-fact agreement, by which the gods receive in advance the remuneration promised in exchange for the services expected from them, and thus find themselves morally compelled to render them. We accordingly see at the very beginning the familiar nature of the relations between these very human gods and the priestly magicians who exploit their power.

In the 2nd ritual, *Kasuga Matsuri*, we again find this idea of the bond which must unite the offerings with the services rendered; for it is 'in consequence' of these offerings that the gods are asked to protect the sovereign and his court. We may also observe that, of the four gods worshipped in the temple of Kasuga, the first two, Take-mika-dzuchi and Futsu-nushi, were represented by magical swords (cf. *Kojiki*, tr. B. H. Chamberlain, 2nd ed., Tokyo, 1906, p. 36), and that the other two, Koyané and his wife, are connected with the famous eclipse in which that god, by his 'powerful ritual words,' helped to bring back the sun-goddess (*Kojiki*, 64).

There is the same spirit in the 3rd ritual, *Hirose Oho-imi no Matsuri*, devoted to the goddess of food.

Her worshippers make a bargain with her; while bringing her various offerings, they promise her others if the harvest is very abundant.

The 4th ritual, *Tatsuta no Kaze no Kami no Matsuri*, is just as characteristic, and, moreover, relates its own legendary origin. For several years unknown gods have bungled all the crops, and the diviners have not been able to discover who these gods are. Then the sovereign himself 'deigns to conjure them,' and they reveal themselves to him in a dream. They are 'Heaven's Pillar's augustness and Country's Pillar's augustness,' the gods of the winds who maintain the order of the world. They require certain offerings, the founding of a temple at Tatsuta, and a liturgy, by means of which they 'will bless and ripen the things produced by the great People of the region under heaven, firstly the five sorts of grain, down to the least leaf of the herbs.' Here it is the gods who state their conditions. The people hasten to fulfil them 'without omission,' but evidently the recollection of past calamities has left some mistrust, for, when making the present offerings, they announce future gifts for the autumn: if, between now and then, the gods have deigned not to send 'bad winds and rough waters,' but to 'ripen and bless' the harvest, they will grant them the firstfruits of it. This will be their small commission.

We shall pass over the 5th, 6th, and 7th rituals, which are not so interesting, and come to the 8th, *Ohotono-Hogahi*, *i.e.* 'Luck-bringer of the Great Palace.' This title itself indicates the magical character of the document, and, in fact, we find the ritual defined in its own text in the words, *ama tsu kusushi ihahi-goto*, 'the celestial magical protective words.' It is a formula the recitation of which wards off all calamity from the palace, as an amulet would do; this is shown by the importance ascribed to the perfect regularity of the words pronounced; for, in another passage, certain 'corrector'-gods (*naho*) are begged to rectify all the omissions that they may have seen or heard in the rites or the words of the ceremony. This ceremony itself throws abundant light on the magical character of the ritual of which it was a part. We have a description of it in the *Gi-shiki* of the 9th cent. (see E. Satow, in *TASJ*, vol. ix. pt. ii. [1881] p. 192 f.). A priestly retinue, in which we distinguish chiefly the *nakatomi*, the *imibe* ('abstaining priests'), and the vestals, goes through the palace in every direction; and in different places, from the great audience-hall to the bath-room, even to the emperor's privy, the vestals sprinkle rice and *sake*, while the *imibe* hang precious stones on the four corners of the rooms visited by them. We observe here an application of the custom, called *sammaï*, which consisted in scattering rice to ward off evil spirits. Whatever is the reason of this custom—whether it is simply a bait thrown to the demons or perhaps a symbolical use of grains whose shape represents one of the aspects of the generative power, of the vital force which combats illness and death—the rite in question was very frequently practised in Japanese magic. Rice was scattered inside the hut in which a woman was about to be confined; in the divination at cross-roads (*tsuji-ura*; see art. DIVINATION [Japanese]), a boundary was sometimes marked on the road, where rice was also strewn, in order to take afterwards as an oracle the words spoken by the first passer-by who crossed this bewitched line; and an old legend tells how, when the son of the gods descended from heaven to Mount Takachiho, grains of rice were thrown at random in the air to disperse the darkness from the sky. Just the same is the magical use of jewels to combat evil influences. Through the whole of Japanese mythology there is the sparkle of jewels, some of which are talismans—jewels which, at the time of an eclipse, the gods suspended to the highest branches of the sacred *cleyera*, and whose brilliance recalled the sun (*Kojiki*, 64); jewels which, in another famous story, enabled their possessor to make the tide flow or ebb at his will (*ib.* 150); jewels which even aimed at resuscitating the dead, as we shall see below. We can, therefore, easily understand the magical rôle of the red jewels which, paraded in the imperial apartments, caused the dark threats of the invisible everywhere to retire before their brightness. Still another point to be remarked is that, according to the description cited, the *imibe* recite the ritual 'in a low voice.' Polynesian sorcerers also said their prayers in a low singing, perhaps even hissing, tone, similar to the hissing, whispering voice which they attributed to their gods; and even in Japan, in the divination by the harp (*koto-ura*), one of the practices of the officiant was a complicated whistle. All this magical atmosphere which surrounds the ritual suits its text very well. It points out, first of all, the propitiatory rites which the *imibe* have accomplished in hewing down the trees intended for the construction of the palace. Then it recalls the mythical recollections which assure beforehand the efficacy of the formula recited. Then the protector-gods of the palace are entreated to ward off certain calamities, several of which—*e.g.*, serpent-bites, or the droppings of birds falling through the smoke-hole in the roof—are ritual 'offences.' Lastly, in the same way as it invokes the corrector-gods for every possible omission, the text insists on this fact—that the 'innumerable strings of luck-bringing grains' have been made by sacred jewellers 'taking care to avoid all pollution and to observe perfect cleanness.' The care in all these details shows the magical importance attached to each of the rites of the ceremony, and to the most insignificant words of the incantation.

We shall omit the 9th ritual, *Mikado Matsuri*, 'Festival of the Sublime Gates,' devoted to the gods who guard the entrance of the palace against the evil influences of the 'crooked' gods (*maga*), and come to the 10th, which is much more important. This is the 'Ritual of the Great Purification' (*Oho-harahi*). This ritual was recited by the chief of the *nakatomi*, at the end of the 6th and the 12th months, to blot out all the transgressions, both moral and ritual, that the whole people had committed in the interval. The choice of these dates is in itself significant: the summer ceremony recalls the lustrations formerly practised on the eve of St. John in different countries of Europe, and the ceremony at the end of the year corresponds with the need of renewal experienced by the majority of men at this time, and which, in Japan, still takes the popular form of a dramatized exorcism called *tsuina*, 'expulsion of the demons.' The Great Purification included various rites; but the ritual is often mentioned as if it itself formed the whole ceremony—which proves the magical power ascribed to the words recited. This ritual begins by stating clearly that it is the emperor who 'deigns to purify and wash away' (*harahi-tamahi kiyome-tamafu*) the offences committed—from which we see that the gods who, a little later, are to be invoked to intervene really play a part inferior to that of the emperor, and act only, so to speak, at his command. The right of absolution which he exercises thus arises from the general sovereignty conferred 're-spectfully' upon him by the celestial gods at the beginning of the dynasty, as the continuation of the text immediately recalls. Then follows the enumeration of ritual crimes, voluntary or not, which are to be effaced (see Revon, *Anthologie de la littérature japonaise*, Paris, 1910, p. 28 f.). We may select from this list at least two offences connected with our subject. The one is the 'planting of wands' (*kushi-sashi*) in rice-fields, probably with incantations—a process which an ancient native interpretation explains as the erecting of magic boundaries on the field of which one claims to be proprietor, though perhaps it is an example of pointed wands secretly stuck into the mud to hurt the bare feet of a neighbour, just as, among the Malays, a person in flight retarded the pursuit of his adversaries by this means. The other offence (*maji-mono seru tsumi*) is the 'performing of witchcraft,' either in a general way (cf. *Kojiki*, 326 f.) or in particular against a neighbour's animals (if we connect this passage with the expression *kemono-tafushi*, 'to kill animals,' which precedes it). In any case the Chinese character employed shows that it is a question of black magic; and that is why the *norito*, although it is itself a magical text, does not hesitate to condemn it. The ritual afterwards shows that, when these faults are committed, the great *nakatomi* has to prepare some twigs in a certain way, doubtless intended to form a sort of purificatory broom, then to recite 'the powerful ritual words of the celestial ritual' (*ama tsu norito no futo norito-goto*). The native commentators tried for a long time to find out to what mysterious incantation this passage could possibly allude, without seeing that it simply referred to the *norito* itself. This is the 'celestial' ritual which the gods revealed on high to the ancestor of the emperors, and whose 'powerful words' his descendant causes to be repeated—an expression intended to recall the intrinsic virtue of this formula. When the high priest recites it thus, according to the text of the ritual itself, the gods of heaven and earth will approach to listen, and all offences will disappear, being swept off, carried away to the ocean by the goddess of the torrents, swallowed by the goddess of the sea-currents, driven to the nether regions by the god whose breath chases before it all impurities, and there they will be seized at last by a subterranean deity who will banish them for ever. Clearly these deities are only the four wheels of the machine which the emperor sets in motion by the hand of the great *nakatomi*, the magician who knows the sacred words which even the gods obey. As for the rest, to make more certain, they bring a horse whose erect ears will incite these gods to listen attentively, just as the crowing cocks, the lighted fire—all these magical processes of the myth of the eclipse (*Kojiki*, 63–65)—would recall the sun, or as, in another account of the old Shinto annals (*Nihongi*, tr. W. G. Aston, London, 1896, i. 106), one had only to whistle to raise the wind. Then an order is given to the *urabe* ('diviners') to throw into the river the expiatory offerings, to which a mysterious sympathy unites the sins themselves, which will disappear along with the objects to which they have been attached. The ritual finishes, therefore, with a last example of the magic which has inspired the whole of it.

We may mention the 11th ritual along with this one. It is an invocation which the hereditary scholars of Yamato pronounced immediately before the ceremony of the Great Purification, and in which they presented the emperor with a silver-gilt human effigy, which would play the part of scapegoat by removing calamities from him, and a gilded sword on which he breathed before it was taken from him, with the same intention of driving away, after this magical transfer, both the sins committed and their material support.

Another ritual which is plainly magical is the 12th, the title of which, *Ho-shidzume*, 'Appeasing of the Fire,' shows that its purpose was not to worship the god of fire, but to banish him from the palace. As in the 10th ritual, the text first recalls the celestial revelation which has confided to the emperor the 'powerful words' by means of which he is superior to this god. Then it recounts the atrocious crime of this 'child with the wicked heart,' who caused his mother's death by burning her when she gave him birth (cf. *Kojiki*, 32–33); and tells how Izanami herself, cursing this son who had caused her death, came up from the nether regions to give birth to the water-goddess, the gourd, the river-plant, and the princess of the clay mountains, four divine things whose magical use against fire she immediately taught. Then, in order that this wicked god 'may deign not to be terribly lively in the palace of the august sovereign,' he is loaded with offerings, which have the effect of captivating and subduing him. This ritual was accompanied by rites which consisted mainly in the lighting of a fire by the *urabe* in the four outside corners of the precincts of the palace, with the primitive apparatus (*hi-kiri-usu*) of which a specimen may be seen in the University Museum, Oxford.

The 13th ritual, *Michi-ahe*, also aimed at employing certain gods to combat others. Those who were invoked on this occasion were three gods of roads and cross-roads, whose phallic character caused them to be looked upon as 'preventive gods' (*sahe no kami*) against the epidemics sent by the demons. The ritual begins by reminding these protector-gods, without great reverence, that their duties were inaugurated in heaven itself, where they already served the son of the gods. It then dictates to them what they must do:

> 'Whenever from the Root-country, the Bottom-country, there may come savage and unfriendly beings, consort not and parley not with them, but if they go below, keep watch below, if they go above, keep watch above, protecting us against pollution with a night guarding and a day guarding.'

In return they are presented with offerings, which they are to enjoy while defending the great roads 'like a multitudinous assemblage of rocks,' and, finally, the celebrant insists once more on the 'powerful words' of his formula.

The next ritual, the 14th, was devoted to the *Oho-nihe*, 'Great Offering of Food.' Before eating the new rice of the year, the ancient Japanese performed a ceremony called *Nihi-name*, 'new tasting,' which had a propitiatory purpose towards the spirit of the rice (Uga no Mi-tama). The *Oho-nihe* was a more solemn *Nihi-name*, celebrated some time after the accession of the emperors, and constituting a sort of religious coronation for them. The ritual relating to this festival contains nothing very curious in itself; but it is interesting to find that the very complicated ceremony with which it was connected included a long series of preparations, in which magic occupied a large place, just as in the essential part of the festival, when the emperor in person, surrounded by ladies of honour who repeated a mysterious formula, shared in the repast which he had just offered to the gods.

The 15th ritual is another document whose magical value appears as soon as it is placed in its psychological surroundings. It is entitled *Mi-tama shidzumuru*, which shows that its purpose was 'to appease the august spirit,' *i.e.* the spirit of the emperor. It was a case of keeping the imperial soul in his body, of recalling it if it seemed to wish to escape—in a word, of renewing magically the vital force of the sovereign for the coming year and thus prolonging his life. This is the meaning of the ceremony called *Chinkonsaï*, which was celebrated at the end of the year in the sanctuary of the priests of the court (see *Nihongi*, ii. 373). Now, the gloss identifies this festival with an ancient ceremony called *Mi-tama furishiki*, 'shaking of the august jewels,' which again plunges us into deep magic. The *Kiujiki* (ii. 2) says, in fact, that, when the sun-goddess gave the investiture to the ancestor of the emperors, she bestowed upon him ten precious treasures:

> 'one mirror of the offing, one mirror of the shore, one eight-hands-breadth sword, one jewel of birth, one jewel of return from death, one perfect jewel, one jewel road-returning [evil things by the road they came], one serpent-scarf, one bee-scarf, and scarf of various things.' She added: 'In case of illness, shake these treasures and repeat to them the words: *Hi, fu, mi, yo, itsu, mu, nana, ya, kokono, tari*, and shake them *yura-yura* (onomatopœia). If thou doest so the dead will certainly return to life.'

The objects enumerated by the sun-goddess are talismans, several of which occur in the most ancient Japanese mythology (see *Kojiki*, 86, 150, 324, etc.). As for the incantation, it represents simply the series of numbers from one to ten, which demonstrates its intrinsic power, independent of the meaning of the words. We know, besides, that the same incantation was recited at this festival by young sacerdotal virgins (*mi-kamu-ko*), who performed the sacred *kagura*, in imitation of the dance of Uzume in the eclipse myth (*Kojiki*, 64–65), while a *nakatomi* knotted threads, which were clearly meant to retain the imperial soul, and which he shut up in a closed vessel.

We shall omit rituals 16 to 24, which refer exclusively to the offices of the temples of Ise; it will be sufficient to mention in this group the formula of the 23rd ritual, for the installing of a princess as vestal:

> 'The offering of a sacred princess of the blood imperial to serve as the deities' staff, having first, according to custom, observed the rules of religious purity for three years, is to the end that thou mayst cause the Sovereign Grandchild to live peacefully and firmly as long as Heaven and Earth, the Sun and the Moon may last. I, the Great Nakatomi, holding the dread spear by the middle, with deepest awe pronounce this dedication of her by the Mikado to the end that she may serve as an august staff.'

We have here evidently a survival of the 'abstainer' of primitive Japan, whose asceticism assured on pain of death the good fortune and health of the village, in the same way as here the sacrifice of the imperial virgin is to guarantee the happiness and long life of the sovereign (cf. art. ASCETICISM [Japanese]).

The 25th ritual, of a more general interest, is entitled: *Tatari-gami wo utsushi-tatematsuru norito*, 'Ritual for the Respectful Removal of the Gods who send Plagues.' In the 13th ritual the gods of roads were made to intervene against these wicked gods; now they themselves are directly addressed. It is, therefore, a real formula of exorcism. The text begins by recalling how the supreme council of the celestial gods, wishing to 'pacify' the country before the descent of the future emperor, sent Futsu-nushi and Take-mika-dzuchi, who triumphed over the terrestrial gods and 'silenced the rocks, trees, and the least leaf of herbs likewise that had spoken.' After this warning, undisguised and all the more plain because, according to the ritual, the wicked gods know well, 'by virtue of their divinity, the things which were begun in the Plain of high heaven,' numerous gifts are made to them to win them over—and not only the usual offerings of cloths, fish, game, vegetables, rice, and *sake*, but also, in a naive form,

> 'as a thing to see plain in, a mirror; as things to play with, beads; as things to shoot off with, a bow and arrows; as a thing to strike and cut with, a sword; as a thing which gallops out, a horse.'

Lastly, after having thus loaded them with numerous toys and abundant dainties, which they beg them to accept 'with clear hearts, as peaceful offerings and sufficient offerings,' they earnestly ask these 'sovereign gods' to be good enough,

> 'without deigning to be turbulent, deigning to be fierce, and deigning to hurt, to remove out to the wide and clean places of the mountain-streams, and by virtue of their divinity to be tranquil.'

Passing in silence a less interesting ritual (the 26th), we come at length to the last document of the collection, the 27th ritual, which is called *Idzumo no kuni no miyakko no kamu yogoto*, 'The Divine Words of Good Fortune of the Chiefs of the Country of Idzumo.' These local chiefs, after having lost their civil sway, had preserved their religious power. It is they who to this day in this old province hand down the primitive fire-kindler which their legendary ancestor, the god Ame-no-hohi, had received from the sun-goddess herself, and which each chief priest of Idzumo bequeaths to his successor by the ceremony called *Hi-tsugi*, 'perpetuation of fire.' In this ritual the *miyakko* first announces that he will recite the formula, after many ritual preparations, to bring happiness to the reign of the 'visible god,' *i.e.* the sovereign. He then relates how Ame-no-hohi and, later, other celestial ambassadors were sent to earth to prepare for the descent of the son of the gods; how Ohona-mochi, the divine king of Idzumo, who achieved the 'making of the country' with the help of a stranger magician, and who was the first to found a government in this important region of the archipelago, was persuaded by the celestial envoys to abandon his temporal rule to the son of the gods; how he then divided his souls, by a curious application of the Japanese idea which allows the possible separation of the multiple souls of man, attaching his 'gentle spirit' (*nigi-tama*) to a fetish-mirror which he caused to be placed in a temple of Yamato, while his 'rough spirit' (*ara-tama*) went to rest in the great temple of Idzumo; and how at length Ame-no-hohi received from above the command to bless the sovereign henceforth, that his life might be long, healthy, and happy (cf. *Kojiki*, 54, 58, 113–124). It is while carrying out this command that the descendant of Ame-no-hohi intervenes, as he himself declares. He brings to the emperor 'divine treasures,' whose magical rôle—fortunately for us—he clearly defines. There are, first of all, sixty jewels, white, red, and green.

> 'These white jewels are the great august white hairs [to which your Majesty will reach]; the red jewels are the august, healthful, ruddy countenance; and the green-estuary jewels are the harmonious fitness with which your Majesty will establish far and wide, as with a broad sword-blade, his lasting great august reign over the Great-eight-island-country which he governs.'

We have here, therefore, a typical case of the action of like upon like, which is one of the essential doctrines of primitive man, and which, in the present case, attaches to the different jewels a power corresponding to their colour. The formula continues by other applications of this principle of imitative magic:

> 'As this white horse plants firmly his fore-hoofs and his hind-hoofs, so will the pillars of the Great Palace be set firmly on the upper rocks and frozen firmly on the lower rocks; the pricking up of his ears is a sign that your Majesty will, with ears ever more erect, rule the Under-Heaven,' etc.

It is possible that at some time these rites may have become symbols; but it is impossible not to recognize in them, especially at the beginning, practices inspired by that primitive logic which has always and everywhere constructed magic on the same universal principles.

Ancient Shinto, therefore, as it appears to us in its most authentic liturgies, is a religion in which the magical element still prevails over the religious sentiment. The rituals are essentially magical formulæ, addressed to magician gods (as is demonstrated by all their mythical exploits) by magician-priests (the *nakatomi*, the *imibe*, and the *urabe*), and encircled in magical rites. Magic is, therefore, at the base of the national cult of the Japanese, and it appears there with all the characteristics familiar to the student of comparative religion.

To finish with a vivid illustration, which, after the necessarily short descriptions given above, will show this magic in application in a typical and exact case, we shall choose as an example sorcery, as it was practised in the most ancient times. The following is the curious account of the subject given in the *Kojiki* (326 f.):

> 'The Deity of Idzushi [the country of the 'sacred stones'] had a daughter, whose name was the Deity Maiden-of-Idzushi. So eighty Deities wished to obtain this Maiden-of-Idzushi in marriage, but none of them could do so. Hereupon there were two Deities, brothers, of whom the elder was called the Youth-of-the-Glow-on-the-Autumn-Mountains, and the younger was named the Youth-of-the-Haze-on-the-Spring-Mountains. So the elder brother said to the younger brother: "Though I beg for the Maiden-of-Idzushi, I cannot obtain her in marriage. Wilt thou be able to obtain her?" He answered, saying: "I will easily obtain her." Then the elder brother said: "If thou shalt obtain this maiden, I will take off my upper and lower garments, and distil liquor in a jar of my own height, and prepare all the things of the mountains and of the rivers, in payment of the wager." Then the younger brother told his mother everything that the elder brother had said. Forthwith the mother, having taken wistaria-fibre, wove and sewed in the space of a single night an upper garment and trousers, and also socks and boots, and likewise made a bow and arrows, and clothed him in this upper garment, trousers, etc., made him take the bow and arrows, and sent him to the maiden's house, where both his apparel and the bow and arrows all turned into wistaria-blossoms. Thereupon the Youth-of-the-Haze-on-the-Spring-Mountains hung up the bow and arrows in the maiden's privy. Then, when the Maiden-of-Idzushi, thinking the blossoms strange, brought them, he followed behind the maiden into the house, and forthwith wedded her. So she gave birth to one child. Then he spoke to his elder brother, saying: "I have obtained the Maiden-of-Idzushi." Thereupon the elder brother, vexed that the younger brother should have wedded her, did not pay the things he had wagered. Then when the younger brother complained to his mother, his august parent replied, saying: "During my august life the Deities indeed are to be well imitated; it must be because he imitates mortal men that he does not pay those things." Forthwith, in her anger with her elder child, she took a one-jointed bamboo from an island in the River Idzushi, and made a coarse basket with eight holes, and took stones from the river, and mixing them with brine [*shiho*, in the sense of 'hard salt'], wrapped them in the leaves of the bamboo and caused this curse (*tokohi*) to be spoken [by her younger son]: "Like unto the becoming green of these bamboo-leaves, do thou become green and wither! Again, like unto the flowing and ebbing of this brine [again the word *shiho*, but here with the meaning of 'sea-water'], do thou flow and ebb! Again, like unto the sinking of these stones, do thou sink and be prostrate!" Having caused this curse to be spoken, she placed the basket over the smoke [apparently on the hearth of the elder son]. Therefore the elder brother dried up, withered, sickened, and lay prostrate for the space of eight years. So on the elder brother entreating his august parent with lamentations and tears, she forthwith caused the curse to be reversed. Thereupon his body was pacified. This is the origin of the term "a divine wager-payment."'

In this text we have a case of original sorcery, founded on sympathetic magic (a conception so well expressed by the Japanese word for 'magic,' *majinahi*, which conveys the idea of 'to mix'), but before the time when the progress of the arts and foreign influences could have given the idea of exercising sorceries on the effigy of an enemy. (For this later development see, *e.g.*, the popular ballad of Shuntoku Maru, in *TASJ*, vol. xxii. pt. iii. [1894] pp. 294–308.) We are, therefore, in the presence of a thoroughly Japanese rite, whose ancient character is shown by its very obscurity, and which cannot be understood unless it is replaced in the midst of the primitive beliefs from which it came. First of all, the mother provides herself with the mysterious bamboo on which the life of her elder son is to depend. Purposely she does not gather it in any chance place; she takes it from an island—which already connects that object with the aquatic element. With this bamboo she weaves a basket, in which she takes care to leave eight holes, which will be the eight openings by which eight years of misfortune are to enter for the victim. In this basket she places river-pebbles, which, even more than the bamboo, come from the water. But it is from fresh water that they have come; and the nature of the rite demands that they should assume a maritime character. They are, therefore, put among brine; by this union the assimilation is made, and the sorcery can be accomplished. The only thing that remains to be done is to pronounce the formula whose powerful words will act on all these things. The victim will wither like the leaves of bamboo, in the same way as, in another legend (*Kojiki*, 238), the magical imprecation (*ukebi*) of a chief had made a great oak-tree suddenly decay; or, better still, in the same way as, by the effect of a general malediction, man, formerly immortal, was condemned to die as the flowers of the cherry-tree fade (*Kojiki*, 140–142). Then, as the high water falls back, the guilty one will be abased. Lastly, he will be seen foundering as a stone sinks when disappearing under the waves. This curse pronounced, the basket of perdition is placed in the smoke of the hearth; the green leaves become black; the threat is executed. Yet in the end the mother's heart hears the repentance of her son. She reverses the curse, *i.e.*, the terrible magical formula is this time pronounced backwards (cf. *Kojiki*, 238), and immediately the body of the young man is 'pacified'; he returns to health, to life.

In this sorcery the most curious point is that which is connected with the sea element. The fate of the young man is, in fact, connected with the ebbing of the tide. We have here an interesting illustration, among the insular Japanese, of the belief so wide-spread among primitive races, according to which a mysterious harmony exists between the life of man and the flowing and ebbing of the sea. In this belief, it is when the sea is flowing in that one is born, becomes strong, prospers; it is when it is ebbing that one loses his energy, falls ill, and dies. The Japanese sorceress, the depositary of primitive traditions, is well aware of this secret agreement. She knows that, even far from the seashore, an artificial connexion can be formed between these two manifestations of a single force. Consequently she brings into connexion with the salt element these river-pebbles, into which the consecrated words will bring the very existence of her son; and the cursed one is immediately delivered up to the enchantment of the waters; he becomes like a pebble on the beach, the tide carries him away, drags him towards the brightnesses of life, then lets him fall back and roll in darkness and death. This story of witchcraft has, therefore, given us at one and the same time a typical case of Japanese magic and a new proof of the strange unity observable even in the most curious beliefs of humanity in general.

LITERATURE.—This has been cited in the article.

M. REVON.

MAGIC (Jewish).—The attitude assumed by Judaism towards everything not sanctioned by its own monotheistic teaching has also affected the practice which may be called 'magic,' and it thus becomes necessary, first of all, to obtain as clear a definition as documents of the OT and Jewish tradition allow as to what is to be understood by the term.

It must at once be pointed out that divination and charms (see DIVINATION [Jewish] and CHARMS AND AMULETS [Jewish]) are not part of Jewish magic, which, properly speaking, corresponds most closely to 'witchcraft.' The difference between witchcraft and other forms of magic is that the magician has nothing whatsoever to do with forecasting the future or with preventing any occurrence that is sure to happen in the ordinary course of nature. He has nothing to do primarily with spells or incantations, nor is the writing of any formula an indispensable condition for magic. Magic can only be 'performed'; no magic is effective unless it is the result of some 'operation'; the magician must 'act' in one way or another in order to accomplish his purpose; and herein lies the profound difference between magic and any other form of superstition—preventing and altering the regular operations of nature. The magician is not helping things to fruition; on the contrary, he seeks to subvert the regular course of events. He is expected, if possible, to obscure the sun and moon, to bring the dead to life, to change human beings into animal shapes or *vice versa*; he is to produce fruit in winter, and, in fact, to do everything that is contrary to the regular laws of nature. The magician will kill, he will create strife—his activity will always be an evil one. He is not expected to do good; he will be the agent for vengeance, hatred, and everything that makes for strife, death, and destruction. But he cannot carry out his intention without an 'operation'; he must 'do' something in order to bring about the desired result. Unlike the diviner, who is guided by certain signs and omens, which he is able to understand and combine, so that he can read the future in the events of the present, and unlike the charmer, who can only undo the magician's evil work by certain spells, songs, formulæ, and written amulets, the magician must perform a whole set of ceremonies quite independent of signs, omens, and spells. It is a new definition that is here offered, which, by circumscribing much more narrowly the field of superstition, is an endeavour to give to magic its real meaning. The magician's work, again, is not expected to be of a permanent character; it is temporary, and it can be undone by other means, or by other magicians who know the secret of the action and the means by which it has been achieved. In order, then, to disturb the laws of nature, to transform existing things, to shape and mould new creatures, the magician requires the help of superhuman powers. This is the very root and basis of magical art; the magician must be able to command the services of spiritual powers—demons, gods, or ghosts—malignant in their disposition and willing to do mischief.

Jewish magic presupposes the existence of such spirits, and occupies the borderland between orthodoxy and heresy, between Judaism and paganism. It is an art that lives in the twilight between truth and falsehood; and the line of demarcation shifts according to the change of theological views in the course of development and transition. It depends also upon the nature of those spirits and upon the theological attitude towards them—whether they are considered as forces opposed to God or as mere negative forces that are also creatures of God and yet unwilling, by their own innate wickedness, to do good. The conception of a rebellious angel who has been cast down from the heavenly heights because of his arrogance and insubordination does not enter into the sphere of Jewish magic, nor, with rare exceptions, have the gods of other nations become evil spirits subservient to the wish of the magician and willing to do his behest.

The Hebrew term for 'magic' is *keshef*, which, like all technical expressions connected with superstition, is of obscure origin; though many attempts have been made to elucidate its primitive meaning, not one has yet proved satisfactory. The primitive meaning of *keshef*, in the view of the present writer, is apparently 'hidden,' 'obscure,' 'a thing done in a secret manner,' which is the very essence of magic. The performance is a secret one, and even those who are allowed to witness it are slow to understand its meaning. The word *keshef*, with its various derivatives, occurs twelve times in the Bible. It is to be noted that all the references in the Pentateuch are to Egypt, while of the references in the Prophetical writings some are to Assyria as well as to Palestine itself. In 2 Ch 33^6 Manasseh is described as having practised witchcraft as well as other forbidden things (cf. also Mal 3^5); the wizards of Egypt are mentioned in Ex 7^{11} 22^{18}; in Babylon there is only one allusion to them, in Dn 2^2.

The LXX translates *keshef* by *φάρμακον*, which does not mean 'poison,' but, as in later Greek, a 'spell' cast by a magician. *Keshef* has remained the technical term in Hebrew literature. Witchcraft is called *kishshūf* in the Mishna and Talmud, and no words have been more widely used, and yet with a very definite meaning attached to them, than *kishshūf* and *mᵉkhashshēf*, nor is there any doubt that the real meaning of this 'magic' is exactly witchcraft. It is clearly stated (*Sanh.* vii. 4, 11) that only he is to be called a magician who produces a real act, but not the man who produces an optical illusion, a kind of jugglery.

The fact that witchcraft is mentioned in connexion with Egypt (exclusively, in the Pentateuch, and occasionally, in other passages in the Bible) shows the probable source of the magical art known and practised in Bible times. The Egyptian *mᵉkhashshᵉfîm* in Ex 7^{11} 22^{18} perform precisely the acts defined above as the work of the magicians; they endeavour to change the order of nature. No details are given regarding the operation of the magician in the Bible; but from Is $47^{9.12}$, Mic 5^{12}, Mal 3^5, Nah 3^4, Jer 27^9, and 2 K 9^{22} it is clear that, in the eyes of the prophets, the work of sorcery was tantamount to idolatry and to lewdness, possibly through the performance of some action by the magician. That some of the witches performed such acts in a state of absolute nakedness is an attested fact throughout the history of magic, and it is possible that the prophets had this in view when in speaking of witches they placed them on the same plane as harlots. It is noteworthy that the witch, and not the wizard, is mentioned in Ex 22^{18}, Dt 18^{10}. The sin of the *mᵉkhashshēfāh* must have been so heinous that the law punished it with death. Witchcraft must, therefore, have been connected with idolatry (Mic $5^{11f.}$); it was characterized as an 'abomination' (Dt 18^{10}), and was also described as *zᵉnūnîm*, 'lewdness' (Nah 3^4, 2 K 9^{22}).

The scanty references in the OT, which show that the practice could not have been wide-spread in Bible times, become clear in the light of the tradition of Rabbinical literature. We learn to know through what powers the magicians were able to carry on their operations; the spirits become, as it were, more materialized.

The existence of demons is not denied; on the contrary, they are universally acknowledged, possibly through the influence of Babylon, and the Jewish belief of the period endeavours to account for them in a world created by God (see DEMONS AND SPIRITS [Hebrew] and DEMONS AND SPIRITS [Jewish]).

According to the *Pirḳē Abhôth*, v. 9 (cf. C. Taylor, *Sayings of the Jewish Fathers*^{2}, Cambridge, 1897, *ad loc.*) and *Gen. Rab.* 7, *mazzîḳîm* were created by God Himself at the close of the sixth day; but, as the Sabbath supervened before their creation had been completed, they remained half human, half spirit. They are not fallen angels, nor are they ancient heathen gods, but intermediate between angel and man, and mostly of an evil inclination.

How they are to be used—*i.e.* the art of witchcraft—has been taught to man by two angels who have forfeited all rights to the bliss of heaven. According to a legend found in the *Book of Enoch*, the *Chronicles of Jerahmeel* (tr. M. Gaster, London, 1899), and other Jewish Haggadic collections, the two angels Uzza and Azael, who showed their discontent at the creation of Adam, and afterwards were sent by God, at their own request, to see whether they could withstand temptation, both fell in love with a woman and were punished by God. One of them hangs head downwards from heaven, and the other is chained behind the dark mountains; it was the latter who taught women the arts of witchcraft and cosmetics (*Jerahmeel*, ch

Library of
PACIFIC BIBLE SEMINARY

25, and notes, p. lxxiii).[1] The Kenites, the descendants of Cain, were the pupils of these angels, and, according to the *Book of Jubilees*, corrupted the descendants of Seth and brought about the Flood. According to another tradition, the *mazzîḳîm* and *shēdhîm* were the children of Adam and Lîlîth, the *shēdhāh* who leads the procession of *shēdhîm*, and who, during the one hundred years that Adam was separated from Eve, consorted with him (*Zôhār*, i. 176; cf. *ERE* iv. 614^a). Lîlîth plays a great rôle in magical literature; she later becomes the demon who kills infants at birth and, together with her companions, is constantly mentioned in Aramaic inscriptions on magical bowls from Assyria and Babylon (see below). The demons are both male and female, and they also endeavour to consort with human beings—a conception from which arises the belief in *incubi* and *succubæ*—and it is through these demons that the magician is believed to be able to carry on his work.

In apocryphal and legendary literature we get a clearer glimpse of the beliefs prevalent among the Jews concerning magic and magical operations. Faith in demons and demoniacal powers seems to have been established by that time; at any rate, these beliefs are far more in evidence, and do not seem to be seriously contested. The character of these spiritual potencies is somewhat indefinite, except in the *Book of Enoch*, where, as we have seen, angels who had fallen in love with human women use such powers as instruments for deception and sorcery. In the book of Tobit another side of this belief is shown in which we may begin to see a differentiation between a white magic, or a magic tolerated by Judaism, and that kind of magic which ranked as pure paganism, and which probably would fall under the category of the witchcraft for which the death penalty was prescribed by law. Here we find the angel Raphael himself helping, by means of fumigation, to counteract the work of a demon who, falling in love with Sarah, had become an *incubus*, and would, therefore, kill any one who intended to approach her. The spirit thus exorcized was Asmodæus, who is recognized in the later demoniacal hierarchy as the king of the evil powers.[2] The position of Beliar, or Belial (the name given also in Samaritan tradition to the evil spirit who deceived Eve), is, in the *Ascension of Isaiah* and other apocryphal writings, not so clearly defined, but in any case he is an evil spirit approximating to the character of Satan in the book of Job (cf. BELIAL, BELIAR).

To obtain the assistance and help of these powers, certain means had to be devised: gifts or sacrifices were made in order to win them over and gain control over them. Maimonides,[3] in interpreting Dt 32^{17}, 'they sacrificed to *shēdhîm*,' says that the gift most acceptable to the evil spirits was blood, and that their willing help was obtained by giving them the blood of the sacrifice as food; the magician must partake of the blood, thus sharing the food of the evil spirits, so as to become their associate. To this sacrifice, which was not limited to the shedding and partaking of blood, other ceremonies had to be added, all best understood as sacrifices; just as the fumigation or burning of incense in the temple is an offering to God, so fumigation and the burning of incense must be understood primarily as gifts very acceptable to the spirits, who are not sufficiently materialized to enjoy material food (cf. the Biblical parallelism of magic with idolatry, noted above). In addition there was the lighting of candles and the use of a knife with a black handle which is mentioned by Rashi to *Sanh.* 101*a*, and which can be understood only as a symbolical sacrificial knife. Philtres must be served in glass bowls (*Bābhā mᵉṣîʿā*, 2*a*). Fasting and other ceremonies are all intended to propitiate the evil spirit, and this is what made magic and magical operations objectionable to Jews and an 'abomination' to Judaism. Yet Rabbis made allowance for weaknesses of human nature and, except on rare occasions, avoided rigorous measures against witchcraft. But when necessary they did not shrink from them. During the first centuries of the Christian era the whole of what might be termed the civilized world—Egypt, Babylon, Greece, and Rome—stood under the absolute sway of belief in evil spirits. It was partly Babylonian tradition that ascribed every form of evil and harm to the action of the *shēdhîm* and *mazzîḳîm* and produced a large literature of invocations and magical formulæ for harm and for protection, and partly the Egyptian tradition of magical operations and ceremonies of a mystical and magical character. During Talmudic times it seems to have been believed that some *shēdhîm* were harmless, and, though they were looked upon as evilly inclined and malignant, a friendly intercourse with them does not appear to have been considered contrary to Jewish law. Thus a Rabbi once assisted in a dispute between two *shēdhîm*, in which one who had taken unlawful possession of a place belonging to the other was vanquished and a few drops of blood were found floating on the well where they dwelt (*Levit. Rab.* 24); but, on the other hand, Abaya saw a seven-headed monster coming out of a well and killed it.[1] The attitude of the Rabbis was justifiable so long as it did not lead to real idolatry.

The belief in the power of the Ineffable Name (see CHARMS AND AMULETS [Jewish], NAMES [Jewish]) was as old as any belief in witchcraft. As soon as the existence of evil spirits could not be denied, they also were given mysterious names, and it was held that, the moment the magician possessed the secret of their names, he could win their assistance, provided it was not contrary to the will of God. Legend says (*Pal. Targ.* to Gn $25^{1ff.}$) that among the first who obtained mastery over these demons and the knowledge how to deal with them for their own purposes were the children of Abraham by his wife Keturah, to whom he had imparted the knowledge of the mystical names of the demons (the names of the unclean). It was through the names of these evil spirits that 'the prophet of the heathen,' as Balaam is called, was able to perform his witchcraft and was expected to harm the Israelites. He was considered to be the greatest magician of old, and, according to *Pal. Targ.* to Nu 25^1, he taught the daughters of Moab to practise sorcery and witchcraft and thus entice the young men to idolatry and immorality, which brought the plague upon Israel. It is also said that Balaam tried to escape by flying in the air, but Phinehas, through the Holy Name, was able to fly higher and smite him. The magicians in Egypt who unsuccessfully withstood Moses were Jannes and Jambres (so already in *Pal. Targ.* to Ex 1), well known in apocryphal literature as the great magicians at the court of Pharaoh (cf. also 2 Ti 3^8). According to the Samaritan *Apocrypha of Moses*, the sorcerer who predicted the birth of Moses was a certain Palti. The Samaritans trace the origin of sorcery and witchcraft to the 'Book of Signs' given to Adam before he left Paradise; but in Jewish and Christian apocryphal literature it is the 'Book of Adam,' or the 'Book of Rāzîēl,' a title afterwards given to a handbook of practical *ḳabbālā* full of such mystical names of angels, rulers, princes, stars, planets, and sublunar worlds. Still less could the Rabbis object to belief in power over these demons when they remembered that even the Temple in Jerusalem was said to have been built by Solomon with the assistance of the *shēdhîm*—a legend which rests on a peculiar interpretation of the word *shiddāh*, occurring in Ec 2^8. So firm was the later belief in Solomon's power over the *shēdhîm*—and whatever was allowed to Solomon could not be refused to any other Jew—that Josephus has preserved to us (*Ant.* VIII. ii. 5) the tradition of Eleazar, who came before the Roman emperor Vespasian, and was able to drive away an evil spirit by using the ring of Solomon and certain herbs.

---

[1] For an Egyptian parallel to this legend ascribing the origin of magical art to the teaching of an angel who had fallen in love with a woman see M. Berthelot, *Collection des anciens alchimistes grecs*, Paris, 1887–88, i. 31.

[2] Later the host of *shēdhîm* had other rulers and princes besides Asmodæus (cf. Jerus. *Shᵉḳ.* v. 49*b*, *Gen. Rab.* 20, *Levit. Rab.* 5, and later Midrashic compilations).

[3] *Guide*, iii. 56.

[1] This is one of the earliest mentions of a seven-headed dragon, which plays such an important rôle in fairy-tales.

In the Solomonic cycle Asmodæus is mentioned as their king, and Lîlîth, Maḥalat, and Agaron are also described later as leaders of evil spirits, while even a demon Meridianus has been evolved out of Ps 91^6. Once the grouping of spirits was conceded, numbers came from various quarters to swell the host. Among these we find reference, in the Talmud, to the princes or rulers over oil and eggs,[1] rulers over the thumb or, rather, thumbnail, and over crystal—all shining objects used, no doubt, for crystal-gazing (*q.v.*). It was a time of syncretism, in which everything that helped either to do or to avert evil was eagerly sought by the credulous. The work of the magician was wrapped in obscurity; his books were kept secret, and his operations were accessible only to the adept, whence much of the practical operation is almost lost to us. What has survived is, with few exceptions, the accompanying formulæ by which these various spirits and invisible powers were invoked or subdued either for evil, as in most cases, or for good. In the Greek magical papyri some fragments of the formulæ are extant, but very little of the operations. Much more seems to have been preserved in the Hebrew *Sword of Moses* (ed. and tr. Gaster, *JRAS*, 1896, pp. 149-198), of extreme antiquity, and in some MSS of practical *ḳabbālā*, or practical occultism, mostly in the possession of the present writer (one of the prescriptions in these is given below). A large number of bowls, many of them dating from the first centuries of the Christian era, have been found in Babylonia with Hebrew and Syriac inscriptions, these vessels being used by the ancient magicians for the purpose of making the incantation or conjuration written on them effective. The inscriptions in question contain whole lists of demons and spirits who are in the service of the magician or whose power he is expected to check. A large number of them have been published by J. A. Montgomery (*Aramaic Incantation Texts from Nippur*, Philadelphia, 1913), and one (no. 32) may here be reproduced as showing the state of mind and the beliefs of the people. The translation is independent and differs somewhat from that given by Montgomery.

'This bowl is prepared for the sealing of the house and the wife and the children of Dīnōi, son of Ispandarmēd, that the Terrifier (fright) and evil Dreams may depart from him. The bowl I lifted up and I have watered (drained) it, an operation like that which was established by Rab Joshua bar Peraḥyah, who wrote against them—a ban against all Demons and Devils and Satans and Lîlîths and curses which are in the house of Dīnōi, son of Ispandarmēd. Again: he wrote against them a ban which is for all time, in the name of ATMDG, Atâtōt Atōt, within T, Atōt Atōt, the name a scroll within a scroll. Through which are subjected heaven and earth and the mountains; and through which the heights are raised (lifted) up; and through which are fettered the magician, Demons and Devils and Satans and Lîlîths and curses; and through which he passed over from this world and climbed above you to the height (of heaven) and learned all counter-charms for hurt and for healing to bring you forth from the house of Dīnōi, son of Ispandarmēd, and from everything that belongs to him. I have dismissed you by the ban, and it is bound and sealed and countersealed, even as ancient lines (of writing) which do not fail and men of old who were not surrounded (tied). . . . Again: bound and sealed and countersealed is this ban in the name of YHYHYHYHYH, YHYH, YHYH, A. (Amen), Amen, Amen, Selah.

Sealed and protected are the house and dwelling of Dīnōi, son of Ispandarmēd, from the Terrifier (fright) and evil Dreams and the Curse. And sealed and protected be [his wife and son] from the Terrifier and evil Dreams and Curses and Vows and . . . Hallela. Amen.'

This inscription has been selected because it contains the name of the famous Joshua (Jesus) b. Peraḥyah who was so important a figure in the time of John Hyrcanus at the end of the 2nd cent. B.C. He was the teacher and friend of R. Simeon b. Sheṭaḥ, whose dealings with the witches of Ashkelon are mentioned below. In the apocryphal stories about Jesus a noteworthy part is assigned to this Joshua b. Peraḥyah, who had fled to Egypt, where he was believed to have learned the art both of working and of combating magic.

The Jerus. *Talm.* (*Sanh.* vii. 19, fol. 25*d*) tells a curious legend concerning this same R. Joshua, who is made the contemporary of R. Eleazar and R. Gamaliel. These three came to a place where they found a young man whose manhood had been taken away by a witch. R. Joshua sowed flax seeds on the table, and they sprouted in an instant and grew up. Out of the midst a woman with dishevelled hair suddenly appeared—the witch. R. Joshua seized her and ordered her to loosen the spell, but she refused, whereupon he threatened to divulge her name. She then answered that she could not undo the spell, because the things had been thrown into the sea. R. Joshua then ordered the angel of the sea to throw them up, and thus the young man was restored to health, and later became the father of R. Judah b. Bethera.

In the light of the Babylonian bowls, it is not improbable that this is a story of Joshua b. Peraḥyah, but, as nothing was known of his magical powers, it was transferred later to another Rabbi also named Joshua.

The Rabbis had no doubt as to the origin of witchcraft: it came from Egypt. According to *Ḳiddūshîn*, 49*b*, ten measures of witchcraft have come down into the world, nine of which have gone to Egypt, while one has spread throughout the rest of the world. The Talmud names one or two witches who are said to have practised in Jerusalem, among them being Yôḥnā, the daughter of R^{e}ṭîbî (*Sôṭāh*, 22*a*), famous as a witch affecting childbirth.

One day, whilst she was assisting a woman in travail, a neighbour came into her house. Hearing a noise in a vessel like that of a child in the womb, she lifted the cover; the noise ceased, and the woman was easily delivered. Hence it was recognized that Yôḥnā was a witch.[1]

Evidence of the Egyptian origin of witchcraft and of its purely temporary character—as is shown by the fact that, if put to the proper test, it vanishes—is seen in the Talmudic story of Z^{e}ʿērî.

He bought an ass in Alexandria, but, when he attempted to cross the river on it, it turned into a plank the instant it touched the stream, for no witchcraft can withstand running water. All who saw him laughed at his discomfiture, but he recovered the money which he had paid for the ass. Another Rabbi, Jannai, being offered a drink of water, poured some of the liquid on the ground, whereupon the rest turned into scorpions. He then compelled the witch to drink and she was transformed into an ass, on which he rode into the market. There another witch, recognizing her, broke the spell, and the Rabbi was then seen to have the witch for his steed (*Sanh.* 67*b*).

As soon as magical operations came to be regarded as idolatry, sterner measures were taken, one of the foremost opponents of magic being R. Simeon b. Sheṭah (*Sanh.* 44*b*, and Rashi, *ad loc.*), who lived in the time of King Jannæus and Queen Alexandra (1st cent. B.C.). He went to Ashkelon, where, with the assistance of eighty pupils, he caught eighty witches actually practising their magic arts, and he hanged them all in one day.

---

[1] The rulers of the egg must mean those who obtained an insight into the work of the spirits or mastery over them through looking intently into the yolk of an opened egg (*Sanh.* 67*b*).

[1] This idea of a witch who holds the soul, or the eyes, or the heart in close imprisonment in certain vessels which, when broken (the contents being restored to the owner), restore life, health, and sight occurs frequently in fairy-tales and is derived from Egyptian tradition.

The details are of much interest, for they show a complete continuity of practice from that day onward. The women procured food and drink in a miraculous manner, and in the midst of their feasting did not disdain to invite the Rabbi's pupils to share in their banquet. Each of the young men then took one of the witches in his arms and lifted her from the ground, whereby she lost her magical power, the reason given for this procedure being that no harm could befall a witch as long as she touched the earth.

It was, however, found necessary to bring some order into the chaos of magic, for the Rabbis could not transgress a clear prescription of the Bible, and a sin which was punished with death could not be passed over lightly. On the other hand, what was a deadly sin for the followers of one creed might be tolerated by those following another; a heathen might be allowed to be a magician and not fall under the ban of the Law, while a Jew was strictly forbidden to follow such practices, and, *vice versa*, a Jew might be considered a magician by the followers of another creed. To a Jew all heathen practices and even religious ceremonies might be magic, and the Rabbis, therefore, divided magic into three categories. First, the death penalty by stoning (Lv 20^{27}) was inflicted only on those who practised magic and performed magical operations. The second class consisted of those who merely acted as jugglers or produced optical illusions, and who were warned not to indulge in such practices, but were not punished. A third type of magic was that by which operations and identical results obtained by the Holy Name were not only tolerated, but actually sanctioned. A difference was thus made between the use of the names of the unclean spirits (magic) and the names of the clean ones (*ḳabbālā*). By the former are meant demons and spirits, by the latter angelic powers. At the same time mastery over demoniacal beings might be obtained through the mediation of heavenly powers.

Thus, when R. Simeon b. Yoḥai and other sages went to Rome, they caused a demon, ben Teᵉmaliôn, to enter the emperor's daughter; and, when they arrived at the city, they were able to cure her by expelling the spirit (briefly told in *Mᵉʿīlāh*, fol. 17, *a–b*, enlarged form in A. Jellinek, *Bēt ha-Midrasch*, Vienna, 1853–78, vi. 128–130; also Rashi, *ad loc.*; Gaster, *Exempla of the Rabbis*, London, 1896, no. 19; M. Seligsohn, in *JE* xi. 360 f.).

Thus was established a compromise which was facilitated by the manifold meanings attached to the word *rūaḥ*, 'spirit,' used even in the Bible for both a good and an evil spirit coming forth from the Lord, possessing man and departing from him. So strong was the belief in the harm which such evil spirits could produce that, as far back as the time of the Mishna, a light might be extinguished on the Sabbath if an evil spirit was feared (*Mishn. Shab.* ii. 5); and in the Bible *rūaḥ* is already occasionally applied to evil spirits, demons, and devils (Jg 9^{23}, 1 S $16^{14-16.23}$ 18^{10}, 1 K $22^{22f.}$, Zec 13^{2}).

Despite the stern attitude taken by the Rabbis, magic flourished among the Jews, for the adepts of this science often deluded themselves as to the true character of their art. Not only did they continue their forbidden practices and their operations for evoking spirits and subduing demons, but in their formulæ they introduced names of spirits and demons gathered from every form of warring creed and ancient tradition, and gods and spirits long dead and forgotten were retained in magical practices and invocations. Gnostic, Babylonian, and Egyptian names, and even such appellations as Soter, Alpha, Omega, and Evangelion are found side by side with Ṣᵉbhāôth and Shaddai. Actual specimens of these conjurations are very rare, for the magician would never disclose his mode of operation, but the following example (taken from the present writer's Cod. no. 443, fol. 13*b*) is characteristic of the peculiar mixture of names and powers used by the magician.

'And they are called "the princes of bdellium." Take bdellium and write upon it with olive oil[1] 'AUNGIL (or) AUNGILEIA;[2] and take a boy seven years old and anoint his hand from the top of the thumb to the end of the finger; and put the bdellium into his hand in the anointed place and seize his hand; and you shall sit upon a three-legged stool and put the boy between your loins so that his ear shall be against your mouth and you shall turn your face towards the sun and say in his ear: "Aungil, I adjure thee in the name of the Lord God, God of Truth, God, Keeper of the Hosts, ALPHA, AIDU,[3] that thou shalt send from thee three angels." Then the boy will see (a figure) like (that of) a man; and say (the charm) twice more, and he will see two (figures); and the boy shall say unto them: "Your coming be in peace!" And then tell the boy to ask of them that which you wish. And if they will not answer him, the boy shall adjure them, and say: "KASPAR, KELÉI, 'EMAR (or) BLEITEISAR,[4] the master and I adjure (you) with a second adjuration that you tell me that thing or who has committed that theft." And know that he who wishes to do this must do it on a clear, cloudless day, and in winter time at mid-day.'

The most remarkable product of this type of syncretism is the *Sēfer Mafteāḥ Shlᵉômôh* ('Key of Solomon'), a complete facsimile of which has been edited by H. Gollancz (Oxford, 1914).

No legal command could eradicate so deep-seated a belief as that in magic and magician, and, though it is true that it was forbidden, almost on pain of death, to become a pupil of a magician (*amgūshî*) (*Shab.* 75*b*), yet his help might be invoked to break a spell in the case of a man who had become seriously ill through witchcraft. This was done almost to modern times (*Ṭūr*, *Yôreh dēʿāh*, § 179, and the commentary of R. Joseph Ḳaro [see QARO, JOSEPH], *ad loc.*).

Belief in magic received an additional impetus through the mysterious teachings of the *Zôhār*, which, from the 14th cent., held almost unbroken sway over the mind of the majority of the Jews. In it the Talmudic legends concerning the existence and activity of the *shēdhîm* are repeated and amplified, and a hierarchy of demons was established corresponding to the heavenly hierarchy. Halls of the nether world and their demon rulers are fully described in the *Zôhār* (Ex. 246*b*–268*a*) and exorcism of the *shēdh* or any evil spirit was recognized as within the power of every man fully versed in mystical lore and in the mystical names of God. Many a tale is told of such expulsion of demons by holy and pious men, such as Heliodorus in Catania in the 8th cent. (L. Zunz, *Zur Gesch. und Lit.*, Berlin, 1845, p. 486); and others are mentioned by Manasseh in his *Nishmat Ḥayîm* (Amsterdam, 1652), bk. iii., which is full of information concerning belief in demons and the power of the pious to master them and use them for their own purpose. Even the scholarly and learned Rabbis of the 17th cent. clung to the belief, while in the legendary lore of the Middle Ages such men as Maimonides (*q.v.*), Ibn Ezra (*q.v.*), R. Judah the Pious, Rashi, and Naḥmanides (*q.v.*) were all credited with magical powers, and many a legend is told of their operations. Rabbi Jehiel of Paris has even found a place in Victor Hugo's *Notre Dame de Paris* as a wonder-working Rabbi, and no less famous was R. Loeb of Prague (17th cent.), who was regarded as a great magician and was credited with having a clay famulus that was able to perform wonderful deeds, since it had under its tongue a plate on which a mysterious name had been engraved. The Baʿal Shēm († 1760), who founded the sect of the Ḥasîdhîm, had many encounters with the *shēdhîm*, as described in his biography (*Shibḥē Baʿal Shem Ṭob*, Berdichev, 1815 ff.), and a collection of miraculous deeds performed by him and after him by wonder-working Rabbis of the Ḥasîdhîm as detailed in the *Kᵉhal Ḥasîdhîm* (Lemberg, 1864); nor should we forget the legendary contest, described in an anonymous chapbook, between a bishop magician and a red Jew, who had come from beyond the waters of the mysterious river Sambaṭyôn, for upon the issue of the struggle depended the life of the Jewish communities in Germany. To this very day the Jews in Syria perform such magical operations as fumigation, libations, and offerings of oil, bread, and lighted candles, which are put in the four corners of an empty house to propitiate the *shēdhîm* before the people venture to enter the dwelling and make the proper dedication. Gradually, however, the belief in the *shēdhîm* is waning, and the literature of practical *ḳabbālā* is slowly but steadily being discarded. Indeed, much of Jewish magic to-day is, in reality, little more than a concession to ignorance. When a Rabbi was asked why the aid of a magician may be invoked in case of serious illness, he replied, according to Joseph Ḳaro (commentary on *Ṭūr*, *Yôreh Dē̆āh*, ch. 179), that, although there was no basis of fact for the procedure, such an appeal might soothe and comfort the patient, and therefore he saw no objection to it. This is practically the answer which is given in modern times when the people are asked why they continue to believe in the harm done by demons, and in magical operations intended to propitiate them and to obtain relief and safety. It is merely a temporary comfort to those who are loath to give up old beliefs which are now recognized as vain imaginations.

[2] Εὐαγγέλιον.

[3] Ὤμεγα (?).

[4] The three kings from the East, Kaspar, Melchior, and Baltazar—a curious invocation in the mouth of a Jewish magician. It is evident, from the corrupted form of the names, that the copyist did not understand what he was writing.

LITERATURE.—In addition to the books mentioned in the text see the Literature at artt. CHARMS AND AMULETS (Jewish), DIVINATION (Jewish), and BIRTH (Jewish).

M. GASTER.

MAGIC (Slavic).—The Slavic countries are a peculiarly rich field for the study of folk-lore, as they were not Christianized until the 10th cent., remained isolated from Western influences, and have conserved their written traditions.

On the vast uplands of the northern steppes man's relations to nature were characteristic. The Greeks, in their narrow, diversified, hilly country, developed a corresponding mythology, varied and beautiful; the modern Western European, a city-dweller, turns to nature in a romantic manner, semi-religiously idolizing what is to him unwonted and fresh. But to the Slav peasant nature was business, his everyday surrounding, beside which nothing else existed. He was rather unimaginative and quite ignorant. Whilst the Norsemen and the Greeks created mythologies out of natural phenomena, the Slav, in the drear monotony of his plains, fell into neither the deep religious fatalism of the Scandinavians nor the bright imagery of the Greeks; he simply saw that the sun ripened and the sun scorched; that the earth was moist and fertile or parched and frozen; that he was environed by unknown powers to be obeyed or to be subdued; he addressed prayers and incantations to them in a prosaic, almost rationalist, attitude of mind, without adoration, with merely a recognition of inevitable dependence. His spells and invocations (the bastard descendants of heathen rites) were unsound science, but good rationalism. A. N. Rambaud[1] says that the primitive Slavs adored matter and never felt the incentive to personify, idealize, or philosophize it; perhaps it was a mere acceptance of necessity.

The Pomeranian Slavs, the only Slavs who had access to the sea, had a very elaborate ritual, and worshipped many-headed images in temples, not in groves, like the other Slavs. Their greatest oracles and pilgrimages were in the isle of Rügen; these pagan shrines were destroyed by Valdemar I. of Denmark in 1168.

The recollection of this sacred island has strongly influenced Slav myth and magic. The word Rügen is derived from the same root as the English 'rough,' and is called in Early Russian Ruyán. Now the word Buyán comes from a synonymous root, and looks like a translation of the Teutonic name Rügen; and it is thus a safe and probable theory to identify the fabulous island of Buyán with the historical shrine of Rügen—all the more so as the mysterious stone Alátyr is thought perhaps to mean amber, which was an article of Baltic commerce.

When Christianity had effaced the old Slavic nature-gods, the need for which they stood still remained—that of dealing with nature, coaxing and dominating her, and mastering her secrets. Fragments of the old ritual, degenerating into incomprehensible patter, continued to be used at the old sacred haunts, but these incantations were clandestine; though the beings invoked were believed in, they were considered illicit or hellish; heathendom had changed into magic.

Every village had its magician or witch-doctor. These practitioners certainly possessed great knowledge of healing, as herbalists and masseurs; but, where all nature consists of discontinuous miracles, such cures had to be accompanied with the ritual that was calculated to conciliate the powers and convince the patient.

The Russian sorcerer lived alone; he had learnt the magic formulæ, and had been instructed by the woodsprites (*lešì*), the goblin of the hearth (*domovóy*), the fairies of the fields and the water (*polevóy*, *vodyanóy*). Such practitioners are known by many names—*e.g.*, *znákhar*, *kóldun*, *kudésnik*, *vedún*, *vorožéy*, etc.; the women-witches are called *vedĭma*; and to them more extraordinary powers are attributed. These magicians hand down their wisdom to their youngest children—a custom signifying that this magical knowledge was derived from non-Aryan peoples, and taken over by the Aryan conquerors.

It is said that the *znákhar* has physical marks—a troubled eye, a grey complexion—that he mutters, has a hoarse voice, and so on. Unless he communicates once a year, earth will not receive his body, and then he wanders after death as a vampire, sucking others' blood. Witches are credited with the power of flying, and are supposed to have marvellous muscular strength and a spotted skin. They are said to forgather in the gusts and whirls of snow at cross-roads; a pious man should cross himself when he comes upon such whirling columns, for in them the witches dance. If a knife be thrust into such a column, it will drop to the ground blood-stained; and it then becomes an implement for sorcery—*e.g.*, a man crossed in love may use its broad blade to wipe out the track of his maiden in the snow.

The wizard is believed to have terrible powers; among the Galician Rusins, *e.g.*, if the *znákhar* inserts a knife under the threshold of his intended victim's dwelling, the victim is snatched away by a whirlwind, and detained until the knife is removed.

The magical formulæ are very curious. They are framed for every occasion of need; and, to be efficacious, they must be spoken in one breath without any departure from the text—only thus can the powers of nature be quelled, and the wizard be the lord of creation. The following is the text of a charm against lead, copper, and iron bullets:

> 'In the lofty chamber, at the river mouth, beyond the river Vólga, a fair maiden stands, stands and decks herself, commends herself to valorous folk, glories in deeds of war. In her right hand she holds bullets of lead, in her left bullets of copper, on her feet bullets of iron. Do thou, fair maiden, ward off the guns of the Turks, the Tatars, the Germans, the Circassians, the Russians, the Mordvins, of all tribes and foes;

---

[1] *La Russie épique*, Paris, 1876, p. 215.

> smite with thy invisible might the hostile weapons. If they shall shoot from their guns, may their bullets not hit, but strike the moist earth, the open field. May I be whole and uninjured in this war, and my steed whole and uninjured, and my dress stouter than armour. I close my decree with a lock, and I hurl the key into the Ocean-sea, on the burning stone Alátyr. And, as it is not to the sea to dry, as the stone may not be seen, the keys not be reached, so may I not be hit by bullets for all my life.'

A charm against fever runs as follows:

> 'On the Mountains of Athon there is an oak, and under the oak thirteen sages with the Sage Pafnúti. To them there go twelve maidens, fair, with simple tresses, and simple belts. And the Sage Pafnúti with the thirteen sages says: "Who are these who have come to us?"—And the twelve maidens say: "We are the daughters of King Herod, we journey across the earth to freeze up bones and torture the body." And the Sage Pafnúti spake to his sages: "Break off three rods, and we will beat them on for three dawns and three gloamings." The twelve maidens besought the thirteen sages with the Sage Pafnúti; but in vain. And the sages began beating them, saying: "Hail, ye twelve maidens! Be ye turned into water-sprites, and weakened, and live in the chilled water; nor enter the world, nor afflict bones, nor torture bodies." The maidens fled into the cold water as water-sprites,' etc.

These charms contain weird mixtures of legend: beyond the sea of Khvalynsk (probably the Baltic), on the isle of Buyán, on the mystic stone Alátyr, or on a sacred oak magical maidens sit; or there is a mighty sword, a man with a huge bow, a gigantic raven, or a castle with seven locked gates. In fact, the epic portion of the incantations is a medley of all the ancient myths, the one common feature being the locality of the island, and, occasionally, distinct recollections of the ritual practised at Rügen by the Pomeranian Slavs in the 12th century. These incantations also contain, as necessary parts, an invocation in which the 'servant of God,' the suppliant, states his request, and a conclusion, such as 'my word is strong,' 'a seal on my words,' to ratify, as it were, and assert the mastery over nature ensured by the spell.

Incantations must be pronounced in the traditional manner and at the right time and spot—*e.g.*, on midsummer's day, facing east, on the threshold, etc., during the offices at church (to contrive murder, a candle should be held upside down during the hearing of Mass). The professional enchanter expresses his desires forcibly and effectually to the natural powers whom he has under his sway, by means of formulæ which are a farrago of ancient Finnish magic, Aryan folklore, and Christian apocalypse. The incantations contain words of action, such as 'I stand up,' 'I wash myself,' 'I shroud myself in the clouds,' 'I surround myself with the crowded stars'; and the expression creates an illusion of the reality of the action.

Among the incantations against toothache, one invokes the dawn-goddess to cover the aching teeth with her veil against the attacks of the fiend Limar; the epic part goes on:

> 'In the field there is a hare, in the sea there is a stone, in the depths there is Limar.'

Another invokes the horned moon to cure the affliction. A third invokes, literally in the same breath, the Christian saints Martha, Mary, and Pegalea, and the water-demon. A fourth runs as follows:

> 'I go neither on the road nor on the street, but on empty lanes by copses and canals. I meet a hare. Hare, where are your teeth? Give me yours, take mine. I go neither on a road nor a path, but in the dark forest, a grey wood. I meet a dusky wolf. Wolf, dusky wolf, where are your teeth? I will give you mine, give me yours. I go neither on earth nor on water, but on the open plain, the flowery mead. I meet an old woman. Old woman, where are your teeth? Take out your wolf-like teeth, take out my falling teeth.'

In an incantation to stay the flow of blood the *znákhar* squeezes the wound and recites three times in a breath:

> 'In the Ocean-sea, on the Isle of Buyán a fair maiden was weaving silk; she did not leave off weaving silk; the blood ceased flowing.'

Again, in another formula, the Holy Virgin is depicted, like Svantovít, one of the principal gods worshipped at Rügen by the Pomeranian Slavs, or St. George, as riding across the golden bridge on her horse—an unmistakable reminiscence of the chariot of the sun on the rainbow.

There are charms to lull a child to sleep, and these sometimes invoke mysterious beings—Kriks, Plaks, and Ščekotuna—as well as the dawn, coupled with the names of Christian saints.

To save a man from drunkenness a worm is taken out of an empty wine-cask, dried, and then steeped anew in wine, whilst this formula is recited:

> 'Lord of the sea-depths! Carry the mettlesome heart of thy servant out of the shifting sands, the burning stones; breed in him a winged brood.'

The following examples illustrate the lyrical quality occasionally found in these strange compositions, especially in some of the spring invocations:

> 'Thou, Heaven, hearest, thou, Heaven, seest what I wish to accomplish on the body of thy servant X. [There follow four words unintelligible. An unintelligible patter is sometimes found, which looks very like a tradition of a lost language.] Thou Moon, turn away the servant of God from wine; thou little Sun, bring peace to the servant of God from wine. Ye bright stars, do ye assemble in the wedding-cup! But in my cup be there water from the mountain-well! Ye stars, do ye wean X, the servant of God, from wine. My word is potent.'
>
> 'Thou bright Moon, come into my net! But in my net there is neither bottom nor cover! Thou generous Sun, approach my door, my courtyard, but in my courtyard there are neither men nor beasts.'

The field of Slav magic is too vast and intricate for adequate treatment in these few words. The varied superstitions have been voluminously compiled by Sakharov and his generation; but it should be particularly noted that there are extant songs of witches in a meaningless gibberish, which some philologist might very possibly interpret and so assign definitively some origin to part of the magic ritual, at any rate, of Russia.

In the 18th cent. Russian magic became specifically demonological. An infernal hierarchy was foisted upon it with anti-ecclesiastical ritual. These late charms impress the reader as being identically artificial, like the imitative ballads of the same period; in form they copy the mediæval spells.

Summary.—The history and decline of Russian magic, it would appear, traced the following course. The primitive vague and inchoate nature-worship of the Slav Aryans was profoundly influenced and deflected by the subject races of the Finns, Cuds, and other Turanian races, who became typical magicians and had mystic powers ascribed to them. The elaborate ritual of the Pomeranian Slavs originated in a greater intermixture of race, and, when suppressed, was soon forgotten; but it lingered on in tradition and folk-lore, in the incomprehensible patter of the spells, and especially in the legend of the isle of Buyán and the stone Alátyr.

As Christianity spread, the ancient gods of thunder, spring, and progeny, the sun and moon, etc., were duly canonized, whilst the pagan soul and the pagan adoration of nature remained the same, and the festivals were held, often on the same day in the same place, and with similar ceremonies.

In the second mediæval stage, merged in and with the incantation are village science and medicine, village nature-poetry, and primitive *religio loci*. The specialization of the medicine-man, the healer, the priest, and the minstrel came with advancing civilization, the herbalist degenerating into the magician and enchanter. Post-mediævally, a formal demonology arose, a positive anti-Christianity, artificial, sporadic, and short-lived.

L. A. MAGNUS.

MAGIC (Teutonic).—In all ages and in all localities the belief in magic is found to have sprung from the same roots: panvitalism, *i.e.* the conception of nature as alive in every part; the incapacity of primitive man to distinguish persons or things from their names or representations; the belief in the transferability of the powers of nature and of human souls; and the dread of soul-spirits and demons, as also of such hostile persons as were believed to be in league with these supernatural existences. We need not wonder, therefore, if the means by which the various peoples of the earth have sought to defend themselves from all sinister influences of the kind should likewise show a large degree of uniformity. Naturally the most effective mode of securing immunity from the machinations of magic was to counteract them, if possible, by a magic still more potent. From the earliest times the amulet and the spell have been specially resorted to as protective expedients. While the former, however, was employed exclusively as a prophylactic, the magic formula was used in the practice of other kinds of the occult art, whether its design was beneficent or the reverse.

With reference to the ideas and customs associated with the belief in magic, the Teutons formed no exception to the general rule. Among them, as among other races, are found the belief in the soul and the various forms of superstition developed from and dependent upon it. The souls of the departed were believed to pervade and animate all nature; they could assume at will human or animal forms, and bring good or evil fortune to men. From the soul of the sorceress came the powers of the witch whose devices could work injury upon other human beings. Many of the nature-demons, whose place of origin was the physical environment, were regarded as being endowed with magical powers. Among the Germans, likewise, the practices of soothsaying and magic were intimately connected with the belief in soul-spirits. The prophetic faculty was attributed to women as well as men. In the north of Europe the *Völven* had a great reputation as prophetesses and sorceresses. The practice of magic was on the whole more fully developed among the Northern Teutons than in Germany, being fostered in the former case by the shamanism of the neighbouring Finns, a people famous over the entire North for their magic. The most powerful and formidable sorceresses mentioned by the Norse sagas belong, for the most part, to the Finnish race, which, again, in its religion, its demonology, and its magic, is very closely allied to the ancient Sumerian peoples. It is possible that many elements in the magic and demonology of the Northern Teutons were borrowed from the Finns. At all events, the practice of resorting to the latter people in order to acquire their magic arts became so prevalent that at a later time the Christian Church found it necessary to enact laws prohibiting it. But this was not the only channel by which the Teutons became acquainted with the magical ideas and usages of foreign, and especially of the Roman, Greek, and Oriental, peoples. The Northern Teutons visited the Mediterranean Sea both as Vikings and as peaceful merchants, while the Southern Teutons were the near neighbours of the Romans, and were sometimes in their pay as mercenaries. In point of fact, however, the occult art and its adepts are found among the Teutons from the outset. Here, just as on Greek and Roman soil, the idea prevailed that it was possible to work changes in the nature of objects simply by the magical virtues of the spoken and written word or of the symbol. The magic utterance and the magic rune—the engraved talismanic symbol—were used for the most varied purposes. According to the *Ynglinga Saga*, runes and spells owed their origin to Oðin, while the rune-master of the *Hávamál* knows the right method of engraving the characters, as well as the songs which effect cures, restrain enemies, render weapons harmless, quench fires, subdue winds and waves, call up the dead, and awaken a maiden's love, though the words of the songs are not given. Other magic songs are referred to in the *Sigrdrífumál*. That a similar profusion of magic songs was to be found among the Southern Teutons is shown by the *Homilia de sacrilegiis*, which came into existence in the Southern Frankish kingdom under the Merovingians. Alike in the North and in the South these songs were in great part employed as expedients for the cure of disease in man and beast; nor is this to be wondered at when we remember that disease itself was regarded as due to demons and malefic magic. Magic alone, in fact, could undo the work of magic.

Now, the articles exclusively employed for the purpose of influencing the magical properties of things were amulets and ligatures. There was not the slightest misgiving as to the efficacy of the appropriate amulet. Discoveries in tombs furnish ample information regarding the objects specially in request as amulets among the Teutons. Thus, for the protection of the dead, belemnites, amber rings, stone arrow-heads, and hook crosses were laid in the grave along with the body. Amulets were also fashioned out of all kinds of objects bearing figures and drawings, while a special vogue was enjoyed by the so-called *bracteates*, which were imitated from Roman coins, and brought to the North in the early centuries of our era. These were mostly of gold. The images of the gods which served as amulets likewise date from the period of Roman influence.

When the missionaries of the Roman Church introduced the Christian religion among the Teutonic tribes, they found ideas and practices quite similar to what had prevailed in pagan Rome and its provinces. Accordingly, they sought to apply the same procedure as had been previously resorted to, *i.e.*, they incorporated the deities of the pagan Teutons into the system of demons whose existence the Church recognized, while they forbade all worship of them, as also the practice of magic in general, and inflicted severe penalties upon the disobedient. From the early centuries of the Church's history, synods and councils had found it necessary to forbid even the priests to pander to the people's craving for amulets, written spells, adjurations, and magic potions; and, as late as the 8th cent., clergy in Thuringia, the missionary district of St. Boniface, were making amulets of small cards inscribed with Biblical verses of supposed protective or remedial powers, and hung from the neck by a cord, just as if they had been pieces of amber or agate. The use of incantations was also vigorously assailed from the pulpit, while other ecclesiastical enactments against amulets and spells are found among the rules for penance and in the ecclesiastical or Christian codes. Among the various collections of penitential regulations—which, it is true, prohibit many non-Teutonic superstitions—a peculiar place is occupied by those of the Anglo-Saxons, as the Frankish regulations are in great measure verbally dependent upon them. They warn against 'divinationes,' 'auguria,' 'somnia,' 'mathematici,' 'emissores tempestatum,' and especially against 'incantationes diabolicæ,' 'filacteria,' and 'ligaturæ.' As yet excommunication was the extreme penalty for transgression. The Venerable Bede (*HE* iv. 27) relates that, during a time of pestilence and high mortality, recourse was had to adjurations and spells. The abbot Regino of Prüm has incorporated an entire series of the decrees of councils dealing with the subject in his work *de Synodalibus Causis* (A.D. 906; *PL* cxxxii. 187 ff.), and from that work much has been borrowed by Burchard of Worms, who wrote about the beginning of the 11th century (*PL* cxl. 537 ff.).

That similar ideas and usages were still flourishing in England at this period is shown by Ælfric's *Passio S. Bartholomei Apostoli*, with its injunction that no one shall seek to regain health by using a ligature of medicinal herbs or praising a herb in a 'magic song.' The ecclesiastical ordinances of Eadgar and the Northumbrian priests' laws contain regulations to the same effect. Among the Northern Teutons likewise canon law directed its mandates against superstition and magic.

Till well on in the 16th cent. synods and councils of the Church were constantly under the necessity of dealing with the use of spells and amulets and the evils arising from them. Thus can. 9 of a papal bull enacts for the Lateran Council of 1514 that *sortilegia* made by invoking demons, by incantations, or by other superstitious practices are unlawful. Clerics who offend are to be punished at the discretion of their superiors, and laymen are to be excommunicated or visited with civil penalties.

In dealing with such offences, the national codes of the various Teutonic peoples do not show the same unanimity as the Church. The Teutonic nations that came into existence on Roman territory found it necessary to base their legislation against magic directly upon the ordinances of Roman law. The earliest Teutonic code, the *lex Visigothorum,* enacted (bk. vi. tit. 2, 4) that those who 'quibusdam incantationibus' bring hailstorms upon the fields and the vineyards 'ducentenis flagellis publice verberentur et decalvati deformiter decem convicinas possessiones circuire cogantur inviti.' Rotharis, king of the Longobardi, sternly prohibited the belief in cannibal witches. Among the Germans, as among all other races, the feeling prevailed that one who practised malefic magic must at all costs be got rid of, whether by expulsion from the tribe or by death. But, on the other hand, we have a variety of testimony from Northern Europe which seems to show that the practice of magic was not in all circumstances deemed criminal.

In the civil law of the Anglo-Saxons, from the 7th cent. onwards, we find penal enactments against superstition and magic, and in particular against the employment of spells and amulets. The laws of Alfred the Great dealing with magic are founded mainly on the Biblical denunciations of the practice. Of similar character are the legal ordinances directed against the occult art among the Northern Teutons. The older Icelandic canon law of the 12th cent. ordains that those who tamper with incantations or witchcraft shall be punished by banishment.

The evil against which the enactments of the Teutonic codes were mainly directed was malefic magic (*maleficium*). Until the 8th cent. we find no similar enactments against other superstitions which eventually gathered round the belief in witchcraft. But the belief in the existence of cannibal witches and in witches' flights was explicitly forbidden by ecclesiastical and civil legislation, though Ivo of Chartres (*c.* A.D. 1100) thought it possible that witches exerted some influence upon the sexual functions. The Church, however, notwithstanding all its exertions, was by no means successful in ridding the people of their magic beliefs and practices. Both continued to flourish abundantly in the department of medicine, thanks to the recrudescence of the old neo-Platonic—in reality, the Babylono-Egyptian—doctrine of demons. At an early period medicine had become the monopoly of the cloister; the demons of disease were exorcized by the priest; and to relics, to the rosary, and to the 'Agnus Dei' were ascribed the greatest virtues. Those who in sickness and trouble applied to the priests were treated by means of the amulet and the incantation, so that as late as the 16th cent.—at a time, that is, when a medical profession in the proper sense existed—adjurations were still resorted to by doctors.

The attitude of the Church towards the belief in magic was twofold. On the one hand, it accepted magic as an indisputable reality. On the other hand, it ranged itself with the civil legislation in an uncompromising opposition to certain dangerous popular superstitions. But in the 13th cent. came a momentous change in the Church's standpoint. The doctrine of Satan was now made the basis of the doctrine of magic and witchcraft. The nightly journeys of witches, the transformation of human beings into animals, the sexual intercourse of men with female demons, and the operation of sorcery in the sexual functions—all these things were now accepted as facts not to be gainsaid. Then in the 14th cent. the two currents of heresy and sorcery, which had hitherto run side by side, became amalgamated with each other, and merged in the belief in witchcraft. While among the Teutonic tribes the practice of magic had hitherto been penalized—to speak strictly—only because of the mischief which it might work, in the 13th cent. the civil legislatures in Germany likewise resolved upon a new policy. The Old Saxon code (*Sachsenspiegel*) sent those who practised magic of any kind to the stake, and its example was followed by other municipal and territorial codes. In spite of the rigour of the Inquisition, it is true, the earlier penal law (which threatened with excommunication the users of incantations, amulets, or other magic devices) was still pleaded for by the councils and by certain outstanding men among the clergy. But the Inquisition at length silenced every stricture against its competence to deal with magic. By the civil legislation of the 16th cent. those who dealt in magic and soothsaying were punished mainly by fines; the death-penalty was scarcely ever mooted. On the other hand, the Hamburg criminal code of 1508 enacts that the punishment of malefic magic shall be death by fire, and this clause was taken over by the Imperial legislation —the 'peinliche Gerichtsordnung Kaiser Karls V.' —while we find that the criminal code of the Electorate of Saxony (1572) sentenced witches to death by fire, and its example was followed by the legislation of the several States. The persecution of witches was gradually introduced into the various territories of Germany during the second half of the 16th century. In England the earliest processes of this kind seem to have been trials for real or alleged attacks upon the person of the sovereign, as from the reign of Henry VI. But in England the laws against witchcraft were in general much more lenient than was commonly the case on the Continent. Witch-persecution in England dates from about the middle of the 16th cent.; in Scotland cases are found as early as the beginning of that century. With regard to Sweden, we are not in a position to say whether witches were burned before or during the Thirty Years' War. These measures, however, were incapable of extirpating the belief in magic—just as the Reformation itself failed to destroy it, though the delusion certainly received a telling blow from the Reformers. As to the question whether sorcery has a foundation in fact, the Reformers themselves shared the ideas of their age, and the final deathblow to the belief in witchcraft and sorcery was administered by the reconstituted sciences of modern times.

Even in the earliest ages a clear line of demarcation was drawn between lawful and unlawful magic. The latter was treated by all races with the utmost rigour, and not seldom punished with death. Among the Teutons, as elsewhere, incantations and amulets were utilized as a means of securing protection and profit to the individual and his belongings, and also to work injury upon others, and their possessions. The magic spells of the Teutons may therefore be arranged in two main divisions, according to the purposes that they were intended to serve: (1) magic formulæ supposed to secure protection and advantage; (2) magic formulæ intended to injure others. But, as the subject itself suggests, the former class may be further divided according to the effects which the spells were intended to produce. Their object might be either (*a*) to drive away an existent evil, to 'exorcize' it, or (*b*) to avert a possible evil by means of a 'blessing.' This dichotomy of the first main group, however, will not be found exhaustive, and it is necessary to mark off another subdivision. Magic formulæ were used not only for the purpose of dislodging present and averting future evils, but also as a means of inducing spirits to throw light upon the future, and upon hidden things generally. In so far as this (*c*) prophetic magic (as it may be called) had often to do with things which lay in the future, it comes into close touch with the class of magic formulæ designed to prevent possible evil. But, while the received spells can for the most part be assigned to one or other of these four *genera*, many particular species may be differentiated within the larger groups. The number of different varieties will in general correspond to that of the various purposes which the formulæ were meant to serve.

Magic can be overcome only by counter-magic; such was at one time the universal postulate of the occult art. In primitive times, however, all sorcery consisted in words and symbols, generally conjoined with actions. Thus, with reference to the Germans, Tacitus (*Germ.* x.) states that, when the deity was consulted by means of the lot, the priests held aloft the magic wand engraved with symbols, muttering incantations the while. Sundry Anglo-Saxon spells specify the appropriate action to be performed. Thus the incantation for bewitched soil gives precise directions regarding the requisite symbolic actions and sacrificial usages. For the formula against the machinations of witches the instruction runs: 'wið færstice feferfuige and seo reade netele, ðe þurh ærn inwyxð, and wegbrade: wyll in buteran'; then at the end, 'nim þonne þæt sæx, ado on wætan.' But word and action had already been frequently employed independently of each other, and it is not surprising that the word came to be used apart from all accessaries or symbolic actions. The Teutonic conviction that magical effects could be directly produced by the spoken word must doubtless have found expression in the particular form of the spell. But the simplest—and hence, no doubt, the oldest—vehicle of direct influence is the express command, and, accordingly, such command must have formed the nucleus of the Teutonic incantation. Two examples of Teutonic spells may be given here. The first is a formula from the 9th–10th cent., which has come down to us bearing the title 'contra vermes' (C. von Müllenhoff and W. Scherer, *Denkmäler deutscher Poesie und Prosa*³, i. [1892] 17):

'Gang ût, nesso, mid nigun nessiklînon
ût fana themo marge an that bên,
fan themo bêne an that flêsg,
ût fan themo flêsge an thia hûd,
ût fan thera hûd an thesa strâla,
drohtîn, uuerthe sô!'

With this may be associated the Anglo-Saxon 'blessing of bees,' the 'wyð ymbe,' from a Cambridge MS of the 11th century. After a direction regarding a magical action, and a verse explanatory thereof, it continues (C. W. M. Grein and R. P. Wülcker, *Bibliothek der angelsächs. Poesie*, i. [1883] 319 f.):

'Sitte ge, sigewif, sigað to eorþan!
næfre ge wilde to wudu fleogan!
Beo ge swaagemindige mines godes,
swa bið manna gehwilc metes and eþeles.'

It is quite conceivable that spells of this kind should exist independently, and unattached to any preliminary narrative. This has been observed also by Schröder in his article 'Über das Spell' (*ZDA* xxxvii. 259):

> 'Probable as it is that at a certain stage of civilization the action of the *galdr*, *i.e.* the spell in the proper sense, or of certain species of it, was produced in connexion with the narration of a particular mythical incident, yet there is not the slightest doubt that in other periods the epic narrative and the magic formula are disjoined, and may each maintain a separate existence.'

Besides these adjurations strictly so called, which were complete in themselves, and which may be regarded as the earliest Teutonic spells, there comes down to us from the same age another species—that in which an epic narrative is prefixed to the formula proper.

The classical examples of this type are the two Merseburg incantations, and the Anglo-Saxon spell against the practices of the witch is constructed on similar lines. The substance of the introductory portion—the narrative—is generally borrowed from mythology. The procedure was to relate some incident traditionally associated with an effect identical with or similar to that which the formula was meant to produce. It was not necessary to say in so many words that the spell should now operate with like efficacy; the bare recitation of the story invested the formula with all the potency required. But this dependence of the formula upon the narrative certainly indicates a change of view regarding the power of the formula. The performer has lost his earlier reliance on his own capacity, and this must, accordingly, be reinforced from without.

While this epic type of spell is often referred to as the primitive Teutonic form, the facts would seem to imply its secondary character, though its root may indeed lie in paganism, but in any case the recitation of a short narrative before the actual formula is not peculiar to the Teutons—let alone the Western Teutons—this form of spell being traceable among other races and in much more remote times. It was certainly known to the Romans and the Hindus. But, as a matter of fact, there is evidence to show that it was not even a distinctively Indogermanic usage, since it is found also among the Babylonians and the Egyptians. An Egyptian papyrus of the XXth dynasty (now in Turin), for instance, contains a spell which in its whole design shows a striking resemblance to the Merseburg incantation for fracture of the leg. In the Babylonian and Egyptian spells, too, precisely as in the Teutonic, the scene of the narrative part is always laid in the mythological sphere. In view of the vast influence exercised by the Oriental, and especially the Babylonian and Egyptian, magical ideas upon the nations of the West, it is a tempting conjecture that Oriental models may have been largely instrumental in propagating the narrative spell among the Indogermanic peoples of Europe—first of all in the Greek and Roman area, and then derivatively in the Teutonic. At all events, the theory that the Teutons had a primitive type of spell consisting of a prose narrative followed by a rhythmical formula, as adopted by Schröder (*loc. cit.*), is beside the purpose. The primordial element was certainly the formula, the narrative being added later; and, as we have seen, each could be used by itself alone. We find, moreover, that in Christian times quite different introductions were combined with the real nucleus of the spell. We must therefore think of each part as distinct in itself, and in no degree the less so because in the recitation 'saying and singing' came alternately. In all probability the spells were simply muttered in an undertone; there is a large mass of evidence —and not from Teutonic sources only—pointing to this mode of recital.

Thus the missionaries who came to evangelize the Teutonic tribes found two types of indigenous incantations, viz. the purely imperative and the narrative. As the Church was unable to put an end to heathen customs and practices, or the use of magic formulæ, it adopted the policy of assimilating everything that could in any way be reconciled with its own views, hoping that by the device of clothing the objectionable thing in a Christian garb, it might succeed in eradicating the superstitions of the heathen. It likewise endeavoured to transform the ancient formulæ, and here probably its first, as also its most urgent, task was to eliminate the heathen characters from the narrative spells and put Christian ones in their place. These new formulæ were generally composed in verse, and were embellished with rhyme. Their narrative portions exhibited Biblical characters, such as Jesus, Mary, the apostles, and others, in perfectly appropriate situations—a fact which in itself conclusively shows that the spells in question originated in ecclesiastical circles. Such imitations of heathen formulæ composed by the clergy are relatively numerous, and date for the most part from the 11th and 12th centuries.

From this narrative species of Christian spell, again, was in part evolved a new type. This took the form of a comparison or allegory, and its rubric ran thus: 'As such and such a result was brought about then, so let it be produced now.' Very few of the surviving spells of this type are in metrical form; the great majority are in prose.

A further form of blessing, for the use and diffusion of which the clergy must again be regarded as mainly responsible, derives its origin from the special Roman Catholic ceremonies known as the sacramentals. New formulæ were formed on the pattern of the 'exorcisms,' 'benedictions,' and 'consecrations,' or these were simply translated into the vernacular. This species is probably not older than the 13th century.

Mention must also be made of a type of magic formula in regard to which the monks played merely an intermediate rôle. This group consists mainly of formulæ handed down in ancient medical writings. The design of most of these is the cure of disease, but adjurations for use in digging up medicinal plants were also transmitted in this way. These formulæ were, of course, mostly in the Latin language. Their potency lay mainly in phrases and letters—magic words and characters largely of Eastern origin, being derived from Babylonian, Egyptian, and Jewish magic. This group, accordingly, comprises the most ancient type of spell, which, it is to be observed, always exhibits an unintelligible jumble of words. From the earliest times, indeed, this very unintelligibility was the indispensable condition of the efficacy of the spell. From the 13th cent., however, we must take account also of another contributory source of the superstition which is concerned with words and letters—and, it may be added, numbers also. This was the religious philosophy of the Jews, as set forth in the works of the Ḳabbālā (*q.v.*).

These leading types will suffice to classify the great majority of magic formulæ, and even the hybrid, composite, and other derivative varieties which inevitably made their appearance in the course of centuries. But the prime factor in such secondary formations was doubtless oral tradition, to the action of which a large proportion of the spells would certainly be subject at some stage of their development. The learned formulæ of the Church are usually of considerable length, and in their full form would have relatively little vogue among the common people. From these larger spells, accordingly, certain typical portions were excerpted, and then used independently. The popular mind laid the main emphasis upon the nucleus of the spell—the formula proper; and examples of this type become numerous from the 16th century. In these the strict parallelism of the earlier ecclesiastical blessings is to some extent abandoned. It was now considered sufficient to say: 'As surely as this act has taken place, so surely may this effect ensue.' Sometimes, in fact, the place of the parallel is taken by the antithesis. It became the practice, further, to draw upon still more remote quarters for the conclusion of the blessing, and to introduce formulæ which in themselves had formerly done duty as blessings, so that the formulæ of blessing, being supplemented by invocations of God and multiplied petitions, often actually approximated to the character of prayer itself.

When we consider the mass of Teutonic formulæ —even with the 16th cent. as the ulterior limit— in relation to the purposes which they were meant to serve, we see that the multiplicity of forms mentioned in the *Hávamál*, the *Sigrdrífumál*, and the *Homilia de sacrilegiis* is by no means an exaggeration. Adjurations against disease certainly constitute the largest class. Many maladies were believed to be due to malignant demons and unfriendly magicians, and were therefore combated by the magic formula. But the same means was employed in dealing with diseases about the origin of which there was no uncertainty. The remedies employed in such cases were supposed to acquire peculiar efficacy by having a spell uttered over them.

Nor was it human beings only who in their distresses were benefited by spells. As had been believed from the earliest times, protection was equally indispensable for the lower creatures most closely associated with human life, viz. the domestic animals. In their case also, therefore, magic formulæ were used to ward off disease and other evils. The dog, and especially the shepherd's dog, was protected in this way from the dangers to which it was exposed from wild beasts. People were very specially concerned, however, to guard against the bite of mad dogs. A certain blessing, 'ad pullos de nido,' was supposed to help the growth of chickens. The purpose of the somewhat numerous 'bee-blessings' was to keep the insects from swarming.

There was, besides, a multitude of adjurations for animals other than the domestic. People tried to rid their houses of flies, mice, and rats by appeal to the power of the formula; wolves were adjured not to hurt the cattle in the fields; serpents, to be easily caught. The bite of the serpent was averted by spells, and by means of adjurations the reptiles were induced to yield up the potent ophite stone, and to be obedient to all commands. The tooth and the right forepaw of the badger acted as charms against all kinds of injury, and with the shoulder of a toad a man could win the love of whomsoever he chose.

In the therapeutics of ancient and mediæval times an important place was assigned to medicinal herbs. It was of vital moment, however, that these herbs should still retain their supposed virtues after being plucked, and certain magical formulæ were believed to ensure this. The practice was to adjure either the whole world of herbs, or a definite number of them (cf. the Anglo-Saxon 'nine-herb spell'), or, again, some particular herb. But still further manifestations of the potency of herbs could be elicited. They could be made to secure the traveller against fatigue, to act as a defence against weapons, and to protect the cattle from sorcery and the crops from hailstorms. They could also help one to win love, to open locks, to ascertain truth, and to read both the future and the past.

Then the magic formulæ served to protect men not only against disease, but also against the malice of their fellows and the threat of misfortune. By their aid a person sought to safeguard himself—especially when on a journey—against the artifice of his enemies, to blunt their weapons, and to free himself from prison. By the same means he could defend himself against malefic magic, and against the bewitching of his food and drink. Other formulæ possessed the power of procuring friendship, love, and favour, and of gaining justice before a legal tribunal. Wives sought, through the medium of magic, to turn the harshness of their husbands into love. An astute merchant of the 16th cent. would even try by a spell to induce people to buy up his stock of stale wares.

Human life was thus surrounded by a rampart of spells, and property likewise was in similar fashion made proof against evil influences. Houses were secured by spells against burglary and fire, and corn in the granaries was kept from decay. If anything was lost or stolen, the magic formula could restore it, and even lead to the discovery of the thief. The same means were also used to protect, and to increase, the fruits of gardens and fields.

The number of extant magic formulæ designed to work harm is quite insignificant—a circumstance which is, no doubt, due to the rigorous treatment meted out from the earliest times to the practice of malefic magic. Such hurtful spells might be used by the malicious to sow dissension between old friends, to change the love of a married couple into hatred, to bring every conceivable disaster upon another, and even to overwhelm with destruction all that he possessed.

F. HÄLSIG.

MAGIC (Vedic).—**1. Definition.**—The sphere of cult and ritual has two aspects in Vedic literature—religion and magic. The former (see art. VEDIC RELIGION) represents the relation of man to the gods and lesser divine beings. Its object is to cultivate their goodwill by means of hymns as well as sacrifice, and thus to induce them to bestow in return the benefits which man desires. The essential character of Vedic religion, therefore, is propitiatory and persuasive. Magic, on the other hand, endeavours to gain its ends by influencing the course of events, without the intervention of divine beings, by means of spells and ritual. Its essential character is, therefore, coercive. Both aim at the same result, but in different ways. Religion achieves its purpose indirectly by inclining the will of a powerful ally through prayer and gifts, for instance, to destroy an enemy; magic does so directly by operating with the impersonal (and imaginary) causal connexion between the means which it employs and the effect to be attained, as burning the effigy of an enemy in order to burn the enemy himself. Its practice was in part auspicious and beneficent, as the ritual for the obtaining of offspring or luck, of rain or victory, but it was largely maleficent in the interest of individuals and not of the community, and, therefore, as being dangerous, was condemned by the priesthood, except in so far as it was applied by themselves.

2. Literary sources.—The sphere of religion, as considered apart from magic, is chiefly represented by the earliest product of Indian literature, the Rigveda, which consists almost entirely of hymns addressed to various gods, in which their greatness and their deeds are praised and all kinds of welfare are prayed for, and which are intended to accompany the ritual of the Soma sacrifice (cf. art. HYMNS [Vedic], § 7 f.). Only a dozen of its 1028 hymns are concerned with magic, about one half of them being auspicious, the rest maleficent in character. As to any magical rites connected with the sacrifice, the Rigveda gives us no information. On the other hand, magic is the main and essential subject-matter of the Atharvaveda (art. HYMNS [Vedic], § 11); it is a collection of metrical spells, largely to be accompanied by ceremonies aiming at the welfare of the magician or the injury of his enemies. The Yajurveda (art. HYMNS [Vedic], § 13) occupies an intermediate position between these two Vedas as regards magic. In its original part, which consists of prose formulæ, the gods are only secondary, bearing a kind of mechanical relation to the sacrificial ceremonial with which these formulæ are associated, and which they follow in its minutest details. Its character is thus of a magical rather than a religious type. The great development, in this period, of an intricate ritual and the concentration of sacerdotal thought on its perfect performance had led to the new conception that sacrifice was not meant to propitiate the gods, but directly to control the natural course of things.

The prose theological works called Brāhmaṇas, which represent the next stage of Vedic literature, being concerned with explaining and interpreting the details of the ritual, supply much information regarding the magical notions and observances with which the sacrificial ceremonial was permeated. The Upaniṣads, though a continuation of the Brāhmanas, are philosophical rather than religious, but their speculations on the nature of *brahman* and on the supernatural powers acquired by knowledge and asceticism are charged with magical notions.

The final phase of Vedic literature, which comes down to *c.* 200 B.C., is represented by the Sūtras. These concise manuals, especially those dealing with domestic life (*gṛhya*), and to a less extent those concerned with customary law (*dharma*), show how the observances of everyday life were saturated with magical beliefs and practices (cf. also art. LITERATURE [Vedic and Classical Sanskrit], §§ 8–12).

3. Importance of the subject.—A knowledge of Vedic magic is obviously important to the investigator of magic in general, for here we have magical material, bearing on every aspect of human life, which began to be recorded well over 3000 years ago, and which can, from that time onwards, be historically studied in continuous successive literary stages, extending over more than 1000 years. Such facilities are afforded by no other ancient literature as regards either the antiquity or the quantity and quality of the evidence afforded. The material in Vedic literature does not require to be laboriously gathered together from scanty and scattered references, as is necessary elsewhere. It is here supplied not only in great abundance, but, for the most part, in an easily accessible collected form. Its aid is, moreover, essential to the student of Indian religion: without it he would arrive at erroneous or exaggerated conclusions as to the purity and advanced character of the beliefs and practices of that religion in its earliest form.

4. Sacrifice and magic.—Considering that in the Rigveda we have a collection of prayers, and in the Atharvaveda one of spells, are we justified in supposing that the spheres of religion and of magic were already separated in the Vedic period? By no means. It is, indeed, certain that the sacrificial invocation had by that time assumed a literary type, and that the hymns of a magical character found in the Rigveda are very few and late. It must, however, be borne in mind that the prayers of the Rigveda, being addressed to the great gods, offered few opportunities for references to magical practices, while the ritual which the hymns of the Rigveda were intended to accompany, and which is fully described in other Vedic texts, is, though carried out by the sacrificial priests, from beginning to end saturated with magical observances. Again, where there is a group of ceremonies directed to the accomplishment of a particular purpose and, therefore, favourable to a greater prominence of the magical element, such as the wedding and funeral rites, we meet with quite a network of magical usages bearing the stamp of extreme antiquity. It is thus impossible to suppose that the sacrificial priests of the Rigveda, the composers of the old hymns, should have occupied an isolated position, untouched by magical practices derived from a much earlier age and afterwards continued throughout the priestly literature of later times. In fact, a close examination of the hymns of the Rigveda actually affords evidence that even in them the belief in magical power independent of the gods is to be found. Thus in one hymn (X. xcviii.) the sacrificing priest Devāpi begins with the intention of appealing to the gods for rain, but then himself brings down the waters by the magical powers of his sacrificial art: 'the sage Devāpi sat down to the duty of Hotṛ priest, familiar with the goodwill of the gods; he then poured down from the sea above to the sea below the heavenly waters of rain' (V. v.). Every page of the Brāhmaṇas and of the ritual Sūtras shows that the whole sacrificial ceremonial was overgrown with the notion that the sacrifice exercised power over gods and, going beyond them, could directly influence things and events without their intervention. An incipient form of this notion already appears in the Rigveda, where exaggerated sacrificial powers are in several passages mythically attributed to ancient priests; *e.g.*, 'with mighty spells the Fathers found the hidden light and produced the dawn' (VII. lxxvi. 4); 'the Fathers adorned the sky with stars, like a black steed with pearls; they placed darkness in night and light in day' (X. lxviii. 11); 'with their kindled fire the Aṅgirases (ancient priests) found the cows and steeds hidden by (the demon) Paṇi' (I. lxxxiii. 4); they 'by their rite caused the sun to mount the sky' (X. lxii. 3); '(the ancient fire priest) Atharvan by sacrifices first prepared the paths; then the sun, the guardian of ordinances, was born' (I. lxxxiii. 5). The ancient priest Viśvāmitra, by directly invoking the rivers, made them fordable for the tribe of the Bharatas (III. xxxiii. 1–12). The composers of all such passages must have attributed to the sacrifice in their own day the powers which they thus projected into the past.

An examination of the ritual literature shows that the dividing line between a sacrificial act, which is meant to propitiate the gods, and a magical act, which is intended to control the course of things, is by no means always definite, but that the two are often intermingled. Thus the morning sacrifice at sunrise, of which we read in the Rigveda (*e.g.*, IV. li. 7), when the fire is kindled and an offering is made to the fire-god, in the *Śatapatha Brāhmaṇa* (II. iii. 1. 5) assumes a magical character, the fire being kindled to produce sunrise: 'By offering before sunrise he (the sacrificer) makes him (the sun) to be born: he would not rise, if he were not to sacrifice in it (the fire).' A similar view seems already to be expressed in a verse of the Rigveda: 'Let us kindle thee, O Agni, that thy wondrous brand may shine in heaven' (V. vi. 4). Again, there are several passages in the Rigveda (*e.g.*, IX. xlix. 1, xcvii. 17, cvi. 9, cviii. 9 f.) in which the Soma ritual is spoken of in the magical character of producing rain direct, without influencing the goodwill of the gods that shed rain.

The blending of a sacrificial and a magic rite may be of two kinds. A ceremony which is primarily sacrificial may assume a magical character by the nature of the object which is offered for the attainment of a special purpose.

There can be little doubt that only food eaten by man originally constituted the sacrifice offered to the gods in fire. On the Vedic sacrificial ground there was, by the side of the fire, the litter of grass (*barhis*) on which the gods were conceived as sitting to receive the offering. On the conclusion of the ceremony the *barhis* was thrown into the fire, originally, no doubt, to render it innocuous after, by the divine presence, it had become dangerous to profane contact. To the *barhis* corresponds, in the ancient Persian ritual, the *baresman* (a bundle of twigs; see art. BARSOM) on which the sacrificial offerings were placed, and which was the seat of the gods. This indicates that the oblation in fire was an Indo-Aryan innovation, and that the burning of the *barhis* not improbably formed the transition to the fire-sacrifice.

The ritual literature furnishes innumerable examples of sacrifice receiving a magical turn by the employment or addition of a non-eatable substance; as when a man wishing for cattle offers the dung of a couple of calves (*Gobhila Gṛhyasūtra*, IV. ix. 13 f.); or when poison is added to an offering in order to destroy ants (*Kauśika Sūtra*, cxvi.). On the other hand, objects suitable for direct magical manipulation could easily be turned into an offering by those habituated to the sacrificial idea in order to invest magical acts with the garb of sacrifice. Thus the burning of injurious substances would become a sacrifice; for instance, arrow tips might be offered in order to destroy an enemy (*ib.* xlvii. 44). In this way the sacrifice came to assume the rôle of driving away demons; of helping a woman to overcome her rivals; of enabling a prince to conquer his enemies or to return from exile; and of producing many other magical results. The gradual mixture of the religious and the magical in the direction of the latter led the whole system of sacrifice to assume this character in the later Vedic period.

Various causes contributed to this result. The belief in the divine presence at the sacrifice, and in the mysterious success produced by the sacrifice, encouraged an increasing application of magical practices as the ceremonial system became more elaborate. Secondary observances of the sacrificial ritual might already have belonged to the sphere of magic from the beginning. Efforts to explain accidental features of the ceremonial would lead to the discovery of effects allied to magic. Priests would also foster belief in the magical power of sacrifice in order to secure their own indispensableness. The magical tendency would be increased by the mixture of prayer and spell; if in the prayer accompanying the sacrifice the magical effects of a spell were assumed, such effects would naturally be attributed to the sacrifice also.

5. Predominantly magical ritual.—There are several groups of rites which, though belonging to the sphere of sacrifice, are predominantly magical in character. They are partly connected with family and partly with public life. The most important of these are:

(1) *The wedding ceremony.*—What little worship of the gods is found in this group of rites is almost restricted to the cult of Agni, the domestic god, who was constituted a witness of the marriage, and who, in the form of the domestic fire, was to accompany the young pair through life. On the other hand, the ceremony was surrounded by magical acts, of which the following were the principal. The bride's hand was grasped that she might be delivered into the power of her husband. She stepped on a stone to acquire firmness. She took seven steps with him in order to establish friendship. She ate the sacrificial food with him to create community of life. When she reached her husband's house, she sat down on a red bull's hide to ensure fertility. The son of a woman who had borne only living male children was placed on her lap in order to fulfil the hope of healthy male progeny. Later, during pregnancy, a magical powder was placed in her nose to secure the birth of a son.

(2) *Initiation.*—Of the various religious ceremonies which were performed during boyhood, and which display the same predominantly magical character, the chief was that of initiation (*upanayana*). This, though not mentioned in the Rigveda, goes back to pre-historic times, as is shown by the parallel Avestic ceremony, and is the Vedic transformation of a rite by which, on the attainment of puberty, a boy was received into the community of men. In India it was regarded as a second birth, as being the entry into a new life, when the boy was introduced to a religious teacher with a view to Vedic study. The outward signs of the initiation are the girdle, which is wound three times round the pupil's waist, and the sacred cord, worn over the left shoulder and under the right arm, with which he is invested. The ceremony includes a number of observances and involves various tabus in regard to food, some of which will be mentioned below (see also VEDIC RELIGION, § 6 *h*, and cf. INITIATION [Hindu]).

(3) *Public rites.*—The public ceremonies of Vedic times were performed on behalf not of the clan or tribe as such, but of an individual, who in these cases was the king. The most prominent of them, aiming at the attainment of certain definite purposes, are magical in their main elements. At the royal consecration (*abhiṣeka* [*q.v.*]) the king sits on a throne made of wood from the *udumbara* fig-tree, which to the Indian was the embodiment of all nourishment. The seat was covered with a tiger-skin, the emblem of invincible strength. The contents of a cup made of *udumbara* wood, filled with butter, honey, and rain-water, were poured over the king in order to communicate to him their strength and abundance. The royal inauguration (*rājasūya*) is a further series of rites, chiefly of a symbolical character (cf. 12 (*b*)) intended to ensure a successful reign. A still more imposing ceremony was the Vājapeya, the two main features of which, a conventional race and another symbolic observance, have a magic purpose (12 (*b*); cf., further, art. ABHIṢEKA). Finally, the horse sacrifice (*aśvamedha* [*q.v.*]) was the highest sacrificial expression of regal power, which was undertaken for the fulfilment of all the most ambitious wishes of the king, and in which the victim indicated the desire to transfer the swift might of the horse to the sacrificing monarch.

6. Priest and magician.—The magician of prehistoric ages, who manipulated only the lower ritual concerned with demons and natural forces, had long before the time of the Rigveda (at least as early as the Indo-European period) developed into the priest, who dealt with a higher cult in which he invoked and sacrificed to gods. In the later Vedic period of the Yajurveda, however, we find the priest to a considerable extent reverting to the rôle of a magician; for he now constantly appears, independently of the gods, driving away evil spirits or influencing the powers of nature by the use of spells and other expedients of sorcery. In various lesser rites the priest acts quite in the style of prehistoric times. Thus he makes the bride step on a stone to ensure steadfastness; he causes fish to be eaten for the attainment of speed; he produces an imitation of rain that it may actually rain—here he is not a servant of the gods, but a magician. Yet even in the earliest period, that of the Rigveda, the sacrificial priest was a magician as well (though by no means necessarily the only magician, for both here and later references are made to sorcerers whose magic is directed against the sacrificial priest). It cannot be supposed that even the most advanced minds among the priests regarded prayer and sacrifice as the only means of securing welfare, while rejecting magic as an ineffective and reprehensible superstition. Magic was still to some extent used by those who had occasion to apply it, as is apparent from the character of some hymns of the Rigveda which, although late, form part of its canonical text. But not the employment of every form of magic was approved nor the practice of magic as a profession, doubtless because alliance with evil spirits and the use of maleficent magic were liable to injure the community. This is sufficiently clear from the words of the author of a passage of the Rigveda: 'May I die to-day if I am a sorcerer (*yātudhāna*), or if I have harassed any man's life; then may he lose his ten sons who falsely calls me "sorcerer"; he who calls me, that am no sorcerer, a practiser of sorcery, or who, being a demon, says that he is pure, may Indra strike him with his mighty weapon, may he sink down below every creature' (VII. civ. 15 f.). It was because the Atharvaveda contained a body of maleficent spells that it did not attain to canonical recognition till after it had become associated with the sacrificial cult by the addition to its text of numerous hymns borrowed from the Rigveda. On the other hand, in the Atharvaveda itself (*e.g.*, V. viii., VII. lxx.) magic is expressly approved when directed against the sacrifice offered by an enemy; and the ritual texts are full of directions for the sacrificer who wishes to destroy his enemy, in particular, when he desires to give his sacrifice a magical turn for the purpose of inflicting injury. The post-Vedic *Code of Manu* even contains the express statement (xi. 33) that the magic spells of the Atharvaveda are the Brāhman's weapon, which he may use without hesitation against his foes. In the Upaniṣads the magician-priest has become a philosopher who has passed from the path of ritual (*karma*) to that of knowledge (*jñāna*); but his mode of thought is still full of traits derived not only from sacrificial, but from magic lore. Of such a nature are his conceptions of the world-soul (*brahman* [*q.v.*]) and of the identity with it of the individual soul (*ātman* [*q.v.*]), as well as his speculations on the sacred syllable *om* (analogous in sense to 'amen'). Such, too, is his doctrine of *karma* (*q.v.*) as an impersonal power which, free from any divine influence, rules future existences with inexorable force. The same mental attitude is indicated by his approval of the grotesque and forcible exercises of Yoga, which is an inextricable blend of philosophy and magic. By the aid of Yoga he believed himself capable of acquiring the ability to make himself minute and invisible, to increase his size infinitely, to multiply his body, to remember his former existences, and so forth.

7. Asceticism and magic.—There is evidence that from the earliest Vedic period ascetic practies (*tapas*, lit. 'heat'), primarily exposure to heat, but including other forms of self-mortification, such as fasting, abstinence, and silence, were regarded as a means of attaining various supernatural powers resulting from the ecstatic condition induced by them. Thus the Rigveda says (X. cxxxvi. 2) of those who are in such a frenzied condition that 'the gods have entered into them.' A poet of the same Veda tells (VIII. lix. 6) how, in a vision produced by austerity (*tapas*), he saw the old creations of ancient sages, the first sacrificers, in the remotest past of the human race. There are many other Vedic passages ascribing similar powers: dream is born from the soul filled with austerity (Atharvaveda, XIX. lvi. 5); speech born of austerity penetrates to the gods (*Taittirīya Āraṇyaka*, V. vi. 7); he who has practised great austerity reaches the sun (Rigveda, X. cliv. 2); after practising austerity Indra won heaven (X. clxvii. 1); the magical power of austerity peculiar to the Brāhman will bring calamity on the man who injures him (X. cix. 4). Austerity confers the power to produce the mightiest creations: the goddess Aṣṭakā, performing austerity, produced the greatness of Indra (Atharvaveda, III. x. 12); the seers were born of austerity (XI. i. 26, XVIII. ii. 15, 18). In many passages of the Brāhmaṇas the creator Prajāpati is described as gaining by the practice of austerity the power to evolve out of himself the worlds and all living creatures; and in one place (*Śatapatha Brāhmaṇa*, X. iv. 4. 2) he appears as practising such asceticism that from all his pores came forth lights, which are the stars. The Brāhmaṇas also tell how various mythical beings attained by austerity to a high degree of enlightenment that revealed to them some secret of sacrificial lore. It is for such magical effects that austerity is required as an essential element in the preparation for various particularly holy sacrificial rites. Thus the Soma sacrifice is preceded by a consecration (*dīkṣā*) of the sacrificer in which he practises austerity lasting, according to some authorities (*ib.* XIII. i. 7. 2), till complete physical exhaustion ensues.

8. Magical conditions and agencies.—Magical effect is largely, if not altogether, based on contact (very often impalpable), which has to be brought about if the agency is beneficial to oneself, or to be prevented if the agency is injurious to oneself. The result desired is attained by the use of spells and rites of various kinds. The place selected for the practice of magic, except when it is an element of the sacrificial ceremonial, is generally a lonely one. A cemetery, the seat of flesh-eating demons, is a specially suitable place for its operations. A cross-road is a favourite locality to divest oneself of evil influences. A secluded part of a house, a shed, and solitary spots in field or forest are also used. The time at which many operations of hostile magic take place is night; but that of others depends on their circumstances or their purpose. Direction is an important element. Thus the south is the home of demons and *manes*; hence performers of rites connected with them must face that point of the compass. In auspicious rites walking and other kinds of movement are directed from left to right, following the course of the sun, while in funeral and other uncanny ceremonies the direction is invariably reversed, the performers moving from north to south.

(*a*) *Spirits and demons.*—Some of the lesser spirits are concerned only with one activity, such as presiding over the fields and helping at harvest; others, with Arbudi at their head, are invoked to spread terror and death among enemies on the field of battle (Atharvaveda, XI. ix. 1 ff.). The characteristic of most of the rest is to cause damage and destruction in the sphere of human life. These demons are usually called by the generic name of *rakṣas*, *yātu*, or *piśācha*, though many of them also have individual designations. Their appearance is for the most part human, though often with some kind of deformity; but they not infrequently have an animal or bird shape, such as that of a dog, wolf, owl, or vulture. They also appear in assumed figures, human or animal; thus at funeral rites they intrude in the form of the souls of the ancestors to whom the offering is made; and they approach women in various disguises. The sorcerer himself (as well as the spirits serving him) might assume animal form and thus injure his enemies. Belief in such transformation is already expressed in the Rigveda, where hostile magicians are spoken of as becoming birds and flying about at night (VII. civ. 18). Setting demons in motion is regarded as letting them loose against an enemy. Thus in the Rigveda (X. ciii. 12) the demon of disease Apvā is let loose against a hostile army with the spell: 'Go forth, Apvā, to confuse their minds, to seize their limbs; attack them; burn them with thy heat in their hearts; let the foe fall into deep darkness.' Such spells might be accompanied by magical acts, such as letting loose a white-footed ewe, in which the power of disease was supposed to be embodied, against the hostile army.

Evil spirits are thought to be everywhere—in the sea, in the air, but most of all in human dwellings; otherwise they especially infest the place where four roads meet. The time of their activity is chiefly evening and night; at night they seek to kill the sacrificer who has undergone consecration (*dīkṣā*). But they are particularly active during the night of new moon. Their usual mode of attack (mentioned in both the Rigveda [VIII. xlix. 20] and the Atharvaveda [V. xxix. 6–8, VII. lxxvi. 4]) is to enter into a man, especially through the mouth; they then eat his flesh, suck his marrow, drink his blood, and create disease of every kind; they also cause madness and take away the power of speech. They are chiefly dangerous on the most important occasions of domestic life—at births, weddings, and funerals. One of the main objects of their attack is the sacrifice: the Rigveda speaks (VII. civ. 21) of the Yātus that seize the sacrificial food, and the Atharvaveda contains (VII. lxx. 1 f.) the spell of a magician desiring to destroy the sacrifice of an enemy through the wiles of a demon. Hence the sacrificial ceremonial is, from beginning to end, accompanied by formulæ directed to defence against demons. These evil spirits, moreover, do harm to man's property, drinking the milk of his cows, eating the flesh of his horses, and damaging his dwellings. In short, every moment of life, every act, every possession is assailed by hosts of invisible foes, the allies of human workers of calamity.

(*b*) *Injurious substances.*—Closely allied to these demoniac enemies are the numerous substances—the most general expression for which in the Vedic language is *tanū*, or 'body'—which, conceived chiefly as impersonal, though sometimes still tinged with personality, perhaps represent an advance of thought. Hence the boundary-line between personal demons and impersonal agencies is not fixed; thus the term *pāpman*, 'evil power,' as a masculine is used in the former, as a neuter in the latter sense. Nor are even injurious creatures like snakes, ants, and worms clearly distinguished from evil spirits, being often spoken of as demons to be driven away. Examples of impalpable agencies are the 'substance' of disease, of hunger and thirst, of guilt, even of such abstractions as sonlessness; or the intangible influence proceeding from auspicious or baneful stars and from the waning or waxing of the moon. These are supposed to fly about in the air and to affect man by various forms of contact. The sphere of magical operations is greatly extended by the belief that, if a 'substance' or power is embodied in any creature or object—*e.g.*, irresistible strength in a tiger—that power is inherent in all its parts and in all that is connected with it. Such a power, therefore, resides not only in the flesh of an animal, but in its skin, horn, hair, and so on. Again, the essence of water dwells in aquatic plants like the *avakā* (*Blyxa octandra*), and in aquatic animals like the frog; the nature of the boar is present in the soil that is torn up by its tusks; the force of lightning is latent in a splint of wood from a tree that has been struck; the virtue of one's native land exists in a clod taken from it; a man is connected with the earth by his footprints; even an image or a name is conceived as containing a part of the essence of the beings or things which they represent or name. As all such powers are communicable by contact, the whole sacrificial ritual is full of rules as to the persons or things which the performers are to touch, for thus the beneficial power of the sacrifice is transferred to them. For instance, the skins of various animals communicate the characteristic quality attributed to them: one who seats himself on the hide of a bull acquires fertility; on that of a black antelope, sanctity; on that of a he-goat, plenty; on that of a tiger, invincible power.

9. **Magical procedure.**—The operations of magic are mainly directed against hostile agencies, either by preventing their contact with the operator or by bringing about their contact with an enemy. Auspicious rites, besides being much less numerous, are often only another aspect of offensive magic, and will, therefore, be treated under the various types of action, partly auspicious and partly hostile, employed in magical ceremonies (§ 12).

10. **Defensive magic.**—This type of magic, though consisting in warding off injurious powers, is not always expressed in the form of hostility when demons are concerned; it may then be attended by a certain amount of propitiation. Thus in the Atharvaveda (I. xii. 2) deterrent homage is paid to a demon of disease: 'Thee, lurking in each limb with burning, we, paying homage, would worship with oblation'; lightning is similarly addressed (I. xiii. 2): 'Homage to thee, child of the height, whence thou gatherest heat; be merciful to ourselves; do kindness to our offspring'; also instruments and ministers of death: 'To those weapons of thine, O Death, be homage; homage to thy benediction, homage to thy malediction; homage to thy favour, O Death; this homage to thy disfavour' (VI. xiii. i. 2). Again, sacrifices to demons are often mentioned (*Baudhāyana Dharmasūtra*, II. i. 32); and in the general sacrificial cult they receive their share, which, however, consists only of inferior offerings, such as blood and offal. Hostile words or actions are often accompanied by spells expressive of homage. *Hiranyakeśin Gṛhyasūtra* contains a direction (I. xvi. 20 f.) that a brand burning at both ends should be thrown at a jackal (regarded as possessed by the evil powers of death), and that the animal should at the same time be worshipped with the Vedic verse, 'Thou art mighty, thou carriest away.' In a rite concerned with serpents the reptiles are addressed with homage, while the intention to destroy them is also expressed (*Sarpabali*, xi.). A ceremonial intended to ward off ants (*Kauśika Sūtra*, cxvi.) begins with propitiatory offerings and spells; but, if these fail, they are followed with a poisoned oblation surrounded by symbols of hostility and accompanied by an invocation of the gods to destroy their eggs and progeny. Propitiation, however, plays but a very subordinate part in this type of magic.

i. PREVENTIVE MAGIC.—On the principle that prevention is better than cure the procedure of defensive magic is largely prophylactic, everything being avoided that might attract injurious powers. The precautions taken are of the following kinds.

(1) *Avoidance of contact.*—The touch of beings in which maleficent spirits or substances were supposed to dwell was eschewed. Thus to touch the mother during the ten days of impurity after childbirth was regarded as dangerous; and the stones used in erecting an altar for Nirṛti, the goddess of dissolution, were put in their place without being directly handled. The access of injurious powers through other senses was similarly avoided. Thus listening to impure sounds involved risk. Precautions were taken not to see impure or dangerous persons or things; the sight of offerings to the dead or to the uncanny god Rudra was to be avoided; and those who were departing from a place where inauspicious ceremonies had been performed, such as those concerned with the dead, with demons, with the goddess Nirṛti or the god Rudra, abstained from looking back. On occasions when evil spirits were likely to be in the neighbourhood care was taken to prevent their coming too near. Thus a bundle of twigs was tied to the corpse on the way to the burning ground in order to efface the footsteps and so hide the path from the demons; and the sacrificial fire of the departed, having by his decease become a seat of death-bringing powers, was removed by some aperture other than the door.

(2) *Fasting.*—One of the chief precautionary measures against the attacks of hostile powers was abstention from food, in order to prevent them from entering the body. It is, therefore, a leading element in the preliminary consecration (*dīkṣā*) for the Soma sacrifice. With reference to this, one of the Sūtras remarks (*Āpastamba Śrautasūtra*, X. xiv. 9): 'When an initiated man (*dīkṣita*) grows thin, he becomes purified for the sacrifice.' A special form of fasting was the avoidance of particular kinds of food. Thus the performer of the new and full moon sacrifice had, on the eve of the ceremony, to refrain from eating either flesh or the kind of food which he was going to offer on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day; while the student himself has to refrain from eating salted food and drinking milk for three days after the ceremony; he must also abstain from food altogether for three days, or a day and a night, before he enters upon a particularly holy part of his Vedic course. A newly married couple must, during the first three nights following the wedding ceremony, avoid all salted or pungent food. The efficacy of fasting is illustrated by the precept (*Gobhila Gṛhyasūtra*, IV. vi. 13) that one who desires to gain a hundred cart-loads of gold should observe the vow of fasting during one fortnight.

(3) *Abstinence.*—Another safeguard is the practice of chastity. This is enjoined for three nights after the wedding ceremony in order to ward off the attacks of demons that destroy offspring. It is observed by the performer of the new and full moon sacrifice on the night before the rite takes place; for a day and a night by the teacher who initiates a pupil; for twelve nights by the offerer of the Śabalī sacrifice; during the course of the Dīkṣā by him who undergoes that consecration; and by the Vedic student during the whole period of his apprenticeship.

(4) *Asceticism.*—This expedient appears in various forms. One of them is exposure to heat; it is an element in the Dīkṣā ceremony, a special formula being quoted for use when the initiated man breaks into perspiration. Sleeping on the ground is prescribed, during the same length of time as abstinence for the newly married couple, the Vedic student, and the performers of the Dīkṣā consecration, of the new and full moon ceremony, and of the Śabalī sacrifice. As a safeguard against demons dangerous to the sleeper, watching through the night is enjoined during the Dīkṣā ceremony, and on the eve of setting up the sacrificial fires and of the new and full moon sacrifice. Silence is to be observed by the sacrificer undergoing the Dīkṣā consecration, by the man about to set up the three

sacrificial fires, and by the Vedic student on various occasions. Holding the breath, which was regarded as an important form of asceticism, appears, for instance, in a rite during the funeral ceremony. It may here be added that austerities of various kinds had to be undergone by one preparing to cure epilepsy, before he was qualified to perform the magical ceremonies intended to effect the recovery of the patient.

(5) *Concealment.*—Another means of guarding against the attacks of hostile powers was concealment of one's person or of its parts, as seclusion in a shed and covering the head during the observances of the Dīkṣā ceremony; or putting on garments to make oneself unrecognizable; or hiding the hair of the head and beard or nails cut off at sacramental rites, such as the initiation of the Vedic student (cf. § 8 (*b*)).

(6) *Amulets.*—Charms worn on the body were frequently employed both for the negative purpose of warding off evil influences from one's person (amulets) and for the positive purpose of attracting prosperity (talismans). Sometimes the same charm serves both purposes; thus the pearl destroys demons, disease, and poverty, and at the same time bestows welfare and long life. Amulets were for the most part made of wood, but also of various other substances. Their efficacy is regarded as dependent on the particular power of repulsion inherent in them, and is not infrequently spoken of as imparted by the gods. They are called god-born, are said to have been given by gods to men, to have been strengthened by the gods, or to have had their power communicated to them by the gods, who co-operate with them; the gods themselves are described as having once been successful by the power residing in them; by amulets Indra overcame the demons (Atharvaveda, X. iii. 11). Their potency sometimes emanates from their names. An amulet derived from the *varaṇa* tree (*Cratæva Roxburghii*) destroys enemies because, according to the meaning attributed to the name (*ib.* X. iii. 5), it drives off (*vārayati*). An amulet made of this wood is thus addressed in the Atharvaveda (X. iii. 14, 11): 'As the wind and the fire consume the trees, the lords of the forest, so do thou consume my rivals; this *varaṇa* upon my breast, the kingly, divine tree, shall smite asunder my foes, as Indra the demons.' One of the amulets most frequently mentioned in the Atharvaveda is that made from the *jaṅgiḍa* tree, which protects from diseases and demons. Again, a long hymn of the same Veda (VIII. v.) dwells on the aggressive powers of an amulet fashioned from the wood of the *sraktya* tree, which destroys foes, demons, and sorceries. Cf., further, art. CHARMS AND AMULETS (Vedic).

ii. REMEDIAL MAGIC.—Magical operations are performed not only to ward off maleficent powers that are threatening, but also to expel them after they have taken possession of their victim in the form of diseases or ailments. The Atharvaveda is full of spells directed against these. Many such incantations make no mention of any concrete remedies with which their use was accompanied; but the evidence of the Sūtras shows that these incantations, at least very often, formed part of a magical rite in which concrete remedies were an element. Examples of simple spells for the cure of diseases are the following: 'As the rays of the sun swiftly fly to a distance, thus do thou, O cough, fly forth along the flood of the sea' (VI. cv. 3); and 'The disease that racks and wastes thy limbs, and the sickness in thy heart, has flown as an eagle to the far distance, overcome by my charm' (V. xxx. 9). Curative spells are, however, more usually accompanied by the express employment of material objects, chiefly plants. The hymns of the Atharvaveda abound in references to such remedies. These represent the earliest beginnings of medical lore in India. The border-line between magic and primitive science here is not always definite, for in some cases the plant used with the spell may have been an actual cure for a particular disease, while in other cases its application was purely magical, as that of the herbs used to promote the growth of hair on bald heads (these were doubtless as ineffective as the hair-restorers of modern times). The following are two charms from the Atharvaveda intended for this particular cure: 'That hair of thine which drops off, and that which is broken root and all, upon it do I sprinkle the all-healing herb' (VI. cxxxvi. 3); 'Make firm their roots, draw out their ends, expand their middle, O herb! may thy hairs grow as reeds, may they cluster black about thy head!' (VI. cxxxvii. 3). The Atharvaveda contains many spells in which the *kuṣṭha* plant (probably *Costus speciosus* or *arabicus*) is invoked to drive out fever; two of its hymns (I. xxiii. f.) are meant to cure leprosy by the use of a dark plant; one (VII. lvi.) operates with a herb that destroys snake poison, and another (VI. xvi.) with a plant against ophthalmia. Fractures are cured by the plant *arundhatī* (IV. xii.), and wounds by the use of the peppercorn (VI. cix.). The use of ointment is associated with one hymn of the Atharvaveda (IV. ix.), of which this is one of the spells: 'From him over whose every limb and every joint thou passest, O salve, thou dost, as a mighty intercepter, drive away disease.' Water not infrequently appears as a magical remedy, and its general curative powers are thus expressed by the following spell of the Atharvaveda (VI. xci. 3): 'The waters verily are healing, the waters chase away disease, the waters cure all ailments; may they prepare a remedy for thee.' It also cures individual diseases, as excessive bodily discharges: 'The spring water yonder which runs down from the mountains, that do I render healing for thee, in order that thou mayest contain a potent remedy' (II. iii. 1); or heart-disease: 'From the Himavat mountains they flow forth, in the Indus is their gathering place: may the waters, indeed, grant me that cure for heart-ache' (VI. xxiv. 1). *Pāraskara Gṛhyasūtra* (III. vi. 2) describes how water is used in a magic operation for the cure of headache: the performer moistened his hands and passed them over the eyebrows of the sufferer with the spell: 'From the eyes, from the ears, from the whiskers, from the chin, from the forehead I drive away this disease of the head.' Another remedy is the horn of an antelope, used against a hereditary disease named *kṣetriya*: 'Upon the head of the nimble antelope a remedy grows! He has driven the *kṣetriya* in all directions by means of the horn' (Atharvaveda, III. vii. 1).

II. Offensive magic.—Aggressive operations against maleficent powers cannot always be distinguished, especially in regard to demons, from that form of defensive magic which is directed to warding off their attacks. Hence the expedients adopted are to some extent the same for both purposes.

i. MEANS EMPLOYED.—(1) *Fire.*—Fire was one of the chief direct means of driving away demons and all hostile sorcery. Thus in the Rigveda Agni, the god of fire, is frequently invoked (I. xii. 5, xxxvi. 20) with such verses as: 'Burn, O Agni, against the sorcerers; always burn down the sorcerers and the allies of the demons.' This use of fire, probably the earliest in cult, though overlaid with its later and much more extensive sacrificial application, still survives in the Vedic ritual. Thus a special fire called the 'lying-in fire' (*sūtikāgni*) is introduced into the lying-in chamber (*sūtikā-gṛha*). Of this fire the author of one of the domestic Sūtras remarks (*Hiraṇyakeśin Gṛhyasūtra*, II. iii. 6 f.):

'Sacred rites, except fumigation, are not performed with it; he fumigates the child with small grains mixed with mustard seeds'; he then adds a number of spells to drive away various demons that prowl through the village at night, that drink out of skulls; Agni is invoked to burn their lungs, hearts, livers, and eyes. At the sacramental ceremony of cutting the child's hair a fire is kindled while a number of auspicious verses are recited; as nothing is said of its application to sacrificial purposes, it was presumably meant to ward off demons. Of similar significance were the fire employed at the investiture of the Brāhman student, behind which both he and his teacher step, and that kindled when the pupil entered upon his course of Vedic study. That this was the significance of the fire beside which the Soma sacrificer watched during the night in the Dīkṣā ceremony is certain, because it is expressly said (*Taittirīya Saṃhitā*, VI. i. 4. 6) that Agni is here appointed 'for the destruction of the demons.' It can hardly be doubted that in the great sacrificial ritual of the three fires the southern fire was understood to have the magical power of dispelling demons, for the south is the direction from which the souls of the dead and the injurious spirits allied to them approach. In the funeral ritual a brand was taken from the southern fire and laid down pointing to the south, while a formula was pronounced in which Agni was invoked to drive away all demons that, assuming manifold forms, might venture near. At the conclusion of the funeral ceremony a fire was used by the survivors for the purpose of warding off the powers that cause death. Fire was also on various occasions carried round what was to be protected against the attacks of evil spirits. Thus a brand lighted at both ends was moved round the funeral offering; and a firebrand was also borne by the priest round the victim, the post, and other accessaries of the animal sacrifice.

(2) *Water.*—Water is another efficacious means of repelling hostile agencies, as is indicated by the statement (*Maitrāyaṇī Saṃhitā*, IV. viii. 5) that 'the demons do not cross the waters.' We have already noted some examples of the use of water in curing diseases and ailments. Water is further regarded as a chief means of removing possession by evil spirits. At the birth ceremony water is supposed to wash away all injurious powers from the new-born child. A purifying bath is prescribed before entering on various ceremonies, as the Dīkṣā, to remove supernatural substances that might be inimical to their success. Thus the bride and bridegroom take a bath or perform ablutions before the wedding ceremony. In rites of expiation especially, bathing and washing play an important part. Various ceremonies also conclude with a bath in order to obviate the risk of taking back into ordinary life the magical influence inherent in the rite. Such is the case at the end of the Dīkṣā, when clothes and implements used during the ceremony are also laid aside. The significance of the bath taken by the Brāhman student at the end of his apprenticeship is similar. There is, further, a rule that after the utterance of spells addressed to uncanny beings, such as the dead, demons, or Rudra, one should purify oneself with water from the contact with those beings which has thus been incurred. The urine of cows was specially esteemed as a means of purification, being perhaps at the same time regarded as communicating the abundant nutritive power inherent in the animal. As long as a magical condition is meant to continue, bathing or washing is avoided; hence dirt is the characteristic of one who, by means of asceticism (*tapas*), aims at acquiring special magical power.

(3) *Plants.*—We have already seen that plants were frequently used along with spells as a magical cure of disease. Cognate to this medicinal employment is the application of herbs to the purpose of securing the love of a man or a woman, and of promoting or destroying virility; of both these classes of charms the Atharvaveda contains many examples. But they are also resorted to for other objects. Thus some are employed against demons and sorcerers, others to counteract curses, and several are associated with battle-charms. Aquatic plants, together with frogs, as representing water, are combined with spells to quench fire. Bdellium (*guggulu*), the fragrant exudation of a tree, frequently occurs in the ritual as, by its odour, driving away demons of disease or frustrating a curse.

(4) *Stones, etc.*—In the wedding ceremony, as we have seen, the bride stepped on a stone to ensure steadfastness. A stone, as representing a dividing mountain, was regarded as a means of keeping off evil spirits, and with this intention it was employed in the funeral ritual to separate the living from the dead, where also a clod of earth taken from a boundary was similarly used. In the same ceremony a mat was laid down while the formula, 'This is put between against calamity,' was pronounced (*Kauśika Sūtra*, lxxxvi. 14). A wooden fence was placed round the sacrificial fire, the purpose being 'to strike away the demons' (*Taittirīya Saṃhitā*, II. vi. 6. 2).

(5) *Lead.*—This metal was frequently employed in magical operations, as, *e.g.*, in wiping off dangerous substances. The Atharvaveda contains a hymn (I. xvi.) in which lead was used against demons and sorcerers, this being one of its spells: 'If thou slayest our cow, if our horse or our domestic, we pierce thee with lead, so that thou shalt not slay our heroes.'

(6) *Weapons and staves.*—These appear on various occasions as a protection against demons. Thus a man who woos a bride is accompanied by one armed with a bow and arrows. At the wedding ceremony little staves are shot into the air, with the formula: 'I pierce the eye of the demons that prowl around the bride who approaches the fire' (*Mānava Gṛhyasūtra*, I. x.). At the royal inauguration the priest beats the king with a staff, saying, 'We beat evil away from thee' (*Kātyāyana Śrautasūtra*, XV. vii. 6). The staff is a part of the ritual equipment in the Dīkṣā ceremony, its significance here being explained by the *Śatapatha Brāhmaṇa* (III. ii. 1. 32) thus: 'The staff is a thunder-bolt to drive away the demons.' The Vedic student, as peculiarly liable to the attacks of evil spirits, is provided with a staff at the rite of investiture. This he must always carry, never allowing any one to pass between it and himself; he parts with it only at the end of his apprenticeship, when he casts it away into water, along with his girdle and other sacred objects. On entering the next stage of religious life the Brāhman receives a new staff made of a different wood, the purpose of which is sufficiently expressed by the spells employed at the accompanying rite: 'Protect me from all powers of destruction on all sides,' and 'Destroy all hosts of enemies on every side' (*Hiraṇyakeśin Gṛhyasūtra*, I. xi. 8). A wooden implement shaped like a sword, technically called *ṣphya*, and very variously applied in sacrificial rites, has evidently the significance of a demon-repelling weapon. At the sacrifice to the dead the *sphya* is passed over the altar with the words, 'Smitten away are the devils and demons that sit on the altar' (*Śāṅkhāyana Śrautasūtra*, IV. iv. 2).

ii. MAGICAL ACTION.—Certain types of action are regarded as producing a magical effect in various rites. They may be grouped as follows.

(*a*) *Hostile.*—(1) To make a *noise* is believed to be an efficacious means of driving away demons. At the solstitial festival drums were beaten in order to scare evil spirits, which were deemed to be especially powerful at the time of the shortest day. A gong was sounded at the ritual for exorcizing the demon of epilepsy. At the funeral ceremony a din was produced by shattering pots.

(2) A frequent method of removing injurious influences is to *wipe* them *off*. Thus lead or a black thread of wool was used as an aid in the process. In particular, the *apāmārga* (*Achyranthes aspera*) plant (popularly interpreted to mean 'wiping out') was most variously employed in this sense. The Atharvaveda contains several hymns with which the plant is applied, the following being one of the spells in which this action is expressed (IV. xviii. 8): 'Having wiped out all sorcerers, and all grudging demons, with thee, O Apāmārga, we wipe all that evil out.' The *Śatapatha Brāhmaṇa* remarks (V. ii. 4. 14) that by the aid of this plant the gods wiped away fiends and demons. Among other magical applications of this action may be noted the requirement that one who has seen an evil dream should wipe his face.

(3) Another means of getting rid of demons or injurious powers is to *shake*, *cast*, or *strip* them *off*. The black antelope skin used at a sacrifice is shaken out with the words, 'Shaken away is the demon; shaken away are the goblins' (*Vājasaneyi Saṃhitā*, i. 14). After feeding the souls of the dead, the officiant shakes the hem of his garment in order to remove the souls that may be clinging to it. At the conclusion of the funeral ceremony, the bundle of twigs, used to efface the footsteps of death, is thrown away for fear of the dangerous substance which it may have derived from those footprints. For similar reasons clothes worn at uncanny rites, such as funerals, are cast aside. Injurious substances are deemed to be stripped off by passing through some aperture the person to whom they adhere. This notion is found even in the Rigveda (VIII. lxxx. 7), where Indra is said to have cured the girl Apālā, who suffered from skin disease, by drawing her through an opening in a car. It is doubtless a survival of this form of purification when, in the wedding ceremony, the aperture of the yoke of a car is placed on the head of the bride.

The removal of injurious substances is not always a mere riddance, but is often also a transference to remote places or to other objects animate or inanimate. The Rigveda and the Atharvaveda contain several formulæ or spells to relegate evil agencies to particular places or persons in the far distance. Thus hostile magic is expelled beyond the ninety streams (Atharvaveda, VIII. v. 9, X. i. 16); the disease Takman (a sort of fever) is sent away to far-off peoples, such as the Gandharians and the Magadhas (*ib.* v. xxii. 14); evil deed and evil dream are banished to the divine being Trita Āptya in the remotest distance (Rigveda, VIII. xlvii. 13–17). Injurious agencies are also transferred to others at particularly uncanny spots, especially crossroads. A garment containing certain impurities is removed to a forest, suspended from a tree, or hung over a post, to which its dangerous influence is conveyed, and thus rendered innocuous (Atharvaveda, XIV. ii. 49 f.). Snake-poison is removed to a firebrand, which, being then thrown at a snake, returns the danger to its source (*Kauśika Sūtra*, xxix. 6). Fever is transferred to a frog as an antidote representing water (Atharvaveda, VII. cxvi. 2); while jaundice is conducted in a homœopathic manner to a yellow bird (*ib.* I. xxii. 4).

(*b*) *Auspicious.*—(1) A very prominent part is played by *eating* in the communication of beneficial influences; contact with injurious substances, which would, of course, be equally well effected by eating, is avoided by fasting (cf. § 10. i. (2)). The Vedic ritual contains innumerable examples of the magical power conveyed by the eating of sacrificial food. The eating of the food is regarded as communicating the blessing embodied in it; and in the most various forms the view appears that the sacrificial substance conveys the special kind of power implied in a particular sacrifice. Thus, when the religious teacher initiates his pupil, he gives him the remnant of the offering with the formula, 'May Agni place his wisdom in thee.' On the occasion of the ploughing festival a mixture of the milk of a cow that has a calf of the same colour and dung, bdellium, and salt is eaten. At the ceremony for the obtaining of male offspring the wife has to eat a barleycorn and two grains of mustard seed (or two beans), one of which has been laid on each side of it (as symbolizing a male being). The act of two or more persons eating together establishes a community between them; at the wedding ceremonial the bride and the bridegroom eat together, and at the royal inauguration the king and the priest.

Based on the idea that an animal, when eaten, communicates its special characteristics to the eater is the correspondence in sex, colour, and other qualities between the victim and the god to whom it is offered. To Indra a bull or (less often) a buffalo, to which he is often compared, is sacrificed; to the Aśvins, twin gods of the morning, a reddish he-goat, for 'of reddish colour, as it were, are the Aśvins' (*Śatapatha Brāhmaṇa*, V. v. 4. 1); to the goddess Sarasvatī a ewe of certain qualities; to Agni, with his column of dark smoke, a he-goat with a black throat; to the Sun and to Yama (god of death), two he-goats, one white, the other black. A cognate magical correspondence appears in the offering of a black victim in a rite for the obtaining of rain: 'It is black, for this is the nature of rain; with that which is its nature he wins rain' (*Taittirīya Saṃhitā*, II. i. 8. 5). When the destruction of enemies is intended, a blood-red victim is offered by priests dressed in red and wearing red turbans.

(2) There are several ceremonies in which *anointing* is applied for the attainment of auspicious ends. In the Dīkṣā rite the sacrificer is anointed with fresh butter to give him unimpaired vigour and sound sight. In the animal sacrifice the stake is anointed with clarified butter for the purpose of bringing blessings to the sacrificer. At the royal inauguration the king is anointed with a mixture of butter, honey, rain-water, and other ingredients, which communicate to him the powers and abundance inherent in them. At the same ceremony the king anoints himself with the fluid contained in the horn of a black antelope and refrains for a year from cutting his hair, which has been moistened by it. At the Sautrāmaṇī rite, an expiatory part of the Soma sacrifice, the priest consecrates the king by sprinkling him with the fat gravy of the sacrificial animals: 'With the essence of cattle, with the highest kind of food, he thus sprinkles him' (*Śatapatha Brāhmaṇa*, XII. viii. 3. 12).

(3) *Charms*, made for the most part of wood, but also of other materials, were frequently attached to parts of the body for various auspicious purposes. A talisman made of wood from the *parṇa*-tree (*Butea frondosa*) was worn in order to strengthen royal power (Atharvaveda, III. v.); a bridegroom, while reciting a hymn of the Atharvaveda, fastened to his little finger, by means of a thread coloured with lac, a talisman made of liquorice wood to secure the love of his bride (*Kauśika Sūtra*, lxxvi. 8 f.); at the full moon ceremony the sacrificer tied on his person talismans made of lac, together with all sorts of herbs, for the attainment of prosperity; while sowing seed, the husbandman put on a talisman of barley. The Vedic student who, at the conclusion of his apprenticeship, has taken the purifying bath ties a pellet of *badara* (*Zizyphus jujuba*) wood to his left hand and fastens a pellet of gold to his neck; he then attaches two earrings to the skirt of his garment, and finally inserts them in his ears. A talisman of gold secures long life: 'He who wears it dies of old age,' in the words of the Atharvaveda (XIX. xxvi. 1). To ensure conception a woman puts on a bracelet with the spell, 'An acquirer of offspring and wealth this bracelet has become' (VI. lxxxi. 1).

(*c*) *Indifferent.*—(1) *Burying* was a frequent secret method of conducting magical substances to others, generally with hostile intent. The Atharvaveda is full of spells expressing fear of magic buried in sacrificial straw, or fields, or wells, or cemeteries. Objects belonging to a woman who is to be injured—a garland, hair, a twig for cleaning the teeth—together with other things productive of misfortune are placed between three stones in a mortar (a symbol of crushing) and buried. The luck of a person thus attacked might be restored by digging up the objects, while an auspicious spell was uttered. The *Śatapatha Brāhmaṇa* relates (III. v. 4. 2 f.) a myth how the demons buried charms in order to overcome the gods; but the latter, by digging them up, made them inoperative. The Soma sacrifice even contains a ceremony the express purpose of which is to dig up the magical objects buried by rivals or enemies. This idea of burying things sometimes has an auspicious intention, as when a mixture of milk, dung, bdellium, and salt is buried in order to promote the welfare of cattle (*Kauśika Sūtra*, xix. 19).

(2) The action of *looking* at an object may be either beneficial or injurious. It has the former effect, *e.g.*, when the sacrificer says (*Vājasaneyi Saṃhita*, v. 34) to the priest, 'Look at me with the eye of Mitra' (the sun-god); or when a guest addresses the sweet food that is offered to him, saying, 'With Mitra's eye I regard thee' (*Aśvalāyana Gṛhyasūtra*, I. xxiv. 14). But the evil eye (*q.v.*), *e.g.* of the serpent, brings disaster on him towards whom it is directed. At the wedding ceremony the bridegroom secures himself against the evil eye of the bride by anointing her eyes and saying, 'Look not with an evil eye, bring not death to thy husband' (*Pāraskara Gṛhyasūtra*, i. 4; *Śāṅkhāyana Gṛhyasūtra*, i. 16). In the Atharvaveda (IV. ix. 6) ointment is conjured against the evil eye with the spell, 'From the evil eye of the enemy protect us, O salve'; the *jaṅgiḍa*-tree is invoked against the evil eye of the hostile-minded (XIX. xxxv. 3); and a certain plant is employed with the spell, 'Of the enemy who bewitches with his eye we hew off the ribs' (II. vii. 5; cf. XIX. xlv. 1). On the other hand, the evil effect produced by an inauspicious object on him who sees it is shown by innumerable directions enjoining avoidance of such sights. Thus the Vedic student who, at the conclusion of his apprenticeship, has taken his purifying bath must not look at an enemy, a malefactor, a corpse-bearer, or ordure. For similar reasons, one returning to the sacrificial ground should not look round after performing an inauspicious ceremony, such as an offering to the goddess Nirṛti or a rite for the slaughter of demons.

(3) The action of *circumambulation*, which occurs very frequently in the Vedic ceremonial, is regarded as having a magically auspicious effect when the performer walks round an object in sunwise fashion by keeping his right hand towards it (*pradakṣiṇā*). Both living and inanimate things are three times circumambulated in this manner; *e.g.*, priests thus walk round other priests or the victim, and the wives of the king walk round the dead sacrificial horse. Sacrificial altars and temples, the ground where a house is built, as well as houses (as a protection against serpents), are circumambulated. This rite is especially often performed with the sacrificial fire, as at the wedding ceremony and at the initiation of the Vedic student. Water is circumambulated at a wedding, as also a new house, while water is at the same time sprinkled round it. When the ceremony is inauspicious, the direction is reversed, the left hand being kept towards the object. This is done especially in funeral rites at the burying ground and at cross-roads. Thus the mourners walk three times round the unlucky fire deposited where four roads meet, with their left sides towards it, beating their left thighs with their left hands. When a patient is to be cured of snake-bite, the priest walks round him to the left. When a servant who is disposed to run away is asleep, his master, making water into the horn of a living animal, walks three times round him to the left, sprinkling the water round him with the spell, 'From the mountain on which thou wast born, from thy mother, from thy sister, from thy parents, and thy brother, from thy friends I sever thee' (*Pāraskara Gṛhyasūtra*, III. vii. 2). Movement both in the auspicious and in the revers direction is not restricted to walking. Thus in th sacrifice to the dead the officiant grasps a water j with his left hand and pours out its contents fro right to left; he also holds the ladle in his left a deposits the offering on the grass in the sa direction (cf., further, art. CIRCUMAMBULATION).

12. Sympathetic magic.—A special type of magi is that which has been called 'sympathetic,' being the influence exercised on a remote being or phenomenon by means of a telepathic connexion between it and what is manipulated by the magician. It may be either beneficent or injurious.

(*a*) *Effigies.*—An image is frequently made and operated on for the purpose of producing a similar effect on the victim. Thus an enemy is destroyed by piercing the heart of his clay effigy with an arrow, or by transfixing his shadow. His death is also produced by melting a wax figure of him over the fire, or by killing or burning a chameleon as representing him. The elephants, horses, soldiers, and chariots of a hostile army are imitated in dough, and sacrificed piece by piece so as to bring about its destruction. The magician annihilates worms by stamping on or burning twenty-one roots of the *uṣīra* plant, while he pronounces the spell, 'I split with the stone the head of all worms male and female; I burn their faces with fire' (Atharvaveda, V. xxiii. 13). In order to exterminate the field vermin called *tarda*, a single *tarda*, as representing the whole class, is buried head downwards, its mouth being tied with a hair so as to prevent its eating grain (*Kauśika Sūtra*, l. 19). With a view to smashing the limbs of evil spirits pegs are driven into the ground. One who pounds the Soma-shoots for sacrifice directs the blows against his enemy by fixing his thoughts on him during the operation.

The sympathetic connexion is sometimes very remote, as when implements or materials are used in which a particular power is regarded as inherent. Thus an exiled prince receives food rendered magical by being cooked with wood that has grown from the stump of a tree, symbolizing the restoration of fallen fortunes. At a ceremony for the removal of troublesome ants a sacrificial ladle of *bādhaka* wood is employed simply because the name of the tree means 'remover.' At a rite to destroy demons the dipping spoon is made of wood from the *palāśa* (*Butea frondosa*) tree as representing the magical spell (*brahman*), which is a slayer of demons. When the sacrifice for the restoration of an exiled prince is performed, earth and other material from his native country are employed. At a sacrifice for victory in battle, soil torn up by a boar is taken for the altar (*vedi*), with a view to communicating the fierceness of that animal to the combatants on behalf of whom the offering is made.

(*b*) *Imitative processes.*—The higher cult concerned with the three sacrificial fires abounds with rites in which the desired effect is produced by an imitation of the event or phenomenon. Thus the kindling of the sacrificial fire in the morning develops into a magical rite to make the sun rise; and the dripping of the Soma-juice through the purifying sieve becomes a rain charm. At the ceremony of the royal inauguration, the conventional chariot race in which the king wins is meant to gain for him speed and victorious might. On various occasions in the ritual a game of dice is played; this has clearly the magical purpose of securing luck and gain for the sacrificer. At the solstitial ceremony an Āryan and a Śūdra (representing a white and a black man) engage in a struggle for the possession of a circular white skin, the former ultimately wresting it from the latter; the magical aim of this performance is the liberation of the sun from the powers of darkness. In the same ceremony, as well as at the Soma and the horse sacrifice, there are certain sexual observances the obvious purpose of which is to produce fertility in women. A good example of the imitative method is the procedure meant to deflect a river into another channel. The new course is first watered; it is then planted with reeds; and, finally, representatives of water, such as a frog and the aquatic plant *avakā*, are deposited on it; the imitation is believed to produce the reality.

(1) This type of magic is very frequently found in the particular form of *rain-making*. Such is the purpose when, at the solstitial festival, a cowhide is pierced with arrows—probably an imitation of the myth of Indra's release of the waters by piercing the rain-clouds (which frequently appear as cows in the Rigveda). On the same occasion girls dance round a fire with jars full of water which they pour out, while they sing a song calling upon the cows to bathe. At the ceremony of piling the fire-altar jars of water are emptied on the ground, on which rain is thus said to be shed, and grain is sown on the spot. When an otter is thrown into the water, rain falls in abundance; or, if any one desires rain, he casts herbs into the water, submerges them, and then lets them float away.

(2) A modified form of sympathetic magic is *divination*, the aim of which is to find out what is hidden or future, largely from the occult correspondence between the representation and the reality. Dreams and sacrificial and funeral rites are the most significant representations; these can be interpreted by spiritual persons who possess inner illumination, strengthened by the power of asceticism and other magical means. From the direction taken by a cow at a particular point in the ritual it may be inferred that the sacrificer will attain his purpose. If at a certain sacrifice the fire flames up brightly, the sacrificer will obtain twelve villages; if the smoke rises, he will obtain at least three. The fire kindled in a special way between two armies about to fight prognosticates the result of the battle by the direction of the smoke. The observer who, at a funeral, notes which of the three sacred fires catches the corpse first can tell whether the soul of the deceased is in heaven, in air, or on earth.

The following examples of divination are of a more general type. If one wishes to know whether an unborn child will be a male, the son of a Brāhman must touch a member of the mother; supposing the member has a masculine name, the child will be a boy. When it is desired to ascertain whether a girl will make a good wife, she is bidden to choose between various clods taken partly from auspicious soil (as that of a furrow or a cowshed), partly from an unlucky spot (as a cemetery or cross-roads); her choice betokens her character and her future. A special form of prognostication is the foretelling of weather by old Brāhmans from the smoke of dung.

Mixed with the knowledge of the future obtainable from a symbolic process is that derived from gods or spirits, by interpreting the movement, the flight, or the cry of animals or birds specially connected with gods or spirits, such as the wolf and hyæna, the owl, crow, pigeon, and vulture. Thus, in one of the two hymns of the Rigveda concerned with augury, the bird crying in the region of the Fathers (the south) is invoked to bring auspicious tidings (II. xlii. 2). Again, in one of the Sūtras, the owl 'that flies to the abode of the gods' is addressed with the words, 'Flying round the village from left to right, portend to us luck by thy cry, O owl' (*Hiraṇyakeśin Gṛhyasūtra*, I. xvii. 1. 3). The direction from which the wooer will come is indicated by the flight of crows after the performance of the rite for obtaining a husband for a girl. Such omens seem to be a later development, resulting from the simplification of the symbolical method of divination by isolating a single feature of a complex process.

13. Oral magic.—Magical formulæ are usually accompanied by some ritual act; but the spoken word in the form of a spell, a curse, or an oath also has a magical effect by itself.

(*a*) *The spell.*—The spell has generally a metrical form, being sometimes an old religious verse degraded to magical use. Though the formula is magical in application, it is in form often a mixture of prayer and spell, the gods being mentioned or invoked in it; *e.g.*, 'Between the two rows of Agni Vaiśvānara's teeth do I place him that plans to injure us when we are not planning to injure him' (Atharvaveda, IV. xxxvi. 2; cf. XVI. vii. 3); 'Thy ninety-nine spirits, O Night, shall help and protect us' (XIX. xlvii. 3–5). It is, indeed, characteristic of the hymns of the Atharvaveda to contain the names of numerous deities, while the panegyrics of the Rigveda are addressed to one only; *e.g.*, 'Heaven and Earth have anointed me; Mitra has anointed me here; may Bṛhaspati anoint me; may Savitṛ anoint me' (VII. xxx. 1). The magician very usually threatens or commands in his own person; *e.g.*, 'I plague the demons as the tiger the cattle-owners; as dogs that have seen a lion, they find not a refuge' (IV. xxxvi. 6); 'As the lightning ever irresistibly smites the tree, so would I to-day beat the gamesters with my dice' (VII. l. 1); 'Swift as the wind be thou, O steed, when yoked to the car; at Indra's urging go, swift as the mind; the Maruts shall harness thee; Tvaṣṭṛ shall place fleetness in thy feet' (VI. xcii. 1). But he also often mentions in his spell a parallel case, in order to effect his purpose, like the symbolical process in sympathetic magic; *e.g.*, 'With the light with which the gods, having cooked porridge for the Brāhmans, ascended to heaven, to the world of the pious, with that would we go to the world of the pious, ascending to the light, to the highest firmament' (XI. i. 37); 'As one pays off a sixteenth, an eighth, or an entire debt, thus we transfer every evil dream to our enemy' (VI. xlvi. 3); 'As the rising sun robs the stars of their brilliance, so I rob of their strength all the men and women hostile to me' (VII. xiii. 1); 'The cows have lain down in their resting-place; the bird has flown to its nest; the mountains have stood in their site; I have made the two kidneys stand in their station' (VII. xcvi. 1). A frequent feature of spells, in order to make sure of striking the injurious spirit, the seat of evil, or whatever else is aimed at, is the enumeration of a whole series of possibilities; *e.g.*, 'Out of eyes, nose, ears, brain, neck, back, arms I drive the disease' (II. xxxiii. 1 f.). If, however the demon is known, this knowledge is emphasized as bestowing magical power over him; *e.g.*, 'This is thy name; we know thy birth; this thy father, this thy mother.'

On the most varied occasions spells are uttered without any accompanying rite. The application of one that may be pronounced by a man on entering a court of justice is thus described (*Pāraskara Gṛhyasūtra*, III. xiii. 6): 'If he should think, "This person will do evil to me," he addresses him with the words, "I take away the speech in thy mouth, I take away the speech in thy heart; wherever thy speech is, I take it away; what I say is true: fall down inferior to me."' Spells are also uttered, *e.g.*, when a man mounts an elephant, a camel, a horse, a chariot, when he comes to cross-roads, when he swims across a river, and in many other situations.

A formula sometimes consists of two or three words, or even of one word. If a man has spoken what is unworthy of the sacrifice, he has only to murmur 'Adoration to Viṣṇu' as an expiation. The daily repetition of the single sacred syllable *bhūḥ* averts death from him who utters it; 'he has nothing to fear from serious diseases or from sorcery' (*Gobhila Gṛhyasūtra*, IV. vi. 1). Again, the mere mechanical repetition of a prayer meant for a totally different purpose may have a magical effect. Thus, the celebrated Gāyatrī verse of the Rigveda (III. lxii. 10)—'We would attain that excellent glory of Savitṛ the god, that he may stimulate our prayers'—it muttered 3000 times, frees a man from the sin of accepting unlawful presents. Even the formulaic use of a stereotyped dialogue secures the desired result. Thus, when the rite of parting the hair of a woman is performed, the husband asks her, 'What dost thou see?' 'Offspring,' she replies.

(*b*) *The curse.*—A special form of the magically effective spoken word is the curse. The earliest examples of it in Vedic literature are mythological. In the Yajurveda (*Taittirīya Saṃhitā*, II. vi. 6. 1) Agni curses the fish for betraying his hiding-place in the waters, predicting that men shall kill it by means of various artifices: 'Hence men kill fish with various artifices, for they are cursed.' In *Tāṇḍya Brāhmaṇa* (VI. v. 11) the gods curse the trees with the threat that they shall be cut down with an axe the handle of which is made from themselves. That the employment of actual curses was also common in early Vedic times is obvious, and is confirmed by the occurrence of many spells intended to counteract them or to make them recoil on him who utters them. The Atharvaveda contains several such; *e.g.*, 'Avoid us, O curse, as a burning fire a lake; strike him that curses us, as the lightning of heaven the tree' (VI. xxxvii. 2); 'Let the curse go to the curser, we crush the ribs of the hostile eye-conjurer' (II. vii. 5; cf. V. xiv. 5, X. i. 5). Plants, such as the *apāmārga*, are invoked to free from the calamity consequent on a curse. The *Śatapatha Brāhmaṇa* contains several passages showing the potency attributed to curses. Thus it is there said (II. i. 4. 19, III. ii. 1. 9) that, 'if any one were to curse him, saying, "May the sacrifice turn away from him," then he would indeed be liable to fare thus'; 'Were any one to curse him, saying, "He shall either become demented or fall down headlong," then that would indeed come to pass.' It is there also said that he who curses a Brāhman possessed of certain knowledge leaves this world bereft of his strength and the result of his good deeds. In other Sūtras those who raise their hand to pronounce a curse are said to be one of the seven kinds of assassin (*Viṣṇu-smṛti*, v. 191).

(*c*) *The oath.*—This is really a curse directed against oneself, as is indicated by the verb *śap*, which in the active means 'to curse,' but in the middle 'to curse oneself,' 'to swear.' It calls down on oneself and one's belongings loss of life or possessions in this world and the next as a penalty for telling an untruth or breaking one's word. Thus, in the ceremony of royal inauguration the priest causes the king to swear the following oath (*Aitareya Brāhmaṇa*, viii. 15): 'All the merit of my sacrifices and gifts from the day of my birth to the day of my death, my position, my good deeds, my life, my offspring shall belong to thee, if I deceive thee.' If the oath is broken, the punishment ensues; *e.g.*, the Yajurveda (*Taittirīya Saṃhitā*, II. iii. 5. 1) relates how, when the moon-god did not keep the oath which he had sworn to the Creator Prajāpati, he was attacked by the disease of consumption.

MAGICAL CIRCLE.—For the 'operation' of 'conjuring' spirits the mediæval sorcerer sat in the centre of a circle described on the ground. This formed a spiritual barrier, protecting him from ghostly attacks, while enabling him to question his 'familiars' or other spirits from a coign of supernatural vantage.

'Circuli sunt munimenta quaedam quae operantes a malis spiritibus reddunt tutos.'[1]

The concepts of circle, circular, and encircling lend themselves naturally to dramatic ceremonialism, and ideas of continuity, finality, and eternity have been appropriately expressed by circular symbolism.

In Scandinavian mythology a serpent engirdles the earth. Popilius Lænas, delivering an ultimatum from the Senate of Rome to King Antiochus, drew with his staff a circle round himself in which he awaited the reply.[2]

The circular form of certain shrines and religious structures may involve some symbolism, possibly astrological. According to the Talmud, a round house and a three-cornered house do not become unclean—*e.g.*, from the contagion of leprosy—whereas a square house does.[3] Possibly the sacred number 3 renders the three-cornered house immune; possibly, again, the three corners represent the points of supernatural weapons.[4] In the case of the round house the idea may be that nothing can cling to its smooth outline.

The circle as a supernatural protective barrier has several analogies in primitive custom, and variations of form involve corresponding variations of meaning. Throughout, from the earliest examples to the latest, importance is usually attached to the material or the instrument with which the circle is traced.

Among the Shuswap Indians the bed of a mourner is surrounded by thorn-bushes, the object being to ward off the ghost of the dead person.[5] The Bellacoola Indians, also of British Columbia, have a similar practice. Besides surrounding the bed with thorns, mourners cleanse their bodies while standing in a square formed by thorn-bushes, as a protection against the ghost.[6] Here the mystic *zareba* depends not on its shape but on its completeness in the geometrical sense.

Water and fire, excellent bulwarks both in human warfare and in spiritual conflict, and, possibly for this reason, among others, regarded as supreme cleansers, are often used to avert evil influences.

The Laotians had a custom of keeping a fire burning in a circle around the bed of a mother for some weeks after child-birth. In Abyssinia the bed was surrounded by blazing herbs, while the mother herself was held in the circle by 'stout young fellows.'[7] In a moving or dynamic form the fiery circle was used for the same purpose in Scotland. Morning and night fire was carried round the mother till she was churched, and round the child till it was christened. In some parts of Scotland a fir-candle was whirled three times round the bed where mother and child lay.[1]

[7] J. G. Frazer, in *JAI* xv. [1886] 84 f.

It has been suggested that in some such cases the idea was to prevent the soul in its critical state from leaving the body, but the greater proportion of cases certainly depend on the idea of protecting the patient from external evil, though the fire-treatment of childbed may have originated simply in a primitive clinical intention of producing comfort or obviating complications.

In China candles are kept alight round the coffin to 'give light to the spirit,' or to light him on his way.[2] The Caribs burned a fire round the grave.[3] A Chinese charm consists in laying a circle of ashes round the dead man; it is supposed to resuscitate him.[4] The Romans carried water or fire round mourners on their return from the funeral.[5]

The curious custom of circumambulation as a mark of honour was practised by Hindus, Greeks, and Celts.

In ancient India, walking round a person three times to the right (sunwise) was a ceremony of honour,[6] as it was among the Gauls and Celts.[7] The ancient Indians walked round the funeral pyre, as Achilles drove round the pyre of Patroclus[8] (see art. CIRCUMAMBULATION). The ancient Indians also practised the rite as a cure for a sick person.[9] Possibly the idea of protecting a person with a mobile, living ring is behind the honorific variety.

In Nias a candidate for the priesthood consorts with spirits in the mountains; when he returns home, he splits a young tree and creeps through the fissure, 'in the belief that any spirit which may still be clinging to him will thus be left sticking to the tree.'[10] Highlanders of Scotland used to send their sheep through hoops of rowan to 'ward off the witches.'[11] Similar customs are found in N. Europe and England as cures for sickness.[12]

The Lapps wore a brass ring on the right arm by way of protection against the ghost of the dead person.[13]

Frazer instances superstitions about rings—arm or finger rings—suggesting that the idea is to keep the soul in the body. For this purpose magic cords are tied round wrist, ankle, or body among various peoples.[14]

'To keep the soul in or the demons out' is a question where convergence of practice is natural. In ancient India the medical magician encircled the bed of a woman at child-birth with black pebbles to ward off demons.[15] This is in line with primitive practices mentioned above, but a suggestion of V. Henry possibly connects it with Babylonian magic: he finds in old Indian magic traces of the double pentacle, or Solomon's Seal, the famous constituent of the mediæval magical circle, consisting of two equal and equilateral triangles, cutting each other so that the resulting segments are equal. The underlying idea may be that the points of the star pierce the invisible enemies.[16] The Indian data alone show a connexion, by means of this astrological element, with the Semitic, and it is from the Semitic practice that the magical circle of mediæval Europe, along with a considerable body of astrological magic, was developed. This is a remarkable case of permeation from one source. Semitic magic and its conquest of Europe may be described, not altogether fancifully, as a left-handed compliment to Semitic religion and the conquest of Europe by the Bible.

The Babylonian texts continually refer to the *usurtu*, which Thompson justly identifies as 'the prototype' of the magical circle, possessing the properties of a 'ban.'

The *ašipu*-priest recited over the sick an incantation: '(The man) of Ea am I, . . . the messenger of Marduk am I, . . . the circle of Ea is in my hand.'[1]

In more detail, the sick person was safeguarded by an enchanted circle (of the nature of a tabu-mark) made with flour or other material, 'as a kind of *haram* through which no spirit could break.' The priest first performed a ceremony of atonement, in which a kid was sacrificed. He flung the kid away, and then described the circle. 'Enclose the man with kusurra (flour), flour of lime, surround the shut gate right and left. The ban is loosed.'[2] A mixture of meal and lime seems to be intended; both substances possessed virtue. The 'flour of Nisaba (the corn-god)' was the 'ban of the great gods.'[3] In another ceremony, before the god Nergal, the priest described with lime a circle round seven winged figures,[4] and in yet another flour and water were used for drawing the circle.[5] Here Thompson compares the mediæval use of the Host as a protection against vampires and witches. The Babylonians described the mixture as the 'net of the corn-god.' Similarly the Jews of Jerusalem employed the virtues of food against evil influences, scattering a mixture of food round the bed of a sick person.[6] A Semitic parallel to the idea of stripping off evil by passing through a ring, or arch, or other circumscribed opening is found in a cure for headache, which consisted in making a circle round a desert-plant with meal, plucking it up before sunrise, and tying it on the head. When the plant was removed, the headache disappeared simultaneously. On the same principle an ailing limb was cured by tying round it a charmed thread, and then casting this away, along with the sickness.[7]

The development of magic, white and black, in Europe, and its remarkable exploitation, lasting till well after the scientific period had begun,[8] were bound up with Semitic animism, or rather dæmonism, if the distinction may be observed. The causes producing a state of culture in which every man of science was a necromancer and conjurer of spirits do not concern us here, but the invariable employment of the magical circle for the conjuration of spirits is typical of the culture of those ages. The primitive Babylonian practice was now divorced from medical magic. As applied to the evocation of elemental demons, whose aid was invoked for alchemical research or prophecy or evil magic against individuals, its main purpose was to protect the sorcerer from the dangerous servants whom he called up.[9] At the same time the geometrical possibilities of the circle appealed to the mathematical instincts of the scholar, and geometry perhaps owes something to magical experiments upon the circle. Kabbalistic lore was also called upon for the exploitation of names and numbers of power, to be inscribed in the circle. Here begins the positive virtue of the circle, which, in connexion with the universal concepts of the figure, made it something more than a protective barrier. It became rather a mystic focus of power, and had at least the merit of concentrating the alchemist's or astrologer's thoughts. Lastly, the astrological elements of the zodiacal system were applied to it, and it thus became an intermediary between chemistry and astronomy, as the focus to which were attracted the infernal and supernal powers alike.

The Arabic and Hebrew developments of magic in the early centuries of the Middle Ages are obscure. The account given by Psellus of a *Hecatinus circulus*, Ἑκατινὸς στρόφαλος, calls for notice, though its meaning is confused. He writes:

> 'Hecate's circle is a golden sphere, enclosing a sapphire in the centre, turned by a thong of bull's hide, and having characters through the whole of it. They made conjurations by turning this; and they are wont to call such things ἴυγγες, whether they have a spherical or triangular or any other shape whatsoever. Shaking these, they uttered unintelligible or beastlike sounds, laughing, and striking the bronze. It accordingly teaches the operation of the rite, or the motion of such a circle, as possessing secret power. And it is called "Hecate's" as being dedicated to Hecate; and Hecate is a divinity among the Chaldæans.'[10]

This account may be simply confusing the Babylonian magical circle with the Greek magical wheel (*ἴυγξ, torquilla*); but, just as the mediæval circle was made material and portable in the form of metal amulets and talismans, so it is possible that Græco-Chaldæan superstition may have developed the circle into a wheel like the ἴυγξ. The fact that such 'wheels' were sometimes triangular or of other shapes is an interesting hint in the direction of the pentagrams and other figures with which the mediæval circles were filled. Psellus notes that the object of the *invocatio* was oracular, the idea, no doubt, being to evoke spirits for the purpose of forcing them to predict future events. As for the Greek wheel on which the ἴυγξ, wryneck, was tied, there is considerable doubt as to its nature.[1]

The magical circle of mediæval occultism had innumerable varieties, according to the purpose, the time, and the species of spirit to be invoked; and it also varied according to the predilections of the operator. The following may be considered typical examples of the method of description and formulæ of blessing and of invocation. The magician, after purifying himself, collected his paraphernalia, including his magic wand, blessed candles and holy water, magical sword or knife, and so forth, and traced the circle, usually 9 ft. in diameter,[2] with his wand or sword. He then blessed the circle, a typical blessing being:

> 'In the name of the holy, blessed, and glorious Trinity, proceed we to our work in these mysteries to accomplish that which we desire; we therefore, in the names aforesaid, consecrate this piece of ground for our defence, so that no spirit whatsoever shall be able to break these boundaries, neither be able to cause injury nor detriment to any of us here assembled; but that they may be compelled to stand before this circle, and answer truly our demands.'[3]

More elaborate formulæ include such terms as:

> 'Sanctify unto myself the circumference of nine feet about me, . . . from the East, Glavrab, from the West, Garron, from the North, Cabon, from the South, Berith.'[4]

Good spirits seem to have been invoked but rarely; necromancy was also rare, though two forms of this were used, one in which the body and the other in which the 'shadow' of the dead was conjured. Evil spirits of power were the usual object of conjuration, and extraordinary precautions were taken in the process.[5]

> 'Now, if any one would call any evil spirit to the circle he must first consider and know his nature and to which of the planets it agrees and what offices are distributed unto him from the planet. This being known, let there be first sought out a place fit and convenient and proper for his invocation according to the nature of the planet and the quality of the offices of the same spirit as near as it can be done; as if their power be over the sea, rivers or floods, then let the place be the sea-shore, and so of the rest. Then chuse a convenient time for the quality of the air (being serene, quiet, clear, and fitting for the spirits to assume bodies). . . . Let the circle be made at the place elected, as well for the defence of the invocant as the confirmation of the spirit. And in the circle write the divine general names and all those things which do yield defence to us; and with them those divine names which do rule his planet, and the offices of the spirit himself; likewise write therein the names of the good spirits which bear rule in the time you do this and are able to bind and constrain that spirit which we intend to call.
>
> We may add characters and pentacles[6] . . . frame an angular figure with the inscription of such convenient numbers as are congruent amongst themselves to our work. . . . Further, we are to be provided with lights, perfumes, unguents and medicines, compounded according to the nature of the spirit and planet which agree with the spirit by reason of their natural and celestial virtue . . . holy and consecrated things necessary not only for the defence of the invocant and his companions, but also serving for bonds to bind and constrain the spirits; such as holy papers, lamens,[7] pictures, pentacles, swords, sceptres, garments of convenient colour and matter. Then let the exorcist (*sic*) and his companions enter the circle.'[1] If, after a prayer to God and an invocation, the spirit refuses to appear, 'reiterate the same three times, from stronger to stronger, using contumelies, cursings, punishments, suspension from his power and office, and the like.' If the spirit make a doubtful assertion, it must be tested by oath; the operator stretches his sword out of the circle and swears the spirit by laying his hand on the sword.[2]
>
> At last, when the operation is beginning to have effect, 'there will appear infinite visions, apparitions, phantasms, etc., beating of drums, and the sound of all kinds of musical instruments; which is done by the spirits, that with the terror they might force some of the companions out of the circle.' At this point, 'holding the pentacle in his hand let him [the operator] say, Avoid hence these iniquities.'[3] The spirit invoked would now normally appear.
